9032. Can you tell me when the voters roll is made up in Scotland, or rather tell me this, from when does the twelve months' occupacy run?—Well, the English Act provided, and I think there is nothing in Scotland to the contrary, a year previous to the 15th of July.

9033. So that, assuming there were a removal during any part of that twelve months, the tenant who had removed would lose his vote. He would not have his name on the roll?—Under the present Act these persons are disqualified, although I believe a transference from one part of the same constituency to another constitutes the same qualification as permanent residence in the one place, but if a man shifted from Edinburgh to Glasgow he would lose his vote.

9034. Would there be any risk of a man taking his house for a month in order to get on to the roll, and then pay his month's rent and give up his tenancy?—There are risks about any enactments. I don't think that is a serious risk.

9035. It would be got at, no doubt, by the clause providing for occupacy?—Obviously. The registers are not at present absolutely accurate.

9036. Then, with reference to hypothec, you are in favour of abolition of hypothec?—I would be.

9037. In the interests of the tenant?—I think of all classes. It is not in the interests of landlords that they should be encouraged to put improper tenants into their houses.

9038. That term applies to tenants who are perhaps unable to pay the rent?—Well, it takes this form, if hypothec be of any value he is excused and absolved from taking these prompt precautions which otherwise devolve upon him, and he lets a man get into a house of a higher rental than perhaps he otherwise would.

9039. In England, as you know, tools and clothing and furniture up to £5 are all exempted from distress?—Yes.

9040. Would you be in favour of a similar provision being made for Scotland?—Yes.

9041. Would you go further in the interests of the occupiers to prevent the tragedy you refer to being perpetrated not only by landlords but by ordinary creditors? Would you give the same protection against not only the landlord but against ordinary creditors?—I think I would, on the same principle as that on which we have abolished imprisonment for debt, and other penal enactments in connection with these matters that humanity has rebelled against.

9042. So you would protect the tenant's tools, clothing, and a minimum amount of furniture?—His means of living.

9043. Up to £5, say?—Yes.

9044. Against all diligence?—I would.

9045. With reference to the option given to Local Authorities, how do you propose, assuming the experiment is not satisfactory, to enable a Local Authority to revert to the present system. You are going to give the power to come under the Bill, would you assume the power to abandon it?—I am quite sure that if they once experience the benefits under my Bill they will not want to go back.

9046. But is there any objection to a resolution of the Town Council cancelling a prior resolution adopting the Bill?—If I am going for local control I must take the whole consequences of local control, and allow them to revert if they should unfortunately so desire.

9047. Do you think, perhaps, that would not be necessary?—I do not think it would, but you put it in a way that I am compelled to answer as I have done.

9048. Then with reference to the English system of compounding, I do not know if I quite understand you to say that 15 per cent. you think was the allowance given by the English burghs where compounding was compulsory?—The authorities are permitted to allow a discount not exceeding 15 per cent. In some cases they give 15 per cent.

9049. But was it your evidence that that included empties as well as others?—Yes; my evidence is to show that that is allowed the landlord when he pays on all property whether occupied or not.

9050. My impression was that 15 per cent. was exclusive of what is known as voids, and that 15 per cent. was allowed where the landlord took the risk?—All I can say is, that my notes of my investigations of the Local Government Board are as I have said.

9051. We will get it from experts, but I see we have here a statement by an English witness who gives scales showing the abatement, compounding rate of Liverpool, Birkenhead, Exeter, and York, etc., and these run 30 per cent. in every case?—Yes, an abuse has really crept in in regard to the deductions in many cases. I was told by the Local Government Board officers that they have been approached frequently in reference to an alteration in the system of discounts. He gives this schedule, and also states that under this section they may allow abatement up to 15 per cent.

9052. If the owner gives notice that he wishes to be rated, whether or not the premises are occupied, he is entitled to another abatement of other 15 per cent.?—That may be the case in some places, but it is very excessive in my opinion.

9053. Is this quotation from the Public Poor Rate Assessment Act applicable to all burghs in England?—I have only an extract from that Act.

9054. Then with reference to the practical difficulty of collecting from tenants, I gather from what you told us that you are not so very strongly, as the Bill indicated, in favour of the separation of rent and rate—in practice, I mean?—It will be a little difficult. My objection to defining in the Bill any procedure is an objection on principle. I think Acts of Parliament should be in general terms, for whenever you begin to attempt too closely to regulate details of such matters, you interfere with the functions of local authorities and perhaps defeat the purpose you have in view.

9055. I was rather referring to this,—assuming the landlord pays rent and rate, we have been told that in Scotland, as in England, what will happen will be that the tenant will be called upon periodically to pay one sum, and that is, I understand, the invariable practice in England, and that in Scotland no attempt will be made to distinguish at periodic payments how much is rent and how much is rates?—Unless a provision to the contrary is inserted. I would leave that to the discretion of each authority.

9056. Do you think the desirability of bringing before the tenant the amount of rate would be met if he once a year or once every six months got a statement simply showing what in effect the burgh rates or parish rates were?—I think oftener, perhaps, than once in six months. I have suggested quarterly. It might be monthly. I think it desirable. It would not involve any great difficulty on the landlord.

9057. You refer to the English phrase "rateable value" can you tell us whether the rent, as opposed to rateable value, includes the whole sum paid by the tenant, rent and rates, not rateable value, but the rent itself?—I scarcely follow.

9058. In Liverpool we are told the rateable value is £13, and with 30 per cent. higher the rent you get is £19, 10s. Is that £19 inclusive of rent and also the rates?—I should say so. I think it must.

9059. That is how I followed your calculation as to how the rateable value was arrived at?—In that case you have always to remember, in dealing with a house in Scotland of a certain value, you have to deduct the sum charged for rates. For instance, if you were to find that it was desirable to make £20 the limit here of rental, and if the rates are to be added by compounding to the rental, you practically would be enacting something like £15 of actual rental, as things are just now. That is a view I hope the Committee will keep carefully in view. My Bill fixes £20 of net rent as the limit.

9060. The point is that we have to make clear that the assessment roll only contains the real rent, not the total sum paid by the tenant to the landlord, and embracing both rent and rates?—The difference between the rental and rateable value is that in the latter a deduction is made for the cost of upkeep, which takes the form of deductions for repairs, I suppose for painting, and I have no doubt for rates as well.

9061. Of course, if it includes rates, assuming any change is made in our system here, and the assessment rolls contain a slump sum, being the whole that the tenant pays, we would require to have a corresponding rateable value?—You would.

9062. Perhaps we will get it from the English witnesses too? Then the case is put with great force that the Bill might be limited to £10. You told us you thought that would not meet the grievance at all?—I do not think it would at all meet the case.

9063. That witness who spoke of a £10 limit was talking largely upon the question of compounding?—Yes, he was dealing with that at the time.

9064. Assuming that compounding was applied to rents not exceeding £10, couldn't it be left to the Local Authority, just as in England, in certain cases either to collect the rates on houses above £10, as they do at present, or to make a voluntary agreement with the proprietors, if they thought proper?—Yes, that could be done.

9065. Above a minimum?—All that recommends such a provision to my mind would recommend it to the rental of £20 just as much as to the rental of £10. I think the suggestion is one of value.

9066. Do you quite appreciate this, that the grievance here is the long period of let, and that the attempt to be

made is to remedy that grievance. The question as to how the remedy will affect rating and franchise does not directly concern the people who are interesting themselves in this question. Supposing the rating authorities tell us that above £10 compounding will be most difficult to apply, that it will cover 75 per cent. of the whole of the houses in Glasgow, if you take up to £20, and that practical men suggest that the compounding should stop at £10, do you think your Bill would make it impossible for the rate collectors to proceed as at present in all houses between £10 and £20?—That is a question upon which I can only form an outside opinion. I think it would be very difficult to collect the rates from that class of houses oftener than once a year. I am afraid it would be very difficult. It may be done, however.

9067. You would not suggest doing it more than once a year?—Well, the hardship is that the tenants do not have the money at hand. Houses between £10 and £15 are 32,000 in Glasgow, houses between £15 and £20 are 19,000, so that there are 52,000 houses in the year 1905 of the class that you refer to.

9068. Your Bill does not lead to more frequent removals?—No, in my opinion it would not.

9069. Where it does lead to frequent removals it will be largely in the lower class?—Why should you confine the benefits of making frequent payments to the lower class. Men at £12 or £14 a year are just as liable to be in a difficulty to find £3 or £4 for rates in November as a man who has a house a little lower rented. I am most eager that those men should have the benefit of the collection of their burden at frequent intervals. To my mind this is the essence of the whole case. It will let a man meet his obligations honourably, and give him that feeling of independence which a man cannot feel when he shirks them, as is the fashion too often now.

9070. Not made by instalments?—I deplore that sad system. It is the worst you can invent. I am in arrears myself. I received a notice this morning that, unless I paid within a certain period, costs would be charged; whereas, if I paid it out in equal sums, it would go out without my feeling it.

9071. As you know, the rents are payable on 15th May and 11th November, and the rent removal term is 28th May?—Yes.

9072 Proprietors find the difference between the 15th and the 28th of May invaluable time for taking steps against the tenant who has not paid?—Yes.

9073. Your Bill proposes to shorten lets?—Yes.

9074. Do you propose that the day of payment of rents should be the day of removal?—I leave that to the bargaining with the landlord. If he finds it an advantage to stipulate with regard to that, let him do so.

9075. Agreements are very rare in small houses?—They will become commoner. It would be to the advantage of everybody.

9076. In the absence of an agreement, you, under the Bill, propose that the rents should be paid by twelve o'clock, and that would be the moment that the tenant vacates the house?—That is the law.

9077. If agreements become commoner, that involves a missive?—Yes.

9078. And the stamp?—Yes. I have raised this question of the stamps that Mr Allison alluded to. It is a serious grievance.

9079. Do you concur with Mr Allison?—No, I don't concur as to the tenants being unable to appreciate the real position. If tenure were weekly or monthly, things would glide along, under tacit re-location the agreement would be propelled from month to month. We have so many confused ideas upon missives in Scotland under this present system that few persons, not even legal agents, have their minds perfectly clear as to what the meaning of missive really is.

9080. Do you concur with Mr Allison to this extent, that assuming the house is taken for six months up to £6, the stamp duty should not be more than 3d. in the £?—Yes.

9081. Under £10 it is 1d.; under £12, 1s. 6d. for a year?—Up to £37, yes.

9082. Do you concur with him that the fixed rate of say 6d. is quite ample for a house up to £20?—I would go further; I would be disposed to abolish the tax altogether. It is like a tax on insurance.

9083. You might extend the limit to £20?—I would be quite willing to assist any such proposal. I have raised this question on the Budget repeatedly, and I have been encouraged by the Chancellors of the Exchequer who say, "If public opinion in Scotland is strong enough, you will 'get your way." Seeing public opinion is so strong, I am inclined to raise the question again.

9084. You confine yourself to burghs and you talk about industrial centres. We have had evidence showing that there are several places in the west, industrial centres and not burghs?—That is so.

9085. Can you tell us where the phrase, "populous places," comes from? It is a well-known legal term for industrial centres?—I had great trouble in coming to the definition of that. I forget the various considerations which weighed with me. You will find the phrase varies in some of the previous Bills. If any better clause or wording could be advised that could cover such places, I should be very glad.

9086. I am suggesting "populous places," but I cannot at the moment remember where that occurs?—I have it in one of my Bills. I will look up and let you know.

9087. You are quite anxious to apply any change not only to burghs, but to all populous centres and industrial places?—Wherever it appears to be needed.

9088. In regard to ejectments, you talk about magistrates taking the necessary time to deal with petitions for ejections. We have been told that almost, with the exception of Glasgow, the magistrates have no power to deal with that at all; that in most places the Sheriff Courts only have power?—Yes.

9089. Would you be in favour of extending to magistrates or to police judges the right to deal summarily with the applications for ejections?—I see no interference with justice which would be induced by such a step.

9090. In Glasgow they have that power?—Yes.

9091. We are told that Sheriffs take so many holidays that there is a grievance felt in places where there is no Burgh Court, and where, therefore, the proprietors must wait during the vacation until the Court resumes. To meet that difficulty you would endow the Police Court magistrates with the same power as magistrates have in Glasgow Burgh Court?—I must not be held as assenting to any proposition that any judicial functionary takes too many holidays, but if it is desirable to extend these powers to the magistrates, I don't see any objection.

9092. In view of the change in the system of letting, we have been told on all hands that something must be done to expedite the landlord's right of ejection?—The landlords keep on asking for that.

9093. Would one way of so expediting his right be to make the Burgh Court or the Police Court the Court which would grant ejections where at present only the Sheriff Court has that power?—Yes, I think it might be of value.

9094. Have you considered the large number of cases in large towns where a house is called a house and shop simply because there are a few goods in the front window?—Yes.

9095. We were told in Glasgow and elsewhere that there is quite a large number of such houses. Would you exclude that from the Bill as it stands?—Yes.

9096. Do you think that is the only case?—The person carrying on a shop is accustomed to mercantile considerations and propositions and transactions, though on a small scale, and ought to be able by agreement to make a bargain which would protect that individual's interest. That situation is quite different from the working man's, whose dwelling-house is concerned, who has no knowledge of business, and is not accustomed to making transactions or bargains at all. I look upon the workshop or the shop as being in a position clearly differentiated from the dwelling-house.

9097. Would you exclude any premises?—I propose to exclude byres, stables, workshops, and the like.

9098. With reference to the allowance to proprietors, I am not sure whether I rightly understood you to say that the more burden the landlord paid in the way of rates and up-keep would inevitably result in the rents being increased?—I think so, economically and in the end.

9099. So that if the typical landlord is right in the view he takes that there will be more frequent removals, extra cost for collection, and that he will lose largely from empties and irrecoverables, that that will result in your political economy in the rent rising?—Yes. Whatever reductions there may be in the returns from the capital invested in such a business must be made up. Capital will not go where there are not reasonable returns.

9100. Whatever he loses in one way he makes up in another?—Yes. But the number of houses remains the same under whatever tenure the houses are held. If a man leaves his house and goes to another, the number of houses and tenants remains unaffected.

9101. Dealing with the scale of allowances, does it follow from what you have said that the greater the allowance the landlord gets the less will the rent be?—No; I think he may regard the allowance as payment for services—a certain proportion of the allowance. I aim at establishing a principle under which the whole of the allowance shall be expended by the landlord in getting taxes collected. I don't intend to make the landlord better or worse by means of this allowance, but that it shall be such an allowance as shall be balanced by the expenditure he is put to in consequence of having to

Mr A. Cross. 21 Jan. 1907.

collect rates in addition to rent, rather than rent alone. Therefore, it does not affect the question you raise.

9102. It affects the question as to whether the scale you give is adequate, and whether the Bill if passed would raise rents. Assuming no allowance is given, rents will be raised?—I think certainly, but may I correct myself? There would not be so much tax required to be raised. Certain expenses are at present incurred by public authorities. These expenses will be saved and placed on the landlord. As far as the tenant is concerned, the amount is alike. I have only transferred the cost of collection from the pockets of the public collectors to the pockets of the landlords, therefore my answer at first was wrong. The amount of the tax to be raised, as far as the tenant is concerned, would remain alike.

9103. Except that the factor has more work?—No; the work is presently performed by the public collectors at a certain expense. That work would be performed by the factors' staff in the future without very much extra expense; but at all events the same work would be performed, and it will be rewarded by something like the same payment. In so far as the costs to the tenants are concerned, it would remain unchanged.

9104. So that so far as the allowance is equitable, and no more or no less than what the Corporation either expend or lose at present if expended in payment of salaries or losses through irrecoverables, the tenants would not suffer?—No; obviously the tenant is in exactly the same position. But this is a counsel of perfection. There will be a little extra discount obtained no doubt by the landlord.

9105. In the scale finally fixed upon, you are anxious that the landlords should get a sufficient allowance to cover the cost to them of collection, of any risk through irrecoverables as well as the risk of empties, unless they get a separate allowance in respect of empties?—Certainly, I am in favour of the landlords being treated with an equitable and even with a generous hand, and I am quite in favour of an enactment being provided that property unoccupied shall not be rated.

9106. (*Mr Cox.*) Do you think any progress has been made at all towards the attainment of shorter lets since this agitation began?—Very much, I think.

9107. There has been progress made, and you told us that just at the present time, within the last week or two, you had heard of some new tenements put up?—New Tenants Defence Association.

9108. About the new tenements of Mr Anderson, are these new?—Oh yes!

9109. And they are weekly terms?—Yes.

9110. Because we were told very emphatically by some house owners in Glasgow that new tenements would not on any account be let on weekly tenure?—Those who possess old tenements are no doubt saying so. There are 16,000 houses (mostly old) unoccupied at this moment. The competition is great, and persons with old tenements are feeling it keenly.

9111. So that progress, if made, is in the direction you want? But you don't think it would do to leave time to work its own cure without the interference of Parliament?—We don't live long enough; besides, there are many analogies for Parliamentary interference with house letting. The Terms Removal Act is an example, indeed, of legislative action in connection with house letting.

9112. What would be the effect on rents, on the passing of your Bill, would it lower rents?—I don't think so. If anything, no doubt the effect would be in that direction, but I don't look for any serious result.

9113. You don't think there are many cases where tenants would prefer the present state of things to remain?—I don't know of any.

9114. But we have heard, of course, in the course of this investigation of a good many men, and probably there are a large number of men who have had for years steady employment, and who have occupied their present houses for many years, who would much prefer to have the thing remaining as it is just now, rather than have it changed. Would it not be possible to put in your Bill some power that would enable tenants of that kind to have some longer tenure. For example, would you not allow a tenant who really wished to be put in the position of making an agreement with his landlord, say with a 5s. or 10s. stamp, or whatever was thought necessary, so that a man who, from prejudice or ignorance, or whatever it was, wished to have tenure of his house for a year, that he might have it?—I have no objections to a regular covenant in the form of a regular lease for a lengthened period being entered into by parties. I propose myself that all houses let for periods of two years shall be exempted. A written agreement might be considered for a period of less than two years, provided it be a written probative deed written before witnesses, so as to show that the tenant was not coerced into his action.

9115. That would be contracting out of the Bill?—No, I cannot consent to that, but it might be put as an exempting clause.

9116. But such a clause might be very useful in certain places: seaside places, for example. Take Rothesay, which was referred to, where people go down for the summer, and it is absolutely necessary that people who let their houses for summer should have security of tenure?—I do not think that is a serious objection. The contention would be that the landlord would pounce upon a house in May, and wish to let it again in October. I say he could not. The suggestion is that the tenant who presently has such a house would be evicted in May, in order that the landlord would obtain the big rents of the summer holding, then he would endeavour to let the house again in October. The house would not be let at all under those conditions.

9117. I don't quite see what you mean. If a tenant has a house on a short tenure, such as you propose, he would not be able to let that house to tenants for short periods during the summer?—Do you mean because he would be afraid of the landlord evicting him in order to get the benefit of the summer rents? The landlord, in such a case, would have the house empty in the autumn, and no person would take it on such terms. I can understand some benighted landlord so acting and taking the summer rents to himself, evicting his tenants. Then comes October. What then? No person would take the house at all in October; and when next June or May comes, the landlord who has so acted will find it impossible to get a tenant at all. But my optional clause provides for such places. If the people in such places as Rothesay consider exemption is to their advantage, they will not adopt the Bill.

9118. But that optional clause would apply equally to Glasgow?—To Glasgow also; and if the majority of persons in Glasgow desire not to have this Bill, they have an opportunity of so electing.

9119. Have you thought of a case like this—we have had it put before us by some factors or house-owners that in their tenements there are houses adjoining each other at varying rents, so that you might have two doors adjoining, one within your limit, and the other without. Thus you would have a half-yearly and weekly tenant, possibly, door to door. The landlord says that would be very objectionable. They want to get weekly tenants altogether. How would you deal with that?—I would not deal with it at all. I don't think legislation can follow all the conduct of a house-letting business. Nor do I see any objection to a weekly tenant and a half-yearly one being side by side, but I think it will very rarely occur. It is not the fashion to build houses in that way. All sorts of difficulties are being fished up from the bottom of the sea against the Bill.

9120. But it is the case that tenements are designed with small houses and large ones. You have three rooms on one side, and perhaps one in the middle?—That may happen, but I see no objection if it does happen.

9121. (*Sir John Stirling-Maxwell.*) How many private members are there from Scotland opposed to your Bill?—I can answer that question if it would not be invidious. I believe there is one.

9122. Only one, as far as you know?—Yes; but it would be improper to go any further, I am afraid, wouldn't it? I am only aware of one, and his objection is to the compounding clause as cloaking the incidence of taxes.

9123. You told us why you did not include any provision to shorten the period for warning away, but you did not tell us whether you were in favour of such a provision?—The Terms Removal Act seems to me a reasonable statute on that question. I see no reason to disturb that statute. It is, roughly speaking, one-third of the period of occupancy. The only point at which I propose to alter the provisions of that Act are in regard to weekly tenancies, and I submit to this Committee that three days is too short a time to call upon a man to find a house, and, even if the landlord has to wait a week before getting possession of his house, it is not a great hardship, and a week is as short a time as can reasonably be expected to evict a man from the house.

9124. Tell us shortly why you decided not to put in any provision dealing with facilities for ejectment under this Bill?—Because I knew no enactment I could propose.

9125. You suggested in your notes—— ?—Yes, these suggestions have been evolved in consequence of my consultation with the members of Glasgow Corporation and with the officers of the Burgh Court. A report was prepared, as you know, by the Town Clerk of Glasgow on this subject. I think that was in the days of Sir James Marwick, and I was not able to get the benefit of his advice, because of his being away from home in bad health when I was preparing my Bill. I make the suggestion now as a reasonable way of dealing with that method.

9126. Would you include them in your Bill?—I think I

Mr A. Cross. 21 Jan. 1907.

Mr A. Cross. 21 Jan. 1907.

would. I should be willing to do anything and everything which would make the position of the lordlords equitable, reasonable, and secure, as far as I can.

9127. (*Mr Binnie.*) Do you regard the optional clause in your Bill as essential to it?—I think it is a wise provision.

9128. Do you consider it essential; because, if so, I will not ask you anything about cases like Rothesay?—I cannot say that I have considered it in the view of being essential. I suppose I may be permitted to quote the Lord Advocate, "It is a great improvement."

9129. Would you not introduce your Bill without that in it?—My present opinion would be to endeavour to obtain an optional clause.

9130. As you put it in that guarded way I must say something more about Rothesay. There are keen landlords there, as in other places. If a tenant holding for a quarter only were to let a house in spring, as is very commonly done for occupation during the summer months, and if a month before removal term he got notice from his landlord to remove, a month before the 28th May, he would be very awkwardly placed towards these people who had taken his house for June, July, and August?—He would be.

9131. Would it not be essential to make some provision for the security of the tenure in a place where such a thing might happen?—I would not regard it as absolutely essential; I think it would be equitable and reasonable. I don't know that I should go further than that. The cases of people who let houses under £20 for occupancy during the summer months in the month of March, which is the case you presume, are very rare. The bulk of small summer houses are taken rather nearer to the term of occupancy.

9132. But my remarks extend up to the 28th of April?—Forty days, yes. You are correct. In the quarterly tenancy they would. It would be a case of difficulty. But we must look at things in a practical aspect. An earthquake might happen and involve the half of Rothesay.

9133. If you don't see any difficulties, we need not go on?—I think an optional clause a reasonable provision; but I am not going to say that I refuse my Bill, if it were scored out.

9134. In regard to compounding, your first and most important representation is that you approve taxing at the source?—Yes.

9135. Is the landlord the source?—Yes. He is like the large railway company. You don't collect your income tax from the individual shareholders; you take it *en bloc* from the railway company.

9136. We are talking of the source?—The tea importer is the source, the man from whom *en bloc* it can be taken.

9137. But is the tenant not the source? You yourself have proved, and quite satisfactorily, that it is the tenant who pays taxation?—Yes.

9138. Then the man who pays it is the source?—Oh! no. The tea-duty is paid by the man who drinks the tea.

9139. We are not dealing with the tea-duty at all; we are dealing with the things we have before us?—If I have used the word "source," and it does not convey the proper idea, I can correct it. Collecting from the landlord is collecting where it can be done *en bloc* in a large amount, and with certainty.

9140. Most easily?—Most easily.

9141. That is it, if you had said so?—I concur in that, most easily.

9142. You said, I think, in answer to a question from the Chairman that the landlords would get the allowance on something on which they get no allowance now?—Yes.

9143. What, for instance?—The landlords pay at present what is called the landlord's share of taxation in full and without any deduction. I presume that when they come to add that to the cost of their houses they make no deduction; they simply charge the full amount. They don't make an additional charge.

9144. What would they get?—Supposing the landlord's taxes were £3 on a £20 house, he would be entitled to a percentage deduction for the £3 he at present pays in full.

9145. Is that your proposal?—Under compounding with an allowance, that would be the proposal.

9146. That he should get the deduction from his own taxes as well as those he collects from other people?—Well, I don't know how you can distinguish. You are going to collect all the taxes from the landlord.

9147. Yes, yes! but we are dealing with the question as between landlord and tenant. Do you think the Corporation of Glasgow, or any other Corporation, would make an allowance to the landlord on his own share of taxation?—They will have to do what is equitable and reasonable; and if the deduction of 5 per cent. or 7½ per cent. on the tenant's half is insufficient to remunerate the landlord for collecting the rates when it is to be upon the whole taxation, it will be ample.

9148. Then is your proposal that you should take this deduction on the whole taxation?—My deduction would be an equivalent to the entire cost of collection just now.

Mr A. Cross. 21 Jan. 1907.

9149. You have made certain allowances, named certain proposed allowances in your Bill. Do you intend that this allowance should be made on the taxes charged directly on the landlord?—Might I say that the proposals for deductions contained here are proposals which are not essential to the Bill; they are to be considered by this Committee. My suggestion is, that whatever deductions be given they shall be equivalent to the charge of collecting taxes at present, so that the landlord would be no worse placed.

9150. Have you said he would get some allowances which he does not get at present? That was your expression. I wish you to explain what allowances he would get that he does not get at present?—My view is that it is impossible to enact that part of the taxation shall be net and the rest of the taxation shall be less a given percentage. I have in my mind that the authority dealing with the taxes as a whole will assess them as a whole, make allowances to the landlord as a whole, and make such deduction to landlords as shall be equal to what tehy will save in expenses, etc., under the new system of compounding.

9151. To put it shortly, the intention is that there should be the same allowance to the landlord on the landlord's taxes as there is on the tenant's taxes?—That way of putting it renders it liable to be misunderstood.

9152. That is not liable to misunderstanding?—I perceive the point you aim at, but I don't think it can be suggested that this Committee should report in favour of a system by which part of the taxes was to be compounded with a deduction allowance and part was to be net.

9153. Then you have been inquiring very largely in regard to this matter about compounding in England. Can you tell us what are the allowances in that country?—I believe they come under the same statute as that which I have read to you, that when they are voluntary they are permissible up to 25 per cent., when compulsory they are limited to 15 per cent.

9154. As a matter of fact, what are they?—From 20 to 30 per cent. There are various authorities, and they vary in different places.

9155. We have had different accounts?—I believe you are having the Registrar of the County Council of London before you. He will no doubt give the detailed information.

9156. If he is coming, that will be all right?—I believe they all compound, except one single division of London represented by Mr Cleland.

9157. Do you consider it essential that an abatement be allowed and be fixed by the Bill, or should it not?—Upon that point I have no absolutely fixed opinion.

9158. The reason for putting the question is this: I think you said that would not allow any other person than the rating authorities to interfere in this matter?—Not the sheriffs.

9159. Now, suppose the Bill is passed, the rating authorities having the power to compel the landlord to pay the rates, would they not have it in their power just to take down the sums to the very lowest figure, 1 per cent., 2 per cent., or 3 per cent., although utterly inadequate?—Well, that is a position that ought not to arise.

9160. But we are dealing with human nature?—But the Bill does make provision for that.

9161. Let us just see where it does, please?—Perhaps you will allow me to add, Mr Binnie, that what I meant was that there should be a scale of allowances; but I should explain to the Committee that since this scale of allowances was drawn up, steps have been taken to include in the scope of the Bill the compounding of poor rates, and I admit at once that the addition of compounding in respect of poor rates involves a rather more liberal reduction to landlords than had been contemplated here. That is why my answers have been more hesitating on that point than they might have been. I was clear that there ought to be reasonable reductions in regard to police rates. I am now convinced compounding ought to apply to poor rates too. But the officials from the Parish Council were not very clear, I think.

9162. They were the very opposite?—The first that appeared was surely not so. I heard him. The police authorities gave you full information. The parochial did not. They said they were opposed to my Bill, because they wanted their rates compounded; and until I put this into the Bill, they would not give me much assistance. The schedule of allowances will require to be overhauled on that point mainly.

9163. To go back to the question, in the circumstances I have explained, do you not think it would be essential that a rate of allowances should be fixed by the Bill and not left to those whose interest it would be to reduce it to the very lowest figure?—Putting the matter as you do, I

Mr A. Cross. 21 Jan. 1907.

am inclined to think you are correct in that matter; that there must be a percentage provided by the Bill.

9164. And fixed?—It may be fixed variously for various localities.

9165. Have you seen the tables that were put in in regard to the recovery of monthly rates in Glasgow?—Yes.

9166. And during your last period, do you know how much the losses were under £10—about 26 per cent.?—I will assume that if you please.

9167. It is only fair, in connection with another answer, that you gave to say that 25·61 was the rate last year. The average for the last seven years is, as near as possible, 22 per cent.?—Yes; I take it from you.

9168. Now, it is only right that you should be reminded that that includes the sum allowed to poor occupants. They have not given us the figures to let us know how much they would deduct from the 25 per cent., but they have given us figures that it would leave at least 15 or 16 per cent. of irrecoverables from those who have been relieved from payment of rates. Now, on the same class you say you would allow on rents up to £7, but, under £10, 5 per cent. Even that allowance is not at all adequate when the loss is not less than 50 per cent.?—You have the benefit of figures, and cross-examination of officials who gave you the figures. I was obliged to take figures from a great many sources, and I had not the advantage of cross-examination. I said in my speech in the House of Commons, when I was permitted to move an amendment to the Address, about my Bill, that I thought the rates for collection would require to be increased. I think so still, but I am not possessed of detailed information which would enable me to say whether your figures and conclusions are absolutely right or wrong. I was guided by the fact that the Parliamentary powers given for compounding deduction in the Burgh Police Act of Scotland on rentals under £4 are only 10 per cent.

9169. The one justifies the other?—No; that was the data I acted upon. I have not heard serious objection. The Landlords' Association, so active in looking after their interests, have not raised the question that this is an inadequate allowance. They are exceedingly keen in scenting any grievance; and I took it that Mr M'Bain or his colleague would be down on such a grievance if it be the case that they are losing so much and only getting 10 per cent. against it.

9170. But this is a Bill which you introduced and tried to get advanced into law, and your proposal was that rents under £7 and under £10 should only have a deduction of 5 per cent.?—Probably before I proposed to deal with poor rates.

9171. But dealing with the question as it was then, the losses were 15 or 16 per cent.?—That is what you say. You would require to take the figures for Edinburgh and other places along with those, wouldn't you, Mr Binnie?

9172. Unless you have simple facts, actual facts in different parts of the country. Why not all through?—Because a Bill of this sort cannot be absolutely regarded as the last word in respect of every one of its details. The schedule is open to consideration; and I assume that if there is to be any error in calculation, or difficulty about proper allowances, the landlords will point it out in the committee stage in the House of Commons.

9173. And you are guided by one case in Glasgow; while if you had inquired, you would have found that in Liverpool, Bootle, Waterloo, Walsell, Portsmouth, Burton-on-Trent, Chester, and Barrow, which are very important centres, they give 30 per cent. on poor rates, and on the general rates they give in Liverpool 50 per cent.?—I don't hesitate to call these allowances an abuse.

9174. And then down to 20 per cent., and in some one or two cases 10 per cent. on rateable value?—Which, of course, makes a different deduction when counted on rental. This was not gone about carelessly as you would like me to admit, but with great deliberation. I was eager to put myself conscientiously safe and to consider every side.

9175. The safe side I quite admit?—I say so. I have never doubted but that the landlords, who have great influence in Parliament, who have prevented my Bill from being heard and debated for fifteen years, would be well able to bring before Parliament any reasons for larger deductions in my schedule.

9176. Therefore you did not?—Oh yes! I consulted with them. I cannot say they assented to these, but they were well aware of the provisions, and they did not make the objections you are making to the scale of deductions.

9177. You were right in saying they did not assent?—If they had been willing to consider the subject with me in earnest attempt to arrive at an equitable scale, I would have been most ready. Whatever can be shown to be reasonable allowances, 5, 10, or 15 per cent., I will be in favour of what is equitable.

9178. That is satisfactory, or even more?—Well, I don't suppose, for instance in Scotland, we charge the rates on empty houses.

Mr A. Cross. 21 Jan. 1907.

9179. Poor rates are paid?—In some localities. It is not always so; but not police rates.

9180. In regard to the difference between rent and assessed value in England, very frequently I think you find that the assessable value is about two-thirds of the rent?—Frequently, yes.

9181. Which is not, perhaps, a case exactly in point now, but it is an important thing from your point of view. Imperial taxes, income tax, and other things are assessed in Scotland, and the rent is entered in the valuation roll, less an allowance for taxes. Were you aware of that?—Is it for taxes or up-keep?

9182. Taxes?—I take it from you, sir. I cannot say that at the moment I remember, but there is a deduction. If it is for taxes, I take it from you. I had the idea that it was for up-keep, but I may be wrong.

9183. In England you say the assessed value means deduction for repairs?—No. The phrase that was used by the head official was that the valuation roll and the rateable values are absolutely confusing in England. There is no rule to be laid down. It varies with localities, and presents many anomalies.

9184. I certainly know that, and you are within the truth in stating again what you said. I know one man who is very largely assessed in England, and he put in a small sum for the cheapest house, to prevent people appealing against his assessments, and that is made the basis of Imperial taxes; while we in Scotland pay on our real rent; and I wish to commend that to the attention of some people who wish to keep us right?—Many valuation rolls are twenty years old and some are twenty-five years old.

9185. I know. In regard to ejectments, you say there should be no defence permissible except whether rent has been paid or not, and whether legal notice has been served or not. Would it not be quite reasonable to say that a tenant could not object to remove unless he consigned the rent due?—I scarcely follow the point.

9186. If a tenant is summoned to be ejected because there is a rent overdue, do you not think it would be reasonable that the rent due should be consigned in the court?—Or ejectment granted forthwith, you mean.

9187. Yes?—Cases were brought before my notice by the Burgh Court authorities, in which it was shown the landlord had departed from the original terms of his weekly let, and that the tenant, receiving consideration at one time, had presumed upon it at another; the Court thought that was a reasonable ground for granting him a little delay. That would be a case in which consignment of the rent could hardly be asked. If I had been your tenant, and you had been in the habit of giving me extension on my rent day, it is improper to evict me on some sudden occasion, unless I instantly conform to a regulation you have not been in the habit of enforcing.

9188. Would you recommend landlords never to give any consideration to the poverty of their tenants?—They will give the consideration which their own interest indicates and which their humanity will prompt. No law will make any difference in that.

9189. And you say that gives the person a right to insist on getting the same?—It does not give him a legal right, but the habit of that court has been to constitute a constructive right in that way.

9190. You say there are but few cases in which an officer has to be employed?—I believe that is correct.

9191. You inquired into that?—Yes.

9192. And what is your idea of a small number of cases?—Well, you have evidence of the Burgh Court officials and the Sheriff Court people.

9193. It amounts to 12,095 last year; is that a small number?—That is a considerable number, certainly. Surely that is not the number evicted by the Sheriff Officer?

9194. The number in which the officer had to be employed, the decree had to be employed?—Out of how many?

9195. That is not nearly the number of cases that were dealt with?—Are these Sheriff Court cases or Burgh Court cases?

9196. There were in the Burgh Court 10,970 where there were summons alone. There were 9917 where decree had been got, and then there were in the Sheriff Court 2078 where there were decrees, so that is not a small number?—My figures are quite different. They refer however, to the year ending 31st October 1902. There were supplied to the Glasgow Municipal Commission on the Housing of the Poor, and may be taken, says the Town Clerk, as an average—

Number of ejectments applied for, .	17,000
Answers lodged by tenants, . . .	6,900
Warrants for ejectment authorised, .	16,997
Warrants for ejectments extracted, .	2,251

I would say only 2200 went *a' l'outrance.*

Mr A. Cross. 21 Jan. 1907.

9197. Would you be surprised to hear that the loss to landlords in Glasgow for rent and ejectment amounted to about £10,000 a year?—With all respect I doubt if any man can possibly obtain the facts of these cases. You may assume it on a wrong basis. I doubt the amount; there are no means of ascertaining it.

9198. Of course—— ?—You get it on the basis that I heard argued here one day, that every case cost so much. But the witnesses did not explain the very important consideration that on one form of petition for ejectment there are six or eight names, and if you make the deductions necessary for that, you get a very different expense from what was put before this Commission.

9199. But, on the other hand, where the officer has to be employed, he has to be employed for each case separately?—I have here a document as an example.

9200. Is that not so?—Where an officer has to be employed, yes, in the end; but that occurs only in a very small number of cases, as I think I have made clear.

9201. Then this number of tenants does not cover the whole expense of the process, which simply means that one sum does for six tenants, but the serving of the summons on each tenant has to be paid for separately?—Yes.

9202. And so it is only a little saving on the drawing out of this paper, and putting on six names on one paper instead of six names on six different papers. That is all the saving?—The cost fluctuates according to the number of tenants on the page. If the number on the petition is six tenants, the cost is 2s. 6d. each. If the number be less it is somewhat increased. Only in the 2000 out of the 20,000 is the whole cost incurred. It is never more than 8s. or 8s. 6d. I made inquiries at twenty or thirty factors, and I am prepared to state that 8s. 6d. in every case would cover the entire expenditure, and this only on an extremely small proportion, as I have shown.

9203. The sum given where the decrees were given and extracted was 10s., that is only 1s. 6d. of difference; and before the Sheriff, 15s.; you don't speak about that?—I happened to put these figures before the Sheriff himself. He said they were erroneous, and sent me his clerk, who has offered to give evidence here.

9204. You say that is not correct?—I say so. The cost of serving a summons is 2s. 6d., but there are six names.

9205. But this was given as an average?—Mine is an average too.

9206. You say six names?—Yes; there are a great many where there are six names. House factors do their business in an economic way. Every factor has to evict a certain number, and he does it in lump when he possibly can.

9207. A factor may have only one?—He is a happy factor; that is all I have to say. It is not so bad as was represented, Mr Binnie. At the same time I would like to say that any reasonable methods by which that process could be assisted would have such support as I could give it.

9208. Would you tell me what difference it makes to a man when he loses a thousand pounds, and calls it loss of profit, and when he loses a thousand pounds and calls it capital. What difference does it make in his balance-sheet at the end of his year?—If he is a payer of income tax he discovers one difference.

9209. Would you kindly tell us what difference it makes?—If I were an accountant I would tell you he was a thousand pounds poorer in either case.

9210. I agree with you. Then you quote the Acts of the Agricultural Hypothec having been abolished. Am I not right in supposing that when that proposal came before Parliament a very strong argument in favour of it was this, that merchants supplying feeding-stuffs and manures were supplying a material which increased the value of the land, and yet the landlord having got his land increased in value by the use of those materials on the land took a preference over parties who had supplied the various materials that increased the value of his property?—Yes, that was true; but the persons who supplied those articles were not differently placed from those persons who had supplied carts and harness, boots or shoes, or any other such article.

9211. Was it at all equal in amount to the other?—It depends; implements are very costly things.

9212. And they are being got much more frequently?—Much more frequently than when you and I were younger. When a new implement comes into the market everybody must have it.

9213. Don't answer the question, if you like. The other has to supply to a larger extent?—Yes.

9214. I thought so. Then do you intend, or do you not intend, that landlords should pay rates on unlets?—I did not intend that. I was anxious, and I am still anxious, to make an arrangement by which they shall not be charged rents on unlet houses.

9215. If you re-introduce the Bill, will you make that clear?—I would be glad if it is thought desirable that it should be engrossed in the Bill. But that will affect the Schedule of allowances.

Mr A. Cross. 21 Jan. 1907.

9216. I wish your opinion?—I am not personally responsible for this Bill. It is backed by a great many members of Parliament. I act on the advice of a numerous committee in Glasgow. I give you my personal opinion, but I am only one of many. My personal opinion is in favour of not rating on empties, and I will do what I can to bring that about.

9217. Is there any reason known to you why allowances somewhat similar to those given in England, where rates are compounded, should not be allowed in Scotland? Allowances similar to those in England, in similar places like Manchester, Liverpool,—is there any reason?—Well, you said to me just now that one thing being done wrongly did not justify another being done wrongly. I would rather——

9218. You did not assent to that, I am sorry to say?—I would found on it now, if I concur in that principle. We are making a new departure in Scotland. We ought to do so equitably and reasonably on conditions really justified by the facts of the case. I was informed by various authorities in England that the allowances in England are excessive, that it has reached an abuse, and by a leading official in the Local Government Board that the scale of deductions should be amended.

9219. But in a case like this, where you are imposing on people the disagreeable duty of collecting rates, should the allowance not be a liberal one? If there is to be any mistake at all, should it not be on the side of liberality?—I should say they should be generously dealt with.

9220. Since you have said that, I need hardly ask the next question. It was this, in one place, page 8, you said, "The landlord is made, and he presently consents to be 'made, the means of collecting that part of the taxation 'which he recovers as part of his rent from the tenant 'perhaps without knowing it." When did landlords consent to that?—I have gone through this agitation for fifteen years, and I don't think I have met many, if any, landlords who appreciated the fact that they were collecting for the State. But they do it perfectly willingly, so you see that they are not aware of the burden laid on them. They don't experience it as a hardship.

9221. There is one thing. What is the meaning of no increase in cost in collecting taxes by collecting them through the landlord. What is a reasonable rate for a factor to get for factorage under £10?—I hear of charges of from 2 per cent to 3½ per cent.

9222. All under £10?—Well, I know some cases like that. In other cases they ask 4 per cent. In slum properties even perhaps 5 per cent., but not in general.

9223. If in Edinburgh we are told by a man that he paid his factor for collecting his weekly rents 10 per cent., what would you say to that?—I would say he was not managing his business very well.

9224. If it is very common to pay 5 per cent. in Glasgow, and if at present it only costs 12s. per cent. to collect municipal taxation, would not that involve a very considerable increase?—No; I think the rates would be collected by landlords and factors with hardly any appreciable increase of expense to them: one collection would serve both. Besides, a factor does much more for a landlord than merely collect the rent. Besides, I think the difficulties with arrears under the present system cause so much trouble to the factors, that they would be quite content with an easier system, which would avoid arrears, even if they had sums a little larger to collect when taxes are included in their collection.

9225. That would be another reason for dealing liberally with those?—Yes, I think so.

9226. You say the very poor should still be relieved, and you propose some plan by which the tenants should get some letter from the assessing authorities, and go to the landlord with it, and then that the landlord should specially arrange to charge a different rent, and they should go and claim the difference from the rating authorities. I think that was your proposal?—Yes, that is one way to do it.

9227. Do you think it is reasonable?—I don't think it would amount to much extra trouble.

9228. Take it for what it is worth. Is it reasonable to impose such a duty on the landlord as a part of his business?—I think it is. He must take some trouble with his tenants. It is not a great deal of trouble after all.

9229 How much difference will it make in his book-keeping?—His clerk may have to work longer on a few days in the year, but he will be saved the severe pressure he suffers from at present at the missive time. I don't attach much importance to that.

9230. (*Mr Howden.*) We have had a view put before us by various tenants of the great value of security of tenure, also the view that while the tenant would have security of tenure he would have the privilege of removing at the end of any month. What do you say to such a system as that?—That the tenant should be at liberty to break——?

9231. That he should have security of tenure. First, if

Mr A. Cross. 21 Jan. 1907.

he paid his rent; second, if he did not destroy the property; and, third, nor interfere with the liberty of the other tenants. Do you think a tenant under such circumstances should have security of tenure?—Well, I think such a tenant will enjoy security of tenure without an Act of Parliament.

9232. But there are some tenants who have come before us and complained that they don't think they will have that. We have had a plan put before us whereby security of tenure could be secured to the tenant on these three conditions?—By direct enactment? Surely such good tenants would have practically a secure tenure as long as they chose to remain under any landlords without any enactment.

9233. Yes. On condition that they pay rent, don't destroy property, and don't interfere with other tenants?—I don't think an Act of Parliament is required to secure fixity of tenure for good tenants. These are the conditions of good tenancy, and the landlord is not so forgetful of his own interests as to disturb a tenant like that.

9234. We had a modification of that view expressed by Provost Keith of Hamilton, who gave it that the landlord should only have the privilege of removing a tenant once in six months, whereas the tenant should have the privilege of moving once in the month?—With every desire to be considerate towards those whom you represent particularly, I could not think of such a proposal. What is sauce for the goose is sauce for the gander. The tenant must take equitable conditions, and the landlord must have the same as the tenant.

9235. But isn't it essential that he should not be disturbed in his tenure?—Supposing such disturbance took place frequently, and for political reasons, or such-like reason, there might be a cause shown for interference, as there was in Ireland; but as I look upon the situation in this country I cannot imagine any circumstances that would justify Parliament interfering in the circumstances you have put.

9236. In the event, say, of a trade dispute?—It is a difficulty. If it were so serious or frequent, I would consider what justification the law would have for interfering.

9237. But we have had evidence that it is serious?—I have no doubt it has occurred, but not enough in my opinion to warrant an Act of Parliament. I cannot see my way to a proposition of that sort, I am afraid.

9238. To come back to your optional clause. Suppose the city of Glasgow adopted your Bill, and the burgh of Partick did not, which at present seems very likely?—No; if the Partick Town Councillors don't adopt the Bill, I think they will lose their seats.

9239. Would what I have suggested not cause a great deal of confusion?—No, I don't think so. It will make Partick a less desirable place for a workman to reside in; but if a workman gets to Partick he will vote for a representative who will support the acceptance of the provisions of my Bill, so it will come right in time.

9240. It may be essential that a man should reside in Partick?—Then he will vote for a Councillor who will support the Bill, and use his influence to obtain its acceptance in Partick.

9241. This, however, to the exclusion of other things, which may be of some importance in municipal affairs?—A man's vote is determined by a great many things. I make no doubt working men in Partick are similar to those in Glasgow. When they see the advantage of this Bill they will insist on the authorities giving them the benefit of it. I think the chances are greater of this Bill passing into law and obtaining the advantages we seek to obtain with the optional clause, than without the optional clause, because the places that don't desire it have to be taken into account as much as the places that do, and it is not desirable to thrust it on the places that don't want it.

9242. We have been told that the optional clause in the Bill is absurd?—I don't read it in that way.

9243. Both landlords and tenants are agreed on that point?—The landlords may say so, because they wish to discredit the Bill. The tenants may say so, because they are determined to have the Bill, and so they want no optional clause which may prevent it. They want it, option or no option.

9244. Then in regard to the limit of rental you propose to fix, you now say £20 all over. If this principle of shorter lets works out well with the rents under £20, is there any reason why it should not with rents over £20?—There is none. My only answer is, that tenants over £20 are more independent than those below £20, and are better able to look after their own interests; and if those below £20 obtain these benefits by legal enactment, those above £20 will be stirred up to make a determined effort to get it on their own initiative.

9245. Would you not be prepared to extend that Bill to all?—I would be delighted, if I had not to consider the opposition of the landlords. I think it would be an advantage with much higher rents.

9246. You speak of the advantage it would give to the building trade. The limitation you have placed in regard to rental is going to take away that advantage?—Every limitation placed on this Bill decreases the advantages to be obtained from it. I would be eager to plead with the Committee even to raise the rental. I have felt the effect on the compounding clause. That did not impress itself so much on my mind before. What my supporters believed when talking about £20 was the net rent presently chargeable. If compounding is to become the law, it means that that will be reducing the £20 to something like £16, which is not what I intended at all.

9247. It may be information to you, but in the Park Ward of Glasgow the Ward Committee have petitioned in favour of shorter lets, and the majority of people in that ward stay in houses over that rental?—I believe you are right. I live in that ward myself.

9248. They evidently wish shorter lets; is there any reason why they should be deprived?—If this Committee will help us the length of £20, fate and providence will look after the rest.

9249. (*Mr Dobbie.*) There is one reply you gave with reference to contracting out. In reply to Mr Cox you said you would not object to tenant and landlord making an agreement for, say, a yearly tenancy on stamped paper and before witnesses. Does that mean the whole provisions of the Bill might, by a formal contract, be departed from?—Certainly not. My reply would be this, if any man is so determined to obtain a yearly tenure, or so oblivious to the benefits of this Bill that he is willing to execute a formal deed in presence of witnesses, depriving himself of the use of it, I was willing in former Bills to exempt him from the Bill, and thought of doing so still.

9250. But in Edinburgh we have stamped missives for nearly all houses between £10 and £20?—When I say a probative lease, I don't mean a stamped missive. What I have in my mind is a legal document, drawn on formidable paper, extending for several pages, and witnessed—such a formal document as will bring to the mind of the man who is asked to sign it a feeling of responsibility. He will think.

9251. What principle are you trying to press. Take an ordinary missive, properly stamped and signed, you would say that that was not to be a binding contract?—That would be my intention.

9252. But if the stamped agreement took a more formidable shape, and extended for several sheets—with formal witnessing—then it would be binding?—Yes. I have perhaps an exceedingly erroneous vulgar view of that position, but I believe that vulgar view will be shared by a good many persons. If a landlord comes in with a legal formal document of this character to sign, the tenant reads it, and probably hesitates, and does not sign it. What happens now is, that a man commits himself, and is not aware of it until he finds it to his disadvantage. If the deed extends for several pages, it opens his eyes to the necessity of considering. But I must make very clear the principle we conceive necessary to be enacted. If there be any possibility of evasion through a written probative deed, I must make it inoperative unless for two years or longer. If you tell me that the distinction existing in my mind between a missive and a written probative deed is not one that can be maintained from a legal point of view, I must drop it.

9253. You think a period of two years may be given?—I think that may be given without fear of defeating the purpose of the Bill through the exemption.

9254. That is to say, as distinguished from clause 5 of your proposed Bill of 1898, which was repeated in 1900, and which runs:—"This Act shall not apply to any dwelling house which is let by a written lease signed both by landlord and tenant in presence of two witnesses according to the law applicable to probative deeds in Scotland." I suppose you see now that if a clause of that kind were introduced, contracting out could be done so as to defeat the Bill?—Yes; from what has passed to-day I am satisfied that is a clause that could be used to defeat the whole purpose of the Bill. May I say with regard to your proposal to make it illegal to let for longer than six months, that such might prove no remedy for the difficulty we are facing. I see it would be easy to adjust missives, make them six-monthly, and insist upon their being signed at six-monthly periods, just as now at twelve-monthly periods, and to attempt a remedy in that direction might prove no remedy at all.

Mr J. Paterson and Mr E. M. Brodie. 21 Jan. 1907.

Mr James Paterson, Greenock, and Mr E. Mortimer Brodie, Port-Glasgow, called and examined.

Mr J. Paterson and Mr E. M. Brodie. 21 Jan. 1907.

9255. (*Mr Dobbie to Mr Paterson.*) What are you?—I am an Accountant and House Factor in Greenock.

9256. You are a partner of Paterson & Anderson, Accountants and House Factors, 13 Hamilton Street, Greenock?—Yes.

9257. What office do you hold?—I am Secretary of the Scottish Branch of the Society of Accountants and Auditors, incorporated in 1885, and also Secretary of the Greenock Traders' Association, Greenock and District Investment Building Society, Greenock Building Co., Ltd., Clydesdale Glass Insurance Co., Ltd. I am also a Member and ex-Chairman of the Parish Council of Greenock.

9258. I understand the house factors of Greenock have been discussing this question, and have held various meetings, and that you appear for them here to-day?—Yes.

9259. Is the evidence you have to give evidence authorised and approved of by them?—It is.

9260. We had some evidence from Greenock before in favour of some change in the law of house-letting. What is your view in regard to opinion in Greenock?—There has been no agitation on the question of shorter lets. About seven or eight years ago there was a Tenants' Defence Association, which dealt for a short time with the missive question, and endeavoured to arouse public opinion, but there was no substance in the complaints, and the Association has not been heard of since.

9261. I think one of the Town Councillors of Greenock, a Mr Bennett, gave evidence before the Commission?—He did.

9262. Is he still a Town Councillor?—Yes, he is a Magistrate.

9263. And I think he rather spoke to the view that in his ward at least there was some public feeling in favour of a change?—Bailie Bennett has been the only member of the Town Council who has tackled this question during his election campaigns. With that exception, I am not aware of any interest being taken in Greenock outside of his ward. I was present at the only meeting at which it was referred to at length, and I cannot say that the meeting, which was a very crowded one, appeared to be enthusiastic in the matter.

9264. The Bill has different rates for different towns, and the rate proposed in Glasgow is £20, and in Greenock, I think, £16. Does Greenock differ in any way from Glasgow, either in regard to necessity for any Bill or in regard to the rents?—Greenock, in my opinion, differs entirely from Glasgow in regard to this question: Out of 14,681 inhabited houses, we have not more than an average in recent years of 160 vacant houses. We are exceptional, possibly, in that respect; of these inhabited houses, approximately 4296 are let monthly.

9265. What is the population of Greenock?—It is estimated at 70,000 inhabitants at the present time.

9265*a*. Do you think there are sufficient monthly lets to satisfy the demand in Greenock just now?—Well, the experience in Greenock has been that we have been underhoused, but if a Bill of this kind had been in force it would increase the difficulty. Houses in Greenock practically represent the necessities of the inhabitants at the moment; and when any of the houses fall to be sublet—and according to our calculation not more than 1 per cent. of the houses which would be affected by this Bill would fall to be sublet in one year—there is no difficulty in getting these houses sublet at once.

9266. What is the staple industry in Greenock?—Shipbuilding and sugar-refining.

9267. Is the population shifting, as a rule. Do the people move much from the one town to the other?—Not unless there is trade disturbance, such as there was at the end of last year with the strike. As a rule, the population is fairly stationary.

9268. We have been told that the grievance which it is sought to remedy has a disadvantage of having to take a house for sixteen months. Have you, in your experience, seen many cases of tenants who required or desired to leave between terms?—We have never had more than a little over 1 per cent. in my experience of seventeen years. My present firm's experience of eleven years confirms that. We have never had more than rather over 1 per cent. of removals during the year, and we have had no difficulty whatever in getting the houses let, and we are not aware of any cases of hardship. Greenock may be exceptional; but we never have any difficulty in dealing with the tenants who wish to get away, and no difficulty has ever been raised by any landlord or factor within my personal knowledge.

9269. What do you do? Do you make a charge for subletting?—We make a charge for advertising the house; that is we merely charge the cost of advertising. In some cases it may be 6d. or 1s. for an advertisement. In many cases we don't require to do that, because the moment a tenant is known to wish to remove, there are others who may desire his house.

9270. Greenock is more favourably placed in the sense that there is no over-building?—There has been none for a good many years in Greenock.

9271. What is the present custom in regard to letting? Are yearly lets common?—Well, in lets up to £8 I think the majority of houses are let monthly: I believe in some cases quarterly.

9272. Above £8?—Mostly let yearly, and payable quarterly or half-yearly.

9273. Do you think that if by Act of Parliament short lets became imperative, that would affect the value of property as an investment?—There is always a prejudice among investors against tenements with monthly lets. It would appeal to an entirely different class of investors from our experience as at present.

9274. Is that not merely because at present only inferior tenements are let monthly to an inferior class of tenants?—That may be in some cases.

9275. If the custom of short lets was universal, would that sentiment not simply die away?—It probably would die away.

9276. Have you any evidence to give in regard to the views of the tenants themselves from their standpoint. What do you think their views are on the question?—I am not authorised to give the tenants' view, but I have been mixing with working-class people in one way or another for a good many years, and I have never heard the slightest desire for a change of this kind. In fact, our experience has been that where a new proprietor has purchased property, and endeavoured to change half-yearly lets into quarterly, the tenants objected to that as being a lowering of the status. Paying rents at more frequent intervals was considered a reflection upon their ability to pay.

9277. It may be said in the same way that that also arose from the same sentiment?—That is so.

9278. Monthly tenants at present are the poorest class of occupants. However, I suppose you would say that there would require to be an extra charge made for collecting rents for any short lets?—That is so. In Greenock we have a local Act of Parliament, and on lets up to £5 the rates are charged against the landlord. Rents from £5 to £8, if let for less than a year, are also payable by the landlord; and in those cases the landlord gets 20 per cent. of a deduction from the rates on lets from £5 to £8, and 25 per cent. on the rates up to £5.

9279. Under what Act is that?—Greenock Police Act, 1877.

9280. These are burgh rates?—Yes; ordinary police, health, and other assessments.

9281. Parish Council rates are not included there?—No.

9282. That 20 per cent. is allowed in respect of rates paid by the owners?—Yes, from £5 to £8.

9283. Then is that 20 per cent. on the tenant's share of rates, or upon the whole rates payable from the proprietor?—Upon the specific rents, not upon the whole rates or the property, but upon the specific rents from £5 to £8.

9284. The point is rather one Mr Binnie dealt with earlier. The landlord has a certain liability for rates and the tenant in most cases. My question was, does the landlord get 20 per cent. off the whole of the rates payable in respect of that property?—No; just upon the rents from £5 to £8. Supposing they were over £8 he would not get a reduction.

9285. But between £5 and £8, is it upon the tenant's taxes or upon the landlord's, or upon both?—It is upon the occupier's rates.

9286. Only?—Yes.

9287. Under that Act are there any burgh rates payable by the landlord between £5 and £8?—Yes; from £5 to £8 the landlord is assessed as owner as well.

9288. (*To Mr Brodie.*) Is this 20 per cent. allowed on purely the landlord's rates?—No; on rents of £5 and under, where the proprietor is responsible for tenant's assessments. On such tenant's assessments 25 per cent. is allowed; but on tenant's assessments where the subjects are let for a less period than a year, where the proprietor is responsible for the tenant's assessments, 20 per cent. is allowed on rents above £5 up to £8. But, of course, in addition to that they pay on the full rental as proprietor.

9289. (*Mr Binnie to Mr Brodie.*) The deduction is only on the tenant's part of the assessments?—On the tenant's assessment for which the proprietors are responsible.

9290. The landlords pay in full, without any deduction?—As owners, yes.

9291. (*Mr Dobbie to Mr Paterson.*) I suppose you cannot

tell us upon what basis these abatements were fixed?—No; the Act goes back to 1877. I hand you a schedule which may clear up the matter.

9292. Can you tell us what is the factor's commission for collecting monthly lets as against, say, half-yearly ones?—Monthly rents, as a rule, are 5 per cent.

9293. And half-yearly?—For rents quarterly and half-yearly it varies from 2½ per cent. to 4 per cent.

9294. Under your Private Act, does the Corporation have the option of assessing the owner, or is it statutory that the owner is to pay between £5 and £8?—My recollection is that it is optional.

9295. On the part of the Corporation?—Yes; but, of course, they exercise the option. It is natural that they should take the easier way of collecting their rates.

9296. In spite of giving 25 per cent.?—Yes; they recognise that a considerable loss is made by the owner. It was estimated at that time that there is considerable loss on monthly houses, so they give us this deduction.

9297. Your view is that, having the option to assess the landlord and give 25 per cent., they prefer that to collecting direct?—Undoubtedly; it is much easier for them.

9298. You have been over Mr Cross's Bill?—I have.

9299. No doubt you have seen that scale which is attached to it. Have you any views on the proposals in that scale?—My view is that the scale is altogether inadequate so far as houses under £8 are concerned, or even up to £10, if the lets are made shorter than at present.

9300. Can you tell us, from your experience, whether in Greenock, you having these allowances of 20 per cent. in one case and 25 per cent. in the other, as a matter of fact, proprietors make any profit through this compounding?—I don't think they make any profit. In purchasing property for clients we always calculate the net rental. We don't take advantage of the gross amount. Further than that, the experience is that you do not always get the full amount added on to the rent.

9301. How do you do in Greenock with that arrangement? Do you get a slump fixed sum, and recover that from the tenant without distinguishing the rent?—We don't distinguish rent from the taxes. The house that was let at 11s. a month might possibly be let at 11s. 8d. to cover the whole of the rates and any risk of loss.

9302. One slump sum payable by the tenant and bargained for with him?—That is so. He does not feel that he is paying the taxes, and the result is that he ignores the question of taxation and representation altogether.

9303. Supposing in Greenock the taxes were raised 2d. in the £, when would that react on these smaller tenants so as to result in the factors raising the rents?—In point of fact, the taxes have been raised in Greenock, and no increase, in my experience, has been put upon the smaller rents. Increases have been made on rents from £9 to £10, where they have been reduced a number of years ago, owing to dull trade, but no increase corresponding to the amount of taxes has been put on the lets of smaller houses, with very few exceptions.

9304. Does that arise from the precaution taken from the start to make up an allowance in fixing this slump sum?—With small lets we cannot ask more than a single amount from that class of people.

9305. I suppose in Greenock you have less trouble in getting your rents, looking to the demand for houses, than in most other towns?—I think so. I have very few unlet houses, and therefore we can select our tenants a little better, and I think on the average we have less difficulty in getting our rents.

9306. What would you put a typical working man's rent at living in Greenock? Take a typical sum?—The great majority of tradesmen live in houses from £8 to £12. Very few ordinary working men live in houses over that.

9307. Are you inclined to believe that £16 is too high a limit to apply to Greenock?—As applied to Greenock, it would.

9308. Are rents dearer in Greenock than in Glasgow?—I think they are cheaper.

9309. What is the view of your Association and the bodies you represent upon the general principle of compounding?—We object to being made the tax collectors in the first instance. We think that the taxing authorities should collect their rates from the persons whom they assess, at their source.

9310. We have had it suggested to us that any inconvenience being caused by the rates being paid in one sum would be got over if the rating authorities collect, say, quarterly or half-yearly?—I think that would be impracticable.

9311. Another suggestion is that the present assessment arrangement might continue if payments be taken by instalments. Have you any views upon that?—I think that a reasonable proposal.

9312. Do you think that would meet any inconvenience without necessitating the making the proprietors rate collectors?—In point of fact that is carried out in Greenock to a certain extent by the assessing authorities. They don't object to take rates by instalments from poor people who are not able to pay in one sum. They allow discretion. I don't speak of poor and school rates, just burgh assessments.

9313. Have you any views on the subject as to keeping tenants in ignorance of the exact amount which they are being asked to pay for municipal government?—I think, as a matter of public policy, if a person knows exactly what he is contributing towards municipal expenditure, he is far more likely to take a direct interest in that expenditure than if he pays the same as rent including taxes, without having the matter brought specifically before him. My experience of municipal meetings is that the class whose lets are paid by the landlords are very seldom the class who attend those meetings; therefore, I think it a mistake, as a matter of public policy, that a person should not be made directly aware of the amount he contributes.

9314. You have told us you think this scale is much too inadequate. Have you any suggestion to make as to what might be an adequate allowance, assuming that compounding is enacted?—In Greenock we do not think we are getting too much a deduction in getting 20 per cent. off these rates.

9315. That is up to £8?—Yes.

9316. You would not have the sum less between £8 and £10, say?—No, because we would have the additional labour.

9317. What do you suggest as a reasonable allowance between these two sums, £8 and £16, 10 per cent.?—I would think at least 10 per cent., certainly not 7½ per cent. or 5 per cent., as stated in the Bill.

9318. Then, as you see, the Bill before us is to be optional in its application. Assuming that the Committee reported that in Glasgow, for example, there exists a strong feeling for some change in the direction of this Bill, would you favour any Bill that requires to meet the Glasgow conditions being also applied to Greenock?—My own view is, that if a Bill of this kind were passed, it should be made experimental in certain districts for a year or two. My Association objected to the optional clause of this Bill, and I am stating their views. I do think that the optional clause in the Bill will cause considerable confusion. In the industrial centres at any rate, not speaking of the country or coast districts, it should be compulsory.

9319. Your Association are at one with other factors in the country in quite recognising that the period between letting day and the warning out day might be reasonably shortened?—That in our view is the only real grievance of this matter.

9320. What would you suggest in the direction of removing that grievance?—My view is that, with the co-operations of the municipalities, an arrangement might be come to in all the towns by which the missives should not be issued before 1st March and be returnable in fourteen days.

9321. Do you think, from what you have heard and seen in Greenock, that if that reform indicated there was carried out, that would remedy any substantial grievance which exists in regard to the letting?—I think it would. The only question with us is the missive question, caused generally by the tenants themselves, desiring to take or retake their houses at an earlier date.

9322. (*To Mr Brodie.*) Do you concur generally in what Mr Paterson has told us?—Generally. I have taken a note of one or two points. Perhaps, in the first instance, I might explain that, although representing the Greenock Landlords and House Factors' Association to-day, I am also representing a good number of proprietors in Port-Glasgow, and in that way I would like to point out that we in Port-Glasgow are governed under the Burgh Police Acts. We have no Act of our own, so that the question affects us differently from Greenock.

9323. Is Port-Glasgow a police burgh?—Yes.

9324. And has no private Act?—No. At the same time we factor a lot of property in Greenock. While concurring generally with Mr Paterson, I don't agree in one or two points, not that we have any serious differences. You asked him a question about property, from the investor's point of view, where the tenants were monthly. Well, I would like to supplement what Mr Paterson said in that way. If you make monthly lets or shorter lets compulsory, there is no doubt about it that you will frighten investors to some extent, because the more frequent the removals the greater damage to the property. The repairs bill becomes a very serious matter; and no matter what class of property and the value of it may be, whether old or new, if the lets are short, that will be the result. I have no hesitation in saying that.

9325. Do you think that one result of the Bill will be to increase the number of removals?—Undoubtedly.

9326. Why?—Well, when people know they can get a thing they usually want it, and it is surprising to know in how many cases the desire for removal is a mere caprice, and there are cases where tenants spot clean houses and want to go there to save them trouble.

9327. So you would continue the present law, in order to prevent tenants who wish to remove doing so, on the view that they don't know what is good for them?—No. You will observe in my *précis* that in two directions I show how improvements in the relations between landlords and tenants can be affected.

9328. Tell me what these two are?—I admit in the first instance that the system of letting so early in the year is not beneficial to either party, and that if the first week of March were adopted, I think the grievance would be met.

9329. That is for sending out missives?—Making the letting day any day within the first week of March. The notices can be sent out perhaps a week or ten days prior to that. You doubtless are aware of the practice that is common now, instead of making every tenant sign a missive each year, you send them a notice to call and retake, or give up the house for the ensuing year, and that is done before two witnesses. It saves stamp-duty.

9330. That is arles?—Even the arles fee is not often taken. At the same time, I think tenants have an undue grievance.

9331. You shorten the forty days which are at present required for notice to be collected?—The first week of March is a satisfactory time for letting. I was keeping in view that the existing law as to the warning out of a yearly tenant might remain. Forty days is long enough, because, as a matter of fact, tenants know for a long time whether they are going to leave their houses or not.

9332. Have you any other point?—There is one thing, although Mr Paterson has not been specially charged with it. The members of the Association and Proprietors in Port-Glasgow, from whom I have distinct authority to speak before this Commission, agree with me that something might be done in the way of shorter lets up to lets of £12. I say, speaking from my own experience, that houses up to £12, if let monthly, would remove the grievance complained of. But this should not be made compulsory until the Burgh Police Acts have been amended, so that under no circumstances will proprietors be liable for tenant's assessments. I would hazard the opinion that if this question of payment of tenant's assessments was equitably settled, as I have indicated, the question of short period lets would almost settle itself. My firm has always recognised the hardship to a tenant with a yearly house who finds it necessary to leave the town before his set is exhausted, and we have rarely any difficulty in arranging to take the house off his hands. We always make it a condition, however, that his assessments are paid; as if not, the community would lose, and the proprietor might be held liable for the loss.

9333. Assuming that short lets were up to £12, you would still have the authorities collector of rates?—Yes, I am strong on that.

9334. We have been told that for certain considerations it is impossible, even with half-yearly terms?—I meet that by saying that now the principle of deduction from tenant's assessments payable by landlords is conceded. If you have to give 25 per cent.—I contradict Mr Paterson on this point. I go further than 10 per cent., speaking from actual experience. If you have to give 25 per cent. as a deduction from the tenant's taxes, what would the loss be to communities if they undertook to gather in all the monthly tenants' assessments themselves? Would they lose one-fourth?—I don't believe it.

9335. Do you suggest 25 per cent. should be allowed up to £12?—Yes.

9336. Assuming compounding?—Assuming these shorter lets for all houses up to £12 becomes compulsory.

9337. Also assuming compounding becomes compulsory. Are you against compounding?—Yes.

9338. On principle?—I think it is mixing up interests.

9339. Is it your position that while you are against compounding, if there was to be compounding with short lets, that 25 per cent. should be the allowance to the landlord?—Yes; to cover the cost of collection, loss and empties—I think these two cover the items.

9340. Under the General Burgh Police Act, where you add the rates at present on houses under £5 and also for short lets under a year, is there no allowances given?—Under the General Statute rents of £4 and rents of £4 and under, there is a deduction of 10 per cent., but in connection with that reply I would like to point out that £4 rents and under are becoming very rare nowadays, because so many old houses are being demolished.

9341. Then under the General Burgh Police Act, for short lets less than a year, what allowance is made?—None at all. There is another point. The question was asked Mr Paterson as to keeping the tenants informed as to what rates he is paying. I know the practice of my firm is this,—we have shown it to the assessor prior to making our valuation returns. We return the net rental of the property, that is to say, the rental on which a purchase price would be based. The gross rent is that net rent plus, say stair lights, or water rate, or in cases where the let is for a less period than a year, the burgh assessments; and I think it is pretty generally the fact—I certainly speak for my own firm—that we add as nearly as possible to the last ½d. the exact amount. No proprietor really wishes to make a profit in that way.

Mr J. Paterson and Mr E. M. Brodie.
21 Jan. 1907.

9342. What appears on the assessment roll?—The actual rent.

9343. What do you call the actual rent?—Take a house rented at £10, and perhaps the gross rent taken from the tenant is £10, 10s. That 10s. may be to cover assessments and stair lights, but he is only assessed on the £10. So also is the proprietor.

9344. You return your valuation at £10, 10s., and explain that the 10s. is for water rate, etc.?—Whatever may be added.

9345. And you are assessed properly, of course, on the actual rent of £10?—Yes.

9346. (*Mr Cox to Mr Paterson.*) In dealing with tenants you said that you heard no expression in favour of change?—That is so.

9347. Is there any very strong desire on the part of tenants not to change?—I cannot say there is any very strong desire; I am not aware of it. I have spoken to a number of workmen with whom I have come in contact with, and they all seem, without exception, to resent the idea of being put upon a monthly basis rather than the yearly set, and they still more objected to having their taxes added to their rent when they knew the proprietor was to get a deduction of 25 per cent. for their collection. That has been the view in every instance in which I have spoken to the men.

9348. In speaking to your house factors, they may say one thing, but they come here in their multitudes and say quite the opposite, and with the exception of house owners and factors we have had nobody taking the opposite side. If there is any general desire on the part of working men not to change, why have they not come here to say so?—I presume the other side has been organised. There is an organisation.

9349. It would have been possible to organise your side too?—As a factor, managing other people's property, I think it would not be right for me to get up an agitation of that kind.

9350. If it was for the benefit of the owners that you were working?—I can see the point; but I am satisfied, personally, that a very large proportion of working men, when they realise that the taxes are to be added to the rent and that their half-yearly or quarterly payments are to be converted into monthly or weekly payments, will object very keenly.

9351. Do you think shorter lets would raise or lower rents?—My view is that it will raise rents.

9352. That is also for the benefit of the owners?—I don't think so, because the owner will have more repairs; he will have a loss. On rates he will require to pay more commission. He will have a constantly fluctuating tenancy in several of the larger towns, and every change of occupancy means an increase of the cost of management of the property and of repairs.

9353. (*Sir J. Stirling-Maxwell to Mr Paterson.*) Can you tell us whether the 20 per cent. rate on rates collected by landlords is fixed by the Greenock Act?—I think it is, but I cannot recollect the terms of the Act of Parliament itself.

9354. (*Mr Brodie.*) The deduction is statutory; so also is the rate of deduction.

9355. (*Sir J. Stirling-Maxwell to Mr Paterson.*) You have not the Act here?—No.

9356. You will let us know that exactly?—Yes; I will give you an extract from 1877 Act of Greenock. I will see that the information is conveyed.

9357. Tell me what the police rates actually have been increased by?—We have had a new rate for electricity purposes, and as far as my experience goes we have added only in a very few instances any additional rate in Greenock.

9358. How much was the actual increase of rate?—I think 4d. per £. We have had several increases.

9359. How much would the increase come to on a £7 house?—The increase of rates for the last few years in Greenock will amount to about 6d. per £, between public health and other rates.

9360. That is 3s. or 4s.?—Yes. You cannot add very conveniently in practice, it is all right in theory, an increase of 2s. or 3s. per annum

9361. At what point would it be added,—if it was 10s.?—Yes, I think it would. The more you increase the rates,

the easier it is to add something that would be an appreciable amount, but you don't like to add 2s. or 3s. in the year to a man's rating. In practice it is seldom done. You either add 5s. or nothing at all.

9362. Supposing the plan were to present to the tenant a Bill in which rent and rates were shown separately, I suppose in that case, when the rates went up, his payment would go up?—That is so, and his rates would go up. When you put them in a separate column in his pass-book you would add the aggregate amount, but then it would never be suggested that the landlord is to calculate out to all his tenants in a large factorage the distinctive amounts.

9363. I was thinking of a continuance of the present system. At present each tenant has his rate put down on his sheet. All the factor would have to do is to keep it up?—There would be no difficulty in putting these separate amounts in the pass-book.

9364. There would be no difficulty to the landlord?—Not the slightest; it would be just a matter of labour.

9365. And he would have the advantage of being able to recover any small increases which could be conveniently added?—Yes, that is so; but I am afraid a great many tenants would make objection. They would offer you the rent and refuse to pay the taxes, just as now they sometimes pay the poor rates, and refuse to pay school rates, in order to get their votes. I think the duty of recovering rates should not be put upon the landlord. If there is a balance of taxes, whatever it might be, the landlord would require to sue for it, just as if it were part of the rent, but that is a great burden to put upon the landlord. There is an odium attached to the collecting of rates by summonsing; and, another thing, the Corporation or the Parish Council can get a summary warrant, while the landlord would require to go to the Small Debt Court and get an ordinary decree. The expense would be very considerable in that case to the landlord.

9366. (*To Mr Brodie.*) You think tenants would move, if the period of let were made shorter, by caprice? Do you find that the tenants who now take their houses on the monthly system move much more than other tenants?—Yes, that is my experience.

9367. By caprice?—Yes, the desire for change.

9368. Does not the expense of moving deter them?—Monthly tenants just now of course have not much in the way of furniture, so that it is an easy matter for them to remove, and it is a well-known fact that such tenants as are monthly just now are very fond of removing. It is really no trouble to them.

9369. But isn't that due to the class they belong to? Would tenants paying larger rents, with more furniture, be equally liable to remove?—There would not be the same amount of removing, but it is a question of degree merely.

9370. (*Mr Binnie to Mr Brodie.*) You say that the 20 per cent. allowed off tenants' assessments payable to the landlords for houses let for less periods than a year is now not always sufficient to cover cost of collection and loss. You are speaking from actual experience. You have looked into the matter, and find that in some of your properties it does not do it?—I have tested it, and that has been my experience. To satisfy myself that my statement was correct, I have gone into the question more closely, and I find that only in a very few of the properties factored by us in Greenock is the deduction more than sufficient for the loss and cost of collection.

9371. And taking that all over, is it sufficient or insufficient?—It is insufficient, barely sufficient.

9372. All over?—Yes.

9373. Then that embraces this other question, what number of such houses do you factor in Greenock?—I did not prepare a note, but I could tell you in a moment.

9374. Just give us a round figure?—About twenty tenements.

9375. And this remark in regard to rates applies to these tenements taken all over?—Yes.

9376. In Port-Glasgow the landlords are responsible for the rates on all houses to £4, and for those above that which are let for less periods than a year?—Yes.

9377. They get 10 per cent. for £4 and under?—Yes, but nothing for all other cases.

9378. In compounding in Greenock, when you get off 25 per cent. and 20 per cent., do you pay on the whole rental whether it is let or not, or do you pay only on the portion that is let?—On the whole rental, whether let or not.

9379. And if there is an unlet you have to pay on that?—Yes, all the same.

9380. (*Mr Howden to Mr Brodie.*) How many short lets have you in Port-Glasgow?—I did not prepare figures, but we have quite a number. In rents under £12 limit I have admitted something might be done. We have found it necessary among the very poor to meet that in this way, because the very poor have to reside in old property, and if their houses are damp or dark, they naturally want to change out of them to houses that are somewhat better in these respects, and at about the same rents. We try to study their interests in that, and all such houses are monthly.

9381. If you do not get any commission from the authorities for the collection of rates, how do you pay yourselves at the present time?—We only in some instances just now charge the proprietor a commission, because in some cases the amount of loss to a proprietor is so serious that we take all the trouble, and that amounts to a good deal, in collecting such assessments free of charge to the proprietor.

9382. But you don't get anything from the town?—Nothing.

9383. So that, unless you are getting something extra to cover that, you are at a decided loss in the meantime?—That is so. The proprietors suffer very much, and that applies to all towns acting under a general statute.

9384. Have you done anything to get that altered?—No.

9385. Surely it is not very pressing if an intelligent body of men cannot do that?—Well, to begin with, you will find proprietors and other people who invest money are not terribly clannish. They are very apt to do things on their own account. But it is an undoubted grievance, but under a general statute, they give up in despair. They see there is no hope of its mending itself.

9386. (*To Mr Paterson.*) Have you a system of cautioners either in Greenock or Port-Glasgow?—We get cautioners occasionally. We try to get forehand rent as often as we can.

9387. But where you get forehand rent, you don't insist on the cautioner?—No, that is so. The cautioner is an exception, the forehand is the rule in most houses; but it generally drops off after the first or second quarter.

9388. I think you told us you don't charge a tenant anything for subletting except putting up the board?—Except for advertising.

9389. Or putting up a board?—As a rule that is so.

9390. Don't you do exactly as factors do in Glasgow, charge a percentage?—No.

9391. Is that only done in Glasgow?—It is not done in Greenock.

(*Mr Brodie.*) It is not done in other towns?

(*Mr Paterson.*) It is, as a rule, only the outlays in the way of advertising in the way of putting up a board that we charge.

9392. Is the rate of hypothec of much value in the lower class of property?—No, with smaller rents it is of no appreciable value.

9393. But do you consider it becomes of some value as you go higher?—Well, from £8 upwards it is of some value.

9394. If you have occasion to put it into operation, how does it work out?—I think we have only put it into operation once or twice during the eleven years. We try to avoid it. It is a thing we only do where some question of character is involved as well as loss of rent.

9395. You would not put it into operation against a decent tenant?—No, we have never done it.

9396. Only in the case of very bad tenants?—Some cases where we were specially anxious to get rid of the tenant or to get our rent paid and be done with the people.

9397. If you had a process of ejectment, that would allow you to get rid of such tenants?—The cases have only been two or three in eleven years in the experience of my present firm, so I think it is hardly worth while asking a general rule for the sake of two or three cases—putting 10,000 people under monthly lets in Greenock for the sake of two or three isolated cases.

9398. How many members have you in your Association?—All the house factors and accountants were present or represented at the meeting which we had.

9899. How many would you say?—About a dozen.

9400. (*To Mr Brodie.*) Are you in the same Association as Mr Paterson?—Yes, but in addition to the Association I have the authority of about a dozen proprietors in Port-Glasgow, one of whom owns in Port-Glasgow about £30,000 or £40,000 worth of property.

9401. (*To Mr Paterson.*) I think you stated there was no agitation in favour of the Bill, that there had been no expression of opinion in favour of shorter lets?—That is so.

9402. How do you account for the fact that on 30th May your Town Council, by fourteen votes to four, decided in favour of Mr Cross's Bill?—Yes, on the motion of Bailie Bennett. But for Bailie Bennett there would be no agitation in Greenock outside the Trades Council, of course.

9403. But Bailie Bennett was able to get fourteen gentlemen in the Town Council to vote for his resolution?—Well, I think that is easily explained. The position of Town Councils is as rating authorities. The policy has been to get as easy a method of collecting the rates as possible, and it is not so much a question of house letting that is agitating the Town Councils like Greenock, but the facility for recovering rates, and these two cases must be

kept entirely separate. I don't think they came to a finding on the merits of the question, but upon the question of collecting rates.

9404. The motion is undoubtedly that they petition in favour of Mr Cross's Bill, and the only amendment put up against that was that they should remit it to the Law and Finance Committee to report, which received four votes?—Yes.

9405. Which would show that the Greenock men, as represented in the Town Council, do want shorter lets?—With the exception of Bailie Bennett, I am not aware of any who referred to it at any election meetings.

9406. What about Bailie Lemmon?—I am not aware of his referring to it.

9407. He is Secretary of the Trades Council?—Yes.

9408. You would expect in their case that they discussed it?—I am not aware that they discussed it, but they appointed representatives to give evidence here.

9409. And they represent probably the whole of the working men?—I would not like to give any opinion on that. They represent the organised workmen, with one or two exceptions.

9410. And there is absolute freedom of speech?—I have never had the honour of being present there, and I cannot say.

9411. But surely there is freedom of opinion there as elsewhere? You may take it that that is the case?—Probably.

9412. If there had been a feeling in favour of longer lets when they proposed to give evidence, it would have found voice then naturally?—That is so.

9413. Of course, I don't know that the merits of the question were discussed. The Trades Council looked at it from one point of view; the Town Council another; and the question of missives was the question discussed by the Trades Council, and the question of the rating was what appeared to actuate the Town Council.

9414. The representatives of the Trades Council would know?—Quite.

9415. If they came here and told us they had discussed the question of shorter lets?—I presume you must take it. I have no knowledge.

9416. Was Mr Halley Stewart, your representative in the House of Commons, questioned?—I cannot say.

9417. That would necessarily come to this, that there is some agitation in Greenock in favour of shorter lets, although you don't know of it?—Well, I have never heard of any agitation. The Tenants Defence Association had an existence of a few months. They had an active campaign seven years ago for a few months, and it has never been heard of since, and any action that has been taken must have arisen through the Trades Council, or through Bailie Bennett's action at the Town Council, but I am not aware of any public agitation.

9418. What rent do you usually charge for two-room and kitchen houses, say in a decent locality? I am not referring to the lower class?—In some of the newer properties we have, the rent is £13, 8s.; in others from £13 to £15, as the ordinary run for two-room and kitchen houses.

9419. How do you say the houses up to £20 are occupied?—There are some detached cottages and small four-roomed dwelling-house tenements with rents of that kind, but not in ordinary tenement property occupied by tradesmen. We have no rents of that kind of houses occupied by the working classes. We have in new properties occupied by clerks and shopkeepers.

9420. Are they better paid than the average workman?—I don't know that they are better paid, but they have to live sometimes in a better locality.

9421. Have they security of tenure?—You refer to clerks, I think in most instances they have in a place like Greenock.

9422. (*To Mr Brodie.*) Is that your experience?—That clerks are better off? Well, that enters on a very delicate question, because, after all, it is pretty much a matter of conduct; the steady working man is as sure of his job as a clerk or shopkeeper.

9423. And there would be nothing extravagant in a working man occupying a £20 house?—No, quite right. I would rather encourage him to stay in a better house; and they could do that, too, some of them.

9424. If it is necessary for that man to have shorter tenure, with a lower rent, it would be equally necessary that he shifts into a house of a higher rental?—He would not ask for it.

9425. But assuming he did, he would be entitled to have it?—Certainly; it is a question of money, and I might point out to you that I deal with the question of rents up to £20. I saw statements which were made here to the Commission, and to say that working men stay in such houses is wrong.

9426. Do you say it is wrong?—I am speaking, of course, of Port-Glasgow and the district. In Glasgow, of course, the rents are much higher.

9427. Do you admit there would be nothing out of the way in a working man staying in such a house?—No, most commendable, and most of them could, but for drinking and horse-betting.

9428. (*Mr Dobbie to Mr Paterson.*)—Mr Cross's Bill proposes that the receipts for payments furnished by owners shall separately distinguish the amounts paid for rent, and the amounts paid for rates and assessments. That means that, assuming this became law, every monthly receipt for every house let monthly, or quarterly receipt, would require to bear exactly the amount of payment applicable to rent and rate. Do you think that is practicable in business?—I don't think so; it would entail an enormous amount of labour on landlords. It is all right to have it on the annual schedule like this, but if everyone of these had to be split up into twelve different portions and marked in everybody's book, it would be really impracticable.

9429. Or fifty-two proportions for weekly?—If it were weekly it would be worse.

9430. Another difficulty would be that the rates are fixed usually about September or October, while the current year's rents and rates would be charged from the same tenant yearly in May or June?—Yes.

9431. Before the actual rate receipts are known?—The rates might be entirely changed.

9432. Then, in practice at the moment in Greenock, where you have this compounding, you don't attempt to show separately how much periodic payment is rent and how much is rate?—No.

9433. (*Mr Brodie.*) Before you close, there are two points. There is a point which has not been made clear in this evidence. I don't know whether it has been before the Commission or not, but in compelling proprietors to pay tenants' assessments there is one point being lost sight of, I think, and it is this: just now we find that poor persons who are unable to pay have the right to go to a Town Council and ask to be exempted in respect of inability to pay. If it becomes compulsory for proprietors to pay tenants' assessments, such tenants cannot possibly get the benefit of exemptions of that kind.

9434. I think we are going to try to find a way out of it. Your view is that that exemption should continue if it is possible?—That is a proper exemption for poor people, and they would lose it. Then I have mentioned here the question of the collection of rates. Why should the rates not be collected oftener than once a year? If we were left to collect the rents once a year, I wonder where proprietors would be. If collectors all over the country took a little more interest in their work, there would not be so much loss.

Mr James Brown, called and examined.

9435. (*Mr Dobbie.*) You are Chamberlain and Collector of Rates for the Burgh of Partick?—Yes.

9436. Previous to that you were Treasurer and Collector for the Burgh of Johnstone for eight and a half years?—Yes.

9437. And your experience of these two offices would extend over thirteen years?—Yes.

9438. In burghs such as Partick and Johnstone, when are the Valuation Rolls made up?—About 15th September, or earlier.

9439. That is after the Valuation Appeal Court?—Yes, after it is over. It cannot be earlier than 10th, or later than the 15th.

9440. In Partick, how many entries have you in your Valuation Roll?—For the last year it was 19,686, including owners and occupiers.

9441. When are the assessments imposed?—As soon after the Valuation Roll is received as possible; in the beginning of October.

9442. Is that the usual period in burghs?—That all depends. In Johnstone we did not receive the Valuation Roll until 5th October: of course the notices were later in going out.

9443. Is the procedure the same?—Yes, all over.

9444. The Valuation Roll is made up first, then the County Valuation Appeal Court is held, and then the assessments are fixed?—Yes, they are all alike as far as that is concerned.

9445. How long does it take you to get your assessments out after you have got the roll?—We do that as speedily as possible, and it is usually in less than three weeks. We have temporary hands brought in at the time. I usually have these men until that work is done.

9446. After the notices are out, you allow a period for appeals?—Yes.

9447. How long?—Usually about twenty-one days or so; not less than fourteen.

9448. Is the next step to have the Appeal Court?—Yes.

9449. Is it at that Court that these applications for exemption are made?—Yes.

9450. That is a magistrates' court, is it?—No, the whole Council.

9451. Do the Council consider each case on its merits?—They do.

9452. Talking generally, do you think substantially no abuse of the right of exemption is found to be given?—In very few cases. There are one or two that crop up, but very seldom.

9453. On the whole, you think this right of exemption is properly applied?—Yes.

9454. Having got the Appeal Court over and the exemptions fixed, you proceed to cover your assessments?—Yes.

9455. When are they payable?—Immediately after the Appeal Court. 26th October usually is the day.

9456. Are you busy from that date until you get your collections finished?—Yes.

9457. When do you usually get in all your rates?—At the end of December we had 72 per cent. collected.

9458. Who is assessed? Is it the tenant whose name is on the roll at the date of making up the Valuation Roll?—Yes, that is the party assessed.

9459. What is the Supplementary Roll?—That is perhaps empties that appear on the principal roll. They are taken up, and a survey made between 1st January and 1st March. The Supplementary Roll is made up principally of those empty houses on the valuation.

9460. Supposing the tenant whose name is on the roll at May, when the roll is made up, terminated his tenancy of the premises, say on 2nd August, would he still be liable for the whole year's rates?—No, provided an ingoing tenant is got.

9461. Tell me about that?—Under Section 346 of the Police Act, premises that usually let for a year are not occupied by the same tenant for the whole year from the term to Whitsunday, to the term of Whitsunday, but occupied by new occupiers. It is lawful for the Commissioners to levy on the new occupier whether his name appears on the Valuation Roll or not a proportion of that assessment for the period of his occupancy, and from the owner the proportion due by the first tenant.

9462. Assuming that you have assessed tenant No. 1, that is in possession on 15th May, and this tenant leaves on 2nd August, and the house is relet, are you then entitled to relieve No. 1 of part of his assessments and impose his assessment on No. 2?—In the first case, we have the name of the tenant who appears on the roll.

9463. As liable for the whole?—Yes, we assess him for the whole, but on delivering these notices, we find that the tenant has gone. We therefore apply to the factor or landlord, asking if this house is not relet and who is the tenant. Thereafter the landlord is charged for the proportion due by the first tenant who is gone, and we assess the second tenant for his proportion.

9464. I am not taking the case of a wayward tenant who has disappeared. Assume he has not disappeared, but taken a house in the next street; under the proposed change in the law of letting by which he leaves his house say at 2nd August, would he be liable to you for the whole year's rate if you knew where to find him?—Yes, that is to say if his first house remained empty, we could follow the first tenant.

9465. If it did not remain empty, but you knew, first of all, where the first tenant was, and, secondly, that the house was tenanted by a second man, can you elect to take either?—No, we take the landlord.

9466. In all cases?—Yes, where there has been a change.

9467. In all cases where there is a change of tenancy between 15th May and 15th May, the landlord automatically becomes liable for the rates?—For the first tenant's proportion, yes. If he lets his house again, he is liable for the first tenant's proportion. We assess the second tenant for his proportion.

9468. If you can get the first tenant, you can get him too, I suppose?—Well, they may make an arrangement between them; whoever pays, it is all one to me so long as I get the rate, but, failing the first or second tenant paying it, we have recourse against the landlord for the first tenant's proportion.

9469. For less than a year, at present what is the rule?—We charge the landlord.

9470. You don't discuss the tenant at all?—No.

9471. That is both above and under £5?—The rental does not matter, unless £4 and under.

9472. That is the landlord as a matter of course?—Yes.

9473. But up to any figure for less than a year, the landlord is liable for tenant's rates?—Yes.

9474. Is there no abatement allowed to landlords liable for tenant's rates in respect of short lets?—Nothing unless under £4.

9475. Looking to the time taken in making up your assessment roll, it is practical in your view to have that roll made up, say half-yearly?—No.

9476. You don't think that could be done?—It is September before I get it. We are so late in the year in getting the Valuation Roll, that by the time I get the notices out and the Appeal Court held and second notices issued, the second collection is on. There is no time.

9477. Would it be possible without having any second assessment roll to arrange for the assessments being paid by instalments?—The Council are entirely against that, unless in cases of poverty or illness, etc.

9478. Supposing your assessment roll was ready in October, why should you not begin and take the assessments then fixed by four quarterly instalments, and so proceed from year to year?—The first quarter is over before you get the Valuation Roll. The second quarter is due before you get the first notices out for the first quarter.

9479. Well, what is the special disadvantage of that? You have the assessment roll, and you then invite the people to pay the whole assessments. Supposing you said, "Pay one quarter just now and a quarter in three months," what is the difficulty?—Well, plenty of them would not have it in that way.

9480. But from the point of view of the rating authority? The local authority won't get the use of the money so speedily?—This is so.

9481. And under the present system of yearly lets, the removal at 28th May would aggravate the difficulty of getting your one-third and one quarter instalments?—That is so, one half of those removing would be away before you get your third quarter rates.

9481*a*. With removals spread over the year, there would be less substance in that objection?—Yes, there would be.

9482. However, in your view, you don't think it would be practicable?—No, I don't.

9483. I see you tell us what the expenses of your office are, but would it be much saving on that, supposing compounding was the practice up to £16, say?—There would be no saving so far as my office staff is concerned, because I consider I am not too highly staffed as it is. When the busy time comes on, we get temporary assistance.

9484. Mr Cross suggests to-day that the allowances to the factors would be made up to the rating authority, through the saving in the cost of direct collection?—Yes; I show that in the table on page 4.

9485. But you think there would be no gain through the expense of collection being less, if there was compounding?—I don't see that there would be much less expense.

9486. You would not have much saving of salaries or printing?—No.

9487. Come to your own burgh of Partick, what is the rate per £, there, just now?—1s. 10$\frac{8}{9}$d., and 8$\frac{8}{9}$d. on landlords.

9488. Have you applied to your own figures the discounts suggested in Mr Cross's schedule?—I have taken it only on last year's valuation.

9389. Would you put in a statement showing how you work it?—Yes, you have it there. I can send it.

9490. We will put it into the notes. What year do you take here?—1905–06.

9491. You separate the rentals here into four classes?—According to Mr Cross's Bill. Over £4 and under £7, over £7 and under £10, £10 to £16 inclusive, and from £16 to £20.

9492. The result is that you show discounts or rebates allowed to the proprietors would come to £474?—Yes.

9493. You show the amount given off in the way of relief on appeal, and in respect of paupers, is £659?—Yes.

9494. And irrecoverables, £539, 16s. 5d. Is that absolutely bad, or not, collected at a certain date?—Not collected at a certain date.

9495. How much of that might be actual loss?—About one half.

9496. We have to keep in mind that while you put in arrears, these are not irrecoverable arrears?—No, I will recover them afterwards.

9497. You show the whole deduction from the money collected?—Yes, £1199 odds.

9498. And including these items, the percentage of loss is £8, 3s.—Yes.

9499. On houses up to £20?—From £20 under.

9500. Then you tell us the number who have not paid their rents in regard to franchise. Take the three years 1903, 1904, 1905, what was the number of people disqualified from failure to pay rates?—These are the figures there for the three years.

9501. These are householders?—Yes, 1603 was the

Mr J. Brown. 21 Jan. 1907.

number disfranchised last year through non-payment of burgh rates. In 1904–05 the number was 1798, and in 1905–06, 1603.

9501*a*. So that, roughly, 1600 people failed to pay their rates prior to 16th June?—Yes.

9502. While the money may be got in to some extent, the result was that the people were disqualified?—That is so. They may have given part payments up to 20th June but not paid fully up.

9503. Assuming that there are to be short lets, do you think it is practicable to avoid compounding?—No. I don't see how it could be otherwise.

9503*a*. A suggestion has been made that, following on what we believe to be the English practice, the rents of £10 and under might be made a subject of compounding, and that between £10 and £20 it might be left to the rating authorities to collect, as at present, or to make a voluntary bargain with the landlords. Do you think the difficulty would still exist which you contemplate might arise through the Bill passing that compounding was in existence with reference to rents not exceeding £10?—I think that is a high enough rental for compounding. We have not much loss from rents over that.

9504. If compounding stopped at £10, while the short lets went on to £20, do you think you would still be able to collect your rates?—Yes, we have not so many removals over the £10 as under.

9505. Is it your experience that above £10, even with the right to remove, there would not be such an appreciable increase in removals?—No.

9506. But you think that below £10 it is essential that there should be a direct right to recover from proprietors?—I think so.

9507. (*Mr Binnie.*) And that would involve a commission individually for the amount of allowance that should be given them for collecting the rates?—Yes.

9508. Think of this. You were already asked part of it. Assume that removals were spread over the whole year, as proposed by Mr Cross. He tells me to-day that if he introduced the Bill he will raise the rent to £20 instead of £16. Well, take Partick, you have a very large proportion of your rents £20 and under?—No, I think the greater portion is over the £20 with us.

9509. Is it. How much?—We have 150,000 up to £20. We have about 200,000 over the £20.

9510. That is of rental?—Yes.

9511. Can you give us the number of ratepayers up to £20 and above £20?—I could not.

9512. It would be a very large proportion, I suppose?—Oh yes. I can give you the number of houses of one, two, and three apartments.

9513. Assume that removals in this very large proportion of your burgh were spread over the whole year, and that the assesssment roll, although made up and handed to you at the time when you can send out your assessments at the 1st of November; suppose that the assessments were by statute made to run from 1st November to 1st December, is there anything to object to in that?—No, I don't think so

Mr J. Brown. 21 Jan. 1907.

9514. Then, as you have been able to get your assessment roll into use, would there be any great difficulty in levying your rates quarterly?—Well, you see, the financial year of all burghs under the 1892 Act finishes at 15th May.

9515. We are proposing to alter the law, and this proposal of Mr Cross's will involve alteration of more laws than one or two. Assume that you were allowed to close your books at any term that was most convenient. Suppose you have permission to make your survey immediately after 1st January, and you get into shape for collecting your assessment on 15th May, is there any reason why you should not collect your rates quarterly?—I don't see that it would make any difference whether you made the assessment run from 1st November to 1st November or 15th May to 15th May.

9516. But would it not enable you to collect your rates quarterly? Your objection at first was that six months of the year was practically over before you could begin to get in your money. Take your survey earlier and get your money in at the beginning of the year, and collect it quarterly.—You would have to alter the letting term from 28th May.

9517. Mr Cross's Bill is for that purpose alone, and his Bill would affect more than three-fourths of the people in Partick, I think, so that, you see, 28th of May as a term would cease to be, so that it would be of very little difference what period you took up your survey. Do you see that?—Yes.

9518. Well, assuming that your survey was in the beginning of January, and the finished assessment roll was put into your hands so as to enable you to begin collecting at 15th May, could you not do it quarterly?—Not with the present staff, I think.

9519. Is there any difficulty except additional trouble in your office?—No, I don't think there is.

9520. You have made up a statement on page 4?—Yes.

9521. And you say that the proposed discounts under Mr Cross's Bill will amount to £474?—Yes.

9522. Whereas you actually lost on assessments £539, 16s. 5d., and you relieve people to the extent of £659, 17s. 8½d. In your opinion the allowances under Mr Cross's Bill are inadequate?—Yes, too small. That bears that out.

[ADJOURNED.]

TENTH DAY.

MONDAY, 28TH JANUARY 1907.

At the Town Hall, Aberdeen.

Present:

LORD GUTHRIE, *Chairman.*

SIR JOHN STIRLING-MAXWELL, Bart.
MR THOMAS BINNIE.
MR JOSEPH DOBBIE, S.S.C.
MR GEORGE B. ESSLEMONT.
MR JOHN T. HOWDEN.

Mr W. Meff., jun., and Mr A. M. Munro. 28 Jan. 1907.

Mr WILLIAM MEFF, Junr., City Treasurer, and Mr A. M. MUNRO, called and examined.

9523. (*Chairman to Mr Meff.*) You have been a member of the Town Council of Aberdeen for twelve years, and in 1905 you were appointed City Treasurer?—That is so.

As City Treasurer you are Convener of the Finance Committee of the Town Council.

9524. (*To Mr Munro.*) When were you appointed City Chamberlain?—In 1905.

9525. Do you look after the Corporation properties?—I do.

9526. Have they any house property?—Considerable.

9527. Of the class that we are dealing with in this inquiry?—Yes.

9528. With rents from what to what?—From 30s. for the small houses to £11.

9529. In different parts of the town?—Yes.

9530. Were they acquired in connection with city improvements, or how?—Mostly, although some have been

Mr W. Meff., jun., and Mr A. M. Munro. 28 Jan. 1907.

built for workmen's dwellings, with which experiments were made by the Town Council.

9531. Are they partly old houses renovated, and partly new houses?—Entirely new houses.

9532. How are they let?—They are let yearly.

9533. Are there any specialties in regard to them, such as employment of caretakers, as in Glasgow?—No, we have a factor who manages that property along with other Corporation property, as far as regards looking after repairs and collecting rents.

9534. They are managed like ordinary house property of a similar class?—Yes.

9535. Roughly, what is the rent drawn from the town property?—I have the number of tenants, but I have not the total rent. The total rents of property would amount to probably £2000, all over the city.

9536. And the rates are collected from these tenants just as from others?—Yes.

9537. Do you collect the police and the municipal assessments?—Yes.

9538. (*To Mr Meff.*) Tell us about the practice in Aberdeen prior to 1901: what was the practice?—There was a report which came before the Town Council in December 1901, asking that an alteration should take place in the date for letting houses. Up to that time 2nd February was the date, and the alteration asked was to the 10th March. This matter came before the Town Council for further consideration, and they agreed to it, and I believe this was commenced; but only continued for a very short time. I don't know whether it would be the house proprietors who fell back, or the people just getting anxious to settle in houses at an early date. I believe, however, it is back again to the old date.

9539. Prior to the Council considering the matter, there had been a public meeting of house proprietors and factors and tenants in Aberdeen?—Yes.

9540. And the resolutions submitted were as follows:—

(1) That it is desirable, alike in the interests of tenants and landlords, that the letting period of houses should be altered.

(2) That the time for inquiry as to the renewal of tenancy be altered from 2nd February to 10th March.

(3) That all proprietors and tenants in Aberdeen be recommended to co-operate gradually in carrying out the change in the letting term which this meeting has now decided to adopt.

(4) That copies of the resolutions be forwarded to the Town Council and other large proprietors and factors.

The result was that a report by the Committee of the Town Council was approved, and was to the following effect, "That the Committee were of opinion that an alteration 'of the term for letting houses was desirable in the 'interests of both proprietors and tenants, and accordingly 'resolved to recommend that the date for inquiry as to 'renewal of tenancies should be altered from 2nd February 'to 10th March, and that all proprietors and tenants in 'the city should be requested to co-operate in carrying 'out the change." Now you say that while that was recommended by the Council and carried out for a time, matters have been going back to the old method?—That is so.

9541. And is it the case that the Aberdeen House Proprietors Association wrote last year to the City Chamberlain as follows—on 23rd February 1906:—"I 'am authorised by my Committee to say that they are 'sorry the 10th of March is not now generally observed as 'the letting period, to thank the Town Council for the lead 'they gave in the matter, but to add that the Association 'cannot expect it to delay beyond 2nd February"?—Yes.

9542. When was the attention of the Town Council first directed to the question involved in Mr Cross's Bill?—It was about the middle of December 1906.

9543. Had their attention been directed at all to the previous Bills which had been before Parliament?—I don't think so. This was the first time, as far as I can recollect.

9544. Did the Town Council, having considered the matter, appoint you and Mr Munro to give evidence here, and at the same time resolve "that it be an instruction to the 'witnesses that the evidence to be given by them before the 'Committee is to be to the effect that the Council do not 'approve of Mr Cross's Bill, and that as regards Aberdeen, 'the existing system of house letting does not, in the 'opinion of the Town Council, call for alteration"?—Yes.

9545. As far as you know, has this matter been agitated at all, as in Glasgow for instance, by being brought before ward meetings?—No, not in Aberdeen.

9546. Or, as far as you know, before Parliamentary candidates?—No, not as far as I know.

9547. Or by correspondence in newspapers?—I have never seen any.

9548. Or by deputations to the Town Council?—No.

9549. Was the Council unanimous in that resolution?—I think they were.

9550. Was any amendment proposed?—No amendment.

9551. Now tell us about the number of smaller class dwelling houses in Aberdeen. In 1905-06 the total not exceeding £20 was 31,203?—Yes.

9552. Out of a gross total of 35,337 in the city?—Yes.

9553. Of the 31,203, there were not exceeding £5, 5734?—Yes.

9554. Above £5, and not exceeding £10, 16,128?—Yes.

9555. Above £10 and not exceeding £12, 4035; above £12 and not exceeding £15, 2796; and above £15 and not exceeding £20, 2510; making the total you already gave us, 31,203?—Yes.

9556. In that way, houses of £20 and under represent 88 per cent. of the whole dwelling houses in the city?—Yes.

9557. Under Mr Cross's Bill, you are proposed to be dealt with as within the £16 limit?—Yes.

9558. Of the 28,700, what proportion would that be of the total 35,337? Taking approximately the limit of £16, and applying it to houses under £16 would give you 80 per cent. of the whole?—81 per cent.

9559. That would be affected?—Yes.

9560. (*To Mr Munro.*) There has been a suggestion of a £10 or £12 limit. Suppose you take a £12 limit, that is 25,897, what percentage is that, about 75 per cent.?—Yes.

9561. (*To Mr Meff.*) In your view, and in the view of the Council, there is no demand in Aberdeen by the public for the proposed legislation?—That is the opinion of the Council.

9562. You observe that the Bill contains an optional clause?—Yes.

9563. What do you say to that as meeting the wants of Aberdeen, consistently with the requirements of the public? Clause No. 10, "This Act shall not come into operation 'in any Burgh until it has been adopted in whole or in 'part by a resolution of the Town Council or by the local 'authority of such Burgh at a meeting called for the 'purpose"—it has been objected to that, even in places where the Act would not be adopted, probably, that it is desirable to have a uniform system for the whole of Scotland?—That is our opinion here. I don't think that would work at all.

9564. Tell us about the vacant houses. The total applicable to 1905-06 was 1656, of which 1446, or 87 per cent., were houses of £20 and under. Is that about the normal amount, or is it not unusual?—It is a little over what is usual here.

9565. The numbers were, not exceeding £5 rent, 455; from £5 to £10, 524; from £10 to £12, 241; from £12 to £15, 131; and from £15 to £20, 95?—Yes.

9566. You are not under the general Burgh Police Acts, are you?—No.

9567. You have an Act of your own of 1881, and several other Acts, I suppose?—Yes.

9568. And under that you have power to charge the owner the municipal rates levied in respect of premises not above £5 rental?—Yes.

9569. Subject to a reduction of 25 per cent. of the amount?—Yes.

9570. That can be recovered by consent from the tenant?—Yes.

9571. What is the landlord entitled to recover from the tenant? The whole money paid by him or only 75 per cent. which he pays to you?—He is responsible to us for the whole rate.

9572. But you give him a reduction?—We give him a reduction of 25 per cent. for collecting it.

9573. What does he recover from the tenant?—There has been some difficulty in the interpretation of the clause by some of the sheriffs. The Act says that the owner shall have the right to recover the sum so paid from the tenant of the premises. One of the sheriffs held he was only entitled to receive the sum actually paid by him. The intention was that the 25 per cent. was to cover his loss and the cost of collection when the Act was drawn.

9574. Is the result that the landlord only gets 75 per cent?—In many cases.

9575. But has the sheriff held that he is not entitled to get more?—Not very definitely.

9576. That is Section 37?—Yes.

9577. Under Section 34 premises above £5, not being let for a year—whatever the rent may be—the rates of all premises not let for a whole year are payable by the owner without abatement?—Yes.

9578. (*To Mr Munro.*) Is that put into force?—Yes, regularly without exception.

9579. Do you know in these cases what was the theory as to giving no abatement when the abatement is given under £5?—In a great number of cases houses that are thus let are houses of larger value which have been, perhaps, in such a state that they could not be let in May;

they are then let during the year. It was considered that the landlord ran no risk in the letting of these houses.

9580. But supposing you have £10 houses in Aberdeen let monthly, the landlord there has to pay the rates and he gets no abatement?—No abatement.

9581. The consequence of that will be very much to make the landlords disinclined to go in for any such lets?—That is so.

9582. (*To Mr Meff.*) What is the general period of letting of dwelling houses in Aberdeen?—Whitsunday to Whitsunday.

9583. With the exception of those below what rent would you say roughly?—Below £5.

9584. And the habit of payment of rent is what?—Every six months, Martinmas and Whitsunday.

9585. Above £5 rents are there many cases, or are they quite exceptional, of what we may call short lets under a year?—Last year there were only 407.

9586. Have you got a table showing that: you have not shown us that?

9587. (*To Mr Munro.*) Have you a table showing the number of short lets above £5?—No, not a table.

9588. (*To Mr Meff.*) Now, you say there are 407 as far as returned to you? These are the only ones?—They are forced to make a return on the Valuation Roll above £5, and in 1905–06 there are only 407 actually on the roll.

9589. Can you say what the reason of these 407 is? Under what circumstances are there monthly lets above £5?—In many cases houses of larger value than £5, even as large as £80 and £90, may be let during the year; they are included as smaller rents under this clause.

9590. That accounts for the majority?—No, the majority, I should say, run from perhaps £5 to £12.

9591. Has the number of such houses been increasing?—No.

9592. (*Mr Esslemont.*) Do these figures apply to monthly lets at all?—No, they are not monthly lets. They are houses which would have been let ordinarily from year to year, but were lying vacant at the Whitsunday term.

9593. For which tenants were secured in the course of the year?—Yes.

9594. (*Chairman to Mr Meff.*) Would these houses largely be new houses that happened to be finished between terms, or not let at the term, for which a landlord takes up a tenant in the middle?—Both.

9595. Have you any idea whether there are any of them that were voluntary arrangements for short lets at the term?—I have no information as to that.

9596. You have no knowledge of that being such a common practice?—It is not at all a common practice.

9597. And these 407 would represent a rental of how much?—I can hand that in.

9598. Is it £2953?—Yes.

9599. Suppose the whole houses of £5 and under with the 407 already specified were monthly, the percentage on the total number of houses would only be 17?—That is so.

9600. Do you think, as far as there is a demand for monthly houses in Aberdeen, it is satisfied by the smaller class of houses?—Quite.

9601. It comes to this, there is no demand for short lets in houses with rents above £5?—I never heard of any.

9602. You would have heard of it if it existed?—I would, previous to this.

9603. Is the number of houses under £5 decreasing in Aberdeen as in other places?—Yes.

9604. And quite right that they should?—Yes.

9605. They are of a very inferior class?—Very.

9606. Comparing the assessable rental of 1882–83 with 1895–96, I think in 1882–83 it was £456,000?—Yes.

9607. And the rental of houses of £5 and under amounted at that time to about £30,000, or 6·5 per cent. of the total rental?—Yes.

9608. In 1905–06 the assessable rental was £891,000, and the rental of £5 and under was £20,000, or 2·2 per cent.?—Yes.

9609. Suppose, contrary to your view, short lets were introduced, what would follow about the rates?—We would require to make the owner responsible for all the rates.

9610. There are two suggestions, either that, or that you should collect more frequently, say quarterly. What do you say to the latter?—We have no objections to collecting the rates every three months, so long as the time of letting is not altered.

9611. But do you think, looking to the arrangement in connection with the Valuation Roll, and the business following on it, that it would be practicable to collect the rates four times a year?—Not at present.

9612. There would require to be changes on the valuation Acts?—Yes.

9613. Subject to these two things, there is nothing amiss?—Nothing, as far as I see.

9614. We know, I think, the arrangements about the Valuation Roll, but we get your experience in Aberdeen. Under the present system of making up that roll, a complete roll is not delivered to the collector till September. Do you find that the demand notices cannot be issued till the end of October?—Not before.

Mr W. Meff, jun., and Mr A. M. Munro.
28 Jan. 1907.

9615. So that about a half of the period for which the assessment is imposed has run before the notices are in the hands of the ratepayers?—Yes.

9616. Don't you think it would be an advantage to the smaller ratepayer if he paid his rates more frequently than once a year?—It might in some cases be an advantage.

9617. I see you point out that there would be a certain disadvantage to him in so far as he would have to make immediate payment after the demand was made?—Yes.

9618. At present, as you pointed out, there is a long period elapses after the time of the assessments before payment is actually demanded?—Yes.

9619. Do you in Aberdeen take partial payment of rates?—Yes, we do in some cases. For instance, if a man is out of employment, or laid up ill, and not able to pay the rates, we take it as we are able to get it from him.

9620. It is a matter of practice, not under statute?—Simply a matter of practice.

9621. In Aberdeen, have you a provision entitling you to give relief?—Yes, I believe there is.

9622. What is that?

(*Mr Munro.*) It is under the 1862 Act on the ground of poverty.

9623. (*Chairman to Mr Munro.*) Is there a Court held for consideration of these cases, or how is it?—It is managed by a Committee of the Town Council, the Appeals and Arrears Committee.

9624. Do they sit once a year or what?—They have several meetings in February and March to consider the appeals which are sent in.

9625. Who does the Committee consist of?—It is a Committee of the Town Council.

9626. How many does it consist of?—About eleven or twelve. Each of the representatives of the respective wards is entitled, whether he be on the Committee or not, to sit along with the Committee when his own ward is being dealt with.

(*Mr Esslemont.*) They are considered ward by ward.

9627. (*Chairman.*) What is the use of that?—I suppose in many cases they have special knowledge of the circumstances to guide the Committee.

9628. Now tell us about the number relieved in 1956 over £5, Mr Munro, and not exceeding £10?—1732.

9629. And over £10 and not exceeding £15 the number was 265?—Yes.

9630. Are there any relieved above £15 rental?—121.

9631. To be added to the 1997?—Yes.

9632. What is the total?—2118.

9633. And the amount of assessment remitted was £1698, or 6·2 per cent. of the total of £27,113 imposed on rentals from £5 to £15?—That is so.

9634. What was the total amount of arrears remitted on the ground of poverty?—£1898.

9635. Out of a total assessment of how much?—About £125,000.

9636. Can you tell me how much of that was due to the people who were on the Poor Roll?—£320, representing 421 persons. We take them off. They are certified to the inspector as being on the roll.

9637. Is that under your statute?—Yes.

9638. Can you tell me how much they amount to in money?—£320.

9639. You might see to this, Mr Munro. We have had a calculation made in one or two towns, of this kind. Suppose you take your total assessment; suppose you take the amount remitted on the ground of poverty, or because they are on the Poor Roll; suppose you also take the proposed allowances by Mr Cross in his Bill, what remains? Perhaps you might be able to make that up. You say it has appeared in one or two cases that if you give effect to the remittances on the ground of poverty, and the Poor Roll, and give effect to Mr Cross's commission, it appears rather as if there would be no benefit to the rating authority in that case. You might kindly make it up, and see how Aberdeen stands in that way?—Yes, I will.

9640. Now, as to arrears. The number of ratepayers in arrears with payment of assessment at 31st May 1906 on the smaller houses was—above and not exceeding £10, 1139. The amount was £979; the number of ratepayers in arrears with payment of assessments was 1338: that is to say from £5 to £15?—Yes.

9641. The total amount of arrears was £1252?—Yes.

9642. And the percentage of ratepayers from £5 to £15 in arrears was 5·82 per cent?—Yes.

9643. And the whole percentage of the assessments imposed applicable to those above £5 to £15 was 4·61?—Yes.

9644. Do these percentages represent the actual loss of assessments?—No.

Mr W. Meff, jun., and Mr A. M. Munro.

28 Jan. 1907.

9645. Why not?—Because we are continually collecting the arrears from the tenants after 28th May. Our collectors are always anxious to get as much as possible in of the arrears after 28th May.

9646. What difference would that make on the total figures you have given?—The 1338 ratepayers, by the 14th of December, were reduced to 704 who had not paid, and the amount of assessment outstanding at that date was £669, in place of £1252, reducing the percentages to 3·06 and 2·4 respectively.

9647. Suppose you did not make these remittances on the ground of poverty, have you any idea how much the Town Council would manage to get out of them in the end?—Very little, I should say.

9648. On the other hand, are there not many people who may not pay their rates when you come down on them for a big lump sum, who could pay monthly through the landlord well enough?—It might be more convenient in many cases, I admit.

9649. It would mean in many cases so much going in less desirable directions?—Yes, in other expenditure.

9650. Is there any idea in your view theoretically, apart from the practical question, that collection through the landlord, say once a month, would yield a larger gross amount of rate than the present system?—I don't think there would be a very material difference.

9651. I am not talking about allowances you are to give, but merely of the gross amount. Would the gross amount be larger to begin with?—Yes, there would be no deductions.

9652. But if you give a sufficient allowance to the landlord, and make provisions on the ground of poverty, there may be no gain to the rating authority?—I don't think we would have any gain.

9653. (*To Mr Meff.*) If the owner was to pay the rates, then there would be no disqualification municipally, as at present of a voter?—No.

9654. Do you see any drawback in that?—No.

9655. It is so in England?—Yes.

9656. And there you have a considerable class entitled to vote municipally, who are disqualified in Scotland?—I was not aware of that.

9657. It necessarily follows?—Yes.

9658. Give us figures on that point. The number of householders over £5 and under £10 rental who were returned to the City Assessor as in arrears with payment of their assessment at 20th June 1906 was how many?—808.

9659. And they were disqualified?—Yes.

9660. Out of how many voters? What is your total?—I will supply that.

9661. You have no views, have you, on the question which may be said to be subordinate, of a proposed alteration of the date of letting from February to March?—No, no views on that.

9662. Nor the question which has been brought in incidentally of the abolition of hypothetic?—you leave that to others?—Yes.

9663. (*Mr Howden to Mr Meff.*) What are the principal industries in Aberdeen?—Granite, paper, shipbuilding, fishing, and combs.

9664. Are any of these of a fluctuating nature?—Yes, most of them are.

9665. Do they necessitate people shifting occasionally from Aberdeen?—Well, sometimes, not often.

9666. (*The Chairman.*) Which most?—In the shipbuilding trade I should say people remove more quickly.

9667. You mean shipbuilding?—No, the ordinary building trades.

9668. And shipbuilding?—To a smaller extent.

9669. (*Mr Howden.*) And the fishing industry?—It fluctuates very much, but they don't shift from the place at all; they don't remove from the place.

9670. Do they not follow their occupation as fishermen up and down?—No.

9671. Isn't it the case in Aberdeen that they shift?—No.

9672. What is the average rent these people pay, the average tradesman?—I could not tell you that.

(*Mr Munro.*) It varies. We get them as high as £20 and as low as £9 in the case of some artisans in our workmen's dwellings.

9673. (*Mr Howden to Mr Munro.*) The ordinary artisans stay in houses from £9 to £20 rental?—Yes.

9674. (*To Mr Meff.*) Have these men never complained that there was a grievance in long letting to your knowledge?—No, I have never heard of any complaint.

9675. (*Mr Munro.*) You have told us in your list of percentages here, that you only lose 4·61 in your total assessment: is that the case?—That is so. We don't lose that ultimately. That was only at 31st May.

9676. Even that is reduced?—Even that is reduced.

9677. You have studied the schedule attached to Mr Cross's Bill?—Yes.

9678. Would you give us your opinion of what the charges are that he proposes for compounding?—Well, the landlord would have greater difficulty in recovering than the Corporation. I am not prepared to say that, as far as the landlords are concerned, the allowances would be extravagant.

9679. Why would the landlord have more difficulty than you?—Because we have greater power than he would have.

9680. If he collected more frequently, would that matter?—It would.

9681. Then probably the loss to the landlord would be practically more than what it is to the Corporation at the present time?—Yes, with more frequent collection.

9682. (*Mr Binnie to Mr Meff.*) You say that if a system of monthly or quarterly letting were introduced, the occupiers' rates would require to be made recoverable from the owner?—Yes.

9683. And you said also that there would be no difficulty in collecting the rates quarterly?—I don't think so.

9684. You must have misunderstood the question put to you, I think?—There would be no difficulty to owners, I mean, collecting.

9685. But to the municipality?—Oh, I misunderstood the question: there would be difficulty.

9686. And why?—We would have difficulty in knowing what the rates really were according to the valuation.

9687. Yes?—But there must be alterations of the law if this Bill of Mr Cross's, or any similar Bill, is to pass.

9688. Now, could you not, assuming that removals are to be spread over the whole year in a greater number of houses, make up your Assessment Roll previous to Whitsunday?—No.

9689. What is your difficulty? Couldn't it be done in February or March instead of June, July, and August?

(*Mr Munro.*) The principal difficulty in the Corporation assessing quarterly would be that at whatever period the rate was for, the financial year of the Corporation must end at a particular date, and there would be a difficulty in properly estimating the amount of assessments required by the Corporation, the rent would be so fluctuating.

9690. You can estimate that in May as well as in September?—We estimate that in September, when we get the definite valuation.

9691. Suppose you get the finished roll, as I am suggesting, at the end of April or beginning of May, you could estimate your assessments then?—Yes, that would do, if all the letting was going to be monthly in the city, but you are only proposing that for a certain section of it.

9692. That is the vast proportion of the houses in Aberdeen?—Not as far as rental is concerned. It may in regard to numbers, but not to rental.

9693. But it would be easy to ascertain at the end of the year what the yearly lettings would be for the following year?—At present it takes the assessor all his time to September.

9694. Beginning in May?—Yes.

9695. But if you began in January?—You would have all your warehouses, far and away the larger portion of the assessment, which would only be let from May to May.

9696. Not in May, but from May to May?—Yes.

9697. And let at a much earlier period?—That might be.

9698. And what difficulty would there be in ascertaining that?—No difficulty, so long as the roll could be delivered.

9699. That is what I think, and then if the roll were delivered to you in May, what difficulty would there be in collecting the rates quarterly?—Well, the first quarter I expect would be practically gone before we could be in a position to collect.

9700. Why?—We might find one half of the tenants gone before we could collect at all.

9701. Only if the rents are paid monthly; you say very few are paid in Aberdeen?—That is so. Still, it would be by the end of August we would have to collect our first quarter.

9702. The beginning of August?—Well, if you shift your date to the 1st May, it would be three months afterwards, the beginning of August.

9703. Well, what difficulty would that make?—If the roll, as I say, could be given to the collector in sufficient time for him to send out notices, it is a matter of six weeks to get them out. He would have very little time before the first quarter to collect his rates from a removing tenant.

9704. You could collect by 1st August surely?—You might and might not.

9705. You give us here the losses. Do those losses you have given us include or not include the unpaid assessments of the people who were relieved on account of poverty?—The losses of £1252, on assessments from £5 to £15, is exclusive of those relieved by poverty.

9706. In 1906?—Yes.

9707. Have you given us in another place the amount you do relieve?—Yes.

9708. Is it £1698?—Yes.

9709. What is the cost of the collection of rates?—In Aberdeen it is a very difficult thing to state, because the office staff, who do the collecting, are engaged in other work, but I calculated it as nearly as possible, and it is a little under 1 per cent.

9710. That would be about £1250?—Yes, about that, but it is really very difficult to state.

9711. (*Sir John Stirling-Maxwell to Mr Meff.*) I understood you to say you were opposed to the clause in Mr Cross's Bill under which it would be optional to adopt the law or not. Am I right?—Yes.

9712. Would you enlarge on that a little?—In what way.

9713. I want to know what the objection is?—A different system in different places. There is no desire for it here.

9714. Under the Bill you would not be bound to adopt it. Would it do any harm if other people adopted it?—I cannot answer for other people, only for ourselves locally here.

9715. But under the Bill as it stands, it would entirely lie with the Council of Aberdeen whether they would adopt it or not?—That is so.

9716. In that case I do not quite understand how the Bill does harm to Aberdeen?—If it became law, it would do harm to Aberdeen, if we were compelled to act according to it.

9717. That is not proposed under the Bill?—It is optional, I understand.

9718. Would you be opposed to a Bill with the optional clause?—It would be better than a general Act, I think.

9719. You cannot give any reason?—No.

(*Mr Esslemont.*) Mr Munro was asked to state the number of municipal electors; I find from the hand-book that there are 33,014.

9719*a*. (*Chairman.*) What date is that applicable to?

(*Mr Esslemont.*) 1906–07.

9720. (*Mr Dobbie to Mr Munro.*) Referring to Sir John Stirling-Maxwell's question, if a Bill like this is required in the west of Scotland, I would like to know whether the view of the Aberdeen Corporation is that, in the event of its being required in the west of Scotland, it should, on principle, apply to Aberdeen, or whether the preferable course would be to retain the optional clause, so that Aberdeen should only adopt it if it thought fit?—Certainly, of the two evils, the optional clause would be the least, but what we feel is that if there is to be a special remedy like that, requiring special legislation, it would be far better to do it locally.

9721. It does not apply to one city, but assume that in the whole of the west of Scotland it is required, may I take it that Aberdeen would prefer the optional clause?—Distinctly.

9722. With reference to the cost of collection, I assume that the cost of collection at present is more serious in regard to assessments on houses under £16 relatively?—Relatively we have more trouble to get assessments on rentals under £16 than for the higher class of rentals.

9723. Assuming, as you told us, the cost overhead was 1 per cent., presumably the cost of collection of houses under £16 would be above 1 per cent.?—Well, it is very difficult to say that it would be so, because we employ a great number of collectors. They get in our heaviest assessments for houses rented on £50 to £60 or up to £100, where they bulk largest.

9724. That will affect largely the percentage if you took the smaller houses only?—A good deal depends on getting as much money in as possible.

9725. Do you assess unlet property in Aberdeen?—Owners' rates only.

9726. Does this percentage give us exemptions on the ground of poverty?—That is so, under £15, 6 per cent.

9727. Does that percentage include the relief given to paupers?—Yes.

9728. Can you give us any idea of what may be the amount of relief from paupers?—£320.

9729. To get any idea of the total cost to the Corporation in respect of rates under £16, we would require to take your 4·61 per cent.?—That sum is reduced to 2·4 per cent.

9730. And add to that the percentage in respect of exemption on the ground of poverty?—Yes.

9731. The amount remitted in respect of no paupers being assessed?—That is so.

9732. The percentage in respect of cost of collection?—That is so.

9733. Have you any subjects known in Aberdeen as house and shop more frequently used as a house?—There are a number of these smaller shops let with dwelling houses attached.

9734. Can you tell us what course is available in Aberdeen to the landlords who wish to eject tenants? Has your Burgh Court any such powers?—For yearly lets, and the Sheriff Court for monthly tenants.

9735. A Magistrates' Court for yearly lets only?—Yes.

9736. Tell us why that distinction should exist?—I can hardly tell you how it arose, but it seems to be that there are only powers in the Burgh Court with reference to yearly letting, and the Sheriff Court with reference to those less than a year.

9737. Do many landlords go to the Burgh Court for warrants in the case of yearly lets?—On an average there would not be more than three in the twelve months.

9738. (*To Mr Meff.*) Can you tell us whether there are any populous places outside the city limits in the landward part of Aberdeen that might not be affected under the Bill?—No.

9739. The city includes the whole building area?—With the exception of one or two places.

9740. There is substantially no large area outside?—No.

9741. Under Mr Cross's Bill there is a clause authorising the sheriff on a resolution by the Corporation adopting such a Bill as this to apply the Act?—Yes.

9742. In some centres the suggestion has been made that the sheriff should have discretion, assuming the Corporation applied to him?—He would hold an inquiry before using the power given to him.

9743. He should not simply act on being satisfied that a majority had decided? You think the sheriff ought to have that discretion?—I think so.

9744. With respect to the exemption on the ground of poverty, is there one committee or two?—One committee, and they take the appeal papers as sent in, each ward by itself. They sit for perhaps three or four evenings on one ward and go over every paper, and of course they have been thoroughly inquired into before coming before the Committee, and they may exempt either the whole or part of the assessment. In any case it is very carefully gone into.

9745. It has been suggested, assuming the Bill is to pass, that it is desirable to retain the privilege in favour of the poorer tenants getting exemption all round. That could be operated in the event of the rates being collected through the landlords.

(*Mr Munro.*) There would be no difficulty with the first class, namely, with those on the Poor Roll. I think the collector of poor rates would certify that these were on the Poor Roll. The landlord would there and then be exempt. With the second class exempted on the ground of poverty, it would be difficult to hold an inquiry.

9746. Assuming compounding, how is the tenant to get the benefit which he at present has of exemption from rates?—I see the difficulty. He presently loses under £5, and they would probably lose the same benefit if it was extended.

9747. The burgh of Paisley have framed a clause which shortly means that the tenant is to be able to appeal at present for relief, then the landlord is to be credited with the amount of rate from which the tenant was thus relieved, so that he would give a corresponding abatement to the tenant paying monthly or quarterly rent. Do you see any practical difficulty in applying some such clause as that?—No, I do not see any practical difficulty. The same inquiry would hold by the Council as is at present done by the Appeals Committee. That of course would not need to be a method by which the landlord's rates as a whole were deleted.

9748. I presume you agree that the present right of appeal should continue?—Yes.

9749. Tell us this. At present under £5, where the landlord pays the whole rates, does he distinguish the rate from the rent when he recovers from the tenant?—I think as a rule he does. He states so much. In many cases it is the exclusive rent, and no rates are mentioned. In other cases the rates are mentioned, where there is yearly letting, and charged only to Martinmas term.

9750. Above £5, who pays the burgh rates? You have them divided?—Between owner and occupier: practically one-third and two-thirds, one-third to the owner and two-thirds to the occupier.

9751. Above £5, is this 25 per cent. allowed both on the owner's portion and the tenant's portion?—Only on the occupier's; there is no deduction for owner's rates.

9752. So that he pays his own burgh rate in full, and three-fourths of the tenant's rate under £5?—Yes.

9753. (*Chairman.*) In regard to information, it is suggested that we might have the exact amount of the total assessments that you say roughly is £125,000; the amount of assessment under £5, from £5 to £10, from £10 to £15, and from £15 to £20?—On houses, yes.

9754. Was the total assessment that you gave us, £125,000, on both owners and tenants?—Yes.

9755. We want the total assessment on tenants only,

Mr W. Meff, jun., and Mr A. M. Munro. 28 Jan. 1907.

and then we will be able to compare the difference on small rentals under £20?—I will supply the assessment on these various rentals.

Then you might give us the exact figure of the amount of assessment on owners and occupiers per £.

9756. (*To Mr Munro.*) Could you get us any information as to the amount of loss there is on Parish Council rates without bringing a witness to Edinburgh?—I will endeavour to see before the Committee rises.

9757. The corresponding figures?—Yes.

(*Mr Dobbie.*) Under £10 and under £16, and £20 also if possible.

Mr J. Rust.

Mr John Rust, called and examined.

9758. (*Chairman.*) You are City Architect, and have been so for fourteen years?—I have.

9759. And you yourself are an architect, and have carried on practice in the city of Aberdeen on your own account for thirty years?—Yes.

9760. Were you for a number of years President of the Aberdeen House Proprietors Association?—I was.

9761. You resigned that office when you became City Architect?—I did.

9762. You yourself have a number of properties throughout the city, yielding an annual rental of £3500 a year?—I have.

9763. What rents do these run from?—From £5 up to £105.

9764. They are let to 312 tenants, and 23 of them are from £4, 5s. to £5, 12s., these being one-roomed houses; 157 two-roomed houses from £7, 5s. to £9; 92 three-roomed houses from £8, 10s. to £12; 20 four-roomed houses from £14, 10s. to £19; 6 thirteen-roomed houses from £70 to £105; and 14 shops from £10 to £28?—Yes.

9765. What are the parts of Aberdeen where the smaller class of dwellings are?—As a rule in the east end, but they are gradually being demolished.

9766. Then where are the houses of the better working class?—They are situated in different parts of the city. There are a lot of them in connection with the harbour at Torry, and in the west end and Rosemount district, and in the north district, and round the suburbs on each side.

9767. We had from Mr Meff a statement that the chief industries of Aberdeen were granite, paper, shipbuilding, fishing, and combs. Which employs the largest number of men?—I should say the fishing industry at the present time.

9768. Do you mean residents?—Yes. The district of Torry, which has sprung up within the last ten or fifteen years, is three-quarters composed of those engaged in the fishing industry.

9769. Is it increasing?—Yes.

9770. Within the burgh boundaries?—Yes. I have seven houses there, and seventy tenants, and three-quarters are in connection with the fishing industry.

9771. What kind of rents?—From £8 to £12.

9772. In Aberdeen, what employment is there for families, especially women?—There are a number of large mills where they are employed. The fishing industry employs a great number of women, and there are two or three large mills.

9773. Granite does not employ any?—None as a rule.

9774. Paper does?—Yes.

9775. And combs?—Yes.

9776. Is the whole of your property let from year to year?—It is.

9777. With half-yearly payments?—Yes.

9778. Except the larger self-contained houses, of course? Yes, they are let on lease.

9779. Suppose that Mr Cross's Bill were passed, which makes the period of let the same as the period of payment, it would practically, for houses above £5 in Aberdeen, convert yearly lets into half-yearly lets?—Yes.

9780. Returning to Section 4 of that Bill, which I have just summarised, what do you say about houses with rents from £3 to £5. In point of fact, at the present moment they are on short lets, aren't they?—As a rule the small rents, very small rents, are monthly lets.

9781. Are there any houses in Aberdeen at or under £5 yearly lets?—Not many.

9782. In what case would there be yearly lets?—Single rooms, if let as such, would be let to yearly tenants, and the monthly tenants are all confined to the older class of houses, what we call the slum property, but of the newer class of property above that, I don't think there are any monthly tenants. They are all yearly tenants.

9783. Even although in single-roomed houses?—Yes, I have some there with yearly lets.

9784. You have twenty-three?—Yes.

9785. Are these all in new property?—Comparatively speaking.

9786. All respectable people?—Yes, widows and single individuals.

9787. What do you say in regard to this? Do you think it is a good system that with such small lets as these the tenancy should be yearly and the payment only half-yearly?—My experience is that that is the best way, and I have always found that the tenants themselves like to get settled for a year.

9788. Did you try collecting the rents more often?—Yes. I had a good deal of trouble in getting the rents. I thought I would try making quarterly collections, and started letting houses by the twelve months, with quarterly collections. It was almost a complete failure. One or two complied, but the bulk had not the rent when I sent round, and said, "Oh, I forgot. We did not know you were going to collect quarterly," and they objected to it. I tried it for a twelve months, and reverted to the old system.

9789. Was that not partly because it was new. Do you think that you gave it a fair trial?—Well, I found it was a failure so far as I was concerned.

9790. You have never tried short lets anything shorter than a year?—No; when we let a house, we always let it for the twelve months without option for subletting. We don't allow them to sublet, but, as a rule, if any tenant wants to remove, we ask him to bring a new tenant, and we always allow them to go away.

9791. But the evidence we will get from you is not the result of experiment entered upon in Aberdeen. Has anybody tried letting the better class of workmen's dwellings except for a year?—I don't think so.

9792. From the landlord's point of view, is it your view that letting for less than a year is not desirable?—I don't think it is.

9793. And from the tenant's point of view, you think on the whole he would gain by it?—I think so. I don't think he would gain anything by taking the house for six months.

9794. Does it come to this, that cases which may arise of occasional inconvenience, from a man having to remove in the middle of a term, are so few, that the other drawbacks would more than compensate for any benefit there?—I think so. In my own case there is only, I should say, a very small percentage of the tenants who want to remove during the year.

9795. Then is it your view also that while this occasional hardship might be met, the tenant would have to face forehand rent?—Yes.

9796. Would he like that?—I don't think so. I don't think he would be able to do it. The ordinary working man, at any rate, would not be able.

9797. In cases of houses that are let monthly in Aberdeen of the small description, is there forehand rent?—Some of them pay forehand, that is if the tenant is not really considered good, but even in the houses that are let monthly, if the tenants are respectable, they get a month of their house before having to pay.

9798. Is there any system in Aberdeen, that we have heard complained of elsewhere, of cautioners being demanded?—Well, it is difficult to say. I don't think so.

9799. Do you ever employ that system yourself?—As a rule not. I make inquiry about the tenant and take steps accordingly. We always make inquiries, and never let a house without asking of their former landlord what sort of tenants they are, and what sort of houses they keep.

9800. But suppose the law of hypothec still remained, would not that be sufficient without forehand rent?—I don't think so. A great number of tenants have not so much furniture as would pay rent supposing it was sold.

9801. What is your view on the question of hypothec on the whole, both as to the tenant's and landlord's advantage?—I think it is very good, to hold over the tenant's head, that you have this hypothec, but at the same time it is not very often exercised. In very few cases do I exercise it. More often we allow them to go and take their furniture with them rather than have any humbug with the furniture, because the selling of it does not pay the expense.

9802. Do you find that there are cases where the tenant does get an advantage from the fact of the landlord's hypothec, in the way of relaxation, being allowed to remain even although a little in arrears?—Oh yes, often.

9803. Your terms of payment are Whitsunday and Martinmas, aren't they?—Yes, or Martinmas and Whitsunday.

9804. What about the Martinmas term, isn't that a very difficult term for tenants?—Yes, we always find that is the worst term of the year to get our half-year's rent.

9805. Work is less, and more fuel is needed, and more clothing for children?—Yes, and during the last year or so

the building trade in Aberdeen has been very dull, and a great number of tradesmen have been out of work. From my own point of view, and from that of others, we have had to give a good deal of time for the tenants to pay the rent, and we do it, especially if they have been with us for a number of years.

9806. When the building trade is dull and men are out of work, have you not found many of them removing from Aberdeen?—Several of them.

9807. But to no large extent?—No, a number of them have gone out of town, and a number of them leave their wives and families in the houses.

9808. Having gone out of town?—To look for work in other towns or in the Colonies.

9809. Then is it the case that it does not necessarily follow that a man wants to remove his family though he wants to remove himself for a time?—No, if he is only removing temporarily from want of work, because some of the family may be employed in the town.

9810. What is done in Aberdeen suppose a man does want to remove his family between terms, and there is a clause against subletting, what is your experience?—My experience is, I always ask the tenant if he can get another tenant, and this man, if he wants to go out, looks out for another tenant and offers him some little advantage, agrees, say, to pay the year's taxes, and allows the new tenant in free of taxes, and if he comes we always allow the first tenant to remove.

9811. It has been suggested that the landlord does not care so long as he has the original tenant liable. I suppose a landlord likes to have his house occupied, not shut up?—Yes.

9812. He has an interest to assist the tenant in subletting?—Certainly, and tries to get the house let himself, but as a rule, when the house is sublet, I take the subtenant, and relieve the old tenant altogether.

9813. What do you charge for subletting?—Nothing.

9814. In other cases, have you known landlords accept of payment for cancelling the let?—That might be the case.

9815. How many cases within the last ten years have you known in your own practice where a man has had to pay a double rent, the rent of the house he took from you, and also of the other house he removed his family to? Have you had any such cases?—Very few.

9816. Give us any notion. How many tenants did you say you had?—300. I would say 1 or 2 per cent. at the outside.

9817. What percentage of removals have you in a year out of your 300 tenants?—About 10 per cent. Of course in that percentage of removals it is not removing out of my property altogether. They remove from one district to another and take a house from me.

9818. What percentage of removals between terms might you have last year?—Maybe 5 out of the 300.

9819. Now, as to the question of the termination of the tenancy, and notice of removal, were you at the meeting in 1891 that we heard about from Mr Meff?—I was.

9820. And it represented both house proprietors and tenants?—Yes, it was a public meeting.

9821. Had there been agitation for some time before that meeting on the subject?—There was.

9822. And was the meeting unanimous in thinking the date should be changed from February to 10th March?—Quite.

9823. Why has the thing broken down, is it the factors' fault or the tenants' fault?—Partly both, principally the factors'.

9824. Are you still of the same opinion as you were in 1891?—I am.

9825. Would the period of 10th March apply to rents of £5 and upwards?—Yes.

9826. Up to any rent?—Well, up to £40 or £50, say up to £25 at all events.

9827. Does your experience show that the thing cannot be effected by voluntary arrangement?—I don't think it can.

9828. We have been told the same history took place in Edinburgh?—Yes.

9829. They thought it advisable, and then broke down?—My experience is that tenants don't want to settle for their house until a certain time before the term, in case their work may fail them. Giving them to 10th March would be abundant time to ask them to say definitely.

9830. The present system really makes a sixteen months' tenancy instead of twelve?—Yes, and we find, as a rule, a great number of tenants won't bind themselves, say till 10th March, and if they are good tenants we just hold on.

9831. What would you propose?—I propose the 10th of March should be the legal term to ask them to say whether they are going to stay or not, and that any let up to that time would not be binding—that up to that time the tenant could resile from his bargain.

9832. Suppose, without going that length, the date for warning out were made later than 4th April?—Well, I think there is rather little time between 10th March and 4th April.

9833. What date would you make the date of warning out?—I don't see why it should not be 1st May, or about the end of April.

9834. Suppose the warning-out date were made 1st May, would that not almost automatically, without interfering with the other matter, produce the same result?—No, I don't think so.

9835. Is not part of the same difficulty due to the warning out being so early?—No. I think it was just that houses began to increase in Aberdeen faster than the demand, and factors began to try and get good tenants, and went back to the old system.

9836. What about the new houses that are ready between the terms?—They would be let whenever ready for occupancy.

9837. In regard to the question of monthly rates, we have heard from Mr Meff and Mr Munro: what view do you take about landlords paying the tenants' rates up to £16 in Aberdeen?—I think it would be a great mistake. I think it is a great mistake even from £5 down.

9838. Is there any other case in Aberdeen except the rates below £5, and the rates on short lets above that? What about water rates?—It is the same with water rates. The Town Council charge the water rates, but the poor rates and school rates the landlord is not responsible for at all.

9839. What about stair gas?—That is an arrangement between the landlords and the tenants in the houses.

9840. But the landlord pays it?—If it is a private meter the landlord pays it in the first place. In all newer houses we charge the tenants according to their own meters. Each tenant has a light, and the tenants arrange that one tenant shall light it one week and another another week.

9841. So that the Corporation in that case can force the landlord to pay stair gas?—Yes, if the meter is in the landlord's name. In all my 300 houses I have only two houses where I pay the stair gas as a landlord.

9842. Suppose you are wrong in thinking that the present system of making the landlord pay under £5 is a bad one. Suppose it is a good one, is there any reason why they should not pay above £5 up to £10?—It means a lot of trouble for the landlord.

7843. It would aggravate the difficulties?—What I have always found is that it is a very difficult thing to get the rates out of the tenant.

9844. Under £5?—Yes, and even under lets for a shorter period than a year, you will find it a great difficulty to get tenants to believe that the landlord is not taking an undue advantage of him when he asks for rates.

9845. That would be cured if it were universal?—I suppose it would.

9846 To some extent?—Yes.

9847. What about the abatement of 25 per cent under £5?—I don't think it pays the landlord.

9848. How much would you say?—Because it is a very, very small rent, not only do you lose the rates, but the rent too, and you have to pay rates to the Town Council when you don't get it yourself.

9849. Of course, with the higher rents along with the better class, you would not have the same risk?—No.

9850. Suppose that, contrary to your view, the landlords were made to pay their rates between £5 and £16 in Aberdeen, what do you say of the proposed allowance in Mr Cross's Bill, which comes to 7½ per cent. and 5 per cent.?—I think it is very fair so far as the allowances are concerned.

9851. What do you understand that covers? If the allowance is intended to cover cost of collection and loss, that is one thing; but if also to cover unlets, that is another thing. Are you assuming that to cover all three?—No, not unlets.

9852. In any system of allowance, do you think unlets should be separately dealt with by the landlord showing the town that the thing was unlet and nothing charged?—I do. I think it is very unfair, the landlords having to pay at the present time landlord's taxes on unlet houses.

9853. In what case have they to do that?—In every case. For instance, if I have £100 of unlets during the year, I have to pay landlord's taxes on all that £100, although the houses are standing vacant.

9854. There is no case where the landlord has to pay tenants' taxes when deducting unlets?—No, you have no tenants' taxes to pay on unlets.

9855. Do you see why you should do it where he has to pay his own?—I think it is an injustice.

9856. I suppose there is, too, that, as far as policing goes, for instance, his unlet does get the advantage?—Certainly.

9857. Might there not be a distinction made in the rates, as to policing, for instance? He might fairly have to pay that, but not some of the others on unlets?—Yes,

Mr J. Rust. 28 Jan. 1907.

there is not the slightest doubt he gets the benefit of policing.

9858. What about the effect this suggested compounding would have, debarring the poor class of tenants from getting relief?—At the present time all tenants who pay £5 and under get no relief from their rates. The landlord charges them, and he has to pay the rates himself to the town, and if it was raised to £10 there would be no relief granted to needy persons under £10.

9859. What is your experience as owner about the effect of this relief? Is it abused?—In some respects it is.

9860. Tell us your view about it.—My impression is that the parties who are most in want of relief are the parties who are paying the smallest rents, and the higher the rent the less are they in need of relief.

9861. And, in addition, it is above £5 that men are most ready to make application?—I think so.

9862. Suppose that, by some method or another, the rates were collected either by the rating authority or through the landlord more frequently than at present. I suppose a number of those people who are not able to pay one rate in a lump sum could pay it periodically well enough?—They might. Of course it would always take more to collect, and in very small sums the collection of it means a good deal.

9863. In addition, what do you say to the period when rates are collected at the present moment: is that a good time to get rates?—Of course the rates are due on 11th November, but, as a matter of fact, they are not obtained until after the New Year. They are legally due on the 11th November, but there is nothing said to the tenant, nor is any action taken against the tenant, although they are a little later in paying them. Of course when houses are let from year to year, 11th November is the middle of the time, I suppose the best time for collection of them, because the Town Council require a certain time to get out their notices, and it gives them time to allow themselves a little time, as it does the landlord, supposing he is not able to pay the whole amount at the time.

9864. I suppose tenants are very ready to make complaints if they have to pay rates in one sum? Not as a rule; I don't think so. My experience is, no.

9865. Equally in regard to long lets, have you yourself had complaints from tenants about the disadvantages of long lets?—Not as a rule, except, for instance, from parties coming in from the country. They want to work temporarily in the town and only to get a house temporarily. Whenever they get a chance they want to go back to the country. An ordinary workman who works in the town has no objection.

9866. Have you ever had a case of one of your tenants under a yearly let coming to you and saying, "I would like to change the monthly to a quarterly"?—Never.

9867. If such a desire had existed, would you expect to have it expressed to you?—I think so. I have had a tenant coming to me and saying, "I am going to work in a different part of the town, could you give me a change of house," and if I could give it to him, if he was a good tenant in that district, I would do it.

9868. If he said that notwithstanding the increased facilities for travelling from one part of the town to another?—Of course it means money to him for tramway fares.

9869. Have your facilities increased in Aberdeen?—Yes, tramways go all through the city.

9870. And is there no system of trains used by working people from one part of the town to another?—No. There is a system of workmen's trains to Donside, but that is without the boundary.

9871. Is that a different thing?—Yes. The mills on Donside employ hundreds of men and women.

9872. Do they stay in Aberdeen?—A number of them do. They go out to the paper mills.

9873. For what reason do they continue to reside in Aberdeen?—Well, they are mostly say girls, working in these mills, and their parents are in Aberdeen, and if the parents are in Aberdeen, sometimes they reside in Aberdeen because some of the family may be working in the town.

9874. What about the charge for the tramway from any of the big works to working people's houses?—No less than a penny as a rule. There are some halfpenny fares, but a penny is the usual fare.

9875. Do you know of any reason to think that the conditions of work are different, say in Glasgow, from Aberdeen? Is there a more shifting population or anything else of that kind?—Well, I think our works are steadier, and our workmen are steadier in Aberdeen, so far as there is not so much shifting of workmen as there is in Glasgow.

9876. Suppose a case where a man wants to change his family residence between terms, you don't think that would be so frequent in Aberdeen as in Glasgow?—No, I don't.

9877. You see, the limit suggested in Aberdeen is £16, as against £20 in Glasgow. Would our rents in Aberdeen compare with a place like Glasgow?—A good deal cheaper, I should think; 15 to 20 per cent. cheaper in Aberdeen upon the same class of house. I think the differentiation is a fair one. If Glasgow is £20, I think it is a fair thing to say £16 for Aberdeen.

9878. It is £15 under the 1905 Bill?—£16.

9879. It is £16 under the 1906 Bill?—Yes.

9880. So you say £16 is a fair limit for the ordinary working man's house?—I think it is over it. I would say £12 in Aberdeen is a fair limit.

9881. Cases above that being perhaps those of men in a position of foreman or with wage-earning children?—Yes, the ordinary working man does not pay more than £12 unless he has some of the family bringing in a wage.

9882. (*Mr Dobbie.*) Do you require to resort to ejection often?—Very seldom. I have never been at the Burgh Court.

9883. Are you in favour of exemption on the ground of poverty applying to rents below £5 as well as above?—I am.

9884. You told us that tenants hang back for about a month rather than take a house, in case they may have to leave and follow their employment. Would that not rather point to some disadvantage attending the taking of a house for twelve months?—No, I don't think so, because when we ask them on 2nd February to take the house they don't know where their work is going to be at Whitsunday, and they want to hang on as near as possible.

9885. At the risk of having to follow their employment about?—My experience of tenants is that they will rather be at that disadvantage than flit. They will rather walk and be at a considerable disadvantage than shift from the house, unless it is going to be a permanent change of work.

9886. Above £5 there are no rates charged on empty property, is there?—Yes.

9887. Owners' rates?—Yes.

9888. Not tenants'?—No, there is no tenants' rates charged on empty houses.

9889. Supposing under £5 the house is occupied when the Assessment Roll is made up, and the tenant leaves between the terms, have you any claim for abatement?—No

9890. In short lets, assuming that the tenant left between terms, between May and May, would that be an additional loss to the property?—It is risky, but I would not say it would be a great loss, because you could always find plenty of tenants for these monthly houses.

9891. You would not be entitled to recover from the successor of the tenant?—Certainly not, that is the loss to the landlord.

9892. In dealing with Mr Cross's Bill, you think that reasonable enough?—Yes.

9893. You do not take into account the risk of loss through short lets becoming prevalent, and that loss therefore increasing?—Well, as I say in respect to those monthly tenants, I have no personal experience of monthly tenants myself, but as City Architect I know there is a factor employed by the Town Council, and I have to look after the properties, and he tells me he found no difficulty.

9894. (*Mr Howden.*) You told us, I think, that there were between 1 and 2 per cent. of removals between terms?—Yes.

9895. And also that where a man got a sub-tenant you usually accepted him?—Yes.

9896. Where the tenant does not get a sub-tenant, what is your experience?—We hold him to his bargain.

9897. Do you find in Aberdeen there is any particular rush before the May term?—To get the houses ready, as a rule there is.

9898. Followed by a corresponding slackness afterwards?—Yes, that has occurred in Aberdeen for three or four years.

9899. Did it occur at one time?—Yes, the working class house is hurried up for the May term.

9900. Has that not been the cause of some friction between employer and employee?—No, I have never heard of friction.

9901. In connection with the yearly bargain, for instance?—You mean between landlord and tenant?

9902. No, between employer and employee as to what date they should sign their agreement?—Yes, there have been some that have been employed as a rule on weekly wages.

9903. But between the Unions that make the bargain and the employers?—As I understand, they settle what their week's wages are going to be about March or in May.

9904. But it has been a cause of friction as to what date should be fixed?—From the men's point of view they thought that was the best time to fix the wages,

Mr J. Rust.
28 Jan. 1907.

because they thought the masters were in a difficulty, and from the masters' point of view, they would like the wages fixed after the May term.

9905. But it is directly in consequence of the removal term being 28th of May?—Well, no, it is just the spring work. It tends to it. Building going on as a rule has always to be got on with by Whitsunday, and the men have the advantage before that time.

9906. (*Mr Binnie.*) In reply to the Chairman, I think you said you did not think the abatement of 25 per cent. on rates of houses under £5 paid?—No, if you got all the money it would pay, but you don't. Those monthly tenants are the worst class of payers.

9907. Then you said, I think, that the rates under Mr Cross's Bill, you thought, were fair?—Yes.

9908. What makes the very great difference between 25 per cent. under £5, which does not pay, and 7½ per cent. on rents from £4 to £7, which you say would pay?—The 25 per cent. is quite sufficient when you get it, but when you don't get it! This 7½ per cent. would be quite sufficient if you got it all.

9909. But you have to run the risk of that, and you were asked that particularly?—If you run the risk, as I say, 25 per cent. does not pay, and I am sure the landlords would rather have nothing to do with the rates at all than have only 25 per cent.

9910. But I wish to know why you said 25 per cent. under £5 does not pay, and 7½ per cent. from £4 to £7 would pay?—Because from £4 to £7, I would say £5, if it were £4 to £5, 7½ per cent. is far too small; but when you make the average £4 to £7, the number between £5 and £7 is very considerable, and if you were to get 7½ per cent. of abatement on all the rates on property from £4 to £7, I think it would be fair enough, but if you only get 7½ per cent. on £5 and under, I think that would not be sufficient.

9911. But do you think that 7½ per cent. on rents from £4 to £7 is sufficient to pay the cost of collection and the risk that the landlord would run of loss?—As I understand, this clause is that all rates are going to be payable by the landlord instead of the tenant, and therefore, when you have that payable, say monthly, or some such term, you would not have so much risk of losing the rates, and I think 7½ per cent. is a fair enough deduction for the landlord for his trouble in collecting. We run the risk of losing some of our rates, and of losing our rents, which we sometimes do, and on the broad principle I think 7½ per cent. is a fair enough abatement.

9912. What factorage does the landlord pay to a factor for annual lets from £4 to £7?—In my own case I keep a factor permanently.

9913. But in the ordinary case, where people have so large property, what percentage would they pay?—I think it is 5 per cent.

9914. So that you think 2½ per cent. would be sufficient to cover the risk of loss on rates?—Yes, if they have to be collected by the landlord. The only thing is, my impression is that if the rates are going to be put on the landlord to keep themselves right, they will make the rent sufficient to allow them for any loss.

Mr J. Rust.
28 Jan. 1907.

9915. That is just his making the tenant pay extra in another way?—I think that would come if the landlord is to pay the rates.

9916. Then you think the allowance given to him is not sufficient?—It just depends on the class of property and the class of tenant.

9917. (*Chairman*)—You think to cover the chance of its not being sufficient, he would put on something extra?—I do.

9918. What proportion of the police rate does the landlord pay in Aberdeen?—One-third.

9919. Of the police rate proper?—Just for policing purposes, you mean?

9920. Yes?—Well, it is not detailed when they send out the taxes now. They put on the whole rate of 1s. on owners, the whole city rate. That includes all the owner's rates and does not detail how much is for policing alone in Aberdeen; on occupiers it is 2s. 3½d.

9921. Perhaps you will not be able to answer this question, but I would like to ask it. Have you ever considered what proportion of the policing of the town is occasioned by the preservation of peace and what by the protection of property?—My impression is that the policing for the protection of property itself is a very infinitesimal part.

9922. Have you ever considered what proportion?—No, I could not say the proportion.

9923. Then, in regard to the relief of rates, you think it is abused?—Yes, in certain cases.

9924. Is it the case in Aberdeen, as in other places, that shortly before the elections, when a man stands, a number apply to him for certificates?—Yes, I myself was a member of the Town Council for six years, and I have known cases where relief was granted when it ought not to have been, and sometimes where it ought to have been granted, they have not had sufficient power or pressure brought to bear, and it was not granted.

9925. And we are told that relief is given just about election times?—Well, no, not in Aberdeen.

9926. When is it given?—I think about the month of March; the election time is about November. They are all gone very carefully over by the Committee, but, as Treasurer Meff stated, members for the ward are always present when the notices of that ward are being gone over, and of course it is a natural thing that the member should try and get as many reliefs as possible in his own ward, so as to try to keep in with the electors. That would be all right if no relief should be given over a certain rental.

9927. But if a widow has taken her house to let it to lodgers and has had no lodgers for six or twelve months, would that not be a case of relief?—Well, it may be, but she would not keep her house long if she had no lodgers. They would not go on year by year, and any person able to pay say a £10 rent should have to pay the taxes.

Provost John Taylor.

Provost John Taylor, Clydebank, called and examined.

Provost John Taylor.

9928. (*Chairman.*) You appear here with Councillor R. Davidson on behalf of the Town Council of Clydebank?—Yes, I have been sent here.

9929. We know that Clydebank is down the river from Glasgow, and has had a remarkable increase of population within recent years?—Yes. We have grown from 5000 in 1880 to 38,000 at the present time.

9930. The industries are shipbuilding, Singer's works, and certain iron works?—Yes, the two largest shipbuilding yards in Great Britain, Brown's and Beardmore's, and Singer's Sewing Machine Factory are included.

9931. You have in the burgh at the present time altogether how many dwelling houses?—I have the details here.

9932. Are there 1340 one-roomed houses, 5079 two-roomed houses, 688 three-roomed houses, 130 four-roomed houses, 86 five-roomed houses, and 73 six-roomed houses and over?—Yes.

9933. In addition to the resident population, I think you have a large number of men who travel daily?—About 10,000 men travel to Glasgow and the Vale of Leven out of Clydebank every day.

9934. What do they pay by tram and by train?—They pay 1s. a week by train and much more by tram. It costs them 3d. to go to Glasgow by tram each way.

9935. Why do they not move to Clydebank?—One reason was the want of houses for a time, and another reason was that there was no employment for families, only for males, and a number of men had come from Glasgow, and had their associations there, and did not care about breaking off these associations.

9935*a*. Do you expect these cases will continue in the future, as in the past, or will they gradually come to reside more in Clydebank?—Yes.

9936. But always with certain numbers leaving for Glasgow for the reasons mentioned?—Yes.

9937. In Clydebank Town Council the question of Mr Cross's House-letting Bill has been considered, and carefully considered?—That is so.

9938. The population of Clydebank, of course, with few exceptions, is of the working class?—Almost entirely.

9939. You have no idle villa population at all?—No. We are not old enough for that.

9940. I may take it that the Town Council represents the working classes of Clydebank?—Yes, a number of them are working men.

9941. And a number of others have been working men?—Yes.

9942. What is your own business?— Painter and picture decorator.

9943. And Mr Davidson?—Wine and spirit merchant; but Mr Davidson is also owner of a number of houses, and has factored these houses, and notwithstanding that he is in favour of this Bill of Mr Cross's.

9944. The question came up on 11th April 1904, and each member was supplied with a copy of the Bill, and they resolved to consider it later. Then it was remitted to a committee, and the Finance Committee, who reported on 27th February 1905, unanimously agreed that the Bill, as presently drafted, altering its provisions to rents of £10 and under, would be of little or no service, and recommended that it should extend to counties, that the mini-

Provost John Taylor. 28 Jan. 1907.

mum rent should be £25, and the deduction allowed on assessments payable by owners in no case should exceed 1 per cent. In the end the Town Council itself, I see, resolved as follows:—"It was agreed to support the pro-'visions of the Bill, but to urge that it should be made 'applicable to all houses of £20 rental, and that the Bill 'should extend to the whole of Scotland, and not be con-'fined to burghs." That is the view that you have come here to represent on behalf of the Council?—That is so. The rental of £10 would be of no use whatever to Clydebank.

9945. Why not?—We have very few houses of £10 all over.

9946. Have you many of the working class who are labourers, or are your working people mostly skilled?—No. We have a good many labourers, but labourers get a fair rate of pay, and are able, at least with keeping lodgers, to keep larger houses.

9947. Have you found the working class in Clydebank are divided on this question of Mr Cross's Bill?—No. We have had no indication of anything but approval of it. We have had many deputations who have come to us asking the Town Council to support the Bill. When the candidates for Town Council honours appeared before their constituents, the question has been put to everyone, and they have all given an answer that they would support the Bill. Otherwise I have no doubt their seats would be very precarious.

9948. Have you had Parliamentary meetings too?—We have, of Parliamentary candidates, both Liberal and Conservative, at the last election, and that was a question put to both candidates, and both were in favour of a modification of the existing state of things.

9949. Do you find in Clydebank the shipbuilding employees more of a shifting population than say men in Singer's works?—Yes, naturally. One portion of the work may be very busy and another very quiet, and where ships have to be built in haste, iron-workers complete their work first, and then the wood-workers and the engineers. The iron-workers may be very busy, but when their portion is done, if there is no other ship to be built, they must necessarily go and find employment elsewhere, and it is a very frequent occurrence in Clydebank for a man to take a house, and in the middle of the year to find that he has to go perhaps to England or some other place to get employment.

9950. And do you find there are undoubtedly cases where a man wants to remove his family as well?—Yes, when anyone goes so far away, at least he always takes his family with him.

9951. Have you always found, as between a man in Singer's works and a man in Thomson's yard, say, any difference of opinion on the matter?—No, they are all at one, although it does not apply so widely to Singer's works. They don't have to shift so often. Their employment is of a more permanent kind; but notwithstanding that they are in favour of this Bill. Councillor Moir, who brought the matter up, was an employee in Singer's.

Provost John Taylor. 28 Jan. 1907.

9952. (*Mr Dobbie.*) I see your Council want the Bill to apply to the whole country?—The reason for that is that we are surrounded, at least we were surrounded before we got our extension, by a population of 10,000 people who worked in our burgh, but who lived in the immediate outskirts. We have now got that 10,000 within our own borders, but we have other places quite close in Renfrewshire, where the people work in Clydebank, and stay outwith. If it only apply to Clydebank, people coming from Renfrewshire into Clydebank would have difficulty in finding houses.

9953. If Aberdeen was dead against it, why should not you refuse home rule to Aberdeen?—We did not think so much of Aberdeen; it is too far away, although we have come here to-day, but our position was that we were more immediately concerned with the counties outside our own district.

9954. More like the larger areas than the present burghs. You think the Bill should apply to larger areas, so as to include the population?—Houses within at least ten miles of our burgh.

9955. But you don't think it would be necessary that the Bill to be operative in Clydebank should extend to every other burgh in Scotland?—Well, if it is optional for them to take it up or not, there is no reason why Aberdeen or any burgh should object to those who want it.

9956. So long as the optional clause is there?—Yes.

9957. (*Mr Howden.*) You mentioned that there were two of the largest shipbuilding yards in the world in your district?—That is so.

9958. You also told the Chairman that you could get from Glasgow down to Clydebank for 1s. a week?—Yes.

9959. Does that apply to Beardmore's work and Dalmuir?—No, they pay 6d. extra, 1s. 6d.

9960. You are perfectly certain £10 would not meet the difficulty so far as Clydebank is concerned?—Not at all. I think very few houses, with the exception of some new ones put up by Mr M'Alpine, are under the £10 limit.

9961. On the other hand, you think £25 would be the limit?—We have a number of houses, three rooms and kitchen, that they pay £25 for.

9962. (*Mr Binnie.*) Mr Cross suggests £20?—£20 is the last decision of the Town Council.

9963. Now what is your opinion on the schedule at the end of Mr Cross's Bill as to compounding. Do you think it is a fair scale? You have seen the scale, I suppose?—No, I have not seen the scale; we did not go into that so much. They did at one time, but not at the last discussion on the Bill.

Mr F. J. Scott.

Mr Francis John Scott, called and examined.

Mr F. J. Scott.

9964. (*Chairman.*) You are a solicitor in Aberdeen?—I am.

9965. You are President of the Aberdeen House Proprietors Association?—I am.

9966. And you are authorised to give evidence on their behalf?—That is so.

9967. The statement you supply to us has not, I understand, been submitted to the Association?—It has not, but I may say a public meeting was called under the auspices of the Association, at which I criticised Mr Cross's Bill, and, generally speaking, the views expressed in my *précis* are the same as the criticism I offered there, and the public meeting unanimously agreed to ask me to give evidence in opposition to the Bill.

9968. Your firm, I think, collects annually nearly £2000 of rent from about 200 tenants occupying houses with rents of from £7 to £12 per annum?—That is so.

9969. In Aberdeen, is it the case that there are few tenements containing flats or half-flats let at a rental exceeding £16 per annum?—There are very few.

9970. The greater portion are between £7 and £12?—Yes.

9971. Would you say the proportion of that class of houses are let by the year?—I have put it here at nine-tenths, but after what Mr Munro said to-day, I am inclined to think there is even a smaller proportion of them than one-tenth let other than by the year.

9972. You would put it that more than nine-tenths of the houses are let by the year?—That is so.

9973. What proportion of these houses have the rent paid half-yearly?—All of them, I should say.

9974. Do you agree with what has been said of the practical result of Mr Cross's Bill if made applicable to Aberdeen in reducing yearly lets to half-yearly lets?—That is so.

9975. Have you any experience of houses of the poorer class let by the month and week?—I have none.

9976. What is your own practice about a stamped missive?—I issue a missive when it is for the first year of tenancy. I produce a few copies of the missive which I issue.

9977. So that you have no experience yourself of anything but long lets?—That is so.

9978. Is that in a form that is practically universal?—I think this form is pretty nearly universal.

9979. In all cases, it is the custom to prohibit sub-letting?—It is so.

9980. We have been told about what took place in 1891 with your Association. Do you yourself consider the arrangement then proposed was a reasonable one?—I think so, and I think it was a pity it had to be gone back upon.

9981. What view do you take as to whether the legislature should interfere to secure that arrangement being observed?—Well, it might be objected to if you make it compulsory or illegal for a proprietor to let his house before 10th March. Some people might object to that, and say that their liberty was being interfered with, and unless you had some such remedy, proprietors would take tenants, and tenants offer to take their houses, and fall back on the old way.

9982. That arrangement failed in Aberdeen?—Yes.

9983. The same as in Edinburgh?—Yes.

9984. In both places it broke down?—That is so.

9985. And that is a case for the interference of the legislature?—I think so.

9986. It would not be a case for having no optional clause,

Mr F. J. Scott.
28 Jan. 1907.

would it? That would be a question affecting equally the whole country?—That is so. Of course I think the period between 10th March and the latest day for warning out is too short, and if you are to alter the date to, say, the 10th of March, an alteration would require to be made as to the forty days for warning out.

9987. How far would you go there? We heard the 1st of May suggested?—I think the 1st of May is a very suitable suggestion, or the 28th of April, making a clear month to the 28th of May.

9988. In regard to the present position of matters as far as the landlord not being able to get rid of a bad tenant is concerned, what do you say?—I think the ejection laws ought to be simplified in order that the landlord could turn out a bad tenant on, say, five days' notice on a complaint simply.

9989. Are you talking of the Sheriff Court?—Of the Sheriff Court; I have had no experience of the Burgh Court. It was only when I went into this matter that I discovered that there was a Burgh Court in Aberdeen for that purpose.

9990. In regard to the Sheriff Court, is it the case that you just first proceed to give an order of sequestration?—That is under the Small Debt Amendment Act.

9991. Is it not competent to issue at once a common law action for ejectment?—I think so, but if you bring your action before the period of removal has expired in order to make sure that the tenant will go out, that is an expense which the landlord must bear, the amount of which he cannot recover from the tenant.

9992. Is it considerable?—Very considerable.

9993. The method taken is under the Sheriff Court Act, 1838?—Yes.

9994. And how long after you begin is it before you get the tenant out, suppose he uses all the powers of the common law in his favour?—Under the summary complaint it might take a month.

9995. Would it come to this, that tenants would be in arrear for how long before you took your action, and he would sit there, and you would lose a month's rent, in addition to being put to the expense of the proceedings, because if you do not recover your rent, you cannot recover the expense of your proceedings? What would the expense of putting him out under that method come to?—From £1 to £2, I should say.

9996. That would only be if you had to employ the sheriff's officer to eject him?—Yes.

9997. What proportion is due to that?—I should think about one-half.

9998. It has been suggested that a landlord should be entitled to put a tenant out without going to the Court at all. Do you agree with that?—I think perhaps if the landlord took an affidavit or swore before a Justice of the Peace that a tenant was in arrear and that was taken to a sheriff clerk, a warrant on that ought to be given to eject the tenant.

9999. Would you not give the tenant an opportunity of stating defences, as, for instance, that the term had not expired?—Yes, I should say so.

10,000. Isn't it inevitable that there must be some opportunity for the tenant to state the defence, if he has one?—I think they should have an opportunity for so doing on a forty-eight hours' *induciæ*.

10,001. That would protect the rights of the tenants if acting *bona fide*?—I should think so.

10,002. We were told that in Glasgow, where the proceedings generally are in the Burgh Court, a tenant, merely by appearing, whether he has any defences or not, gets delay. How is that in Aberdeen?—In the Sheriff Court delay is given if a tenant says that there is illness in the house or that through some such reason he cannot leave. Perhaps the Court will allow him the matter of five days, and that is in an exceptional case.

10,003. Now, in these cases, does the sheriff apply his mind in each case?—There is really no proof led as to whether there is illness or not, and it is a frequent excuse.

10,004. We were told that, in Glasgow, a man by paying 6d. is entitled to lodge answers and then he need not make any excuse?—It is in the Burgh Court, and I have had no experience, but it is not so in the Sheriff Court here.

10,005. In regard to the present system, you have told us the process of ejection is too long and too expensive?—That is so.

10,006. Suppose a tenant is not in arrear but unsatisfactory in other respects, a disorderly neighbour, is there a satisfactory mode of getting rid of him?—There is not, and I think some procedure should be adopted analogous to the Small Debt Court procedure.

10,007. Under the Small Debt Act?—Yes.

10,008. Have you yourself found occasion to complain of the absence of such procedure?—I have.

10,009. What kind of tenants are referred to when one is talking of that?—On one occasion, unfortunately, I had let a house to an immoral tenant, and I had very great difficulty in getting that tenant put out. The Chief Constable said he could do nothing in the matter, though the party conducted the house in an immoral manner; she did not employ others to assist her, and in that case he could not interfere, and the thing was a perfect nuisance in the place.

10,010. The rent was regularly paid?—Yes.

10,011. But the neighbours complained?—Yes.

10,012. And you were unable to do anything in the matter?—I could do nothing.

10,013. At present, suppose you exercise your hypothec, the goods must be sold at the Market Cross?—Yes.

10,014. That is an old-fashioned provision and not a very proper one?—It is very objectionable, because my experience is that it usually costs more than the value of them.

10,015. What is your view of the value of a landlord's hypothec?—Well, I should say in about 75 per cent. of the cases it is of very little use in the smaller class houses.

10,016. We were told by Mr Rust that it had the advantage of holding something over their heads. Is there anything in that?—I don't think there is a great deal. Of course, if the landlord's right of hypothec were abolished, something ought to be given in its place in the way of getting rent in forehand. There would have to be some protection to the landlord.

10,017. If the hypothec were abolished, that would come as a matter of course?—I think it would.

10,018. In regard to the tenant's point of view, you know it is alleged by many working men that they are placed in circumstances of great difficulty frequently by the present system, because they cannot remove when they ought to be in a position to remove. What do you say to that, as far as Aberdeen is concerned?—I have had very few cases of tenants wishing to remove to another locality. If they say they have got employment elsewhere, they are asked to find another tenant, or perhaps to put an advertisement in the papers at their own expense, and if a suitable tenant is found, they are allowed to sub-let, and nothing is charged beyond the actual cost of the advertisement.

10,019. Is it your view that, whatever theoretical grievance there may be, there is no practical grievance?—None in Aberdeen.

10,020. Have you any notion of how many go from one industrial centre to another? How many have you yourself found?—One in about 500.

10,021. And have you yourself had any experience of this case—a man being compelled to pay double rent, the rent to you as his landlord and the rent in another place?—I have not come across a case of that kind.

10,022. Do you think Glasgow would fairly compare with Aberdeen, or has Glasgow, do you think, a more shifting population?—I think it might, but I cannot speak for Glasgow.

10,023. What about the increased means of locomotion and the facilities for getting from one place to another?—That is one reason why the objection alleged by the tenant does not apply, because we have in Aberdeen, at any rate, the electric car and the suburban railway, whereby tenants can easily get to their work either on Dee side or Don side at a cheap rate.

10,024. These facilities are going on improving and increasing?—They are.

10,025. So that, if there has been any grievance in the past, it has not got worse but diminished?—Yes.

10,026. Do you find that working people show a preference for a particular locality in the city?—I do.

10,027. Do you find that very often the working men's houses are really the centre for the different wage-earners in the family?—That is often the case, particularly where there are different wage-earners.

10,028. In regard to subletting, suppose you sublet, what do you charge?—Nothing.

10,029. I understand in Aberdeen there are very few regular factors, that the factoring is mostly done by law agents?—That is so.

10,030. Is it the ordinary practice not to charge in such cases?—I believe it is.

10,031. And I suppose you agree with what we were told that it is the landlord's interest to get a sublet?—It is not good for a house to stand empty, and if he gets a subtenant, the chances are that the tenant will stay on for the next year.

10,032. What do you say to the inconvenience to people removing, from all the removals taking place in the same day of the year, compared with the English system?—I do not think there is any real grievance there, because my experience is that the removals don't all take place in the one day, but that the tenants arrange amongst themselves. They find out when the tenant in the house which they have taken is removing, and then arrange amongst themselves for getting possession before the term day.

10,033. We have been told that there is this substantial grievance, that the rates for removing come very much higher. What about Aberdeen?—I have no knowledge of the rates being higher.

10,034. Have you any knowledge of this, that the rates for getting anything done in the way of painting and papering, and so on, are higher?—I have some experience of that, and I don't find it higher. I find the painters charge the same rate at Whitsunday as at any other time.

10,035. It is said you might have to bribe the painter to go on with the work at once?—I have never had to do that.

10,036. (*Mr Howden.*) Is it not left to the tenant to do that?—Occasionally the tenant has to wait for a week or two when the painter is busy.

10,037. (*Chairman.*) I suppose the convenience or inconvenience depends a good deal on the weather. If the removal day is a bad one and the furniture has to lie out for a time, it would certainly be inconvenient?—That is so, but there are very few cases of that kind in Aberdeen, because tenants arrange among themselves, and some of them remove a week or a fortnight before the term.

10,038. In regard to the remedies proposed, and particularly in the case of short lets, you know that there has been a good deal of agitation for this remedy?—I suppose there has been, in Glasgow.

10,039. If there is no grievance, how do you account for the agitation?—I don't think there has been any agitation for short lets in Aberdeen. There has been in Glasgow, I understand.

10,040. Do you make that remark about Aberdeen looking to all the ordinary sources from which you would learn that there was a grievance?—As your lordship put it to-day to some of the witnesses, in municipal elections I don't know that candidates have ever been asked about this grievance, nor do I think that in Aberdeen in Parliamentary elections candidates have been heckled on the subject.

10,041. You think the effect would be serious for landlords?—It think it would be.

10,042. Without any corresponding benefit to tenants?—I think so, because it would destroy the value of the property. The number of changes would be greater, and the repairs account would be very much increased, I think.

10,043. What would be the effect of all that on the rent? Would the result be to leave rents as they are, or raise them?—I think to raise the rents materially.

10,044. Do you think the feeling in favour of short lets, so far as it assumes that rents won't be raised, is a wrong basis?—I think so, and I think that a tenant, if he only takes a house for a month or three months, won't take the same interest in the property as he otherwise would.

10,045. We have been told in some places that there is a certain social element in the matter as between long and short lets. Do you find that?—Yes.

10,046. Isn't it due to the fact that the short lets are all the poorest class of houses?—That may be the case.

10,047. That is to say, that would right itself in the course of time?—If there were only monthly lets there would be no distinction.

10,048. Did you take steps actually to ascertain in the case of certain properties what the tenants thought about this matter?—I did so. I selected two different blocks of properties in opposite parts of Aberdeen, and put the question to forty-eight tenants as to whether they were in favour of the present system being changed.

10,049. In the first place, tell us what the rents were?—From £9 to £12.

10,050. Did you select these just at random?—Yes.

10,051. What was the exact question put to them?—Just if they were in favour of the present system of yearly tenancy, or would they prefer a change to monthly.

10,052. Orally or in writing?—Orally.

10,053. What was the result?—Thirty-nine are in favour of yearly tenancies, and six decline to give any answer, and three, not that they are in favour of shorter tenancies, but would be prepared to give the monthly system a trial.

10,054. Have you discussed the matter with those forty-eight, or simply told them what the question was?—I simply instructed the assistant in my office who takes charge of the properties to put the question, not to discuss it in any way, to put the simple question and bring back his report, and this is his report.

10,055. As far as you know, none of them raised the important question of whether rents would be raised or not?—No, I have not known of them raising that question.

10,056. You think these people fairly represent the ordinary class of working men?—Yes. I may say that in both these properties they are very good working class people in the houses I took.

10,057. These would be the best kind of working men, not the shifting, improvident class?—That is so.

10,058. Would these generally be skilled men or labourers?—I should say skilled men.

10,059. Artisans?—Yes.

10,060. Does that seem, in your view, to point to the fact that the necessity for removal between terms does not bulk largely in their minds?—That is so. It was my impression before, and that confirmed it.

10,061. Are you assuming that short lets would mean more frequent removals, taking the year as a whole?—I think it would mean more frequent removals, but I don't know to a very large extent.

10,062. But suppose it did not mean more frequent removals, would not a great many objections to short lets disappear?—That is so.

10,063. A great many are based on the assumption, are they not, that short lets would lead to more frequent removals?—Yes, that is so.

10,064. And deterioration of the property, etc?—Yes. On the other hand, I think that if a tenant has taken his premises for twelve months, he is more likely to take an interest in the property than he would otherwise do.

10,065. What is your view on the important question of compounding? In the first place, do you think compounding of rates would necessarily follow?—I think it would.

10,066. Suppose it did, what do you say about it?—I think it is objectionable that the landlord should be made the tax-gatherer.

10,067. Why? He is the tax-gatherer just now under £5?—Well, I believe those who have experience of that rather object to it.

10,068. Of course you have not?—No.

10,069. Have you had an experience of the water rate collection?—The water rate in Aberdeen is collected along with the city assessments.

10,070. But from the landlord?—From the tenant.

10,071. What do you say to the suggestion about there being no hardship because Aberdeen does not need to adopt the Bill?—I think it very desirable that there should not be a difference in regard to letting in different parts of the country, and I think the same should apply to Aberdeen as to other places.

10,072. I see you say in your *précis* that this would introduce an inequality of treatment in circumstances precisely similar. Now, suppose in Glasgow—they have shifting population which Aberdeen has not—might there not be room for such a remedy in Glasgow, although not warranted in Aberdeen?—There might be.

10,073. Do you think it is very desirable to have a uniform system?—Yes.

10,074. Which would you rather have, suppose you were offered a choice?—In that case, I should say that I should have the option.

10,075. Do you go the length of objecting to the landlord paying up to £5?—I do. I think the tenant ought to be made to feel that he has some share in keeping the assessments low, and he will not have that unless he is made to pay direct—at least, not to the same extent.

10,076. What do you think has led to the landlord being made to pay up to £5?—I don't know what the reason is.

10,077. Does it appear to show that short lets are necessarily associated with compounding?—I should think that would very likely be the reason.

10,078. Under £5 of course are practically all short lets?—Yes, I understand so.

10,079. In what you have said about the law of hypothec, I understand that has not been considered by your Association?—No, it is entirely my own view.

10,080. But if the law of ejection was simplified, there is no reason why this law should remain?—No, as far as lets up to £25 are concerned.

10,081. (*Mr Howden.*) You talked about an immoral tenant, one you had some difficulty in getting rid of. If you had shorter tenancy you could have got rid of that tenant?—That would be so.

10,082. It would have that advantage at least?—It would have that advantage.

10,083. (*Mr Binnie.*) In regard to shortening the time for warning away, would it not do quite well if you gave a fortnight or three weeks in that case. The tenants know quite well whether they have got a real let of their own house or not, and warning away is simply a legal form very much?—That is so.

10,084. Would it not do a fortnight or three weeks before the actual removal term?—I think a fortnight rather too short.

10,085. Why?—If one has got a great many tenants to deal with, it is a great deal of work for one thing, and if there is any dispute to arise as to the warning away in the longer period of a month, the dispute might be adjusted by finding another house.

10,086. But if your ordinary letting term were a month earlier than the warning-away term, a tenant would gather

Mr F. J. Scott. 28 Jan. 1907.

in the course of that month whether he was to get the house or not?—I think he would probably, but there might be a risk, and I cammot see any particular advantage in making it fourteen days.

10,087. The advantage would be that you could bring the letting term much nearer the removal term. If you warned away say on 7th May, you might make the letting term begin on the 1st of April, that is a whole month and a week for letting?—Well, I think fourteen days is rather short. Thirty days is what my view is.

10,088. (*Sir J. Stirling-Maxwell.*) You said you attached great importance to having a uniform system all over Scotland?—Yes.

10,089. Is that on general grounds, or is there any inconvenience you foresee?—I think grievances are conceivable. From the lawyer's point of view one wants to know the law all over the country, and if there are different systems prevailing, it is very awkward. If a tenant comes from Glasgow to Aberdeen, it is desirable that the same rule should apply as applies in Glasgow or Edinburgh or elsewhere.

10,090. That is what I call general grounds. There is not any particular inconvenience you see?—I cannot suggest any.

10,091. (*Mr Esslemont.*) I take it that one of the chief grounds of your objection to the shorter lets is, that more frequent removals might take place?—That is one of the grounds.

10,092. With consequent deterioration of the property?—That is so.

10,093. But if you had satisfied yourself that more frequent removals would not take place, your objection would be to a great extent removed?—It would to a great extent.

10,094. Would it not be a convenience to wage-earners to pay rates and rents more frequently than at present in instalments?—It might be an advantage to pay quarterly to wage-earners.

10,095. Would not it be a real advantage to pay it monthly?—I believe in some cases it would.

10,096. Would not it be an advantage to the owner as well to have his money coming in month by month, or quarter by quarter, or half-yearly?—I think it would be an advantage.

10,097. It could not possibly be a disadvantage?—I don't see that it could.

10,098. House-owning is a business?—That is so.

10,099. And people in business want to get in the money as quickly as possible. They rather prefer a prompt to a deferred payment?—Yes.

10,100. Do you not think it is remarkable that house owners should object to a system which would enable them in the course of three months to have one-half of their obligations paid?—Yes, but if I collect my rent monthly, it is a monthly let.

10,101. We are not discussing the Bill. We are inquiring into the system of house letting generally, and we wish to consider the interests of the proprietor along with those of the tenant, but you don't see that it would impose no prejudice on the owner?—Nothing beyond the additional trouble of collecting the money.

10,102. But I have never heard of anyone in business complaining of the trouble in connection with the collection of money. I have always thought it was an advantage to have it paid as quickly as possible?—Yes, I believe that is so.

10,103. Speaking as a business man, I would much prefer to have a settlement with my customers every month than one every six months?—As I have said, I don't see any objection to that if I am not compelled to let my house by the month.

10,104. You are not compelled?—If this Bill passes I would be.

10,105. (*Mr Dobbie.*) In the two tenements in which you took a plebiscite, were the tenants yearly tenants?—All yearly tenants.

10,106. Then, if the Bill of Mr Cross's became law, they would become half-yearly tenants?—That is so.

10,107. Not monthly?—No, because they pay the rent half-yearly.

10,108. The question put was as between one month and twelve months, and you did not put it to them as whether they would have a six-monthly let as against a twelve-monthly?—No, I did not.

10,109. Why do you think, if this change were made, it would result in more frequent removals?—Well, some people are very fond of changing. I believe if tenants were not asked at 10th March whether they intended to stay or not, they would simply go on if the matter of change was not brought before them. I believe there is a good deal in that. If you continually suggest change to a man he will probably take advantage of the suggestion, but if not, he will not think of it.

10,110. You would not rather put it that, if the Bill results in more frequent changes, the absence of the Bill would keep people where they would rather not be?—I do not think so. If there is any real need for a change, they will soon get it.

10,111. Is there any suggestion as to practical remedy for dilatoriness in regard to ejections?—I think some procedure analogous to the Small Debt procedure should be introduced.

10,112. Over and above that, do you think there might be given to the Burgh Courts more drastic powers to deal with smaller houses?—I don't see any objection to that to meet the difficulty, or to the Sheriff Court.

10,113. In Glasgow, the great bulk of the ejections are in the Burgh Court?—Yes.

10,114. Then, with reference to short lets, I suppose the great objection landlords have to short lets is that it would put upon them the duty of collecting rates?—That is the chief objection.

10,115. If there was reasonable allowance made to landlords in respect of the rates to be collected, that would largely get over that?—That would, if a reasonable allowance was made.

10,116. Have you seen the scale attached to the Bill?—I have.

10,117. What is your view in regard to the rates suggested?—I think it is far too small. We have it from those who have had experience in collecting rates that 25 per cent. is more like a reasonable allowance up to £5, and I should say 20 per cent. to 25 per cent. would be required, based on the experience of landlords dealing with rents under £5.

10,118. Would that 25 per cent. cover not only irrecoverables but also empties between terms?—No, I don't think so. It would cover irrecoverables, but not where the house was empty. It is conceivable that a man might have a whole tenement of property empty on which he would have to pay not only landlord's but tenant's taxes. I think it is a hardship at present to pay landlord's taxes on empty houses.

10,119. That is based on the present exemption on the ground of poverty being continued?—Yes.

10,120. (*Chairman.*) Suppose an optional clause were introduced, and the adoption of the Act were made optional to the various authorities, do you think it would be reasonable that there should be provision for a revision of it within a certain number of years?—I think so, because, as I understand the Bill, it is simply put to the sheriff to confirm it, and I cannot see the force of doing that, because the sheriff, according to the Bill, has simply got to confirm whatever is passed, and has got no discretion in the matter whatever.

10,121. Do you remember in any of the other Acts, where power is given to adopt or not, if there is a provision for periodic revision within so many years?—I cannot say.

10,122. I have an idea there is in some of them, but I am not sure about that?—I really cannot say.

Mr A. M. Williamson and Mr A. Ledingham.

Mr A. M. Williamson and Mr Alexander Ledingham, called and examined.

10,123. (*Chairman to Mr Williamson.*) You are an advocate in Aberdeen, and have been requested by the Society of Advocates in Aberdeen to give evidence here?—Yes.

10,124. You have been in practice for twenty-six years?—Yes.

10,125. (*To Mr Ledingham.*) You are Vice-President of the Society of Solicitors in Aberdeen, and have been asked by the Committee of that Society to give evidence?—Yes.

10,126. (*To Mr Williamson.*) May I take it that in Aberdeen, as contrasted with Edinburgh and Glasgow, the factoring is generally done either by owners or law agents?—Yes. Occasionally the law agents may employ others, such as retired tradesmen, to do the actual letting and collecting of rents; but these people account to the lawyers for all their intromissions.

10,127. Do you yourself do any factoring?—There is a little done in our office.

10,128. You are not a property owner?—No.

10,129. (*To Mr Ledingham.*) You have had a long experience in connection with the management of houses, and you are Secretary of a Property Association, which owns property with a rental of over £5000?—Yes, I have had experience of over thirty years.

Mr A. M. Williamson and Mr A. Ledingham

10,130. And factor for several clients?—Yes, and I have been asked to represent the views of one of the largest proprietors in Aberdeen, who did not want to trouble you with evidence. His rental altogether is over £4000.

10,131. In what class of houses?—He has houses of a less rental than £16, going down to £4 of rent. His aggregate yearly rental from such houses is £815.

10,132. (*To Mr Williamson.*) We heard about the houses in Aberdeen above £5 being generally let by the year, with half-yearly payments?—Not under £5.

10,133. Over £5?—Yes.

10,134. And is it the case, as we have heard, that forehand rents are practically unknown?—That is so.

10,135. And quarterly payments are rare?—Yes.

10,136. Now, in other places, quarterly payments seem to be very common for houses of that kind. Is there anything in the circumstances of Aberdeen to explain the difference?—I don't know anything exceptional in the circumstances of Aberdeen, but it is a fact that quarterly payments of dwelling houses over £5 are practically unknown.

10,137. We were told by Mr Rust that he had tried it, and had not found it a success. People did not like it. Do you know of its having been tried?—We have not tried it.

10,138. (*To Mr Ledingham.*) Have you?—No.

10,139. (*To Mr Williamson.*) What do you say about the evidence we have heard to-day in the direction of thinking it desirable to go back to the old arrangement about the 10th of March for letting houses?—Well, I think it is certainly better to have a later date than Candlemas, and I don't think the 10th of March is at all too late in the season.

10,140. Would you approve, at the same time, of altering the date of warning away to make it later?—I should certainly shorten the period between the warning away and the date of leaving.

10,141. To what extent?—Well, I think the removal term being 28th May, probably if warning were given before 1st May that would be satisfactory.

10,142. Do you think that can be carried out without statutory enactments?—No, it would require that, I understand.

10,143. It has been tried by voluntary arrangement and has broken down?—I am not aware that it has been tried.

10,144. The shortening of the period has been tried?—Oh yes.

10,145. (*To Mr Ledingham.*) What do you say on that point?—If you retain the forty days' notice between the 28th of May and the date of warning out, the letting period would be too short. The tenants must have a reasonable time to see about suitable houses. I see no objections to delaying the date of warning to the end of April or the beginning of May.

10,146. And in that case?—The evil, if there be an evil, would right itself, because the landlords and tenants have no interest to hasten one another in coming to a bargain, and the house-letting season would extend over March and April.

10,147. Is it your view that the legislature should only interfere to the extent of altering the warning-away date?—That is my view, and the other evil would right itself.

(*Mr Williamson.*) That is the view I meant to express also.

10,148. (*Chairman to Mr Williamson.*) Do you gentlemen think if that were altered any grievance that really does exist would be sufficiently met?—Yes.

10,149. Suppose, however, you consider a Bill like Mr Cross's Bill, do you think that the effect of it would be in any way to increase rents with short lets—in short, would mean increased rents?—That is what we have found. We have always found that a proprietor who puts his money in that class of property where there are short lets, looks for a considerably larger percentage on his investment.

10,150. Why?—Well, there is a good deal more tear and wear on the property, a good deal more expense in the collection of rents, and in the letting, and what is, I think, of still more importance, it is not such a class of property that is so favoured by lenders, and if one wants to borrow money on that class of property one has to pay a higher percentage for it, and they don't get the same ratio, such a proportionately large sum on the capital value.

10,151. But isn't that all fallacious, because you are not comparing like with like? The experience of short lets hitherto has been in relation to the poorest class of property. Suppose you are rather applying short lets to the best class of working men's properties, wouldn't all that disappear?—Not altogether. It is a great advantage to a lender to know that the rents are to come in at the same time as his half-yearly interest is due. He can take much more ready means to protect himself for his interest, if his security becomes inadequate, or if there is any reason to be apprehensive about getting payment of his interest. He has a whole half year's rents to fall back upon.

10,152. But suppose actual payment of rent is concerned, isn't it more natural for a working man to pay frequently when his wages come in?—It is a good deal what he is accustomed to.

10,153. Any change of the amount would produce dislocation at first, but one must look forward. In the long run, would short lets in the better class of property produce that?—It rather looks as if one had no confidence in the providence of the working man. Does it not depend on what our view is as to whether short lets would produce more frequent removals or not?

10,154. Perhaps, if not, the objection as to more repairs would disappear?—You could not reduce the extra cost of factoring the property.

10,155. That would remain, that is the cost of collection, but is not the factor's clerk about the property on other business, would it add substantially to the cost of collection?—It would be very considerably more. If you collect twelve times a year instead of once, the expense is very much greater, because the time occupied in doing it is very much greater.

10,156. That, I think, would remain. Do you know of anything else that would remain. I am not talking of compounding, but, apart from that, would there be anything except the increased cost of collection to heighten rents?—There is what I mentioned. I believe the man who had the monthly tenants would have to pay more for his money if he were dependent upon borrowing.

10,157. (*To Mr Ledingham.*) What do you say on that very important question whether or not short lets on the better class of property would mean an increase of rent to the tenants?—I think short lets would be irksome to the landlord and in the end lead to increased rents. Probably for a time the bulk of tenants would still go and come at the May term, but if a landlord were left at the end of an intermediate quarter without a tenant, he would have more difficulty. He would have no full market. The full market would be for the May term. These would be half terms, and he might be a long time without finding a successor. Then he would have the increased cost of collection, more voluminous accounts, and collectors, more frequent calls, and the cashier would have a bigger account to keep.

10,158. That would be substantial?—I think so.

10,159. But I suppose one of the greatest reasons why you apprehend an increased rent is in connection with what we are coming to, namely, that compounding must necessarily follow?—That is also a serious matter. He must guarantee all the tenants' taxes, for which he must be compensated.

10,160. Is it your view that the necessity for compounding following on short lets is a very important thing to be kept in view by this Commission?—I don't see how you can have short lets without compounding. The present system of taxing once a year is because the Valuation Roll is made up once a year. If the Valuation Roll is made up once a quarter, there could be quarterly collection of taxes. If the Valuation Roll is to be made up only once a year, and if the landlord is to be burdened with his tenants' taxes, it means that he guarantees not only payment of his tenants' taxes, but has to pay out of his own pocket the tenants' taxes at any part of the year during which the house may be vacant.

10,161. But would you not comtemplate that, along with compounding, the landlord should get free from payment of rates so far as his house is unoccupied?—It would involve a great deal of expense and a clumsy system. The landlord would have to ask back part of his taxes on the ground of empties.

10,162. You have no experience of how it is done in England?—They have quarterly collections there. I have no experience.

10,163. From proprietors?—Of rates.

10,164. From proprietors?—Both proprietors and tenants.

10,165. Well, we are to hear about the English system afterwards, but do you agree that if it could be done, it would be in the interests of everybody that rates should be paid more often than once a year?—I do not see any benefit.

10,166. Don't you think that if a working man has to pay out at once a lump sum, perhaps £2 or £3, it is a serious thing?—To a provident man that is a good thing. He puts part of his weekly earnings into a Savings Bank, and a great many of the Aberdeen working men are in the Co-operative Society, and receive a dividend once in the year. They have that in hand to pay their taxes, and I believe many of them rely on that to pay both rent and taxes.

10,167. That is perfectly true about the ideal working man, and there are many; but take the most, or at least a

very large number, who live from day to day and from hand to mouth, isn't it the fact that a great deal of money would be got, and would be paid, which at present goes in other directions, just because it is not collected frequently?—I think undoubtedly so, but if a working man pays rates weekly or monthly, he thereby causes a great deal more trouble to the landlord, and assuredly will have to pay for it in the shape of higher rent.

10,168. You think that is nigh certain?—I think so.

10,169. You have not only the increased cost of collection, and the other matters you have already referred to but you would have the increased rent in connection with compounding?—That is my view.

10,170. (*To Mr Williamson.*) Do you agree with that?—Entirely.

10,171. And you think these elements would all go not only to affect the borrowing and lending on house property, but also the erection of house property for the labouring classes?—I think so. One does not readily go in for an undertaking if he foresees much trouble in connection with it, and unless he has a reasonable expectation of a remunerative investment.

10,172. It is a business like anything else?—No doubt, but it is to a large extent taken up by people who are engaged in other occupations for the employment of part of their savings.

10,173. Suppose that the landlord in connection with compounding gets a sufficient allowance, do all your objections disappear?—You refer to a sufficiently high rent.

10,174. No, sufficient deduction from the occupier's rate he pays. It is proposed to give him a certain amount by way of percentage by reduction?—But he would require a very much larger deduction than is proposed.

10,175. Suppose he gets a sufficiently large deduction, would all your objections disappear?—Well, no, there are a large number of tenants who are more or less in poor circumstances, and who on application are exempted by the public authorities from payment of rates. It would be impossible to leave it to an individual landlord to discriminate as to who were the deserving applicants and who were not.

10,176. In your experience, is that power to remit fairly applied?—I know nothing to the contrary. I may say it is applied much more extensively than I had any idea of when I made some inquiry at the Town Hall and the Parish Council offices in connection with this inquiry. I had no idea until then that relief was granted to any such large amount.

10,177. Isn't it granted to a considerable number who are not the most deserving class?—No doubt that must be to a great extent with so many applicants. I understand there are about 1900 who get exemption from city rates, and something like 1100 who get exemption from parish rates; these being over and above recipients of outdoor relief who, as a matter of course, are exempted.

10,178. Have you any notion how many get exemptions compared with the number that apply?—I cannot tell that.

10,179. Do you see any reason why, if that is the relief system, it should not be extended to the poorest of all—those under £5 rents who get no exemption whatever?—I see no reason.

10,180. Do you believe, in regard to what we heard from Mr Scott about the circumstances of Aberdeen, the nature of the employment in it, and the facilities for getting from one part to another, that these relieve the alleged grievances which are said to exist in a place like Glasgow?—Yes, I think I may fairly say that in Aberdeen there is no real hardship caused to anyone through having to change the place of his work within the town or the suburbs.

10,181. Do you think the existence of a large amount of unlet property illustrates and proves that?—I don't very well see the connection between the two subjects.

10,182. Suppose, for instance, that there was a demand, as is said to exist in other places, for short lets in a good class of property, do you think that is consistent with the existence of so much unlet property?—Well, I think when there is so much unlet property, that those desirous of a shorter tenancy could easily secure it, because a landlord, if he has not let his house for a year about the ordinary letting period, with the prospect of it hanging on his hands for a twelvemonth, will much prefer to have it off his hands in monthly lets.

10,183. We have been told in Glasgow that that is not so, and that people won't let property that is usually let on yearly tenancy at a short let?—I think they must be luckier than we are here, and have their property more fully let on a yearly tenancy.

10,184. So it comes to this, if there was a big demand for short lets of the better class of working class property, that unlet property would meet it?—In the present state of the market, that demand would certainly be met.

10,185. And if it existed without that in your view, and Mr Ledingham's, we are bound to have heard of it?—Yes.

10,186. Have you seen any sign of it in the way of agitation such as one is generally able to take from the newspapers and ward meetings, etc.?—No, I have not seen the slightest sign of it. On the other hand, we have been told by several people who manage their own properties that they had spoken to some of their tenants about introducing more frequent collection of rents—it is not the change from the yearly tenancy but the more frequent collection of rents—but they got no encouragement.

10,187. Rates or rents?—Rents.

10,188. Have you any reason to think the views you have stated as existing in Aberdeen are different in places like Peterhead, Stonehaven? Have you heard of any agitation there?—I have never heard of any agitation, but it might exist without my knowing it.

10,189. The proceedings in places of that kind are reported in the Aberdeen papers: for instance, have you seen any indication in that way?—I do not recollect having observed any.

10,190. Would you expect that, suppose a Bill such as Mr Cross's were passed with an optional clause, it would not be adopted in Aberdeen?—I should say it ought not to be adopted; but whether it would or wouldn't is a different matter. I should apprehend that some one or two members of the Town Council would make it their business to get it adopted, and if they continually, in season and out of season, pressed the point on the other members of the Town Council, in the absence of anyone making it his business to prevent its being adopted, sooner or later they would probably find a majority and force it upon us.

10,191. Do you think, if there was an option that there would be an opportunity at periodic times for revision?—That would certainly to some extent lessen the evil consequences of its adoption.

10,192. Because your view is that, if it were adopted by a chance vote, it would be found not to be a benefit but a drawback?—That is my present impression.

10,193. (*To Mr Ledingham.*) What do you think, Mr Ledingham?—I would just apprehend that once it were adopted and applied to different towns, it would be found very difficult to alter the system.

10,194. And what do you say to the uniform system all over Scotland?—I think the system should be uniform, because there is a great deal of removing from one place to another. Take Aberdeen, we have beyond the city boundaries very large suburbs, both along the Dee and the Don, people who are employed in Aberdeen. Many of the people in these places are working in Aberdeen, and it would be very awkward to have different systems prevailing.

10,195. These are not within the burgh?—No.

10,196. (*To Mr Williamson.*) Do you think that the short let would lead to more removals on the whole than the present system?—It is difficult to say. I think at first we might find a good many tenants would remove at the first opportunity, going into a house and not giving it a fair trial for some small thing they considered detrimental, but if they were forced to give the house a fair trial, they might like it, and live there for years. After they had been for a certain time in the house, I don't think they would be so readily inclined to remove as they are under the present system.

10,197. Has not the present system this drawback, that it rather suggests removal to people by this annual missive being sent?—I don't know that there is much in that.

10,198. We have been told there is in Edinburgh and Glasgow what is called a house-hunting fever at Whitsunday. The ladies especially are all on the go?—With a certain class of people. We find those who are not the most desirable tenants are always on the out-look for a completely new house that they will get clean. We do find that.

10,199. Do you not think that owing to there being one removal term there is considerable inconvenience to the working classes and more expense?—No, I do not think here that the working classes pay more for removal at Whitsunday term than they would at any other period.

10,200. Your experience is the same as Mr. Scott's?—I was not here during the whole of his examination.

10,201. He said what we had here, in other places, about increased expense, did not apply?—I think so. We have large carting firms and good carters' plant here, and I don't think that applies.

10,202. What about tradesmen's charges?—I am not aware that anything more is charged than at other times.

10,203. And what about there being an over-pressure on the tradesmen, the builders, joiners, plasterers, etc.?—Doubtless a little pressure is put upon different tradesmen in connection with the finishing of buildings, but it is generally a blessing, because otherwise the buildings would take months before they are finished.

10,204. We have heard something about the law of

hypothec. Do you find any general complaint on the part of tenants?—I cannot say I have found complaints either on the part of the tenants or the landlords. I find no complaints with regard to the existence of the law of hypothec.

10,205. The complaints are rather on the part of the tradesmen?—Well, I don't think there are many complaints. They quite understand that that right exists to the landlord, and they can give credit or withhold it accordingly.

10,206. Do you propose any change in the law of hypothec?—No.

10,207. You would have things remain as they are?—Yes.

10,208. Suppose short lets were introduced?—Well, I think that if short lets were introduced, the tenant is not getting the benefit of the half year in which to pay his rent. The landlord would more than likely ask the rent to be pre-paid, and if that were done, there is no occasion for hypothec. But the existence of the landlord's right of hypothec undoubtedly enables him often to give a tenant help temporarily and allow him to tide over his difficulty.

10,209. But suppose short lets were introduced, the landlord, if he made the rent forehand, would have no occasion to use it?—Not the occasion that he has at present, but supposing a tenant just finds himself in a temporary difficulty, then I imagine he could not get the indulgence that he does at present from his landlord.

10,210. Have you anything to say on the desirability for more speedy and cheap ejectment?—Yes, I think it would be very desirable, if it were possible, to lessen both the expense and the time required.

10,211. But is it possible, looking to the humanarian elements that must enter into the question of the ejection of a family?—Well, of course that is difficult, because one must allow for reasonable precaution to avoid the infliction of hardship. Still, say the effects have been sold under sequestration, if there is not more than enough to meet the past due rent, the landlord has no hypothec for the current rent, and naturally he says to the tenant, "You must replenish this place or go." At present, he has to get the case brought into Court, and a report as to the result of the sale. Then *pro forma* a warrant is given for service on the tenant of a notice that the case will call in Court again, with the view of getting a warrant of ejection, if the rent had not in the meantime been paid. I would suggest that the officer, when he has sold and found that the furniture is exhausted, and the rent not fully met, or no provision for the current rent, might, without going back to the Court, intimate to the tenant that on a certain day the case will call again in Court.

10,212. Would that alter the period at present occupied considerably?—That would depend on the date that the Court sat. It might be the saving of a good few days, but it would be a certain saving of expense; but, seeing the tenant has not an opportunity of appearing in Court at this first calling, it does not seem to be necessary; it affords him no protection.

10,213. (*To Mr Ledingham.*) What do solicitors think about the law of hypothec?—They think it beneficial both to landlord and tenant, and they see no call to do anything.

10,214. Suppose short lets were introduced, how would that affect it?—It would be an experiment which we could hardly know the result of.

10,215. Suppose Mr Cross's Bill passed, would you expect the only result would be, as far as lets are concerned, to kill yearly tenancies, and make them all only half-yearly tenancies, or would the effect be to go further and produce quarterly or monthly tenancies for the better class of houses?—It might inconvenience both landlord and tenant, because the landlord might have difficulty in letting his house during an off season, and a tenant seeking a house during an off season might have too limited a choice.

10,216. But it would not necessarily produce monthly or quarterly tenancies? Would you expect it to do so?—There is no reason to expect that.

10,217. What do you say about the power of ejection?—The present proceedings are far too cumbrous and expensive, and a little ingenuity would enable the proceedings to be shortened.

10,218. In the Court?—The Sheriff Court; we don't know the Burgh Court.

10,219. We have heard of the Burgh Court being composed of over-compassionate magistrates?—The recourse has not been to the Burgh Court at all in Aberdeen.

10,220. You prefer to leave the matter in the hands of the Sheriff Courts?—Very much.

10,221. If a tenant has failed to pay rent, the landlord could have power to bring the contract to an end. He can do that just now?—No, you have first to apply for a warrant of sequestration.

10,222. But is that a necessary preliminary?—Yes, and then to sell, and it is only after you have sold that you can present a second application to the sheriff representing that there is not sufficient furniture to pay the rent. It might be made competent to the Court, when a tenant is in arrear, to grant all necessary powers to the landlord, on one application by him.

10,223. Do you think there would be no ground on the tenant's part to object to that?—I think not; he has not paid his rent, and has broken the contract.

10,224. (*To Mr Williamson.*) If there is to be compounding, have you anything to say about the rates in Mr Cross's Bill?—His Bill proposes, I think, to throw upon the landlord the burden of paying the whole rates, with the right of relief against the tenant, and in the receipt he gives his tenant, he has to specify how much is rent and how much is assessment.

10,225. I am not talking about that, I am talking about the schedule:—"Deductions to which the owner shall be entitled from assessments leviable on the occupier in respect of any dwelling houses situated in Aberdeen" are: over £4 and under £7, 7½ per cent.; £7 and under £10, 5 per cent.; £10 and not exceeding £16, 2½ per cent. Have you applied your mind to consider whether these are adequate or not?—With the class of tenants whose rates would be paid punctually and fully, these deductions might be fair, but they are not enough to make up for bad debts, and there is no provision for giving an exemption that a large proportion of impecunious tenants have been accustomed to.

10,226. Have you considered what would be necessary in place of these percentages to recover bad debts as well as cost of collection?—I have not gone into it, and I don't think anyone could guess it, because you would not let your house to any of these people who have been in use to obtain exemption. I do not see how these people who have been in use to obtain exemption, and who will necessarily look for it in the future, are to get houses at all.

10,227. Is it your view that these people who have been in use to obtain exemption would, if the exemption had not been granted, not have paid?—Many of them might pay. There might be a hardship in making some of them pay. I understand that some of them who pay the largest rents are lodging-house keepers, but perhaps on the representation that they have been unfortunate for a year, or had their rooms standing vacant, have had exemption. It is all very well to allow that out of the public purse, but the individual landlord would not give it, and he would simply not give houses to these tenants at all.

10,228. But you cannot suggest something to give in place of Mr Cross's percentages. You see under £5 the allowance is 25 per cent. You think they are inadequate if they are to cover more than the cost of collection?—Yes, and I don't think any discount could be specified to cover the loss on these people who have been accustomed to exemption.

10,229. It would really amount to this, that they would be deprived of exemption just as they are under £5.

10,230. (*To Mr Ledingham.*) What do you say?—I agree with Mr Williamson. Take a £5 rent. The taxes amount to £1, and the commission you get for collecting them and distinguishing on the receipt and reckoning with your client is 6d.

10,231. And losses?—Besides the risk of losses.

10,232. Have you any suggestion to make to percentages to replace Mr Cross's?—I have the utmost objection to having to collect tenant's rates at all. You might almost as well ask me to pay for his groceries.

10,233. In any case, you don't contemplate empties being covered, either partial or whole?—Quite.

10,234. Is it your view that you should get deduction for loss as well as any charge for collection?—It would be difficult to carry out that idea. It might be said that the landlord's pressure to obtain payment had not been sufficiently drastic, that those rates might have been recovered.

10,235. Have you anything to say about the present proposal in regard to lending money on building property?—That it might be more difficult to get a loan on property. The more trouble and difficulty you put on the landlord, the less he will be able to borrow.

10,236. Will all that go in any degree to increase the rents?—I think so.

10,237. The tenant pays in the end?—He does.

10,238. (*To Mr Williamson.*) I understand your view, gentlemen, is that while the present proposal would be clearly detrimental to the landlord, it would not be of any substantial advantage to the tenant?—My view is that it would rather be to the tenants a disadvantage, for the better class of tenants here prefer the security of tenure that the yearly tenancy gives them.

10,239. Apply your minds to the third person in this equation, the rating authority. Do you think, if they gave a proper allowance to the landlord and continued the exemptions of the poor, they would be any better in

Mr A. M. Williamson and Mr A. Ledingham.

28 Jan. 1907.

the end than they are now?—I do not see that they would be any better. They ought to be able to collect the rates quite as cheaply as any other one can do, and under existing legislation have a certain preference, and preferences in bankruptcy. In order to put the landlord on an even footing with him there, he would require to have the right of hypothec extended to cover not only the rent, but also the sum he had to pay for taxes.

10,240. (*To Mr Ledingham.*) What do you say about the position of the rating authorities? Do you think they would be the gainers in the end if a proper allowance were given by the authorities?—It depends on the allowance. They ought to collect as cheaply as the landlord.

10,241. (*Mr Esslemont to Mr Ledingham.*) You have charge of properties bringing in a rental of £5000?—Yes.

10,242. And, if we assume that a change in the system of letting would not create more removals than existing at present, do you think the interests of the Property Association would in any way be prejudiced?—Even if there were to be no more removals of tenants, there would still be disadvantages.

10,243. You have not stated how many removals you have among your tenants, but let us assume that the number of removals in any one year remains normal; that a change of system does not create more frequent removals, but instead of taking place on any one day, they take place at different days during the year. Do you think that would prejudice the owners in any way?—I think the owners would not have the same facility in finding new tenants, because they would be trying in an off market.

10,244. But under the present system, if you miss a tenant, you have to wait till the next Whitsunday?—Unless you get an odd one.

10,245. Would not there be more odd ones?—Yes, but it would be less convenient. In off seasons, away from Whitsunday, the demand and the supply would both be irregular.

10,246. Don't you see that if tenants had an opportunity of leaving other property and coming into yours, you would have more chance of letting your un-let property during the remainder of the year?—It would be more troublesome.

10,247. If they did not increase in number?—If I had empty houses in off seasons I would have to advertise them. At present my advertising is confined to one recognised letting season. All the year round my assistants would require to be on the amble, as against two months at present.

10,248. But at Whitsunday, if you miss a tenant, you miss him till next Whitsunday?—There is a chance.

10,249. There would be more off chances?—We would be in a turmoil all the year round.

10,250. You would only distribute your wealth?—It is more easily done within two months than over twelve months.

10,251. I don't agree with you. I would rather have it distributed over twelve months?—Well, it is more convenient to have only one letting season in the year.

10,252. You would get a fuller market under this system?—No, you would have a broken market, at most seasons of the year.

10,253. You defend the existing system on the ground that it encourages thrift on the part of working people. Do you seriously contend that this monthly payment would encourage thrift?—In the case of good tenants it would.

10,254. In any case, is the system of credit likely to inculcate the virtue of thrift?—It teaches saving.

10,255. I understand the people who want the longest credit are the most improvident class?—If the tenants ask me to collect the rents every month instead of six months, I would do it, but they will have to pay more rent.

10,256. But wouldn't it be an advantage to you?—No, it would be very troublesome. I am content with my hypothec.

10,257. If you receive £2500 every half year, do you think it would be a positive inconvenience to receive half of that £2500 at the end of the first quarter?—It would be more troublesome.

10,258. How could it be an inconvenience?—More work, four collections in the year instead of two.

10,259. And would there be no compensations?—You would have the use of the money from the collectors, in each case, three months before you would have it otherwise.

10,260. As a business man, would you value that?—It would not come to a great deal. Tenants don't come to one's office on the term day and pay what they owe and go away. You have to send round and beat up for weeks before getting payment of rents.

10,261. Did you ever hear of a man who had a debtor owing him £12 who would say to him when he came at the end of January and said, "That is £1 of what I owe," and at the end of the second month said, "That is another £1,"—"I don't want it; it is a bother to me to take it?"—If he had security for his debt he would very likely say so.

10,262. The security is what?—The furniture.

10,263. (*To Mr Williamson.*) You say in your *précis* that if monthly lets are introduced, owners of property would find difficulty in borrowing to the same extent as they do at present on the security of these properties, and that the proprietor, paying a higher rate of interest, would require a higher rent to give him a fair return on his capital?—That is our present experience in dealing with houses that are let on monthly tenancies.

10,264. But isn't that due to the character of the house?—You would reduce all houses to that character.

10,265. I would not alter the character of the house, only the system of letting them. We have been told in Glasgow, Edinburgh, and other places, that tenants who want houses on monthly or weekly or quarterly tenancies have to be content with the poorest class of property in these cities, and it is undoubtedly the case, is it not, that it is somewhat more difficult to borrow on the security of these houses than the security of more modern and better class properties?—Yes.

10,266. Isn't the real difficulty in regard to the bond, the character of the property?—The lender or proposing lender does not go and poke his nose into the houses; he gets a report on the class of property.

10,267. And the rental?—And the rental, and if that is a rent that is paid monthly and not half-yearly, probably he will have nothing to do with it. If he does, he looks for a higher margin and a higher rate of interest.

10,268. Why?—He does it; he does not like the security so well.

10,269. Is it due to the fact that the class of property letting that way just now is a poorer class of house?—Not entirely. You have to take care that there is a fund out of which you will get your interest at the half-yearly terms of Martinmas and Whitsunday. If the borrower has no interest coming in, the security is so much worse, because you don't know that he will be able to pay the interest. You might collect the rents; that is one of the advantages of having his security. If he has not got payment of his interest he will enter into possession and collect the rents. He always has it open to him to do that.

10,270. Whether he fails to pay nor not?—No, he would do it even before the date of payment if he has reason to believe that his borrower is in impecunious circumstances.

10,271. That would only be the case when he had failed to pay on the previous occasion?—Of course, it is not the ordinary case, but in dealing with a security, you have to take into account what may happen.

10,272. (*Mr Dobbie to Mr Ledingham.*) I suppose if Mr Cross's Bill passes it would simply convert in nine-tenths of the cases yearly lets into half-yearly lets, and therefore the payment of rents would simply be half-yearly as at present; there would be no change made by Mr Cross's Bill in regard to the collection of rents?—No, not in regard to collection of rents.

10,273. I assume that if the landlord was called upon to pay the tenant's rates and got no abatement, he would require to raise the rents?—He would.

10,274. The more reasonable allowance he gets, the less risk there is of rents rising?—That is so. If you give him a very liberal allowance, more than enough, rents would fall.

10,275. In England, in most burghs the compounding rates are 15 per cent. where entries are not guaranteed, and 30 per cent. where the owner takes the risk of empties. Now does that appeal to you as more like the rate to apply?—In small houses I should not think it was sufficient, but we have not a great deal of experience.

10,276. It is the experience of England that the usual compounding allowance is 30 per cent., say to £10?—And are the landlords satisfied?

10,277. The Corporation, I understand, have an option of compelling the landlords to compound, and they do it, so it seems to pay the Corporations?—But if that be not adequate in England, although the landlords may compulsorily have accepted it, the effect may have been to raise the rents.

10,278. The suggestion is that it at all events pays the Corporation to give the 30 per cent., seeing that they have the option to exercise it in England?—Quite.

10,279. (*Mr Binnie.*) What is the rate paid to a factor for managing properties where the rent is paid half-yearly, and what is the rate where rents are paid monthly?—We have no skilful adjustment of the scale of charges, as you have in Glasgow; it is very much a matter of arrangement in Aberdeen. I could not quote rates generally applicable.

10,280. Would the factor take the collection of the rents in a property monthly or quarterly for the same rate as if

half-yearly?—No, he would require higher commission if he had to collect monthly or quarterly.

10,281. You have apparently looked into a matter that has been troubling some of us a good deal, that is the question of the shortening of the time for ejectment and reducing the cost. Would it trouble you too much to put in writing what you have suggested to us?—I would be glad to do so.

10,282. Some of us are anxious on that point, and the clearer you can make it for those who are not lawyers the better?—I think a simple system could be devised.

10,283. That would be of great assistance to some of us. Then I think you said that if this Bill was passed the system should be uniform throughout the country?—Yes.

10,284. Have you thought of the position of a place like Stonehaven, or other places where people go in summer to take houses for the season. If short lets were introduced, how would those people in spring let their houses for people wishing to go there in August?—In Stonehaven and these little towns and villages for summer visitors the houses are let furnished.

10,285. I know, but if Mr Cross's Bill were passed and shorter lets were introduced, I think it is the practice for people to go early in spring and take their houses for summer and autumn. How can a person in such a place let a house for autumn if the let is quarterly? They might lose their houses at the end of any quarter?—Evidently he could not let his furnished house for a longer period than he was sure of getting it from his landlord.

10,286. Does that not suggest that there are certain cases in which the Bill should not apply?—It suggests that you should not interfere with freedom of contract

10,287. But suppose there is a case made out for this Bill, in some quarters, does it not suggest that in certain other quarters there should be a power not to be subjected to the Bill?—I cannot see how you get over your difficulty with the Bill being made universal.

10,288. I am not proposing it to be universal; I think you said it should be universal if it passed at all?—The country should be subjected to a uniform system and not a patchwork.

10,289. Then the difficulty I pointed out would arise?—And the remedy is to leave things alone.

10,290. That is a very drastic way of dealing with it.

10,291. (*To Mr Williamson.*) In regard to this question you have spoken to already, the lending of money on property on short lets, you say if the lets were at shorter intervals, the bondholders would not be nearly so sure of punctual payment of their interest?—I have said so.

10,292. I do not see how that arises. Would you kindly explain it to me? A landlord at present can lift his rents on the 15th of May?—Yes.

10,293. And if a man were not intending to pay his interest, I suppose he would be very likely to go and get all his rents in on the 15th of May if he possibly could?—Of course, the lender is still liable to that chance, but I was looking to the case of the honest, though temporarily impecunious landlords. The collection of rents on 11th November puts him at once in funds with which to pay his interest if he chooses to do so.

10,294. And if he is an honest, straightforward man, he will have been collecting these monthly or quarterly during the six months previously, and if he wishes to pay his way he would have been putting the money aside to meet his interest?—Yes, but you have not the assurance that he has been putting that aside.

10,295. But we are dealing with an honest man?—Well, he has got it in by driblets over six months. There does not seem to be the same intention of doing the lender out of his interest as if he hurries through things on the term day and goes away on that same day with the money.

10,296. Do you really think any man collecting his rents monthly or quarterly, if he is an honest, straightforward man, does not look forward to the term day for his interest?—There is a chance of the borrower coming to grief, getting into financial embarrassment during the six months.

10,297. Is that at all so common as to require any special arrangement of let connected with it?—I do not say it is just so very common, but it is always an element that would enter into the minds of the intending lender or his agent. It is certainly an element that would enter into my mind.

10,298. You have been in business for a long time in a large way. Have you known that occur half a dozen times?—Well, you see, here we don't have our rents paid monthly; we have them paid half-yearly. I have certainly known cases, not many, but some, where we had on the eve of the term day to take measures for securing the rents to the bondholder, without an interposition of the borrower at all.

10,299. Because the borrower could not be trusted?—Yes.

10,300. And in that case he (the lender) would have lifted the rents?—Lifted the rents and paid feu-duty and interest.

10,301. And if the rents are paid at shorter periods than six months and the man did lift the rents and not pay his interest, you would all the sooner get part of your interest paid, in a month or in a quarter?—But they only pay a month's rent: it is scarcely worth while the bondholder lifting that, and probably the bondholder finds himself in the position of having to pay taxes and feu-duty and has no half-year's rents coming in to meet them.

10,302. And it is this very unlikely case you think should be specially provided for? You think these cases are so numerous as to require special arrangement of let?—I think they are an element to take into consideration in determining whether the existing law should be altered or not.

10,303. Then you say that in many cases within the last year or two, owing to scarcity of work, many working men have gone abroad to look for occupation who did not take their families with them, the family occupying the house until the tenancy comes to an end?—That has not been at all uncommon in Aberdeen during the last two or three years. Trade is bad at present, but we find our tradesmen here who cannot find employment in Aberdeen as a rule do not go to other towns in this country. As a rule they emigrate, but they don't take their wives and families with them. The men go there simply in search of employment.

10,304. And they will not have as much money to send to their families as they do when in work here?—That does not follow, for sometimes they get excellent wages in Canada and the States.

10,305. If they are wandering about in search of employment? That is your own statement.—That is only for a short time as a rule, and perhaps they want to move about until they get a start.

10,306. Don't you think that during this uncertain period the wives and family would like to go into a cheap house?—No, I don't think that follows: there will be other wage-earners in the family.

10,307. You say also, "I cannot but think that if there 'were any general wish on the part of the tenants to have 'shorter tenancies, they would secure these for themselves 'without any fresh legislation"?—That applies in Aberdeen at the present time.

10,308. They could secure that?—I see no difficulty about that.

10,309. What harm, then, would it do to arrange by legislation that they should have the option which they could secure at present?—There is no need of fresh legislation to secure what they can secure at present.

10,310. But what harm would the legislation do?—But this is all a hypothetical case. I say, "If there were the demand." We don't want to have a new system thrown upon us. If there were a real demand of this sort, it would certainly be met by the landlords. They have their houses at present standing vacant. For my part, I don't want a monthly tenant, but I would rather take a monthly tenant than no tenant at all.

10,311. Then monthly tenancies would not reduce the value of the property?—I think it would rather reduce the selling value of the property if you had it under a monthly tenancy instead of half-yearly.

10,312. But you would willingly do it?—Yes, in an exceptional case, certainly. In an exceptional case, I would much rather have the monthly tenants than none at all; I would not convert my property into a property wholly under that monthly tenancy if I could help it.

10,313. Have you thought of any way of arranging the payment of rates if the landlord should become responsible for them, so that there could be relief given to poor tenants?—I don't see how the poor tenant who gets exemption just now could possibly get a corresponding exemption from the landlord.

10,314. You think that is impossible?—Practically impossible.

10,315. (*Mr Howden to Mr Williamson.*) I think you spoke about tenants valuing the security of tenure they had with yearly lets. What induces the landlord to part with a tenant if he pays his rent and is otherwise a good tenant?—Oh! he need not be frightened for being turned out.

10,316. The same thing would apply under a monthly system of lets?—Undoubtedly, to some extent it would.

10,317. What method does the landlord take in Aberdeen in fixing the rents?—The rents are to a great extent fixed by the law of supply and demand.

10,318. You simply take as much as you can out of the property?—The landlord does that.

10,319. It will not be too evident where the rise of rent comes from?—Of course, he has to consider the rent other people are getting for corresponding houses, else he need not expect a good tenant to sit in his house.

Mr A. M. Williamson and Mr A. Ledingham.

28 Jan. 1907.

10,320. In connection with pounding tenants' effects, what financial results do the landlords usually get?—You mean what percentage?

10,321. What is the price they usually get for goods that are pounded from the tenants?—A poor price.

10,322. What I want to get at is, what is the value of the goods having to be sold to realise £5 of rent?—I have not the experience of a sheriff's officer in this matter, but I know that the goods that are sold are generally sold at a very low price, and you want a fairly good houseful of furniture to produce a year's rent at anything from £10 to £12.

10,323. Would it be a fair statement to say you only get one-third of the value of the goods?—I could not say that. I could not tie myself to any figure.

10,324. (*To Mr Ledingham.*) And you, Mr Ledingham?—I have not enough experience of that. A sheriff officer would answer that to the most advantage.

10,325. They don't get the value of the goods?—They are sold under undesirable conditions.

10,326. (*To Mr Williamson.*) Do you think it is just to sell all the effects belonging to the tenant under such circumstances?—You cannot say a man is unjust in exercising his legal rights. He may occasionally be harsh.

10,327. But isn't there a moral right as well as a legal right?—I don't know that moral rights are the subject for inquiry.

10,328. Put it in another way. Do you agree that even the wearing apparel and bedding, which are the necessary articles of furniture, the goods should be taken from the poor tenant and sold at the Market Cross?—I am afraid that if the tenant has not the wherewithal to pay his debts, he has to give up his estate, whatever it is, to someone, and the injustice, if there is an injustice, is not between the landlord and tenant; it would be between the landlord and some other creditor. It is a matter of indifference to the impecunious debtor whether the trade creditor or the landlord gets, by his hypothec, the value of the furniture. Often the tendency would be to give the landlord the preference, in the expectation that he would be allowed to sit in the house until he finds another roof to cover him.

Mr A. M. Williamson and Mr A. Ledingham.

28 Jan. 1907.

10,329. But selling off the wherewithal that that man has to live by?—No, what he lives by is his tools, and they are safe to him.

10,329*a*. He has to get a reasonable amount of shelter?—The shelter is afforded by the house.

10,330. But the house does not afford a great amount of shelter if there is nothing in it?—No, but he would not be left with his movables in the house even if he had not a landlord with the right of hypothec.

10,331. I presume if the landlord loses this right of putting a tenant absolutely to the door, you would not object to that right being taken from other creditors. I wish to protect the tenant, up to a certain amount, against all creditors. If the right is taken from the landlord, do you see any reason why the right should not be taken from the other creditors?—Well, it would not do the landlord any good if it were taken from him, but I don't see where you are to stop if you are to allow a man to retain his estate and not pay his debts.

10,332. There is a law known in America as the Homestead Act, which preserves to a tenant a certain amount of goods, whereby he can go out into the world and face the world: would you object to any such law as that in Scotland?—It depends on the extent you are saving to him. I don't object to his tools being saved to him.

10,333. His wearing apparel?—Yes, no one takes his wearing apparel.

10,334. And bedding?—Well, it is difficult to draw the line.

10,335. That is what we want to get at?—That is what you want to get at. If he is going in search of other employment, his bedding is of little use to him.

Mr J. Croll, Mr W. Davidson, Mr W. Johnston, and Mr A. Edwards.

Mr John Croll; Mr William Davidson; Mr William Johnston; Mr Adam Edwards, called and examined.

Mr J. Croll, Mr W. Davidson, Mr W. Johnston, and Mr A. Edwards.

10,336. (*Chairman to Mr Johnston.*) You are the Secretary of Aberdeen Trades Council?—Yes.

10,337. (*To Mr Croll.*) Are you a member, and what is your position?—I am a member of the Trades Council.

10,338. And Mr Davidson also?—Yes.

10,339. (*To Mr Johnston.*) How long have you been Secretary?—Twenty years.

10,340. How long has the Society existed?—Since 1868.

10,341. The Council consists of 180 delegates, representing 52 trades unions, with a membership of over 9000, fully two-thirds of whom are householders in the city?—Yes.

10,342. What is your occupation?—I am Secretary for the Trades Council and Manager for their building.

10,343. (*To Mr Croll.*) What is your position?—I am by profession a solicitor.

10,344. (*To Mr Davidson.*) And you, Mr Davidson?—A joiner.

(*Mr Johnston.*) There is another party here, Mr Edwards.

10,345. Just bring him forward?—He represents the building trade.

10,346. (*To Mr Edwards*).—You are a member of the Trades Council also.

10,347. (*To Mr Johnston*).—When did the question of the house letting first come up before the Trades Council?—It has been up every year for the last five or six years back.

10,348. What brought it up first?—The resolutions on the Agenda for the Scottish Trades Union Congress.

10,349. When did Mr Cross's Bill first come up?—I think four years ago.

10,350. What is the Council's view about Mr Cross's Bill. They always instructed their delegates to the Congress to vote in favour of the resolution which was in favour of Mr Cross's Bill.

10351. Do they approve of the Bill as a whole, or have they any objection to the Bill?—Well, I never heard any serious objection made to the Bill.

10,352. The question of whether it should be monthly or quarterly letting, I think, was discussed, but there was no definite decision come to in regard to whether it should be monthly or quarterly.

10,353. But, you see, under the Bill, it would neither be monthly nor quarterly in Aberdeen, because the effect would be to change the yearly system to half-yearly?—Yes.

10,354. Have they any views on that? Are they willing to accept the principle which is to make the period of let the same as the period of payment?—As far as I can judge, and can remember, every time it came before the Council, they were in favour of Mr Cross's Bill.

10,355. There is one detail, they think the rental to be applied should be at £30?—Yes. It was discussed in Committee, and we thought there are some houses in Aberdeen where there might be a rental as high as £30, where the occupier kept lodgers and that.

10,356. You also would be in favour of making the statute compulsory for the whole country?—Yes.

10,357. Instead of being optional?—Yes.

10,358. What do you say to the amount of commission or allowance proposed by Mr Cross's Bill?—I should say the commission is fair and reasonable, and in Aberdeen here 25 per cent. is allowed for rentals under £5. Of course from those paying rents above £5 the rates are more usually got.

10,359. But you have no special knowledge on that matter?—Yes, I have been a member of the Town Council in Aberdeen for fourteen years.

10,360. We want all information of that sort. You were in the Town Council for how long?—Fourteen years.

10,361. Do you factor any properties yourself?—Yes.

10,362. Of what class? Is it working class property?—Yes, with rentals from £10 to £17.

10,363. Have any of the other gentlemen anything to tell us? Have any of the other gentlemen been in the Town Council?—No.

(*Mr Croll.*) I have been on the Parish Council.

10,364. (*Chairman to Mr Johnston.*) Does your Council think that there is in Aberdeen and district a substantial grievance due to the length of the tenancy for the better class of working men's dwellings?—I do.

10,365. The poorest class is already supplied with short lets?—Monthly lets, yes.

10,366. Therefore it is the better class we are considering?—Yes.

10,367. How does that grievance in your view arise, in what circumstances?—I could give you one or two instances.

10,368. I see that in this *précis* you have given very conveniently the different cases apparently where the question arises, and you put them thus:—"A tenant does 'not leave a house except—for a better house, a better 'landlord, a better neighbourhood, change of work, want 'of work, increase or decrease of family, convenience of the 'family, desire to retrench or death"?—That is right.

10,369. That seems to be pretty exhaustive?—Quite.

10,370. (*To Mr Croll.*) There is nothing else occurs to you?—No.

10,371. (*To Mr Johnston.*) Do you think that any of

Mr J. Croll, Mr W. Davidson, and W. Johnston, and Mr A. Edwards.

28 Jan. 1907.

these cases frequently produces the necessity for shifting between terms? Of course, in any of these cases you see, a man may shift at the end of a let. How is it that in any of these cases, apart from death, the question should arise between terms, and cannot be considered just as well when the tenancy expires?—Well, you see, a man in the middle of the year may lose his employment, and have to shift to another town, and is responsible for the rent in Aberdeen. Then he may have to pay most likely a rent in another town. I have known instances where they have had to pay eighteen months' rent in one year.

10,372. What class of employment are you referring to?—I am referring to artisans particularly.

10,373. Not so much people employed in the paper and comb works, more builders?—Yes.

10,374. What were the men in the instance you have in your mind?—This man was not an artisan, but came under my observation a short time ago.

10,375. What was he?—He was an ironmonger.

10,376. Had he a shop?—No, he was traveller to a firm.

10,377. What rent did he pay?—He took a house from myself at Whitsunday, with a rental of £12, and through dull trade he got employment for a short time in Aberdeen, and latterly a situation in Glasgow. Under the usual conditions he had to find a suitable tenant, but had to pay £6 of rent here up to Martinmas, and at least nine months' rent in Glasgow.

10,378. Why six months' rent here, if a suitable tenant was got?—A sub-tenant was not got until December.

10,379. Of course such cases must occur. What we want to get at is whether they are at all numerous. You may have a grievance in anything. We want to know whether it is a substantial grievance or not?—I think it is more intensified than it used to be.

10,380. Tell us about that?—The conditions of finding employment now are more precarious than they used to be, and there is more shifting. If men cannot get work in one town they will go to another.

10,381. Is that due to machinery shortening the time during which jobs last?—That is it.

10,382. That would apply to the same class of trades as you have mentioned, like shipbuilding, and so on?—Yes.

10,383. Would it apply to the fishing industry in Aberdeen?—Well, of course we consider in the fishing industry that they are a shifting class.

10,384. They are not represented in your Trades Council, are they?—Yes.

10,385. What class of fishery people?—Enginemen and firemen, and the fishermen on the steam vessels, that is the trawlers. There are over 400 members represented in the Trades Council in the case of trawlers, and over 300 enginemen and firemen.

10,386. We have been told to-day by Mr Scott, a gentlemen who factors a large amount, that he made an experiment and asked the whole of the tenants selected at random whether they would prefer the present system to remain or that the present system should be changed to monthly tenancies, and that with the exception of nine, they all said that they would prefer the present system to remain. Six would give no reply, and three seemed to want to try the short tenancies. What do you say to that?—We called a meeting last Friday evening of all the office-bearers in connection with the building trade to get their views before we appeared here, and they were all in favour of shorter lets, and we consider these men voice the opinions of their fellows.

10,387. Would something depend on the class of employment? We probably should have asked that more particularly of Mr Scott. Suppose the great majority of the people Mr Scott spoke about were in a kind of permanent employment in paper works, would their view be different from that of men like shipbuilders?—Well, I suppose there is a number of working men who don't like to shift their houses, and if they put the question whether they would not like some security of tenure, they having steady employment, it does not give them any more bother.

10,388. Is it your view that if a man is a good tenant he does not need the long let. It is in the interest of the landlord to retain him?—That is my experience, and I have over sixty tenants.

10,389. In your experience, can you give us a notion of the percentage of the removals in a year among your tenants?—I have never made that calculation, but we have not many removals. Some of them have been in the property since ever it was erected ten years ago.

10,390. Do you think short lets would mean on the whole and in the end more removals, or merely that they would be spread over the year more?—I don't think so. I think it will make better tenants.

10,391. Do you think the present system of suggesting to tenants the idea of removal is a good one?—I don't think the tenant has any terror of removal if the party is a good tenant.

10,392. We are told that through the missive system the tenants have the idea of removal put into their heads, whereas in England nothing is said, and they just remain in the same house. What do you say to that?—Possibly if the law was altered there would be that feeling among a number of them, that they would be more shifting than they are in the meantime.

10,393. But, in the end, do you think they would be more shifting or not?—I don't think so.

10,394. Do you contemplate that short lets would increase the rents or not?—No, I think rents would be regulated by supply and demand.

10,395. You see, it is suggested that if you have frequent payments of rents, say monthly instead of half-yearly, and especially if the landlord collects the rates as well as the rents, the cost of collection would be a good deal increased. What is your view about that?—Of course if they collect the rates too, they would get a commission for that, and as far as the cost of collecting the rents is concerned, I don't see that there would be very much expense incurred there.

10,396. And you would insist, in place of the rates being paid direct, that the landlord should be recouped for collecting the rates in the shape of an allowance, and the rates would not be paid by the tenants?—Yes, and besides, if the landlord gets his rent monthly, he has the money in hand and the interest which would accrue, which he loses in the meantime.

10,397. In Aberdeen, is there any inconvenience found in connection with the rush at the one legal term—28th May?—Very much.

10,398. How does it show itself?—Well, I have known parties having to give a contractor as high as 5s. for a lorry for an hour.

10,399. Instead of what?—Instead of 1s. or 1s. 6d. at the outside.

10,400. The factors who appeared before us were not acquainted with that, and have not found that?—But I know it from experience.

10,401. Do you think that is exceptional, or would there be many cases of that kind?—Well, those that are hiring contractors generally pay it at that time. They know they can get it.

10,402. What about the difficulty of getting tradesmen, with so many orders all at once?—Mr Edwards and Mr Davidson can speak to that.

10,403. (*To Mr Edwards.*) What do you say, Mr Edwards, about that: does the necessity for executing so many orders at the same time produce a rush?—There is certainly a rush. It occurs annually in connection with new properties, due to delay in starting operations, and allowing them to lie over until too near the term. The rush of work is brought about and overtime is invariably introduced to get the work over for the letting term, especially, I should say, in the painting trade. It has also a very serious effect on the tenants who occupy the houses, owing to the place not being dry, and the paints not dry, and in many cases it is an outstanding grievance in Aberdeen that properties are not finished for weeks after the tenants are in. For instance, the stair rails are not in.

10,404. Do you find all that results in a want of work at other times of the year?—It is certainly responsible for a good deal of the want of work. When the term is over, there is always a large number thrown out of employment as the result.

10,405. (*To Mr Davidson.*) What do you say to that?—That is my view of the matter. I have seen it myself frequently, that joiners were only beginning to put on the boards of a house when the tenants were in. Very often the walls were to paper, and some of the woodwork probably was omitted altogether, in the painting. The tenants were in and anxious to get the tradesmen out, and the tradesmen were anxious to get out of their way.

10,406. That applies to trades that are last in order in the house?—Yes, carpenters and joiners and painters.

10,407. (*To Mr Johnston.*) Do you think it would be an advantage for all the members of the family, women and children as well as the men?—Yes, certainly. I have known a house taken even before the stair was made, and what Mr Edwards and Mr Davidson say is quite true. It is getting worse every year. There is a rush always prior to the term, and the painters are feeling this, I believe more than any others, that just about the term time they are busy for a month or so, and then they have scarcely anything to do all the year round.

10,408. It has been suggested that the grievance that does exist would be remedied by shortening the time between the taking of the house and the term of entry?—Most certainly, the work would be better spread over the year.

10,409. That would be a good thing nowadays?—Yes.

10,410. But is it the opinion of the Council that that

would not relieve the real grievance which is in the length of the let?—No, it would not.

10,411. We have heard a great deal about the consequence of making short lets drawn from the experience of existing short lets. Do you think that is a sound view that the existing short lets are all of the most inferior property?—Well, I think that is one of the causes of any feeling that might arise against shorter lets amongst the better class. They feel that they are brought down to the level of those who are on monthly lets in the meantime in the lower class of property.

10,412. Of course that would disappear if the better class of property were made all monthly lets?—Just so.

10,413. Objections have been stated on behalf of money-lenders to short lets. I suppose their associations with the existing short lets are due to the fact that it is an inferior class of property?—Yes.

10,414. What would be the effect, in your view, of making short lets compulsory? Would the bad properties disappear, or what?—It would have a tendency that way, I think.

10,415. Make them unlettable?—Yes.

10,416. If there be this demand for short lets, how do you account for the fact that it does not show itself more? For instance in Aberdeen there are a great many unlet properties just now. We are told that landlords would let them on any terms if they could only get them let, but they say nobody asks for short lets?—Well, I think I have said already that yearly lets having been so long the custom, the working men and the wife like some security of tenure, and I think there would be some difficulty in getting a number of them to think that monthly lets would be more suitable.

10,417. But you think that if it were a system all over, that would disappear?—Yes, I don't believe in its being optional.

10,418. Do you know any reason why, assuming that short lets are a success in England, they should not be so in Scotland?—I see no reason why they should not be the same success here.

10,419. You don't think there is anything in the conditions of trade or other conditions to justify the difference?—No. I think it is getting more necessary, because the population have easy means of transit for shifting from one place to another when they are out of work. It is more necessary now than it was some time ago.

10,420. That cuts two ways. It is said, on the other side, that the increased facilities for going from one part of the town to another make removals less necessary?—Well, of course if a man is working in another town, and his wife is living here, he has his lodgings and his rent to pay, and if they were monthly houses it would be of more advantage to shift his wife and family to the town he went to.

10,421. It is not a desirable arrangement either in respect of money or the well-being of the family, I suppose?—No.

10,422. Have you known cases where men had to do that, pay lodgings in other towns, having to remove in the middle of the term?—Many a time.

10,423. And it may result in very little profit being got?—I have known a number of men that I have sent for that could get employment elsewhere out of Aberdeen, and they would not go simply because they had to pay lodgings and keep up a house here. It was too expensive.

10,424. Even although the work they could get elsewhere might be better?—Well, it was employment at any rate, and they were going idle.

10,425. I see, in regard to the other matter that has been brought up, landlord's hypothec, you view is that that should be abolished?—We think the landlord should just rank with any other ordinary creditor if there were monthly lets.

10,426. And as against landlords and all other creditors, is it your view that not only should tenants' tools and clothing be protected, but a certain reasonable amount of house furnishing?—We think it is a great hardship, inhumanity in fact, to take every bit of furniture that anyone has if they are liable for rent, not even a bed left in some cases.

10427. What limit would you put?—I should say they would be left with bed and bedding to cover them, tools, and the necessary utensils to cook food.

10,428. You agree with the evidence we have heard, I suppose, that when landlord's hypothec is exercised, it does not produce anything like the value of the article sold?—I believe that is so, but I have had no experience. I had only one case where we had to exercise that power, but it produced more than covered the rent.

10,429. But the articles don't realise anything like their full value usually?—I believe that is generally the case.

10,430. You give us one figure here. The number of tradesmen in the different Unions connected with the building trades at present idle here is about 600. Is that in Aberdeen?—Yes.

10,431. What is that due to?—Dull trade and house-building at a standstill.

10,432. Has house-building been overdone in Aberdeen?—Well, trade got bad, and there has been a number of people who emigrated from this town to other places where they could find employment, and of course that has left a number of empty houses.

10,433. If what we have been told is a fact, there has not been in Aberdeen, at ward meetings or Parliamentary candidates' meetings, or in the columns of the newspapers, the agitation on this question that has been found in Glasgow?—Aberdeen is not such a large town by a long way, and in such a large place the population is more shifting than here. That is to say, they have greater distances to go to their employment. Aberdeen not being such a large town, there would not be the clamant demand for this.

10,434. But you still think, although that is so, there is a substantial grievance here?—I do.

10,435. (*To Mr Croll.*) Have you anything to add?—I would just point out that this 600 by no means covers the people in the building trades going idle.

10,436. These were the skilled men?—Yes, and it doesn't even cover all the skilled men, only these connected with the Trades Council who sign their books.

10,437. (*Mr Esslemont to Mr Johnston.*) I rather gather from your answers that you are under the impression that, if this Bill became a law, a system of monthly lets would be introduced?—I think monthly lets would be very acceptable.

10,438. Don't you see that under the Bill the only change that would take place in Aberdeen, would be that the lets would be half-yearly instead of yearly, because the periodic payments of rent are presently half-yearly. The Bill provides the time of lets shall be fixed by the periodic payment of rents: that if you paid weekly, the tenancy would be weekly; if monthly, the tenancy would be monthly; if quarterly, quarterly; and if half-yearly, half-yearly?—I don't see any objections to weekly lets the same as in England, but I don't know that we in Scotland are prepared to go that length just at the start.

10,439. Even supposing Mr Cross's Bill became law, it would not introduce in Aberdeen a universal system of monthly lets unless payment of rents were monthly?—Of course I understand if there were monthly lets there would be monthly payment of rents.

10,440. Mr Cross puts it the other way, and says if there were monthly payments, there must be monthly lets; but I take it that parties whom you represent would regard it as a great advantage if they had an opportunity of paying rent and rate more frequently, at shorter periods than at present?—In the meantime the payment of the rates comes at the very worst season of the year for these men. The accounts are sent out about October, and they have to be paid at latest by the end of March, and that is the very worst season of the year for them, for tradesmen or any working man having to pay rates.

10,441. Why have you such an objection to the optional clause in the Bill?—I don't think it would suit very well, because, if the law was not the same in Aberdeen as in Glasgow, for instance, the party might come from Glasgow and not get a house here, unless it was for perhaps nine months in the year. He might come from Glasgow for a job for six months, and if it was made the same all over, of course he could take a house for a month.

10,442. Of course the practice is not universal at present. In Glasgow there is a very large number of houses let by the week, month, and quarter?—Yes, I know. I read the evidence.

10,443. Wouldn't you rather have a measure of this kind with an optional clause than no measure at all?—Well, I don't believe in it being optional. I think there should be the same law in Aberdeen as all over Scotland.

10,444. You would rather not have the Bill at all?—I don't know if it is fair to put it in that way to me.

10,445. I mean there are two alternatives, and you have to consider them.

10,446. (*Mr Howden to Mr Johnston.*) I presume you represent the Aberdeen trades?—Yes.

10,447. Is the present letting term detrimental to the Aberdeen trade as a whole? Is that your experience?—Yes, certainly. It is the experience of those engaged in the building trade.

10,448. That applies to the whole of the branches of the building trade?—Yes.

10,449. And without any difference of opinion? That is the opinion of the building trade in Aberdeen?—As far as I can gather, yes.

10,450. You heard the question put in connection with the Homestead Act in America, and I see you have a clause in the Trades Council *précis*. Do you agree with that?—Yes.

Mr J. Croll, Mr W. Davidson, Mr W. Johnston, and Mr A. Edwards.

28 Jan. 1907.

10,451. Have you considered any amount you would like to recommend?—No.

10,452. (*To Mr Croll.*) Have you?—Well, as far as the workman is concerned, I think he should have the ordinary things he has about him, because if he is deprived of that he is demoralised.

10,453. Could you put a figure on it?—Well, you don't find a working man having many unnecessary things about him.

10,454. (*Mr Howden to Mr Davidson.*) Do you agree with that?—Oh yes.

10,455. You have an expression of opinion in connection with security of tenure: do you think monthly tenancies would really reduce the security of tenure to the working classes?—I don't think so.

10,456. Assuming that it did, we had a case put to us that a tenant should have the right of security of tenure up to six months, while he could break his tenancy at one month: what do you say to that? That was put by Provost Keith of Hamilton. Of course it applied more to Hamilton, because they have men staying in employers' houses there. Have you any men staying in employers' houses in Aberdeen?—Very few.

Mr J. Croll, Mr W. Davidson, Mr W. Johnston, and Mr A. Edwards.

28 Jan. 1907.

10,457. These men are usually in constant employment?—Yes.

Mr Scott, in reference to the tenants to whom he had put the question that he referred to in his evidence, explained that they represented almost every class of trade, and put in a list showing their occupations.

[ADJOURNED.]

ELEVENTH DAY.

WEDNESDAY, 30TH JANUARY 1907.

At the New Court, Parliament Houes, Edinburgh.

Present:

LORD GUTHRIE, *Chairman.*

SIR JOHN STIRLING-MAXWELL, Bart. | MR JOSEPH DOBBIE, S.S.C.

MR THOMAS BINNIE. | MR EDWARD COX.

MR JOHN T. HOWDEN.

Mr W. E. Nelson.

30 Jan. 1907.

MR W. E. NELSON, Estate Offices, 22 Lord Street, Liverpool, and 196 Liscard Road, Liscard, Cheshire, called and examined.

Mr W. E. Nelson.

30 Jan. 1907.

10,458. (*Chairman.*) Have you the management of property in Liverpool?—Yes, my firm has.

10,459. What kind of property?—All kinds of property, but to a large extent cottage property.

10,460. What is the lowest rent that you have to deal with?—We go down to 3s. 6d. per week.

10,461. We have been calculating it by the year; how much is that?—£9, 2s.

10,462. And going up to larger rents?—Yes.

10,463. You manage both dwelling-house property, and shop property and works?—Yes.

10,464. Entirely in Liverpool, or in other places also?—Yes.

10,465. Waterloo and so on?—Yes, and in Birkenhead. And for some miles round Liverpool.

10,466. How long has your firm been in existence?—Forty years. I have had twenty-three years' personal experience, and during that time a large number of cottage properties have passed through my hands either as agent, trustee, or receiver for mortgages, and in other ways. I acted for some years as secretary to a local property owners' association, and in that connection was continually brought in contact with owners of cottage property, and questions of management were constantly discussed. I have attended as delegate many of the Property Owners' Conferences held annually in different towns of England. I am therefore well informed on matters affecting cottage property.

10,467. You refer to cottage property. Have you in Liverpool the same system of working men living in what we call flats or tenements as we have in Scotland?—No, not generally. There are a number of flats, but it is not the rule.

10,468. Is that system increasing?—No, I think not.

10,469. In the case of cottage property, each householder has his own separate house?—Yes.

10,470. Of how many storeys?—Generally the ground floor and one above.

10,471. In the case of any of the cottages, are they occupied by two families?—They might be, but that is a matter that does not come under the observation of the landlord. He lets the house to one person.

10,472. Have you in Liverpool any cottages where there are gardens attached?—In some cases.

10,473. But, generally speaking, do the working men have any gardens?—No, yards.

10,474. Yards in the rear?—Yes.

10,475. In Liverpool the houses are built of brick?—Yes.

10,476. And also in the other places in the district round that you are connected with?—Yes, mostly.

10,477. Do you know at all how the rents for similar accommodation compare in Liverpool with other places in England?—I think our rents are rather higher in Liverpool than in other parts. In inland towns the rents are lower than with us.

10,478. How do you compare with London?—We are lower than London.

10,479. As to your rates, are they normal in Liverpool, or are they higher or lower than other places?—About normal.

10,480. Do you know how they compare with London?—I think we are lower than in London. I think I can give you that.

10,481. If you have it at hand, yes, because we have other evidence, and we would like to know how it compares?—I am afraid I have not got it, but I could give it later in the day.

		s.	d.
	Liverpool, . . .	7	9
London districts.	West Ham, . . .	10	4
	East Ham, . . .	9	7
	Westminster, . .	6	8
	Croydon, . . .	7	4
	Islington, . . .	7	8
	Kensington, . . .	6	8

As the basis of assessments vary, a reliable comparison is impossible.

10,482. Up to what rent does a working man of the ordinary respectable class, who is not a foreman and who has no wage-earning members of his family, pay?—Up to £19, 10s. From about £7, 16s. to £19, 10s.

10,483. Then the £20 limit in Liverpool would cover the ordinary working man's dwelling?—Yes.

10,484. When you talk of the payment by the working men to you, is that the whole payment, including the rates as well as the rents?—Yes.

10,485. Could you tell us the assessed rental?—The assessed rental of a house letting at £19, 10s. would be £13.

10,486. And of £7, 16s.?—It would probably be £4 or £5.

10,487. Now, as to the accommodation—the number of rooms in these respective houses—take the houses let at £7, 16s.: how many rooms have they?—They probably have two rooms.

10,488. How high will the two-roomed houses go?—They might go to £8 or £9.

10,489. Assessed rental?—No, not assessed rental, gross rental.

10,490. Then, when you come to three-roomed houses, what would be the variation there?—I think the next step would be four-room houses.

10,491. From two to four; have you no three-roomed houses?—We have very few, and they are disappearing.

10,492. The four-room houses would go up to what?—About £13 gross.

10,493. What is the length of tenancy in Liverpool for working men's houses?—Weekly.

10,494. Are there any monthly houses?—There might be a few, but it is quite the exception.

10,495. Have you any yourself?—I cannot remember now.

10,496. Could you give us any notion roughly of how many working men's houses you have the management of?—Probably 800 or 900.

10,497. Between the rents you have mentioned?—Yes.

10,498. And all these cases, with a very rare exception, are weekly tenancies?—Yes.

10,499. Do you suppose that your experience is just like that of other estate agents in Liverpool?—I feel confident that is so in Liverpool.

10,500. Is that so also in the district that you told us you had to do with?—Yes.

10,501. Do you yourself know about other parts of England, whether the tenancy is as univarsally weekly there as in Liverpool?—Yes, in a great many places I know it is weekly.

10,502. Such as?—Burnley, Accrington, all the Lancashire towns. Manchester is weekly.

10,503. How many days' notice do you give to turn out the weekly tenant?—One week's notice, which usually expires on the Monday.

10,504. And how often are the rents paid?—Weekly.

10,505. The rent and rate?—Yes, weekly.

10,506. Are they collected by one of your clerks?—Yes.

10,507. And what receipt is given?—I have a form of rent book here,—perhaps you would like to see it?

10,508. Yes, please?—I have filled it in with a supposed rental.

10,509. Tenant's name, John Jones; date of entry, 22nd January 1907; rent 5s. 6d. a week,—how much is that a year?—£14, 6s.

10,510. That would be how much assessed rental?—About £9.

10,511. I see that among the conditions there is a prohibition of subletting without permission?—Yes.

10,512. That is pretty universal, is it?—We object to it pretty strongly.

10,513. It is a common provision?—Yes.

10,514. May I take it that these are just the ordinary conditions?—Yes, universal. They are not printed specially for us.

10,515. I see you have definitely stated, "a week's notice in writing to be given before leaving"?—The stationers print those books for universal use. They put our name on or anybody else's.

10,516. I see you have a provision, that if at any time the house is left unoccupied, or your tenant does not give up possession according to notice, or in default of payment as above, it shall be lawful for the landlord or the agent to enter the premises by force, and whatever goods may be on the premises shall be taken to defray the rent and the expense incurred, after which possession shall be given to the landlord without any legal process whatever, and as effectually as if the landlord obtained judgment. Under that condition you do not require to go to any court?—I am afraid that is not legal.

10,517. You do not think that could be enforced if objected to?—No.

10518. In the case of such property as you have been telling us about, is there any written agreement other than the rent book with these conditions?—None at all.

10,519. Does the tenant sign these conditions?—No.

10,520. Is the system you have been describing to us a recent system, or, so far as you know, the system from time immemorial?—I should think that it has been in operation for fifty or sixty years. In Liverpool it took its rise probably over one hundred years ago.

10,521. Before 1846 what difference was there?—I cannot tell you. In that year the Liverpool Corporation had a special Act of Parliament to deal with the matter.

10,522. How often are wages paid in Liverpool?—Weekly, except at the docks. In that case they are paid probably daily.

10,523. Do the tenants in your properties include working men of all occupations?—Yes.

10,524. Connected with the docks and other industries?—Yes.

10,525. Above £19, 10s. do you come into another system of tenancy, or are there still weekly tenants?—We are gradually increasing the weekly system above £19, 10s.

10,526. As compared with what system?—Monthly or quarterly. Formerly the tenancies were either monthly or quarterly from £19, 10s. to £25 or £26. Above £26 the tenancies would be quarterly, but the tenants, even up to £26, often like to pay weekly or monthly.

10,527. Is the tendency to increase the weekly tenancies due to the desire of the tenants to pay weekly or the desire of the landlords to collect rents weekly?—To the tenants.

10,528. It is more trouble in the way of collection?—Greatly.

10,529. Is there any advantage to the landlord in it?—None at all above £19, 10s.

10,530. But below £19, 10s. you think the rents are better got if collected weekly than monthly?—That is the only way we could get the rents. There is no alternative.

10,531. Why?—Because if we waited to collect those rents monthly, we would probably lose half of them.

10,532. Is that because, the wages being paid weekly, the money would not be there for you?—Yes.

10,533. Is it your view that frequent payment of rent is desirable in connection with the class who get frequent payment of wages?—Yes.

10,534. And the one as near as possible to the other?—That is so.

10,535. Have you any cases in Liverpool of fortnightly rents?—No.

10,536. We have heard of it in Glasgow?—If the tenant asks to pay fortnightly, we would not object, but it is quite the exception.

10,537. Have you found, on the other hand, any tenants who would prefer a longer tenure than a weekly?—No.

10,538. Have you not found cases of people who say, "We do not want the risk of being turned out, and we would like to take the house for six months or a year"?—That does not occur at all.

10,539. You never met with it?—It is not a risk that would tell. If a tenant is a good tenant, he is perfectly free to stay there as long as he likes.

10,540. It being your interest, of course, to keep him?—Quite.

10,541. In the case of weekly tenancies, tell me how, first of all, the repairs and then the improvements are done. Take repairs: what does the landlord do?—In Liverpool, he practically does everything.

10,542. Of course, to start with, he keeps the house wind- and water-tight?—Yes.

10,543. What in the way of painting and papering?—When a tenant goes in, he would clean that house down, and probably clean it periodically, as occasion arises, as long as that tenant remains, and of course, when a new tenant comes in, some cleaning is always necessary.

10,544. What do you mean by cleaning?—Papering and whitening and painting.

10,545. Of course, as far as painting goes, it is in the interest of the landlord to keep the place painted to preserve the wood?—I mean inside painting.

10,546. Then, in the ordinary case, does the tenant do anything?—Very seldom. That would apply almost entirely to Liverpool. In the country places, the tenants do pretty nearly all the internal work themselves. We have a number of properties in Cheshire and the country parts of Lancashire, where the tenants do everything entirely.

10,547. In Liverpool, have you any special removal terms, or are people removing all the year round?—All the year round.

10,548. I may tell you that in Scotland there is practically only one removal term, that is the 28th of May, Whitsunday?—I understand so.

10,549. And at that time there is a great complaint of over-pressure, immense demand for the men that remove the people, and for painters and so on who work on the houses, and then want of work at other times of the year. Have you anything of that kind in Liverpool?—No, we have nothing of that kind. I could conceive that it would be a great drawback having all the tenants removing at one time.

10,550. But in Liverpool you have no such drawback or grievance?—No.

10,551. You described the system. Do you find that with your system of weekly tenancy and weekly payment,

Mr W. E. Nelson.

30 Jan. 1907.

as compared with the Scottish system of long tenancy and infrequent payment, there are any complaints about your system by the tenants?—I have never heard of any.

10,552. There is no grievance, so far as you know, on the part of the working classes of England in connection with the tenure of their houses?—No grievance at all.

10,553. I suppose the only grievance is that the rents are too high?—Yes.

10,554. What is your experience about houses which are on a longer tenure? You have a higher-rented house at the monthly tenure!—Yes.

10,555. Quarterly?—Yes.

10,556. And anything higher?—The biggest rents are paid quarterly. That constitutes a yearly tenancy. That is to say, any person who pays quarterly is liable to give six months' notice, to expire at the date corresponding with the date of entry.

10,557. Is that understood to be a yearly tenancy?—Yes.

10,558. In that case, is there any document in writing entered into?—Usually a written agreement. Of course, if that agreement contained any special clause about notice, that would over-ride the general law.

10,559. Suppose you have a yearly tenancy with a written agreement. As the time goes, is that renewed in writing or just allowed to run on?—Usually allowed to run on.

10,560. You do not send at a certain day to ask whether they mean to remain?—We never do that.

I may tell you that what is proposed in regard to Scotland in a certain Bill, with many other things we have to consider is that the length of tenancy should be made the same as the period of payment—that is to say, that suppose the rents are paid weekly, the tenure should be weekly; suppose they are paid monthly, the length of tenure should be monthly; and suppose they are paid quarterly, quarterly; and six-monthly, for six months.

10,561. If you paid once a year, that would be a tenancy for a year. In England, in the case of a weekly tenancy that is the principle?—Yes.

10,562. In the case of monthly tenancy, is the payment once a month, or may it be weekly?—Monthly.

10,563. In the case of quarterly tenancy?—That would be a yearly tenancy if paid quarterly, which would expire at the date the tenant entered in any year.

10,564. Then have you any cases of half-yearly payment?—We have a few, but very few.

10,565. Quite exceptional?—Quite.

10,566. With the higher class of property?—Yes, up to hundred of pounds.

10,567. Now, suppose the tenant fails to pay his rent, and you cannot proceed on that condition that we look at, about turning him out, have you to go to the Court?—Yes, up to £20, we have to go to the Police Court.

10,568. The Police Court?—Yes, they send a summons to the tenant. That summons costs us 3s. 6d. Then the tenant is asked to appear at the Court. The tenant would then appear at the Court, and the matter would be argued out before the magistrate, and he would probably make an order that that tenant should be ejected any time between twenty-one and twenty eight days from that date, and the further cost would be 9s.

10,569. In that particular case, how much rent would you lose? He would be in arrear how long when you applied to the Court? What would be the maximum?—Probably he would owe us two or three weeks to start with. We would give him one week's notice: that is perhaps four weeks. It is a month before we get him out.

10,570. You lose two months' rent?—Yes.

10,571. How much would it cost you?—It would cost us 12s. 6d. at least.

10,572. Suppose you actually had him turned out, would it cost you more?—No, the police would do that.

10,573. Is there any complaint on the part of landlords in England about that process being too lengthy?—Yes, great complaint.

10,574. And expensive?—Yes; but chiefly on account of the length.

10,575. Has any proposal been made for shortening the time?—It has been discussed, but I do not think anything has been before Parliament so far. It is discussed regularly by the Property Owners Associations and other organisations.

10,576. The time I suppose you want to be shortened would be the twenty-eight days?—Yes, a week would seem to be sufficient.

10,577. Unless, of course, he has some good answer?—Yes. Then, in the case of rents above £19, 10s., we go to the County Court, and in Liverpool we pay a plaint fee of £1, 1s. The case is then heard probably twenty-one days after we have entered it, and the judge may probably order possession to be given in a fortnight or three weeks or a month. That costs us £2.

10,578. And what delay would that involve!—It probably might run to three months sometimes.

10,579. As to the law of distraint in England, tell us about that?—It is really a survival of the old feudal system, and it has been altered. Formerly the landlords had the power to take the tenants' goods, and hold them till the rent was paid. Then by later legislation they were given the power to sell everything, and then by more recent legislation they were bound to leave a certain amount—I think it is £5 worth of goods and bedding in the house in addition to tools and clothes, and there are quite a number of other exceptions. Then the distraint now has to be made through a certified distraint officer appointed by the County Court, not personally.

10,580. In point of fact, has it often to be enforced?—It is often used, I think, to get a tenant out, but not often carried to the end.

10,581. It appears in Scotland that when a sale does take place of goods nothing like their true value is obtained?—I am afraid that would be the case in England too.

10,582. It is said that in Scotland practically the only people who appear are brokers and dealers, and probably something like a third of the value is got?—That would probably be the case.

10,583. So that in Scotland it is very seldom worth while to carry it to the bitter end?—It would be the same way in England.

10,584. Is it the fact that, in regard to short tenancies, the earliest statute which appears to recognise them is the Act 59, Geo. III. cap. 12?—That will be so.

10,585. And then after that came the Poor Law Act of 1869, and the Public Health Act of 1875?—Yes. Those are the two Acts upon which we go now.

10,586. And in these Acts the limit is £19, 10s.?—In the 1869 Act the limit is £8 in England generally, I think £12 in Manchester, £13 in Liverpool, and £10 in London. Under the Public Health Act the limit is according to the discretion of the local authority.

10,587. In Liverpool, do you find that the men in some trades or employments are more liable to remove than in other cases?—Yes.

10,588. Which?—Dock labourers.

10,589. Men in factories are more stationary, I suppose?—Yes. Of course we are not a manufacturing city.

10,590. What are the industries beyond shipping?—Shipping and railways, mostly transit, and a few manufactures.

10,591. What kind of manufactures,—cotton?—No, not cotton mills. Of course we have the sale of cotton, soap works, large jam works, and minor industries of that kind. We have really no staple industries.

10,592. You cannot give one any idea among your 800 householders what percentage of removals there may be in the course of a year?—I should think that in Liverpool it may reach 20 per cent.

10,593. Do you at all associate the number removals with the short tenancy?—No.

10,594. You see, it is a question in Scotland,—that, suppose our long tenancies were changed to something like your short tenancies, whether the total number of removals would be increased or not. Now you have indicated that with you a tenant has really security of tenure provided he is a good tenant?—Oh yes.

10,595. You rather think that the net number of removals in the course of the year might not be affected although they were spread over the year?—I should think that would be so.

10,596. And of course in Liverpool, with your population as in all similar places, the occasions for the working men wanting to remove are numerous?—Yes.

10,597. And often at short notice?—Yes. It would be a great hardship in leaving to make the working man take a tenancy other than weekly.

10,598. It might prevent him getting better employment?—Well, not that exactly; he might be in a small house and his means might improve, his salary might improve, and he naturally would want to get into a better house.

10,599. Or *vice versa*?—Yes. Probably in the small house he might be under a great inconvenience, which would be reduced if he could get a larger house.

10,600. And there are other contingencies in human life besides wages, such as the family increasing or decreasing, questions of death and so on?—Yes.

10,601. Suppose it were proposed to your tenants to change their tenancy from weekly to half-yearly or yearly, what would they say to that?—They would say, "No, thank you."

10,602. Unanimously?—Quite. There is not the slightest doubt on that.

10,603. It has been suggested that a weekly tenancy would involve more expense to the landlord through more frequent repairs and more cleaning and more painting and

Mr W. E. Nelson. 30 Jan. 1907.

papering. What do you say to that?—It might do that, but I think he would gain considerably in having his rent paid weekly.

10,604. One would go against the other?—Yes, and that would only apply to coast towns like Liverpool. In inland towns the works generally give regular employment, and the tenants remain in their cottages year in year out.

10,605. You see, the view in Scotland, which appears to be rather derived from the experience of short tenancies—but this rather applies to the bad class of tenants, the worst class of houses——?—Yes, those are the tenants you want to get rid of soonest.

10,606. I suppose, in the experience derived from them, the injury that comes from short tenancies would not necessarily apply to the better class under short lets?—No.

10,607. Is it your view that, taking the thing as a whole, the weekly payment of rent undoubtedly yields a substantial amount more than an infrequent payment would?—I should think that would be the case.

10,608. That would not be so, I suppose, with the very best class of working man, who has a big savings bank account? He is right enough whether he pays short or long, but if you take the ordinary working man, who is not more than any other class ideal?—The strain would be too great.

10,609. In England, have you a large system of co-operative societies?—In the Lancashire towns.

10,610. You see, it is said that in Scotland the best class of working man who is a co-operator gets his dividend say every half year and that comes in very handy for paying his rent and relieves him of any difficulty. I suppose that would be so in England also?—That would apply to towns in Lancashire where the co-operative system is in operation.

10,611. If you take your dock labourers and others, you have a large number of people who have neither savings bank accounts nor an interest in co-operative societies?—No, the very great majority.

10,612. And just when the money is there you get your fair proportion of it?—Yes.

10,613. How about the present position of Liverpool in respect to building or over-building? Is it normal in regard to the number of empty houses?—At present we are about normal. At the present time I think we have about 5000 houses empty. (Actual figures: 1904, 4293; 1905, 4353; 1906, 4627.)

10,614. Can you tell me roughly the number of houses that there are in Liverpool?—I am afraid I cannot tell you.

10,615. You could send that?—Yes. Number of houses in Liverpool, 149,000.

10,616. You said that the percentage of removals, you thought, would be about 20 per cent. If you could kindly, when you go home, just check that and see what it actually is as near as you can.

10,617. (*Mr Howden.*) If you could not give us it on the whole property, you could perhaps give us the actual percentage on your own property?—That is what I understand you want. Taking 489 of our cottages in Liverpool, I find that there were 175 changes of tenancy during 1906, or, say, 35 per cent. Taking 282 cottages in Wallasey for the same period, I find 88 changes of tenancy, say 31 per cent. 1896 was a good year for the first six months, but in the latter half of the year we had a large number of changes.

An analysis of these totals gives the following result:—

	Houses.	Changes.
Rentals up to £13 0	171	65
„ 15 12	246	105
„ 18 4	162	67
„ 19 10	44	5
„ 26 0	148	21
	771	263

10,618. (*Chairman.*) For a normal year?—Perhaps I might say that in twenty years we have only had two cases where we have had to apply to the Court.

10,619. For the order to eject the tenant?—Yes.

10,620. I think you have spoken to everything now except rating?—I have a copy of Mr Cross's Bill, and I would just like to point out something—Clause 5.

10,621. What was your point there?—That clause seems to indicate that all tenants, whether weekly or otherwise, weekly tenants at any rate, would have to give a week's notice to expire on the 28th of the month. Would that not perpetuate the system that is objected to?

(*Chairman.*) Yes.

10,622. (*Mr Binnie.*) Do you not have any definite day for removal?—Any Monday. Seven days' notice, to expire on any Monday, and that is a convenient day, because it is rent day and there is no apportionment of account to make out. The tenant would pay his 5s. and be done with it. If the notice was to expire on the Wednesday, that would be two days' further rent to pay.

10,623. What day does your clerk go round?—Monday.

10,624. And the wages are paid on Saturday?—Yes.

10,625. Is there any other clause in the Bill that you want to direct attention to? Look for instance to Clause 7,—"This Act shall not apply to any dwelling-house which 'is let along with land for agricultural purposes, or with 'a fruit or vegetable garden, nor to any dwelling-house 'let in conjunction with a shop, workshop, stable, byre, 'or the like." Are these properties which are excepted in Mr Cross's Bill, equally the subject of weekly tenancies in Liverpool, houses with gardens?—It is rather a wide definition, because a garden may be so small. If the garden is any size and the tenant takes an interest in it or makes anything out of it, that tenant naturally wants to get a longer tenure.

10,626. How much longer would he want?—Probably he would be an annual tenant.

10,627. The course of the seasons?—Yes.

10,628. Suppose a dwelling-house is let in conjunction with a shop: what is the tenure?—At the very least yearly, but probably on a lease. A man does not want to build up a business and be liable to be turned out on short notice.

10,629. But then, if there is practical security of tenure, provided he is a good tenant, is there that feeling that he would be liable to be turned out?—Well, a business is very different from a dwelling-house. A man makes his reputation in a certain place, and it is desirable that he should remain there.

10,630. Not only desirable but perhaps essential?—Yes.

10,631. So you think that that is a fair enough exception?—I think so.

10,632. Look at No. 9, the subject we are coming to immediately. You see the provision there about the owner paying the taxes up to a certain rental only applies to burgh assessments. The poor rates and school, registration and special parish rates are excepted. So far as your compounding system goes in Liverpool, all rates are included?—Yes, all rates.

10,633. Look at that clause; the latter part of it seems a very awkward clause for the landlord. Just read it?—"Provided always that the receipts for payments furnished 'by owners to occupiers shall separately distinguish the 'amounts which are paid for rent and the amounts which 'are paid for rates and assessments." That would be an almost impossible thing to work out in practice. Have you looked at that rent book I gave you? You see that the rents and the rates are there included without any distinction.

10,634. Yes, the practice in England is to make no distinction?—No distinction.

10,635. What would be the difficulty, in giving effect to the latter clause of Section 9? Do you mean the figuring would be so irksome?—The taxes vary, they go up and down, and I suppose when any alteration took place on the taxes under that section you would need to inform the tenant. It would throw a lot of work upon the landlord, which would seem to me to be unnecessary in England.

10,636. There would be no difficulty, instead of what is provided there, in having a provision that the rate per £ of the different taxes that the occupier has to pay through the landlord should be noted on the rent book?—That would be very awkward.

10,637. Why?—Dealing with a large number of tenants, it would tend to be neglected. You would have to put a penalty clause in, and I am afraid you would have a lot of trouble with the landlords.

10,638. It would not introduce friction, would it, between the clerk and the tenant?—I do not think it would. It would not make any difference to the tenant.

10,639. But do you not find the tenant sometimes saying, "Oh, you are putting too much on me, because the rent and the taxes together do not come to what you are asking"? Do you never find that?—Never. The tenants really get the benefit in cottages, and the landlord does not alter his rent except when the rates go up very much. We have had no cases like that in our experience where we have raised the rent. The rates have varied for the last twenty years, but the rents have always been about the same.

10,640. Do you find that the tenants raise any difficulty in the shape of saying that the landlord has no business to be the rate collector?—Never.

10,641. Do you find that estate agents object to be made rate collectors?—I have heard that objection from some.

10,642. Have you yourself experienced the difficulty?—No.

10,643. Or have you found your clerks complaining about it?—Oh, not at all.

10,644. I suppose among systems of that kind, once they

Mr W. E. Nelson.
30 Jan. 1907

are recognised and universal, difficulties disappear?—Yes, this system has worked so long in England that we have practically got used to it. Then the tenant feels a great relief from having not to trouble about the rates. That is a great advantage to landlords. The tenants are not inclined to move to avoid payment of rates, because they are already paid for them.

10,645. That cuts both ways. They do not want to have the trouble of the rate, but it is suggested that they should have the trouble of the rate, so that they would take an interest in it?—Well, with us they seem to take quite a keen interest in it.

10,646. I suppose tenants do not desire specially to have rate collectors coming about them? Do you think they rather prefer to have just the one person?—There is a very considerable objection against the rate collector amongst all classes.

10,647. You have to do with watering places like New Brighton, have you?—Yes.

10,648. It is suggested to us that although the proposal in Mr Cross's Bill might be quite proper for Glasgow, it would be very awkward for places like Rothesay, where a person goes say in autumn and takes from a Rothesay tenant a sublet of the house for a great many months in the next summer. It is suggested that that would not be possible, because the tenant who would thus be letting the house would be turned out and the sub-tenant would find himself out in the cold. How do you find that in England?—Take New Brighton as an example. None of the cottages in New Brighton are let for lodging houses. It is a better class of house, houses about £25.

10,649. Of how long tenancy?—Yearly.

10,650. Then the difficulty cannot arise?—I do not think so.

10,651. You never knew of a cottage in New Brighton being taken by somebody in Liverpool from the tenant who has it on a weekly tenancy?—No.

10,652. Now we will pursue the compounding. The chief Acts that have to be considered in the rating of owners instead of occupiers in small tenements are the two you have mentioned, the Poor Rate Assessment and Collection Act, 1869, and the Public Health Act, 1875?—Yes.

10,653. In individual localities they have their local Acts?—Yes.

10,654. And of course they have their local Acts in Liverpool?—Yes.

10,655. The 1869 Act is enforced throughout England?—Yes.

10,656. And the 1875 Act applies chiefly to small towns and burghs and urban and rural districts, larger towns having their own Acts?—Yes.

10,657. Tell us about the amount of allowance which is given by the rating authorities. First of all, you talk about the Poor Law Act of 1869?—Yes.

10,658. What is given under that?—In assessments of £8 and under, the landlords are assessed if the overseers wish, and because of that, they are entitled to 15 per cent. If the landlords like to enter into an agreement with the authority to pay these rates, whether the houses are occupied or not, in that case they get another 15, altogether 30 per cent.

10,659. Is that in the case of the vestry resolving to make it compulsory?—Yes. I have a form of agreement which I put in.

10,660. Then has the vestry first of all to resolve to avail themselves of the compulsory clause of the Act?—Yes.

10,661. And then if the owner pays the occupier's rate, he gets 15 per cent. reduction neccssarily?—Yes, and if he signs that agreement, he gets another 15.

This agreement runs thus,—

(*a*) In the case of business premises.

PARISH OF LIVERPOOL.

Agreement for Payment of Rates by Owner, 32 and 33 Vic. cap. 41, sec. 3.

MEMORANDUM OF AGREEMENT made this day of 190 , between of the one part, and the Overseers of the Poor of the Parish of Liverpool, in the County of Lancaster, of the other part.

WHEREAS, the said is the owner of certain hereditaments (specified in the schedule hereunto annexed), the rateable value of which said hereditaments does not annually exceed thirteen pounds, and is willing to enter into an agreement with the said Overseers to become liable to them for the Poor Rates assessed in respect of such hereditaments, for a term of one year from the date hereof, and until further notice, and to pay the Poor Rates whether the said hereditaments are occupied or not. And whereas the said Overseers are empowered by Section 3 of the Poor Rate Assessment and Collection Act of 1869, to enter into such agreement, and are willing to receive from the said the rates to be assessed in respect of such hereditaments, and to allow to him on the payment thereof a commission of 25 per cent. on the amount of such rates. Now, therefore, it is agreed by and between the parties hereto, and the said shall become liable to the said Overseers for the term specified for the payment of all Poor Rates assessed in respect of such hereditaments, whether the same be occupied or not, and shall pay the same, and that the said Overseers shall, subject nevertheless, to the control of the Vestry of the Parish, receive such rates from the said and shall allow to him a commission of 25 per cent. upon the amount thereof.

Signed by the said parties hereto this day of 190 .

No. of Street.	Street or Situation.	Name of Occupier.	Name and Address of Owner.

(*b*) In the case of cottage property, in respect of which an allowance of 30 per cent. is made.

PARISH OF LIVERPOOL.

32 *and* 33 *Vict., cap.* 41, *secs.* 3 *and* 4.

TO THE OVERSEERS OF THE POOR OF THE PARISH OF LIVERPOOL.

I, the undersigned, being the Owner of certain rateable Hereditaments in the said Parish, each of which includes a Dwelling-house, and each of which is of the rateable value of not exceeding £13, do hereby give you notice that I am willing to be rated for a term of one year from the date hereof, and until further notice, in respect of all such rateable Hereditaments, whether the same be occupied or not.

Dated this day of 190 .

Name

Address

Schedule of Hereditaments to which the foregoing Notice applies, being the whole of such Hereditaments of which I am the Owner.

Street Numbers of the Hereditaments referred to.	Situation.

10,662. In that case, is the rate of allowance agreed upon or is he entitled to another 15 per cent.?—It is agreed upon.

10,663. So that he gets an allowance of 30 per cent. altogether?—Yes.

10,664. Would you just give us a reference to the section for convenience?—Yes, 13 and 14 Victoria, Chapter 99, Section 4, empowers the vestry of any parish from time to time to order the owner of all rateable hereditaments, which include dwelling-houses, and which do not exceed a certain prescribed limit, shall be rated in respect of these hereditaments instead of the occupiers. Then they give the prescribed limits, that is to say, in the

metropolis £10; in parishes within the city of Liverpool, £13; in parishes without the city and in Manchester or Birmingham, £10; and in every other parish in the country, £8. I gave you those figures just now.

10,665. That is the one section. What about the one applying to voids—does Section 4 cover it? 32 and 33 Vic., C. 41, Sec. 4, applies to voids.

10,666. When you talk about poor rate, that includes a good deal more than the expense of the maintenance of the poor, but also the county expenses, cost of education, general expenses of rural district councils (including highways, overseer's expenses, and the upkeep of police)?—Yes.

10,667. And in country and rural districts it is the only rate levied?—It is becoming from year to year the only rate levied. I find that in Birmingham and Manchester they levy all their rates through the poor rates. With us we have two sets of rates, the general rate and the poor rate, but that is not the case in Manchester and Birmingham.

10,668. Take high-rented houses: how are the rates paid there? Do the occupiers pay direct?—Usually, but there are many exceptions.

10,669. We were told, for instance, by an ex-member of Parliament, Mr Provand, that he paid three hundred and something pounds in London, including rates?—That of course would be furnished.

10,670. That may be. In that case it would be one payment?—Yes.

10,671. In very sparsely populated counties, where the cottages are scattered, how is it done there?—Direct to the tenant. It is a very small rate indeed.

10,672. Generally speaking, however, in the case of cottage property throughout England, the assessment is on the owners instead of occupiers within the rateable limits stated?—Yes.

10,673. The result being that in some cases there is an allowance of 15 per cent. and voids, and in others 30 per cent. and no voids?—Yes.

10,674. Then how are the voids arranged between the landlord and the rating authority?—That is a difficulty. In a good many cases we pay the rates in full, and a few days before the end of the financial year we send a list of our voids to the authorities, and they send us cheques for the amount of the voids.

10,675. Then if they choose to question your voids, they can do so?—They come and look at our rent books.

10,676. Take the original 15 per cent.—what elements does that cover? It covers cost of collection and losses and unpaid rates?—The 15 per cent.?

10,677. What is it allowed for?—I suppose it is allowed for the landlord collecting the rate weekly and paying it to the authority in one sum.

10,678. But does it not include the two elements, first, of your cost of collection, and, second, cases where you do not get either the rate or the rent? Of course the tenant might make a moonlight flitting?—Yes, it would cover that.

10,679. And the third element of the voids is a separate one that the additional 15 per cent. has to bear?—Yes, and you will notice that the authorities invariably get those agreements signed if they can. The Act says that the landlord must agree with the authority, but the authority prepare the agreement, and they are very anxious that the landlord should sign. These forms are sent out by the authorities.

10,680. Then the Public Health Act, 1875, takes a step further in the direction of compounding. That is the Act 38–39 Victoria, Chap. 55, and under Section 211 the owner, instead of the occupier, may at the option of the urban authority be rated in cases where the rateable value does not exceed £10, or where the premises are let weekly or monthly, whatever the value may be, or where apartments are let separately?—Yes.

10,681. What does that mean where houses are let separately?—There are in some cases big houses let separately.

10,682. Single rooms?—Yes, a decayed neighbourhood.

10,683. Is there much of that?—In Liverpool we have a few such districts. In that case the owner is assessed on a reduced estimate of not less than two-thirds and not more than four-fifths of the net annual value, or if the authority wish to avoid allowances for unoccupied property they must assess on one-half the assessment.

10,684. What do you mean by tenements? Is that the same as we mean?—Yes.

10,685. By the Liverpool Improvements Act, 1867, where the net rateable value does not exceed £13—this means £19, 10s. rent—the owner shall be assessed on half the value of his premises, whether the same be occupied or not, and by the Liverpool Water Act, 1871, owners are assessed at three-fourths of the rateable value on £13 and under, and you have produced a total showing the allowances to owners assessed in place of occupiers in a few of your districts?

	Poor Rates.	General Rates.
Liverpool	30 per cent.	50 per cent.
Birkenhead	30 „	20 „
Bootle	30 „	20 „
Waterloo	30 „	20 „
Wallasey	30 „	20 „
Litherland	30 „	20 per cent. for all small tenancies.
Exeter	25 „	None.
Blackburn	5 per cent. to all who pay early.	5 per cent. to all who pay early.
Bristol	30 per cent.	25 per cent.
York	No allowance.	No allowance.
Burnley	10 per cent.	10 per cent.
Portsmouth	30 „	50 „
Burton-on-Trent	30 „	20 „
Thornaby	30 „	20 „
Harrowgate	30 „	25 „
Chester	30 „	30 „
Barrow	30 „	None.
Huddersfield	10 „	10 per cent.

Mr W. E. Nelson. 30 Jan. 1907.

10,686. In that table I see you have the heading "Poor Rates." Is that poor rates proper for the maintenance of the poor only?—It includes the other things I mentioned.

10,687. What are general rates as distinguished from poor rates?—Roads, gas-lighting.

10,688. Parks, libraries, and so on?—Yes.

10,689. It has been suggested that there are two ways of securing the advantage to tenants of frequent payment of rates, either the one that you have been expounding or a system of getting the rating authorities direct to collect frequently, say quarterly. Is that tried anywhere in England so far as you know?—No, it is very often collected half-yearly, but not quarterly.

10,690. By the rating authority?—Yes.

10,691. Direct from the occupier?—Yes.

10,692. In what cases is it collected half-yearly?—Poor rates. I think the tendency probably will be that the general rates will merge into the poor rates, and we will have one rate levied once a year, one Bill, and the tenants may be allowed to pay in four instalments, but this would not apply to cottage property.

10,693. And so far as you know they are allowed to pay, but then they pay by going to the office?—Mostly.

10,694. The rating authorities do not send round?—They send round if you required, but it is mostly paid over the counter.

10,695. So far as you know, is there any difficulty experienced in carrying out that system?—The system I outlined?

10,696. Yes?—But that is not involved at present, that is a system which I think we will probably attain to. The present system is half-yearly or yearly.

10,697. But I am talking of the half-yearly payment of rates direct to the rating authorities by the occupiers. You say that that is in existence?—Yes.

10,698. Is any difficulty found in carrying it out so far as you know?—I do not think so.

10,699. What is your own view as between a system under which the rating authority would collect direct say four times a year from the tenants and the system of making the landlord the rate collector?—I do not think any other system except the present system would do for cottages in England.

10,700. Of course, if you could make the rating authorities collect weekly, that would do?—That would increase the expense enormously.

10,701. Theoretically it is possible, but not in practice?—No.

10,702. Of course the landlord's clerk is collecting the rent anyway?—Yes.

10,703. And he may as well get the rate too?—Yes.

10,704. In the one sum?—Yes.

10,705. How often do you landlords pay over your rates that you have thus collected?—Once a year in Liverpool.

10,706. And you have the advantage of the interest of the money that you have thus been collecting during the year?—We pay about halfway through the year when the rates have been running about six months.

10,707. You have had some of it for the first six months?—Yes. The other six months we still have to collect.

10,708. You are out of pocket six months, and in pocket six months; the one would balance the other?—Yes.

10,709. I see. You say on page 4 of your *précis*, at the top, that "In discussing the question of the advantages 'and disadvantages of rating of owners instead of occupiers, 'it must at once be admitted that theoretically it would

Mr W. E. Nelson.
30 Jan. 1907.

'appear better for each occupier to be assessed directly, 'and be directly responsible to the local authority, as by 'this means, it is argued, ratepayers would be more likely 'to cultivate that attention to local affairs which is so 'desirable in the public interest; but I am of opinion 'that the practical advantages of the compounding system 'outweigh the theoretical advantage of a direct tax pay-'able directly, without the intervention of the owner." You adhere to that rule?—Yes.

10,710. Is that the view of the Royal Commission too? Did you see the passage in their report?—Yes.

10,711. They were against compounding on principle, but admitted it could not be avoided?—Yes. I have had conversations with many public officers, with borough accountants and district accountants, and they are all against it in theory, but they admit that it is the only possible system. This system comes in for revision every year when the authorities levy the taxes. There is always a temptation to save it if they can, because authorities are generally hard up.

10,712. I suppose that while the system of paying direct once a year may be quite natural in Scotland with yearly tenancies, short tenancies of weekly or monthly would necessarily involve the compounding system?—I should think so.

10,713. And you think that there is sufficient enterprise among political parties in regard to the question of the tenants taking an interest in taxation to ensure that the matter will be kept well in front?—That is our experience in Liverpool.

10,714. And of course the working classes are now taking a much more keen personal interest in politics than they did, and in the question of taxes?—Very much.

10,715. And they have also organised themselves in a way they did not do formerly?—Yes, nearly every trade has its organisation now.

10,716. You have also ratepayers' associations and different social organisations concerning themselves with matters of local government?—Yes.

10,717. I see that you mention here—you referred to it before, but I should just like you to emphasise it—you say in the middle of page 4 that, "By the payment of the 'rates in the rent a uniform system is carried into effect 'and, year in, year out, a working man pays the same 'sum although the rates are continually fluctuating, and 'generally on the rise, which is a great benefit to a man 'with a wage barely sufficient to meet all his daily require-'ments." Have your rates in Liverpool increased much?—Yes, they have gone up a good deal in the last five years. The education rate has gone up 1s. nearly.

10,718. How do you account for it that the total sum paid by the working man has not gone up? You must either have been getting too much before, or you must be getting too little now?—No, I think we were over-built.

10,719. And that brought down the rents?—It meant that practically.

10,720. Now things have righted themselves?—Yes. We are fairly normal at present.

10,721. Do you think also that, in the interest of the tenant, the landlord even in his own interest finds it desirable to make allowances to a tenant that of course a tax collector is not entitled to do?—Yes, the tax collector would have to take the tenants before the Court, which would hurt the feelings of a great many of the tenants.

10,722. And there may be many reasons why it would not even pay a landlord to be too strict?—It is not to their advantage, for if it is found that a certain landlord is harsh, then people avoid his houses.

10,723. We have heard it said that there is a feeling in England that you landlords and estate agents get too much. Have you worked that out to see how the thing stands?—Yes, I have one or two cases here. I could give you a few figures.

10,724. First of all, may I take it that you have yourself tested the matter, and averaged out the results in the case of properties under the control of your firm, and you are of opinion, while in some cases the allowance may appear high, yet, taking everything into consideration, the landlord is not too well paid for the risk and extra work put upon him?—Yes.

10,725. So that you think on the whole it works fairly now?—Yes.

10,726. Have you any notion how these percentages were arrived at by the legislature?—None at all, but they seem to be very good working percentages. Although at first sight the allowances seem to be high, still, they don't work out in practice excessive. Then the parties have discretion, you notice, so that the system is wide and works differently in different towns.

10,727. There is no differentiation apparently?—Yes, you see under the Public Health Act they can decide on the amount of the allowance.

10,728. Yes, one amount, but what I mean is that we are told that the expense and the risk in the poorer class of houses is much greater than in those that are higher rented, and Mr Cross in his Bill proposes to give effect to that, because he differentiates the allowances. In England, if you have your 15 per cent., there is no differentiation. In the £7 houses, where there is more trouble, you do not get any more than in the £15 houses?—No. The allowance on the low rental will probably mean a loss, whereas on the higher rental it might probably be a little gain.

10,729. So that the 15 per cent. must have been a statutory average?—Yes.

10,730. Because the loss in the lowest rentals would be more than 15 per cent., while on the highest it might be less?—Yes.

10,731. Have you any opinion as to whether that is a better system, rather than Mr Cross's, of differentiating? It is the easier system, of course?—Yes, I do not think Mr Cross's system would work out. I think he would have to make a bigger allowance and leave the discretion more with the various local authorities.

10,732. We will come to that. He proposes for over £4 and under £7, 10 per cent.; £7 and under £10, 5 per cent.; £10 and not exceeding £20, 2½ per cent., halving it again. I suppose the simpler system is to have one average allowance?—Yes.

10,733. And I fancy in all these matters the less complication there is, the better?—Yes. It will be very awkward to work Mr Cross's system out.

10,734. Do you apply that at all to the proposal in Mr Cross's Bill, that the adoption of his measure should be optional? It has been suggested to us, that to have different systems in different towns in Scotland would be awkward. Now you have great differences in England, as you have been showing us?—Yes. I think it might safely be left to the local authorities, because they know best the local requirements.

10,735. I suppose, in the end, the tenant pays everything?—Yes.

10,736. However the system is worked out?—That undoubtedly generally is the case.

10,737. And in the question of rating, you have to consider the three interests, the landlord, the tenant, and the rating authorities?—Yes.

10,738. And at the present time, is it your view that all three are satisfied that whatever theoretically may be desirable, compounding is the best system?—Undoubtedly.

10,739. You include the rating authorities?—Yes.

10,740. And show that by what you said about their interest to get these arrangements signed?—Yes, and by the fact that they make these allowances practically throughout the country. They are not bound to make them, but they do make them.

10,741. For their own advantage?—Yes.

10,742. In reference to the amount, I see at the bottom of page 4, you note that in Liverpool on 1st June, at the time when they are paid, the Corporation can depend upon receiving something like £94,000 in a lump sum?—Yes.

10,743. Is the result that they do not require to overdraw their bank account to the same extent as they would otherwise?—I do not think they overdraw in Liverpool at all. The estimate during the year carries them on.

10,744. Has there been any proposal on the part of the rating authorities in England that the landlords should remit the rate more often than they do?—You mean more than once a year.

10,745. Yes?—No.

10,746. You referred to the Act of 1869. Has there been any tendency to go back on the arrangement there outlined or rather to extend it?—Rather to extend it. You see the 1875 Act perpetuates the system and carries it a step further than the 1869 Act.

10,747. And what about local Acts generally?—They follow suit.

10,748. You refer on page 5 to the Corporation of Liverpool introducing the 50 per cent. arrangement. What do you refer to there?—Within recent years, we have had added to the city a number of urban district areas. Those districts, prior to their inclusion in the city, were under the Public Health Act.

10,749. Of 1875?—Yes, and the allowance to owners was 20 per cent. The moment they are included in the city, the 20 per cent. is dropped, and the city gives 20 per cent. and no voids. Our City Accountant in Liverpool is an expert on these matters, and I am quite sure he would not allow anything of that kind to pass, unless he had fully considered it, and it has in fact been considered by the City Council on more than one occasion. But it is perpetuated wherever they add an new area.

10,750. How long do you say there has been a practical experience in England of the compounding system?—About forty years.

10,751. Is the only other point on which there is any

real difference of opinion, the amount of the allowance to be made to owners?—Yes.

10,752. And there is a wide discretion there given to local authorities?—Yes.

10,753. Is it your view that, instead of fixing any rate of allowance under an Act for Scotland, that should be left to local authorities?—I think a rate of allowance, a maximum and a minimum, should be fixed by the Act, and that the authorities should operate between these two extremes. I understand in Scotland that half the rates have been paid by the landlord hitherto, and that they get no allowance. If they have to pay the whole of the rates in future, and get 15 per cent., and that would be equivalent to 30 per cent., would it not.

10,754. Is it your view that, whether it be owner's rates or occupier's rates, landlords should not pay on voids unless they get an allowance above that?—Yes.

10,755. Is it the case that you find a difference in the amount of allowance between places like Liverpool and Portsmouth, with large floating populations, and inland towns with staple trades giving constant employment?—Yes, that is very marked.

10,756. And the difference is justified by the different conditions?—Yes. I have a letter here I would like to read. It is from the City Accountant of Westminister, Mr Lester Woodhouse, formerly accountant at Birkenhead, who went to Burnley, and now is at Westminster, so I thought his experience would be valuable. "At Burnley 'we were able to get in the rate without compounding, but 'the pressure upon the Council was so great that after I 'left they had to make arrangements to adopt that plan. 'The statement of the people was that they could far easier 'pay 1s. a week than 26s. at one time. At Birkenhead 'compounding was in force the whole time I was there. 'Here for six months the various Workmen's Dwellings 'Associations declined to compound, and our experience 'proved that it was very much cheaper to collect the rates 'ourselves than to compound. But, again, the wishes of the 'ratepayers decided the matter in favour of compounding. 'I do not think to-day that you could find any Council 'willing to go back to the direct rate of collection, as, if so, 'the majority would, I believe, lose their seats at the 'following election. As to the question whether more 'interest is taken where the rates are paid direct, I can 'only say that one year in Burnley the rates were increased '11d. in the £ and the price of gas 5d. per thousand feet, 'but all the rates were then collected from the occupiers 'and not a single councillor lost his seat. So far as West-'minister is concerned, the percentage is only very small."

10,757. In Liverpool, is there any system under which persons are entitled to apply for relief of rates on the ground of inability to pay or from poverty?—Under this 1869 Act any person can apply to the magistrates and be relieved.

10,758. Do they do so to any large extent?—No; of course there are a number of cases, but I do not suppose the Council would lose more than £200 or £300 in a year in that way.

10,759. In that case, how is it done,—the landlord has already paid the rate?—But not for that class. That is for the class of tenant who pays direct.

10,760. Then there is no means for those who have paid through the landlord of getting it back?—No.

10,761. Is there any agitation for such a relief being instituted?—None at all.

10,762. I suppose you think that in many cases in Scotland where a tenant may in the case of one lump rum of rate be unable to pay, he might quite well be able to pay if it was spread weekly over the year?—Yes.

10,763. (*Mr Binnie.*) In Liverpool, how do you arrive at the assessed rental? Apparently in some cases it is two-thirds of the gross rental, but in other cases it seems to be in a smaller proportion? Is there any rule?—The assessment is made by the overseers, and they have a discretion as to what allowance they make. Taking the rental of £19, 10s., that is 7s. 6d. per week, they assess that at £13, and it is in their discretion what the assessment shall be.

10,764. In another case you say £14, 6s. was——?—£9.

10,765. So that the allowance in that case is still greater than one-third?—Yes, it varies according to the information before the Assessment Committee. The poor rate assessment establishes the general rate assessment.

10,766. And all rates are charged on the lower sums, not on the larger?—Yes.

10,767. That is, a tenant who pays £19, 10s. to you, pays rates only on £13?—Yes.

10,768. Then, in order that we may judge of that compared with our practice, would you tell us what the rates really amount to in Liverpool?—In the £?

10,769. Yes?—The general rate under the compounding.

10,770. The gross before you get your discount?—3s. 8d.

10,771. 3s. 8d.; that is general?—Yes.

10,772. And then poor?—3s. 6d. And then there is a water rate of 6d., and a watch rate of 1d.

10,773. Now, on the 3s. 8d.—that is the general rate—you get off that 50 per cent., do you?—Yes.

10,774. That is 1s. 10d. And you pay 1s. 10d. Then the poor?—30 per cent.

10,775. That is 3s. 6d. 30 per cent. is 1s. 1d.,—that leaves 2s. 5d. Then the water, you get a fourth of that. That is 4½d. And the watch rate?—That is levied in full.

10,776. So that you pay in that way 4s. 8½d.?—We generally reckon about 5s. That is about it.

10,777. Then thirteen times that is £3, 1s. 3d.: is that about it?—We generally estimate in round figures about £3, 5s. for a house of that description.

10,778. So that in reality the landlord gets a rent of £16, 5s. when the assessed rental is only £13?—Yes.

10,779. In other cases of course the proportion will be somewhat similar?—Yes.

10,780. Then to follow up this point,—you told us about the rents of the houses, with which let us compare the rents of Scotland. You say that a four-roomed house would let at anything up to £19, 10s.?—No, a four-roomed house would be about £13.

10,781. Up to £13?—Yes.

10,782. Can you give us the size of these houses? Give us the length of the frontage and the width of the building?—Probably the entire frontage would be anything from 16 to 18 feet.

10,783. You have not the 14 feet frontages that they have in London?—Probably we would have some 14 feet.

10,784. I don't want to suggest anything, but I know a good deal about it?—It varies considerably. So that in the smallest-roomed houses, two-roomed houses would have a kitchen and a bedroom above and probably a little yard behind and a little pantry. Probably that house might not measure more than 12 or 14 feet frontage, but if you go to a four-roomed house, it would probably have a little entrance hall, a passage about 4 feet wide, and that would increase the width of the house.

10,784*a*. You say that would be about——?—About 16 to 18 feet.

10,785. Say 17?—By 24—12 for the front room and 12 for the back room.

10,786. Do you know the cost of these houses?—The cost of building?

10,787. Yes?—I am not inclined to say. It varies so very much that I really could not say.

10,788. You have promised to give us particulars as to the actual facts of the changes in the course of the year, because 20 per cent. in our experience seems so very great. —Yes, in my own experience.

10,789. Then, in regard to the rating, you say there are two 15 per cents.?—Yes.

10,790. The first one is compulsory; the landlord is bound to collect the rates——?—If the authorities so decide.

10,791. Yes, if the authorities resolve, then the landlord must collect, and he must be allowed 15 per cent.?—Yes.

10,792. Even if they resolve to adopt the practice of arranging with the landlords about paying for voids, that is not compulsory on the landlords; they are not compelled to do so?—No.

10,793. And when the rate there, if it is an insufficient rate of compounding, is offered to the landlord, he can say, "I decline to accept it"?—Yes, that has been done more than once.

10,794. Then you said that you thought that in Acts regarding compounding, there should be a maximum and a minimum rate fixed; but if the Act makes it imperative upon the owner to gather rents, to compound, what advantage would there be in having a maximum and a minimum rate? Would the authorities not be certain just to fix on the minimum?—In practice that is what it amounts to. They do not give a penny more than they are obliged to.

10,795. Then what would be the advantage of having a maximum and a minimum, assuming always that the landlord is bound to collect the rates?—But there might be cases, and no doubt there would be cases, where they would probably make a larger allowance and include the voids.

10,796. There is no use having a maximum and a minimum if the landlords are compelled to collect the rates?—Perhaps not.

10,797. And then the Acts should define what allowance should be given?—It would appear so.

10,798. In regard to paying for voids, you think that that is a case where there should be agreement between the parties that the landlord should not be compelled to pay for voids unless he comes to an understanding with the assessing authorities as to the amount to be given to him? —That would be so, and then maximum and minimum would come in.

10,799. I understand it in that case. Then, in regard to this matter of compounding. Can you account for the great difference in Liverpool between the allowance given on the different classes of rates? There is 50 per cent. on the general rate, and there is 30 per cent. on the poor rate: can you account for the difference in any way?—The poor rate is levied under the General Public Health Act.

10,800. I know, but apart from the difference of Acts, can you account for the fact that in one case the allowance is 30 per cent. and in the other case it is 50 per cent.?—Of course we levy under our local Act, and probably it has been found in practice that 50 per cent. was a proper allowance to make, and it paid the Councils to make that allowance.

10,801. But in other places, Birkenhead, for example—which is just across the river from you—they only get 20 per cent. on the general rates, and in a majority of towns they only get 20 per cent. The highest of any town except Liverpool is Portsmouth, where it is 50 per cent. or so, and the next highest is Chester, 30 per cent.; Harrowgate, 25 per cent.; Bristol, 25 per cent.; and all the others are 20 per cent. or 10 per cent., and then no allowance in some places. Can you account for Liverpool being 50 per cent.? Is there anything peculiar about Liverpool that accounts for that great difference?—It is a seafaring town, and there are a great many changes in tenants, and a great deal of rates would be lost if they had not this arrangement.

10,802. Would you lose more of the general rate than of the poor rate?—I suppose not.

10,803. And yet the allowance in one case is 30 per cent., and in the other 50 per cent.; you cannot account for that? No.

10,804. Can you tell us how, in places like Exeter and York, there is no allowance made on the general rate, no allowance made on any rates?—York and Exeter are two very old-fashioned cities, where there is principally a resident population, and practically no industries. The small tenants in places like that would be more people who were more or less dependent on the gentry of the town.

10,805. But the strange thing is that there are no allowances in York upon the poor rate: now I thought that was regulated by an Act that specified 15 per cent. allowance?—The overseers are not bound to avail themselves of the Act, you see.

10,806. But can they then recover from the proprietor?—No, they must go to the tenants direct.

10,807. And when you say "no allowance," it would perhaps be more correct to say "no compounding"?—Yes.

10,808. May we alter that then?—I put it in purposely, so that you could see there were places where there was no allowance.

10,809. No allowance means no compounding?—Yes.

10,810. Then Blackburn, there is 5 per cent. allowed to all who pay annually?—Yes.

10,811. Do you know where any landlords take advantage of that, or do they just leave it?—I don't know, but they levy under a local Act there.

10,812. You cannot say whether in respect of this allowance of 5 per cent. any of the landlords pay their tenants' rates or not?—I believe so, but I cannot say definitely. I see the allowance for voids in Blackburn amounted to £8500.

10,813. Was that the amount of assessment allowed?—No, the amount of rate allowed.

10,814. This is the rate allowed in respect of voids?—Yes.

10,815. And also in Barrow, where you say on the general rates no allowance is given. I suppose that will be no compounding?—Yes, no compounding.

10,816. Then in Litherland there is 20 per cent for small tenancies. What do you mean by small tenancies?—They have a very peculiar arrangement in Litherland. They assess the landlords in all cases where the tenants pay their rent weekly or monthly.

10,817. It is 20 per cent. for all tenancies let weekly or monthly?—That is so.

10,818. You have told us that in Liverpool the very poor get no relief at all?—That is so,—from the magistrates.

10,819. What do you mean by suggesting that landlords may allow? Is that founded on any practice, or is it each man just dealing with each case as it arises?—That is so. The cases are dealt with as they arise, and, as a matter of fact, the landlord is on better terms with his tenant than any rate collector is likely to be.

10,820. Then you yourself will have some very poor tenants?—Yes.

10,821. Have you any system for instructing your rent collectors?—We find out the real facts of the case, and if we find that the tenant is in difficulties owing to no fault of his own, we ask him to leave the house and forgive him any arrears of rent that he owes—to leave at a week's notice.

10,822. You have no system of allowing a certain proportion of the rates in respect of their poverty?—No, each case would be dealt with separately.

10,823. In regard to subletting: how do you prevent that subletting?—It is an exceedingly difficult thing to do.

10,824. I know the district of Wallasey very well, and I know that in some of the cottages there with two storeys of 14 feet frontages, there are sometimes four families. In Liverpool, does that prevail to any extent?—I am sorry to say it does.

10,825. So that there is a good deal of subletting?—Yes, that we do not know anything about.

10,826. That must subject the property to a great deal of tear and wear?—It does.

10,827. And how do you recoup yourself for that? Do you in certain districts charge extra rent because of the extra tear and wear?—No, I do not think so. Of course anyone buying that class of property would pay so much less price in consequence of that, in view of the fact that probably there would be a greater wear and tear on that than on the average property.

10,828. And you find the lower-rented houses sell at a comparatively small number of years' purchase?—Yes.

10,829. Is there any time of the year in which there are a larger number of removals than at any other, or are they spread pretty generally over the whole year?—Speaking of cottages, they are spread over the year.

10,830. Pretty largely?—Yes. Of course in larger houses the spring is the time.

10,831. I think you said that in twenty years you had only twice to apply to the Court for an ejectment order?—Yes, only twice.

10,832. Does that mean the County Court, or does that include the Police Court?—Both Courts. One case in each Court.

10,833. In twenty years?—Yes.

10,834. How do you get tenants out?—In the first place, we give them notice, and if they do not leave the house at the expiry of that notice, we send them a further notice that we intend to distrain if the house is not vacated. If they do not leave, then we issue a warrant and a distraint officer takes that to the house and he has our instructions to say to the tenant, "If you get out at once you can take 'all your furniture, but if you do not we will be reluctantly 'compelled to distrain upon you," and that means that they go. You can distrain, you know.

10,835. And you put in an officer?—Yes.

10,836. Into the house?—Yes, always, and we have to pay him 5s. 6d. for every case. We practically get possession for 5s. 6d., whereas by going to the Court we would have to pay 12s.

10,837. And then in England you can put a man in possession, I think?—A distraint officer is an officer of the County Court.

10,838. That is only on an order of the County Court?—He is appointed by the County Court. You must distrain through him.

10,839. But that officer can put a man into the house?—Yes. He can go and take the furniture out subject to a number of exceptions. He cannot turn the tenant out.

10,840. He cannot turn the people out?—No.

10,841. But he can put a man in possession?—No.

10,842. How is that?—We have no power to take possession unless we get an order from the Court.

10,843. We were told by someone that you can put an officer into the house?—Yes, but that man can only distrain on the goods and take them away. He cannot even stay on the premises unless the tenant asks him to stay.

10,844. He can take away everything?—Yes, except these large number of exceptions.

10,845. Tools and bedding and a large number of other things up to what?—£5. That means that in some cottages we must leave everything.

10,846. We were told by some factors in Glasgow that there are quite a number of tenants who move very frequently from house to house, paying perhaps a month's rent when they go in and no more, and sit on practically rent free, to the great hardship of the landlords, and they do so for the greater part of their lives?—Yes, we call them squatters in Liverpool.

10,847. How do you get rid of them?—It is very difficult to get rid of them. We often give them something to go out. We do not get very many of that class of tenant, but they are exceedingly difficult to deal with. After they once get into your premises, it takes a great deal of trouble to get them out. That is the class of tenant who likes to take the house on a yearly tenancy.

10,848. Are any of your rents paid in advance?—Occasionally, but very seldom.

10,849. When a tenant is moving, you would just get the rent as they leave the house?—Yes.

10,850. And if the clerk happens to call in the afternoon?—They may have gone.

10,851. You have no arrangement for getting the rent out of them earlier than that date?—No.

10,852. It was suggested to us that the rating authorities should be required to serve on each tenant once a year a notice of the amount of the rates that are payable in respect of the house they have occupied, to make them take an interest in municipal affairs, and also to let them know how much more than rent they had actually paid. Is there anything of that kind done in England?—No.

10,853. The only way in which a tenant knows the amount of rates is just from the newspapers?—That is so.

10,854. (*Mr Howden.*) What percentage do the landlords pay factors for the collection of rents?—5 per cent. on weeklies and 2½ per cent. on monthlies and quarterlies.

10,855. Could you give us any idea of what the arrears of rent are in connection with your own property, the net amount, or the percentage?—I have some figures here. To take a case where we have an estate of 142 cottages, the nominal rental is £2176. We actually collected last year £1888, so that we lost £288.

10,856. (*Chairman.*) That is independent of unlets?—That includes voids.

10,857. (*Mr Howden.*) But it is not voids I want. Deduct the voids?—I am afraid I could not do that. I could probably send you the information.

(*Chairman.*) You might send it to us.

Voids, ...	£175 10s.
Loss of rent, ...	112 10

10,858. (*Mr Howden.*) And it would also include the rates; that would include everything?—Yes. Might I be allowed to give you this. I tried to estimate what is the result to us as landlords in this particular property, and I have taken the nominal rent as £2176. We collected £1888, and that leaves £288 loss. The rates from that property, if paid in full, would be £680. That is practically a third of the rental; I have taken it as a third. We have lost £288, and I say that if the rating authorities had collected direct they would have lost a third of that amount, because the rates are one-third, and a third is £96. So they would have lost £96 on that property. Then I assume the cost of collection would be £40, the cost of office staff £40, for general rates, and the same for poor rates, making a total of £256 that it would cost the Corporation to collect those rates. They actually allowed us £241.

10,859. (*Mr Binnie.*) It would have cost the authorities how much?—£256, and I think that I have erred rather on the side of leniency than otherwise, because there are so many expenses a Corporation has that an outsider does not know about.

10,860. And you got £241?—Yes, that is in the city of Liverpool.

10,861. (*Chairman.*) That is nothing exceptional?—I have taken out two or three cases, and they practically come to the same.

10,862. (*Mr Howden.*) I think you told us that you paid the rates to the local authorities in the month of June?—Yes.

10,863. When does your financial year begin?—It commences on the 1st of January and ends on the 31st of December.

10,864. When is the roll of voters made up?—On 1st January, on the occupation of the previous July. A man who is in in July will get his vote on 1st January. He will be put on the roll.

10,865. On 1st January?—Yes.

10,866. It takes him practically six months to make up that roll?—Yes.

10,867. You have a paragraph in connection with distraint for rent. You tell us that any implement by which the tenant makes a livelihood—"goods in actual use"—what are the goods in actual use?—I suppose that would be foods, bedding.

10,868. Bedding and clothing. Your paragraph led me to believe bedding is in addition to that?—Might I trouble you with an extract; but perhaps I could give you that again. The exceptions are fully set out in Woodfall's *Landlord and Tenant* (a leading authority), 1898 edition, pp. 442–536.

10,869. Yes. You tell us on the general letting question,—that is also in your precognition, third paragraph,—that the custom rests either on a verbal agreement or parol agreement, or based on lease or decisions of the Court. What do you mean by "decisions of the Court"?—There are various decisions. For instance, it has been decided that a weekly tenant should give a week's notice, and a monthly tenant a month's notice, and a quarterly tenant six months' notice, to expire at the date of entry in any year?—Yes.

10,870. But, as a matter of fact, when a weekly tenant enters a house, he does not take the house for a week, only for such time as he gives a week's notice?—Yes.

10,871. (*Sir J. Stirling-Maxwell.*) I suppose the number of empty houses varies?—Yes, very much in a place like Liverpool.

Mr W. E. Nelson. 30 Jan. 1907.

10,872. How much has the rate been varied, for voids?—It has not been varied for years.

10,873. Although the number of voids varies a good deal?—Yes.

10,874. Has there been any discussion about altering the rates?—It comes up almost every year for discussion, and they still adhere to the arrangement. They must allow 50 per cent. if they are not going to allow voids.

10,875. Taking one year with another, it comes all right?—Yes.

10,876. You said you thought it would be difficult where there was compounding to separate rates from rent in making a statement to the tenants. I did not quite understand in what the difficulty lay?—Taking a case of a £19, 10s. house, the rates there would be about £3, 5s. Well, it is very awkward to divide £3, 5s. into fifty-two amounts and mark it correctly in the rent book. It would lead, I am afraid, to mistakes and errors occurring frequently.

10,877. Fractions of a penny?—Yes. And suppose a tenant is in arrears, how much of that arrear is to be rate and how much rent?

10,877A. Well, from my point of view, the sum would be one. He has got to recover it. He has got to lose in any case when he is answerable for the rates. The point of the question was that the tenant should see what he was actually paying in rates. Do you think the tenant as a matter of fact does know?—Not the amount. He knows he is paying pretty heavily for rates, because it is constantly borne in upon him by agitation.

10,878. Suppose I asked an average workman what rates he was paying, could he tell me?—No, I do not suppose he could. He would tell you they were very heavy.

10,879. But he would not know whether they had gone up or not?—I think he would know that, because there is so much discussion.

10,880. He would know he had not to pay any more?—That is so. It would not affect him.

10,881. Would it not be an advantage to the landlord, if it was possible, to indicate that the rates were going up, because he would be able to put the increase of the rate directly to the tenant without raising his own rent?—I do not think so. It might be if the authorities concerned notified the tenants once a year of the amount of the rate. That would be the best way if it was to be done at all. Then the authority has direct connection with the tenant, and they know that he gets the information. To throw the onus on to the landlord is awkward, and unless you have a penalty clause I am afraid it would not work.

10,882. It is rather difficult with weekly rents as compared with monthly rents?—Yes.

10,883. (*Chairman.*) I see that the Statistical Officer of the London County Council gives us a Memo., and he says that tenants in London express their view of the subject usually in the statement that they had no rates to pay at all. Is that so in Liverpool?—I do not think so. I have heard many tenants talking about the rates being heavy when they were paying through the landlord.

10,884. They know quite well that they are paying the rates through the landlord?—Yes, that is constantly referred to.

10,885. (*Mr Cox.*) Can you tell us at all how what you call the rateable value is arrived at in England?—It varies so much. You see the assessment committee have a discretion, but, generally speaking, it is somewhere between 10 and 25 per cent. of the actual rental.

10,886. Do you send in a form every year of what the rentals of your various properties are?—We send in a form whenever we are requested to.

10,887. Whenever you are asked. How often is that?—Perhaps every two or three years. They can request it every year.

10,888. And off your rental they can deduct how much?—It may be anything between 10 and 25 per cent.

10,889. And that is what you call the assessable value?—Yes.

10,890. And you have a deduction of a third or a fourth more before you pay your taxes?—That is so.

10,891. So that in that way you are really paying upon about half the value?—Yes.

10,892. I am afraid it is different with us here. We pay on the larger amount, so that it may not be exactly the case that English rates are higher than they are here, because you pay on the smaller value?—Of course it does not make any difference if the system is the same; whether the rates are high or low they pay the same.

10,893. To bring out a comparison between the two countries you must take these two things into account?—It is almost impossible to compare, and it is almost impossible to compare town with town in England.

Mr W. L. Nelson.

30 Jan. 1907.

10,894. (*Mr Dobbie.*) Are written agreements common among tenants in England?—Above cottages, yes.

10,895. And are they usually stamped in accordance with the Stamp Act?—I am afraid that a good many of them are not stamped. I think that opens up a very awkward matter. There is an agitation in England to have the agreements stamped with a penny stamp. At present it is *ad valorem*.

10,896. At present the stamp duties are 1s. 6d. above £10, and 2s. from £15 to £20. Is that thought to be an excessive duty?—Yes.

10,897. Apart from agreement, I think you told us that the notice to quit was rather a lengthy notice. In the case of quarterly lets, six months' notice is given?—Yes.

10,898. And in yearly lets it is six months also?—Yes.

10,899. Is that a common law rule applied to England?—It may be.

10,900. In the absence of an agreement, one requires to get notice?—Usually: some of the lesser tenants want a three months' notice.

10,901. In giving us the figures about the removals, you might distinguish between the removals say up to £10, and between £10 and £15, and £15 and £20. Then, under any conditions, does the death of a tenant cancel a let?—No, it does not. I should like to see that reformed. I think there should be something for that. (See previous reply.)

10,902. Then, under these exemptions from distraint, is it found in practice that the limitations of £5 limit in regard to tools, etc., and these other exceptions, operates harshly towards the landlord?—It means that he gets nothing.

10,903. Is there a grievance that this distinction should exist in favour of the tenant?—The grievance is rather that you cannot get rid of a bad tenant quicker.

10,904. In Scotland we do not have any £5 limit or any restriction. The landlords do not complain of that if they have more ready means of ejection?—Yes.

10,905. In the case of shorts lets, where your tenants leave on the Monday—that being rent day—if your clerk finds him in process of leaving and he does not pay the rent, is he helpless?—Yes, quite.

10,906. You must just let him go?—Yes.

10,907. I do not quite understand the figures about the typical case that you gave to Mr Howden. Do I understand that the total irrecoverables was £288?—That is the amount we lost between voids and loss of rent.

10,908. Voids, irrecoverables, and unlets?—Yes.

10,909. The rates upon that property are £680?—Yes.

10,910. From that would you get 30 per cent. deduction?—The sum we received amounted to £241. We actually paid £439.

10,911. But the rebate you got was £240?—Yes.

10,912. Which would mean that on that property, owing to the system of compounding, the loss to the property in respect of unlets and irrecoverable rents was £47?—Yes, except that you must take into account that he is collecting the rates for the authorities.

10,913. Apart from the trouble of collection?—Yes.

10,914. £47 represents the total loss on a rental of £2176? That would be so.

10,915. When rates are payable by tenants, what is the rateable value?—They vary just as they do in the other assessments.

10,916. Of course in that case there would be no allowance given for rates?—The rateable value is not the rental value.

10,917. It would have to represent repairs and insurance rather than rates?—Yes.

10,918. The object of giving the increased deduction off the gross rents in the case of compounding is that the sum put in includes the rate, and therefore perhaps a quarter must come off for that?—Yes, a rental of £30 would mean assessment on £25 or £26.

10,919. Is there any statutory authority in England for taking assessments by instalments?—No.

10,920. The system of half-yearly collection will be statutory?—Yes.

10,921. But any more frequent payment is simply a case of paying up arrears?—It is a matter of arrangement with the local authority.

10,922. There is no statutory arrangement for getting payment, say quarterly?—No.

10,923. Then, apart from compounding, are rates charged on empty property in England?—Direct to the tenant.

10,924. In the case of voids?—No. It is only in the case of compounding that any deduction requires to be made in the case of voids.

10,925. We have a different system from the one in England. You have no taxes charged direct as owner's taxes?—Except under the compounding system.

10,926. Apart from that?—No.

10,927. The whole rate is charged on the tenant?—There are a few exceptions.

10,928. I mean generally?—Yes.

Mr W. E. Nelson.

30 Jan. 1907.

10,929. Coming to compounding, have the Corporation of Liverpool attempted to make an agreement with the proprietors to compound and to collect at less than 15 per cent.?—No.

10,930. They have to compound by agreement—to arrange for compounding?—No. They have not the power now under their Act. Every assessment value of £13 and under must come under the 50 per cent. allowance.

10,931. Under the Public Health Act?—No, their local Act.

10,932. In Liverpool?—Yes.

10,933. They have no choice now. The Corporation must, where the assessment value is £13 and under, allow 50 per cent. to all owners, and no voids, and that is the system they are perpetuating in all districts they take in.

10,934. With regard to burgh rates?—Yes, burgh rates are practically the general rates.

10,935. Not the poor rates?—No, the poor rates come under the general law of 30 per cent.

10,936. I was talking of poor rates, which differ rather in regard to the application. Coming to poor rates, have the Corporation of Liverpool attempted to induce the factors to compound for less than 15 per cent.?—No, they have no power to do that. That is settled by the 1869 Act, and the Corporation do not levy the poor rate. It is the overseers.

10,937. I mean the rating authority. In some of these burghs, the allowance is only 10 per cent.?—That will be under a local Act.

10,938. If you look up the clause, you will find the position is that that by agreement between the two parties there can be a less rate than 15 per cent.

(*Chairman*). Not exceeding 25 per cent.

10,939. (*Mr Dobbie.*) And in some burghs the landlords have agreed to collect the owners' rents under 15 per cent., but in Liverpool has any attempt been made to induce you to do that?—No.

10,940. Then, coming to the voids and the general collection, is 30 per cent. the allowance in Liverpool?—For poor rates, yes.

10,941. Did the Corporation attempt, or have they attempted, to arrange on a smaller sum?—No; you see, if they go under the 1869 Act, they cannot.

10,942. Undoubtedly, if you look at Section 4?—Which Act?

10,943. The 1869 Act, Section 4. In regard to the arrangement for voids, the allowance for voids is not to exceed 15 per cent.?—That is to say, if the overseers like to make an arrangement with the landlords, they must allow that 15 per cent.—or they "might" allow them, yes.

10,944. The point is, whether they have taken up the position that 15 per cent. would be too much in respect of voids?—No, they have never attempted to suggest a less amount.

10,945. In the London burgh you gave us, Westminster, the allowance on voids there is only 1 per cent.?—Yes, that is so.

10,946. I was wondering about the comparison between Liverpool and some other places?—I notice the Liverpool rates collected are about 90 per cent., so they lose 10 per cent.

10,947. That is the whole rate?—Yes.

10,948. Under compounding, you don't know how much they would lose in the absence of compounding?—No.

10,949. In London, where they don't compound, they lose about 6 per cent., we are told. Can you tell us the percentage of irrecoverables above the compounding in England. What is lost in Liverpool, say, above rent where compounding prevails?—I could not tell you that.

10,950. Up to what point does compounding apply in Liverpool?—£19, 10s.

10,951. Which means a rateable rental of £13?—An assessment value of £13.

10,952. Can you find out what the Corporation lose, say on assessable rentals of from £13, 10s. to £19, 10s.?—The Corporation of Liverpool lost last year on voids £45,000, on a total rating of £750,000. Would that answer your question?

10,953. As near as possible—of course, if we had the different classes of houses and different rentals, making the comparison?—I could get that from my own books.

10,954. If you take some of your own houses, where the tenants are assessed direct, and attempt to discover what occurs in the case of rents immediately above the compounding limit?—Say from £13 to £20.

10,955. If you could do that it would be useful. Then of course in the assessment roll the tenant's name won't appear at all in cases of compounding?—Yes, the landlords are bound to supply the names of the tenants under a penalty.

10,956. Is the tenant liable himself?—The landlord is liable, but the tenant's name is entered.

Mr W. E. Nelson.
30 Jan. 1907.

10,957. Are they both liable?—No, only the landlord.

10,958. We are struggling with two different systems. In Scotland, as you know, our tenant is liable for tenant's rates, and we get an assessment put on the individual who happens to be on the roll at the moment it is made up, and the practical difficulty we have is how to pass on that liability to an intermediate tenant. That difficulty does not occur with you in England, for you only have the landlord assessed?—That is so. It would occur above the limits.

10,959. Well, what happens above the limits?—You see, they may make the rate in May for a term ending 25th March following, and then there is no rate between then and the previous March.

10,960. But what happens if the tenant assessed leaves?—A tenant in that period does not pay any rate, but a man who happens to come in may have to pay the full rates.

10,961. Is he not remitted?—None at all, because, if so, the rates, while they are for a year, run for the period between May and May to the following March.

10,962. Can the tenant evade getting on to the assessment roll at all?—Sometimes that occurs.

10,963. It may be done?—Yes.

10,964. We would have the same trouble accentuated here with removals spread over the whole year?—Yes.

10,965. Can you tell us what preference the landlord has in the event of the bankruptcy of his tenant?—He comes after the imperial taxes.

10,966. After what period?—I think it is six months. In case of bankruptcy he gets six months' rent.

10,967. Has he preference over the ordinary creditors in every case?—Yes.

10,968. Supposing the ordinary creditor had a judgment summons, and attempted to attach the furniture, would he become liable for the rent?—No. He could take the furniture and remove it, and is not liable for the rent; but the landlord may stop him removing it if he finds out. Once it is moved it is gone.

10,969. We have a more excellent system in Scotland. We can have a direct claim against anyone touching the furniture, and can bring it back also?—I know, if it is taken under a judgment and removed off the premises.

10,970. Can the landlord get a warrant from any court to get the tenant to furnish his house?—No.

10,971. Then, if a tenant is found to be in difficulties, can he take any steps to procure the furniture before the rent is due?—No.

10,972. We still have some advantages in Scotland. What are the Police Courts you refer to?—The Courts for petty affairs of everyday life.

10,973. Judges or magistrates?—Stipendiaries and Justices of the Peace. We have two stipendiaries in Liverpool, assisted by a Bench of something like 200 unpaid Justices.

10,974. Has the unpaid Justice power to grant ejections?—Yes.

10,975. In regard to the franchise, I assume there will be no disqualification in respect of failure to pay rates where compounding exists?—No.

10,976. Assume you had no allowance at all, in respect of compounding, you would simply have to increase the rents, so as to make up for the loss through empties or irrecoverables?—If they had no allowance, the rates would be collected direct, wouldn't they.

10,977. If they were collected from the proprietor with no abatement allowed?—The rents would go up undoubtedly.

10,978. Therefore the more reasonable the abatement is, the less the increase will be upon the general rents of that class of houses?—I should think so.

Mr W. E. Nelson.
30 Jan. 1907.

10,979. (*Chairman.*) Under Section 3 of the 1869 Act, there is a provision applicable to Liverpool, that in the case of the heritable value of any hereditament which does not exceed £13, if situated in any parish within the burgh of Liverpool, the owner of such hereditament is willing to enter into an agreement in writing to pay the poor rates, the overseers may agree with the owner to receive the rate from him, and may pay him a commission not exceeding 25 per cent. on the amount thereof. Is that provision availed of in Liverpool?—Not in Liverpool, but it is in some places.

10,980. Liverpool, as far as the 1869 Act is concerned, deals with the fourth clause, where the vestry orders that owners shall be rated?—Yes.

10,981. In some cases under that clause, the 15 per cent. is allowed, and in some cases owners enter into an agreement with the overseers?—Yes.

10,982. In what proportion is the additional 15 per cent.?—In all cases of £8 and under, and in Liverpool, in all cases of £13 and under.

10,983. But, according to the terms of the Act, it is only allowed if there is a notice given by the owner to the overseers that he is willing to be rated. Now is that used by the owners?—The authorities go to the owners.

10,984. And the owners are always found willing?—Yes.

10,985. Of course, if the authorities went to the owners with a proposal for 1 per cent., it would be otherwise?—It might be.

10,986. (*Mr Dobbie.*) They have not attempted it at all?—I have not heard of any such attempt.

10,987. (*Mr Binnie.*) You have promised to give us some figures in regard to unlets?—Yes.

10,988. What I would like to get—I don't know if it is what you have noted down—is, in an ordinary town, what percentage of unlets would you have in the course of a year, when there is a good brisk demand for houses?—The best way would be to give you the percentage over five years.

10,989. Anyway you like, but I don't want the percentage for a time when there has been over-building or an excessive demand for an increase of property?—Last year in Liverpool it was ordinary, but in Birkenhead it was a very bad year. You want a fair average.

10,990. You said something about Liverpool Corporation losing £45,000 on a total assessment of £750,000?—That is in addition to the allowance made to the owners.

10,991. That is what I wished to show. The £750,000 is the gross assessment, is it?—Yes, the gross amount of the rate.

10,992. Including what is paid by landlords?—Yes.

10,993. Then you would require, in order that we may understand the proportion of the loss of £45,000, to deduct from the £750,000 the part that is paid by landlords?—Yes, that is £94,000. They allow landlords £94,000, and tenants and voids £45,000 in round figures.

10,994. (*Chairman.*) I don't know whether you could do it, but we are very anxious to know what is the effect of short tenancies on the number of removals. Some people say that if we introduce short tenancies in Scotland, people will be moving continually; others say it won't affect the total number, but spread the removals over the year. Can you give us any notion of the average duration of your tenancies?—Yes, I think so.

10,995. It would be very interesting if you could supplement that in any way by enabling us to have any notion of the extent to which the tenants, although weekly tenants, are affected?—If I take the 400 houses and gave you an average of that?

(*Chairman.*) Details of how many have been in so many years. You cannot do it fully but roughly.

Mr J. G. Watson.

Mr John G. Watson, 4 New Bridge Street, Newcastle-on-Tyne, called and examined.

Mr J. G. Watson.

10,996. (*Chairman.*) You are an estate agent?—Yes.

10,997. Have you had thirty years' experience of letting and managing property in Newcastle and district?—Yes.

10,998. What does the district cover?—Practically Tyneside.

10,999. Are there any towns?—Gateshead, North and South Shields, Tynemouth, and Whitby.

11,000. What class of dwelling-house property in Newcastle and district have you had experience in?—In all classes, but mostly in the commercial central city property.

11,001. Have you had experience of working men's dwellings?—Yes.

11,002. What rents?—Ranging from half-a-crown to 12s. and 15s. a week.

11,003. Give us that in pounds?—£3, 15s. to £31, 4s.

11,004. Could you give us a notion of how many working men's dwellings you are managing just now?—Not so many as Mr Nelson. It is more mixed, more commercial and city property, but I should think we have one hundred tenants on the weekly system, and of course my position as house valuator in the way of buying and selling property brings me into touch with the weeklies. While we have not so many tenants as Mr Nelson, we come across them in the way of valuation.

11,005. What do you call an estate agent in Scotland?—A factor, I understand.

11,006. But in addition you are a valuator?—Yes.

11,007. You have a business in the way of buying and selling property for clients?—Yes.

11,008. You heard Mr Nelson's evidence in regard to the condition of matters in Liverpool as far as the ordinary range of tenure is concerned, as far as the periods of payment, so far as the method under a certain rental of

the landlord paying taxes, and getting an allowance from the rating authorities are concerned?—Yes.

11,009. Can you tell us to what extent your Newcastle experience confirms Mr Nelson's, or differs from his. Take first the period of lets?—Weeklies, you mean?

11,010. Yes; is it the same?—Exactly the same.

11,011. Have you many or any cases of rents under an assessable rental of £20 let monthly?—Yes. They are put down as weekly.

11,012. How do you mean?—The larger proportion of houses let at that rent are let weekly. The tendency is to get from long tenancies, quarterly or monthly, to weekly. Sometimes they pay fortnightly or monthly, but in the case of the tenancy having to cease, a week's notice is sufficient.

11,013. So that it is a weekly tenancy?—Yes.

11,014. And the tendency is to go for that?—Yes, with a rental like that.

11,015. What induces that?—The necessity of tenants to get rid of the nuisance of the payment of rates in large sums. They want to know the extent of their weekly liability. These people have a weekly income, and the tendency is for them to find a means of ascertaining their weekly outgo.

11,016. It is a tendency on the part of the tenants and not any movement on the part of the estate agents?—It is entirely from the tenants' interest. It is the demand.

11,017. As to the periods of payment, are wages paid weekly in Newcastle?—Yes, all wages on Tyneside: there are no fortnightly wages.

11,018. Besides shipping, what are the industries?—Largely mining and chemicals, although that is on the decline, engineering, shipbuilding, and shipping generally.

11,019. And shipbuilding very largely?—Yes, on the banks of the Tyne.

11,020. And ironworks?—Yes.

11,021. Are there some of these occupations more shifting than others?—Shipbuilding fluctuates. We may have a period of prosperity for two or three years, and then have bad times for a year or two, aud in consequence of that there is a large migration of tenants from one district to another. We have a good many of these men from the Clyde coming when shipbuilding is busy.

11,022. Do these men from the Clyde bring their families with them, or take lodgings?—They take lodgings for a short time, till it is convenient, and then the families come.

11,023. In short, among these people are there very frequent occasions when a man wants to move his house on short notice?—He can move at a week's notice. He knows that.

11,024. Are there many occasions due to circumstances of the men's employment when they require to move?—No, not many.

11,025. I thought you said that they have to shift from one district to another very much?—Yes, in times of depression, but in times when work is busy in the yards there is very little moving.

11,026. It is more in times of depression, is it?—It is from some extraordinary general cause that they have to move.

11,027. Take such a time of depression, may that come on suddenly?—Sometimes it does.

11,028. If it came on gradually, would there be any difficulty, even if they had a longer tenancy, in looking ahead?—My experience is that the working classes don't look ahead. If they find they are going to lose their work in any district, they immediately give notice to leave, and go to another district.

11,029. And owing to your system they have no difficulty?—None at all.

11,030. Supposing it were proposed to introduce the Scotch system into Newcastle of a yearly tenure, what would your tenants say?—It would be utterly impossible. We could not conceive of such a system being worked. It could not be done.

11,031. Mr Nelson said that in the case of people who have a bit of garden ground they want a longer tenancy. Do you find that?—Yes, in rural districts. Where there is a fair extent of garden, the tendency is to make the tenancy as long as possible.

11,032. And what is the tenancy usually in such cases?—We call it a yearly tenancy, subject to an arrangement to accept three months or six months' notice, as may be agreed.

11,033. But that state of matters does not apply to what may be called industrial centres?—No, not at all.

11,034. You know enough of the system, or have been informed of the system of yearly tenancy in Scotland?—Yes.

11,035. How does it strike you in relation to working men from your experience in England?—I think it works against the working man. It must be exceedingly inconvenient and irksome to working men, who, through circumstances over which they have no control, may, although having agreed to take a house for a year, in a very short time find that they have to remove from the district, and that they are liable for the rent of a house there, and have to pay for the rent of another house.

11,036. Does it surprise you that that system should have continued so long?—It does very much.

11,037. Do you know historically whether the present system has always obtained in regard to such dwellings?—On the weekly tenancy?

11,038. Yes?—Well, in my own experience, for forty years.

11,039. It has been the same?—Yes.

11,040. And there was, so far as you know, no new introduction then?—No, I think it would be a gradual outcome of modern demands.

11,041. Might it arise from the more modern houses having no gardens attached to them, as compared with the old-fashioned towns, where even the working men had their gardens? Would that account for the change of system?—It would, but even in the case of the garden, when a man ceases to have his employment, and has to move from that district, even his garden must go. It would be no tie on him.

11,042. Are you aware of any difference in the condition of working men's employment or habits in Scotland that can account for the difference in practice?—No, I do not know.

11,043. Conditions of work are apparently the same?—Apparently the same. It must be that this old system here has continued so long that the people have not been able to introduce or initiate another system.

11,044. In your view, the English system is much more in the interest of the tenant than the Scotch system?—I would not say that. For that class of property I think it is as much to the interest of the owner.

11,045. But it is to the interest of the tenant?—Yes.

11,046. About the owner, what do you say?—An owner who buys that class of property, knows it is weekly property. Owners are attracted to it as an investment, because they know the income is more regular, and as a rule they can get a greater percentage for their money. They get a much better investment in weekly than they will in quarterly houses.

11,047. Why?—Well, I do not know why, but the houses pay better.

11,048. It has been suggested that if the short tenancy were introduced into Scotland in place of the long tenancy for that class of property, it would reduce the value as an investment on such property. You have not had that experience in England?—No.

11,049. It is also suggested that people would not be so ready to build that class of property if the tenure were weekly or quarterly instead of half-yearly. Have you found any difficulty in England of that kind?—No. I think it is the other way. Builders find that there is a good demand from investors for that class of property, and I may say that what we mean by flats is very different from what you mean by flats. In Newcastle — it is almost peculiar to Newcastle and Tyneside, Northumberland and Durham—we have houses say with a flat of three rooms on the ground floor, with a scullery and yard and a front door, the yard being separate to that tenant; then on the upper floor there are three or four rooms, according to the size of the flat, with the same accommodation, and a separate front door, and a separate yard. A weekly tenant has his own house to himself, on the principle that an Englishman's home is his castle. I suppose it is a Scotchman's as well.

11,050. You have talked of the advantages to the tenant of the English system in being able to move when he requires. Are there, on the other hand, any drawbacks which are the subject of grievance on the part of the tenants?—To the weekly tenants?

11,051. Yes?—No.

11,052. Of course that system may have its recommendation to counterbalance drawbacks?—I don't know of any. I don't see how there could be, because we could not get lower than weekly tenancies.

11,053. Is there no complaint of this kind, that whereas a landlord, if he lets his house for a year, is willing to do a good deal for it, he won't do much if it is taken on a short tenancy?—He would do more for a tenant likely to stay for a longer period.

11,054. Do you find any complaint of that kind from the tenants?—No.

11,055. Do you agree with Mr. Nelson that although the tenancy is nominally weekly, if the tenant is a responsible person, he can stay as long as he likes?—Entirely. We have some tenants on weekly tenure for fifteen, sixteen, and seventeen years, and on any Monday morning they can give notice that they will leave the next Monday, and that will be perfectly agreeable and satisfactory on both sides.

11,056. Have you in Newcastle, any more than in Liverpool, any set term when there are a great many removals, or are they spread over the year?—No, in the weekly tenancies they are spread very fairly over the year.

11,057. You have no time of over-pressure or difficulty of getting people to help in removals?—No, that is averaged.

11,058. Do you think that, as a result of weekly tenancies, you will get in the end of the year as a net return more rent than you would if the period of payment were say half-yearly?—Well, it is a different class. We expect different results from different classes.

11,059. Take the case of men who are getting paid their wages weekly. Do you think that in consequence of your getting your rents weekly you get more out of them than you would if they only paid a big sum once half-yearly?—Yes, in that they are all agreed.

11,060. Of course what applies to rent will apply to the payment of the sum you give which belongs to the rate?—Yes.

11,061. The same thing?—Yes.

11,062. You have heard what has been said about the desirability of frequent payment of rate and the two ways of doing it, either for the rating authorities to collect frequently from the occupier, or a system of compounding?—Yes.

11,063. What is your view as between these two?—From the point of view of the authority or the point of view of the owner.

11,064. The authorities?—I would say the authorities have a greater security in collecting their rates from the owner than they would from the tenant.

11,065. Suppose it were practical to collect from the tenant four times a year. Some of them told us it is not, but suppose it were, would that be the better system than collecting through the landlord?—No.

11,066. Do you think it would yield as much in the shape of rates as the present system of collecting weekly?—No, because the risk of credit comes in there, the same as in any other business. Ready money is better than credit. The same principle applies to rents.

11,067. It is said that the Savings Bank and Co-operative Societies meet the difficulty. I suppose you have a large number of working people who have neither a Saving Bank account nor are members of a Co-operative Society?—I am sorry to say we have, and that is the class of tenant that gives most bother.

11,068. You agree with what Mr Nelson said, that there is no friction created between landlord and tenant, because the tenant knows that the landlord is really the rate collector?—Not the slightest.

11,069. You never heard a whisper of that?—Not a whisper.

11,070. Suppose you had to distinguish on your receipts between what you were giving as rent and rate, would that make a difficulty?—A very great difficulty; it would be almost impracticable.

11,071. Why? You know it is proposed in Mr Cross's Bill. What he proposes is, at the end of Clause 9: "Pro-'vided always that the rates for payment applied by owners 'to occupiers shall separately distinguish the amounts which 'are paid for rent and the amounts which are paid for rates 'and assessments." What would be the objection to that?—It would be very difficult and lead to confusion.

11,072. In the first place, would it be very difficult to figure out?—Yes, especially in the case of a small tenement, and, so far as my experience goes, there is no wish and no thought of that in England. They don't care; they pay their 5s. or 6s. a week and are content with it. They know they have paid the rates. I wish they had a little more connection with the rates.

11,073. There is a wish on the part of political economists that the tenants should have brought to them the amount of rates paid. You sympathise with them?—I do.

11,074. Do you see how, under the English system, that could be given effect to?—I cannot at the moment see a practical way of carrying it out, especially in relation to smaller rents.

11,075. You don't think this is a practical way?—I don't think so.

11,076. It would be quite practicable to put on to the receipts the rate per £ that the rates are at?—We would have to alter our schedules and rent books and our whole book-keeping. We would require to have a column for that.

11,077. Is it the case in Newcastle, as Mr Nelson told us it was in Liverpool, that you don't alter your total sum as the rates fluctuate?—We have attempted to do that in certain districts in Newcastle and Tyneside, but you can only do that when there is a good demand for property, that is to say when there are very few houses empty. But where we suffer, as we do in Newcastle and Tyneside at present, from over-building, it is a question of regulation by demand and supply.

11,078. It has not been much attempted?—No, it has been attempted perhaps a matter of 3d. or 6d. a week added, and it is for that very purpose, in order that there might be a demonstration to the tenant that it is not an advance on the rents, but on the rates, and as a lesson to the tenant, but it has not succeeded.

11,079. I suppose you don't maintain that if compounding takes place the landlord should make any profit out of it? He ought just to get such an allowance as would keep him safe?—That is it, and he makes his calculations accordingly.

11,080. You know the allowances vary very much?—Yes.

11,081. Have you ever done what Mr Nelson said he tried to do—to see whether the allowance actually received is a fair one or not?—No.

11,082. You have not figured it out?—No.

11,083. In Newcastle, are you under local Acts?—Yes.

11,083*a*. The Poor Law of 1869 applies to all England?—Yes.

11,084. You cannot contract out of it?—No.

11,085. You get your 15 per cent., and if there are no voids, other 15 per cent.?—Yes.

11,086. In the case of that Act, are there any voluntary arrangements under Section 3, or is it all done by the assessing authority making an order?—By the assessing authority making an order, and there is an option to the tenants as to whether they accept the 30 per cent. or 15 per cent.

11,087. Has there been any attempt in regard to the extra 15 per cent. to bring it down and get owners to accept less?—No, it is 30 per cent. in Newcastle, just as in Liverpool.

11,088. What is your own opinion, apart from having figured it out? Does the landlord make money out of it or lose?—He does not make any money, and he does not lose. He reckons that is the amount which has become standard.

11,089. Is there no agitation on the part of the assessing authorities to bring it down?—No.

11,090. Have there been any Bills brought into Parliament to alter that rate in the 1869 Act?—No, not for ten years past.

11,091. I suppose you only manage the best class of property. Might not the allowance be much worse in the case of another man who only managed the poorest class? It might be too little?—It only applies to the one case.

11,092. I know; but then the nearer you come to the highest that it applies to, the cost of collection is very much less?—Yes.

11,093. And the losses are very much less?—Yes.

11,094. But it is an average applicable all over?—Yes.

11,095. But the average implies, doesn't it, that it may be too little at the bottom and it may be too high at the top?—I could not say.

11,096. You think all over it is fair?—It has been so long in practice that if it were radically altered, the rents would have to be altered, because it is an absolute calculation that whatever the rates are, it is 15 per cent. or 30 per cent. We calculate accordingly. In some districts where there are not likely to be voids, the owner exercises his option and does not take that.

11,097. I suppose the fact that Clause 4 is optional on the assessing authority; they don't need to make an order unless they like?—That is so.

11,098. The fact that they all make the order seems to mean that they don't think that 15 per cent. is excessive?—That is so, and it is general, as we heard this morning; it is not confined to any particular locality.

11,099. Take the better class of property nearer the maximum. Do you compound on it as well as on the lower class of property?—No.

11,100. Take Clause 4 of the 1869 Act, under which the vestry may order that the owners of all heritable hereditaments to which Section 3 of this Act extends—it is the one giving the maximum—shall pay the poor rate instead of the occupiers. Does that apply to all the different districts of Newcastle?—Yes.

11,101. And when that order is made, you as an estate agent cannot say, "I will compound for the cheapest 'property; I won't compound for the better. That 'applies to everything up to the maximum?"—In Newcastle the poor rates are collected by the poor rating authorities, and not with the municipal rates, as in Liverpool.

11,102. Up to £8?—Yes.

11,103. Does it come to this, that in Newcastle you are under the £8 limit?—Yes.

11,104. And above £8 there is no compounding in Newcastle?—There is compounding up to 5s. 4d. a week, which is practically £8 net.

11,105. Has there been any proposal that the limit should be less?—No.

11,106. How do you account for the limit being £20 in

Mr J. G. Watson.
30 Jan. 1907.

London and only £8 in Newcastle?—I cannot account for it.

11,107. And then £13 in Liverpool and £10 in Manchester, you don't know why those different limits were fixed?—No.

11,108. In Newcastle, the mode of ascertaining the valuation for rating purposes is to take one quarter for rates, one-fifth for insurance and repairs?—Yes.

11,109. Suppose you take a rent of £100: you take one-fourth for rates—that gives you a balance of £75—then one-fifth for insurance and repairs, £15—that gives you a balance of £60 on which assessment takes place?—Yes.

11,110. 30 per cent. is allowed off for compounding, the landlord paying the rates whether the property is occupied or not. Compounding is compulsory on all rents up to £13?—Yes, gross, £8 net.

11,111. Where tenants pay the rates, the allowance is one-sixth off for insurance and repairs?—Yes, that harmonises with the statement made by Mr Nelson this morning, practically 15 per cent.

11,112. Do you agree with Mr Nelson about the law of distraint and the consequence of that?—Yes, excepting that his charges are rather more than we pay in Newcastle, but the difference is only a few shillings.

11,113. In the course of your experience, how often have you had occasion to put the law into force in cases of distraint for rent?—The number is not great at all. It depends largely on the district and the class of tenants. We have the "squatters" referred to, and they are very difficult to deal with. They know the law as well as the landlord does himself. There is one point I thought was not clear this morning. The question was asked about the man in possession. The man comes in and makes a levy. If the tenant pays at once he only has the levy to pay, but if the tenant does not, or cannot, or will not, pay at once, the officer puts a man in possession for six days, the idea being to give the tenant time to pay.

11,114. And what is the duty of the man in possession? Is it to see that the furniture is not removed?—That is it.

11,115. Who pays for him?—It comes out of the amount realised.

11,116. In regard to the question of giving any exemption from the rates to the poor, what is your practice in Newcastle?—The landlord paying the rates practically collects both rent and rates, but it is called rent, but we know the rent includes rates. The landlord does not allow the tenant for rates. If he did, he would allow it as rent. It is a matter of option with them and to their feelings.

11,117. So that the rating authorities themselves give no exemption?—No, not when the landlord has compounded and pays the rates.

11,118. Suppose it were thought desirable that there should be an allowance, do you see how it could be worked practically?—No, because of the old principle of the men's income being weekly, he has paid his rents as long as he was able, and when he is not able, he does not pay his rents nor his rates.

11,119. So it would be difficult to say he was not able when he had actually paid?—That is so.

11,120. Would not the case of poor widows occupying houses where the landlords don't pay the rates; exemption from the poor rates is allowed by the authorities. Is that under the statute, that they have power to do it?—That is not in regard to poor rate, but in reference to municipal rates.

11,121. Do they do it under powers?—Under their own powers.

11,122. We have been told that in some cases where people have no power, they do it by simply not exacting the rate. Do you know whether that is done in Newcastle by actual exemption?—It is only allowed after very minute inquiry has been made into the circumstances of the tenant. In the case of a widow, it is invariably allowed.

11,123. And what about the poor rates?—It is not allowed on poor rates.

11,124. (*Mr Dobbie.*) With reference to the man in possession, is he put in by the landlord at his own hand without any warrant from any Court!—Yes, he can fill in a form, and give it to the bailiff who goes into possession.

11,125. Then, after five days, does the bailiff sell off without any warrant?—Yes. The furniture is removed and sold.

11,126. And suppose the tenant had a good defence, supposing the tenant says, "I am not due the rent; I have a counter claim against the landlord"?—He would have a remedy by action at law against the landlord.

11,127. Can he stop the sale of the furniture?—If he could show to the landlord anything of that kind from his own interest, apart from sympathy, the landlord would say that discretion would be the better part and not proceed to distress.

11,128. Assuming the landlord is unreasonable?—I cannot imagine a landlord being so unreasonable as to do an illegal thing wilfully, because the law is very severe.

Mr J. G. Watson.
30 Jan. 1907.

11,129. Is it not common that a tenant would go to Court and say, "I have a counter claim here, and I want to stop this landlord from selling my furniture"?—He could not.

11,130. So that the landlord simply, five days afterwards, sells off the furniture, and leaves the tenant to go into an action for damages if he thinks fit?—Of course, as you know, the law of distraint and distress is a very big one; it occupies 100 pages of the Act with different definitions. I am giving you it from a layman's point of view.

11,131. Under your private Act, have you power to exempt on the ground of poverty, or is it confined to the case of widows?—Yes, that is all. You see, very poor people are not living in quarterly houses or yearly tenancies, generally in weekly properties, and their rate is paid with the rent.

11,132. One benefit of our present system is that small tenants can claim and get exemption. Any change in the direction of your English system would put an end to that benefit?—I see.

11,133. In arriving at weekly rent to be asked, do you take into account the actual current rates, or just fix the sum you can get?—We fix the highest sum we can get, and if we cannot get that, the highest according to the market.

11,134. You treat the outlay for rates as you do an outlay for repairs or insurance?—Yes, you have to calculate for that, just as you have to calculate for your repairs and other contingencies.

11,135. Then, where you don't come under a provision dealing with voids, and only get 15 per cent. of abatement, how do you transact with the rating authorities in regard to empty houses?—Where we don't compound?

11,136. Where you don't get the second 15 per cent., and you, in fact, have empty houses, how do you get back your money?—We are not entitled to anything if we don't take the second 15 per cent. We only get the second 15 per cent on condition that we agree to pay the assessment, whether the houses are occupied or not.

11,137. But if you are assessed on the beginning of the assessment year on the whole rental as let at that time? My point is, suppose, during the year, a part of the property becomes unlet, and you are not taking the allowance, in respect of voids, don't you get a refund in respect of the part of the property unlet?—We don't get it in the way of a refund. When we are paying the rates, in the case of a large owner or estate agent, it is a considerable amount, and we pay up to the time, and we say that, "so many tenements empty," and we point that out and satisfy the collector that that is so. The collector, being on the ground collecting other rates and taxes, is in a position to check the statement, and is satisfied that so many houses are empty, and they deduct it at the time of settlement.

11,138. You don't pay and get back at the end of the assessment year?—No, speaking from my own personal experience, it is considerable; we have not done that. It is just deducted at the time of the payment off the rates.

11,139. But you pay rates in the middle of the year? We were told by Mr Nelson that it was at the end of six months?—Half-yearly.

11,140. Supposing you made the payment half-yearly?—Well, the rate is generally made in May, and it is towards the end of the six months that the whole of the rates are completed, and it is then that the largest owners pay their accounts.

11,141. (*Sir J. Stirling-Maxwell.*) How many different authorities collect in Newcastle?—Two.

11,142. They collect separately?—Yes, the poor rate and the other. They practically make four collections.

11,143. What do you call the other?—The municipal rates.

11,144. You don't compound the municipal rates?—Yes, they follow the poor rates.

11,145. What is the rate of allowance of that?—The same, 30 per cent. They follow the poor rate assessments.

11,146. (*Mr Binnie.*) Have you ever made an estimate of the percentage of unlets that you have one year with another or the year over?—No.

11,147. Do I understand your explanation as to not paying rates on unlets? Is it this, that you state at the time you are paying the rate the number of unlets you have at that particular date?—Up to that time.

11,148. And that is deemed to be a fair average for the whole time for which you are paying rates?—That is it, and that works out with the next payment. It is from the same reckoning, from that date to another date, so that we get a fair average.

11,149. What is the gross amount of the poor assessment?—With us it is 1s. 1d.

11,150. 1s. 1d. per £?—Yes. The municipal is 4s 7d., making 5s. 8d.

Mr J. G. Watson. 30 Jan. 1907.

11,151. And from these two you get a deduction of 30 per cent. ?—Yes, up to 5s. 4d. a week.

11,152. We are dealing now with the smaller ones. You get 30 per cent. off that. That is fully 1s. 8d.: we will say 1s. 8d. That is about 4s. per £ that you pay ?—Yes.

11,153. And yet, while you collect £13, 17s. 4d. from a tenant, that is 5s. 4½d., and you pay four times eight, £1, 12s., of taxes. Do you follow ?—Yes.

11,154. That leaves £12, 5s. 4d. that you get; yet you are only assessed on £8 ?—Yes.

11,155. What do you pay income tax on: is it the assessed rental or what ?—Imperial taxes follow the assessments.

11,156. So that you pay your income tax on £8 ?—Have you my evidence before you. I work it out in another way.

11,157. Let me understand it any way, what page ?—Page 3. I am showing there how we get at the assessment. The Scotch system, as I heard this morning, is that the actual rental is the assessment. I am not showing by that that ours is not; but that it is a lower assessment when these allowances have been made.

11,158. And your imperial taxation is on the same assessed rent, is it ?—It is on the actual rent.

11,159. Well, in that £100 that you deal with, what income tax would you pay ?—The whole of the income tax. I am not following you there, I am afraid.

11,160. You are taking a house at £100 ?—Yes.

11,161. Then you take off one-fourth for rates: that is £75 ?—Yes.

11,162. And there is for insurance and repairs £15, leaving £60, and that is the assessed rental, what we call in Scotland the Valuation Roll ?—Yes.

11,163. Do you pay income tax upon £60, £75, or £100 ?—It follows the assessment of the poor rates.

11,164. Then is it on the £75 you pay the taxes ?—Yes, and yet hardly. The imperial taxes, speaking particularly, are general to Scotland and England and Wales. The income tax is fixed at a certain amount, say 1s. or 1s. 6d., or whatever it is. The assessment with us is somewhere between. They don't always follow the poor rates. For instance, if the assessment is low, the assessors of the income tax take their own view of what the rateable value is.

11,165. But Newcastle, what is the tax ?—I am not sure. I cannot give you a definite answer.

11,166. Will you inquire, and let us know ?—I will be glad to do that. The evidence I was asked to give was as to the practicability of short tenancy and short terms. I did not prepare myself for these other questions.

11,167. Don't suppose we are blaming you.—Thank you.

11,168. But we are wishing to know, so as to compare the rating systems. If you will kindly inquire and let us know, we would be much obliged ?—Yes.

11,169. In Scotland, the actual gross rent paid by the tenant is taken, and deduction made in respect of rates.

11,170. (*Mr Howden.*) What percentage do landlords pay to factors for collection of rents ?—On weekly tenancies from 5 per cent. to 10 per cent., according to the class of the property and tenants.

11,171. Then it varies ?—Yes

11,172. According to rental ?—Yes. Where you have small rentals, and a large number in a poor locality, the collection is difficult and sometimes dangerous.

11,173. What would be about the average percentage for collection on the class of houses we are dealing with ?—I should say nearly 7½ per cent.

11,174. Is that all on weekly tenancies ?—Yes; I am only speaking of the weekly.

11,175. What do you charge for monthly tenancies ?—Probably 5 per cent.

11,176. Could you give us any idea of the amount of the arrears of rent you have in England ?—It is largely the outcome of management. If an owner or a factor is very stringent he will have a fewer amount of arrears than the man who is more lenient. I cannot give you an answer in percentages.

11,177. You heard Mr Nelson's evidence, and he gave us some figures in connection with that particular ?—He was able to give you concrete cases in a particular estate.

11,178. Could you give us anything approaching that ?—I could not.

11,179. Could you get it for us ?—Yes, I could give you that.

11,180. (*Chairman*). If it would not be too much trouble ?—It would not be for such a large area, but the percentage of arrears generally for five years.

11,181. (*Mr Howden*). There is one more question I would like to ask you. You told us you have weekly rents up to 12s. per week, and more ?—Yes.

11,182. Do you compound on all weekly tenants ?—No, we can only compound up to £8.

11,183. And how do the rating authorities do in weekly tenancies in which they don't compound ?—In weekly tenancies the landlord pays the rates, because the authorities only collect their rates once a half year, and they won't take the payment from the weekly tenant.

11,184. That is compounding, is it not ?—No.

11,185. The landlord puts on a slump sum for rent and rates, and he pays the rates ?—Yes, although up to 12s. or £1; it is for the convenience of the tenants, who say, "We don't want to be bothered with the rates,"—especially in the case of strangers—"tell me what the whole thing will come to, and charge me accordingly," and if the landlord is agreeable he fixes a sum and it is paid weekly. In some cases it comes to 12s., and in other cases nearly 20s. a week.

11,186. You don't get any deduction from the authorities in view of that slump sum ?—No, not more than the 15 per cent.

11,187. You get your 15 per cent. ?—No, the owners don't; the tenants do. A quarterly tenant gets his one-sixth off, as I have already told his lordship.

11,188. But it is the weekly and monthly tenants I want to be clear about. You say that up to £8 you have what we call compounding ?—Up to £13 gross, making it down to £8 net.

11,189. You have weekly tenants above that ?—Yes, we cannot compound for them.

11,190. But you pay the rates ?—Yes.

11,191. And the difference between the one and the other is that you have no fixed percentage to receive back as an abatement from the authority ?—No.

11,192. You simply make your accounts square by taking a slightly larger rent from the tenant to cover the rates ?—It is practically the same rent, plus the current rates, to meet the convenience of a tenant.

11,193. But do you not charge anything in the shape of a percentage on that at all ?—To the tenant for rates ?

11,194. Yes ?—We put the actual rates on.

11,195. Just the actual rates on ?—Yes.

11,196. You get no deduction, so that you are actually, in the case of a £19, 10s. rental, collecting the rents for the authorities without any cost ?—That is so.

11,197. (*Chairman.*) You say the loss of rates on small houses where rates are collected from the tenants is very small, almost nil. You mean collected directly by the rating authorities from the tenants ?—Yes; I thought that would be a very difficult question to answer.

11,198. What small houses are these ? Are these small houses to which compounding does not apply ?—Yes, £12 to £14, or £18 or £20.

11,199. Above the £13 ?—Yes.

11,200. The rating authorities collect direct from the tenants there twice a year ?—Yes.

11,201. Is there not considerable loss in these cases through there only being a biennial collection ?—As I was saying, I felt this to be a difficult question. In a way I formed my actual opinion that it was small. But in consultation with our rating authorities of Newcastle, I asked them about that particular point, and while my phraser was "very small," I ascertained that it was "almost nil," so that it more than confirmed my own opinion in the matter.

11,202. That seems to point to the system of the rating authorities collecting direct being a system that does not result in loss ?—I daresay.

11,203. But we have been told that in consequence of making only an annual or biennial collection, a great many people don't pay their rates who could pay if they paid weekly through the landlord. Now, apparently that is not so in Newcastle ?—Well, we get a better class of tenants in these quarterly tenancies, and the rate collectors in the different wards and different districts are on the ground practically every day, and have facilities for following up anyone who wishes to evade payment. That brings the result, as I say, of loss almost nil.

11,204. Suppose the same system were applied to the poorer class of houses below £13, would there be substantial loss ?—Yes, because you come to a different class of tenants, who have always been used to paying their rates in place of rent weekly.

11,205. (*Mr. Binnie*). I would like to clear up a reply you gave to Mr Howden. You stated at an earlier period that, in consequence of a large discount allowed on the rates, the rents were——?—I think it was Mr Nelson who stated that.

11,206. Does it mean you look to the result of the whole, and you can do with a smaller rent ?—Yes, I answered to his lordship that if there was any alteration in the amount of 30 per cent., the rents must of necessity go up.

11,207. And in the cases where you have to collect the rates and get no allowance, that is in the short tenancies about £8, you will just need to charge more rent to make

Mr J. G. Watson. 30 Jan. 1907.

Mr J. G. Watson.
30 Jan. 1907.

up for loss of an allowance?—Yes, if the 30 per cent. should be disallowed from any cause at any time, we should have to add to the rent.

11,208. In the case where you don't get the 30 per cent. now, you have just to make that up?—Yes, that is it. It has been put in another way. I follow you better that way.

Mr J. G. Watson.
30 Jan. 1907.

Bailie H. Baird.

Bailie HENRY BAIRD, Paisley, called and examined.

Bailie H. Baird.

11,209. (*Mr Dobbie.*) You are a member of Paisley Town Council?—Yes.

11,210. And you are here on behalf of the Paisley United Trades Council?—For the Trades Unionists of Paisley through the Trades Council.

11,211. Have you been authorised by your Council to give evidence here to-day?—Yes They had a meeting last night. Through some misunderstanding I ought to have been at Glasgow, but it was only this week I discovered the mistake. They had a meeting last night, and I asked them if they thought it was worth while going, and they were unanimous in saying they would like to be represented here.

11,212. What is the Paisley United Trades Council?—They practically represent the whole of the Trades Unionists in Paisley, because there are a little over four thousand Trades Unionists, and there are over three thousand of these affiliated to the Trades Council.

11,213. Are these largely ratepayers in Paisley?—Yes, I would say most of them are ratepayers. There will be a few young men who are not yet ratepayers, at least directly, but the bulk of them will be.

11,214. Can you tell us when your Council had this question first before them?—To consider the change of let?

11,215. Yes?—As a matter of fact, they have been discussing it for a good many years back, and assisted in every way ever since the matter came before Parliament. They have not only passed resolutions, but organised meetings in favour of it, passed resolutions, and sent them not only to the Town Council, but to members of Parliament and members of the Government, at various times.

11,216. What is the question: what is the grievance?—The chief grievance is the letting system. For instance, I might give you an example with regard to myself. I have to send in my missive to-morrow, not later than the last of this month, to take my house for the next year, or they will consider the house is to let, and may let it over my head. That means practically sixteen months. That notwithstanding that the Paisley Tenants' Protective Association and the Landlords' Association came to a compromise two years ago to the effect that the latter would not insist before the 28th of February. It seems that some of them are going back on that, and they want us to take the house for sixteen months. It is a great grievance, because a good many workers affiliated to the Trades Council sometimes find it advantageous to work in Govan, Glasgow, and surrounding districts.

11,217. Is the grievance felt in Paisley largely the grievance that the missive day is too soon?—Both that and that they are tied to their house for such a length of time. For instance, I am engaged in the building trade, and that is a pretty fluctuating trade. I might have to go out of town or to the other end of the town, say at the beginning of the year.

11,218. So that both grievances are felt: first, that the letting day is too early, and, second, the yearly lets are open to the objection you mention?—They are too lengthy.

11,219. And on what grounds do you think yearly lets are open to exception? You mention, for example, removals at one day?—That is a very serious objection. The whole of those who wish to remove must remove on 28th May by 12 o'clock, and the possibility is that they may not get into the house they are removing to before 12 o'clock and they might not get any time. I myself on one occasion had to get the people coming into my house to assist me to get my furniture out, and then I had to assist them in. I had to assist the other party out of the house. I wished to get in and got his assistance.

11,220. What is the population of Paisley?—About 84,000 to 86,000.

11,221. Can you say how many removals you will have on an average annually?—Last year in particular we had 2900 removals, which would be equal to about one in six houses.

11,222. How do you get that figure? We have been looking for it in some other towns?—I will tell you, and I think it is the most certain way. I went to the Gas Office. They must get a notice after every removal, so that they may go and turn off the meter or take it for the benefit of the out-going and in-coming tenants, and from their books I find out that there must have been at least 2900 removals that year.

11,223. Can you tell us anything about removals between terms from the same source under the present system?—There may be a few, at the half term in November, but there are very few, because even although you desire to change your house at the half term, there will be great difficulty in doing so. They will hold you the next half year. People have either to make a big sacrifice if they do remove or hold on to the house.

11,224. Don't the house factors in Paisley take the missive off your hands?—Not very readily.

11,225. We were told by one house factor from Paisley or some other place that on paying 10s. he was quite prepared to cancel the missive?—He must have been speaking for himself. It is not usual. The usual thing is that if they permit you to give up the house they leave it to you to find a tenant to take your place, and that tenant must be subject to their approval. I have known cases where they demanded the full year's rent before they let them go.

11,226. What is the most popular industry in Paisley, the thread industry?—Of course, as you know, that is a pretty large industry, but in Paisley trade is very mixed. We have the large engineering works, and even four shipbuilding yards on the Cart, and the starch manufactory.

11,227. Is there a shifting population?—There is a large number who move back and forward. Of course, there is also a large stationary population, but in the shipbuilding and house-building and such-like trades, they have to move to surrounding districts.

11,228. One objection to any change to short lets which is suggested is that the present privilege by which the very poor get exemption on the ground of poverty would be extinguished?—Yes, and that would be a very strong objection in Paisley. There is a large number of poor people who really require to be exempted. At present in Paisley they have the right to appeal to the Town Council to get off, and we anticipate that if this Bill were passed into law that right would be done away with, and we feel it would be a hardship.

11,229. You would therefore have a clause in any new Bill containing that privilege?—That is the opinion of the Trades Council. They have discussed this thoroughly.

11,230. Another clause in the Bill is making the Bill optional in different areas. For example, it might be wanted in Glasgow, and not in Aberdeen. Have your Council any views on that?—That was also discussed at some length, and of course some of those represented there would feel it keenly. For instance, we might adopt it in Paisley. They might adopt only a part of it in Govan; they might adopt another part or none of it at all in Partick or in Whiteinch. We have workers who travel to these places, and if they were removing it would create confusion, and they believe it would be much better if it were a general Act made compulsory.

11,231. For the places that want it?—Yes.

11,232. What about the places that don't want it?—Well, of course I think they would be very few. I have no doubt that in some mining districts they might have an objection, but I think that could be got over in other ways. I do not know, but in many mining districts at present, if the Truck Act was put into full force, it would assist them greatly.

11,233. I suppose you are aware that any change in the direction of short lets would necessitate a collection of the rates from the landlord?—I don't know that it would necessitate it, but certainly it is proposed, and I believe it is desired by the large body of the workers to have that easier method of paying the rates.

11,234. Do they want to pay periodically small payments?—Small payments, and in Paisley it has been felt pretty strongly and discussed, not so much from this point of view: at least it was before this Bill was considered. Two years ago there was an agitation to get their rates paid to the Corporation by easier methods than at present, and the Trades Council and several other bodies sent resolutions to the Town Council asking them to do something. They appointed a small Committee, of which I was a member, to inquire into another method, say quarterly, or perhaps easier if possible for payment of rates. We made some inquiry and discussed it, but there was strong opposition from the officials and the Chamberlain's department. They felt it was going to entail a great deal more work. However, as compared with the proposal to compound the rates, I believe that the amount which it would cost us in Paisley for the landlords to lift the rates, would go a long way to assist them in doing it the other way, that is to say, the Corporation taking the whole rates but receiving them quarterly. I do not know that the expenditure would be any greater by the Corporation taking them quarterly or monthly than by the

method proposed in the Bill. My own opinion, and I believe the opinion of a good minority, is that it would be preferable if the Corporation up-lifted the whole rates. I must, however, admit frankly that there is a large majority of workers in Paisley in favour of compounding all rates, and paying them with the rents.

11,235. Supposing the rates are compounded, have you seen the scale of allowances attached to Mr Cross's Bill?—Yes.

11,236. What is your view upon that scale?—I may say it has met with the approval of the Trades Council, and, as a matter of fact, they feel that if it was it would be a burden on them unjustly. They believe that is quite a generous compensation to the landlords. I abase that on some personal experience. I might explain that in Paisley landlords already uplift a good portion of the rates. For instance, all the rates on houses of £4 rental and under, also all the rates on houses for which the rents are paid more frequently than half-yearly, and for that they get a percentage on both the domestic and public water rates of 25 per cent., and on the roads and burgh improvements rates they get 10 per cent., and what I was going to say before explaining that, was that I know there is a strong desire on the part of them to uplift this portion of the rates. In my own case I prefer to pay my rent half-yearly, because in my trade, owing to the way it fluctuates, I find it much easier to pay at the May and November terms than at the other quarterly terms. I always try to get that privilege, and I always find that most of them are willing enough to grant it, provided that I let it remain as a quarterly payment, so that I pay the rates to them instead of to the Corporation. So my belief is that it pays them well enough, and they desire it. Now, we have considered that in the Paisley Town Council, who at present have an order in Parliament, at least they are promoting one. It is in the hands of the examiners, a Provisional Order for many things, chiefly in connection with waterworks and gasworks. There are some minor items, and one is asking power to compound the rates up to £15 rental. Mr Cross's Bill is up to £16 rental, but it is based on a percentage almost the same as Mr Cross's 7½ per cent. up to £4 rental, 5 per cent. up to £10 rental, and 2½ per cent. up to £15.

11,237. What did you mean by saying that it would appear harder on the workers if the allowance for compounding was increased beyond the sums indicated in Mr Cross's Bill?—Well, it would bear hardly on them in this way, that presently, even for the uplifting of that small part of the rates, it costs us somewhere about £812.

11,238. Whom?—The ratepayers. They pay that in percentages to the landlord at the present time.

11,239. You mean the whole community?—Yes.

11,240. You don't indicate that the increase would bear hardly on the occupants of small houses?—It would tend to increase their rates, for even with the percentage in Mr Cross's Bill it will cost us about 1d. on the rates. It will add, I believe, a halfpenny.

11,241. We have had excellent evidence from Glasgow to the effect that one great argument for a change in the law is that Glasgow Corporation is going to make money out of it?—Glasgow Corporation may. It depends how they view it. At present perhaps it loses a good portion of the rates, but the landlord would take good care that he did not lose, and of course the landlord would have to pay, whether he lost them or not, to the Corporation.

11,242. In Glasgow at present 26 per cent. of the rates on property under £10 is irrecoverable, and accordingly Glasgow authorities would, if they could, get that done for 5 per cent., which would save money. Can you tell us what in Paisley is the experience of the authorities in collecting rates from tenants of small houses?—I cannot give you how much they lose, but I know that they lose something in that way, because, while there is a large number of the poor appeal to get relief, there are a number also who relieve themselves without appealing.

11,243. Can you tell us roughly what proportion of the total assessable rental applies to £15 houses and under, and what above that. My point is that this abatement will undoubtedly come out of the pockets of the ratepayers, that the great bulk of it won't be recovered from property above £15 value?—Admittedly so. Say a man has a £10 rental, it will cost him 5d., and it will cost a man with £100 rental proportionately more.

11,244. But if the abatement is not sufficient, then the owners of small tenements will recover, not from the community, but will recover the loss which they sustain in the way of empties from the other tenants of the small houses, so that it has been argued to us, that unless the landlord's allowance is reasonable and adequate, the loss will fall directly on the occupants of small houses?—By increasing the rents?

11,245. Of these small houses, yes?—That is so.

11,246. Can you speak of this Provisional Order of Paisley Corporation?—Yes.

11,247. In this Provisional Order you ask power in a private Bill to give effect to what Mr Cross seeks in his Bill?—Practically.

11,248. Do you see any objection to Glasgow and any other town that thinks such a change of the law desirable proceeding in the same way rather than having a general Act of Parliament?—I do not see anything wrong with proceeding in that way for towns pressing on for a reform, but it will not be satisfactory until it is done.

11,249. To those localities that desire the change?—Yes.

11,250. But assuming Edinburgh and Aberdeen do not want the change, is it not arguable that Glasgow and Paisley, who do want it, should proceed by private Bills just as Paisley is proposing to do?—Yes, I don't think they should require to wait.

11,251. By Clause 54 of this order, Paisley Corporation does seek power to make owners liable for rates up to £15?—That is so.

The clause runs thus:—"Owners of dwelling-houses and 'other premises within the burgh let at a yearly rent not 'exceeding £15 shall be liable equally with the occupiers 'of such dwelling-houses and other premises for payment 'of tenants' rates and assessments in respect of such 'dwelling-houses and other premises, and the Corporation 'may assess either the owners or occupiers of such dwell-'ing-houses and other premises for such rates and assess-'ments, and such rates and assessments shall be recoverable 'from the owners or occupiers of such dwelling-houses and 'other premises as the case may be, in the same manner 'as other rates and assessments imposed by the Corporation 'irrecoverable, provided that the Corporation shall allow 'to owners who may be assessed under the provisions of 'this section the following deductions, that is to say—in 'the case of dwelling-houses and other premesis let at a 'yearly rent exceeding £4 and not exceeding £7, a deduc-'tion equal to 7½ per cent. of the amount of the assessment; 'in the case of dwelling-houses and other premises let at a 'yearly rent exceeding £7 and not exceeding £10, 5 per 'cent. of the amount of the assessment; and in the case of 'dwelling-houses and other premises let at a yearly rent 'exceeding £10 and not exceeding £15, 2½ per cent. of the 'amount of the assessment, and every such owner charged 'with and paying any such assessment shall have relief 'against the occupier of the dwelling-house or other 'premises assessed for the full amount thereof without 'deduction, provided that the occupier of any dwelling-'house or other premises referred to in this section in 'respect of which the owner is assessed, shall be entitled 'to appeal against such assessment on the ground of poverty, 'and in the event of such appeal being sustained the owner 'shall be relieved from the rate or assessment appealed 'against in whole or in part, in accordance with the result 'of the said appeal or if such owner shall have paid such 'rate or assessment, he shall be credited with the amount 'so paid, and the owner shall not be entitled to charge the 'amount from the payment of which he is so relieved or 'with which he is so credited against the occupier."

11,252. And then they give their owners a compounding allowance similar to Mr Cross's Bill, and they do this also, they give the owner the right to recover full assessment from his tenant?—The right to recover.

11,253. Yes, but the owner charged is to recover the whole assessment with a deduction?—I don't think they make any differentiation. I don't think they make that any of their business. They leave that to the owner.

11,254. Yes, they say here, "and every owner shall be 'relieved against the occupier of a dwelling-house or other 'premises assessed, and that for the full amount thereof 'without deduction." It would mean, of course, that the landlord would pay less the allowance, and by this clause have the right to recover the full rate from his tenant?—Of course it is some time since we had that before us.

11,255. Then the same clause proceeds to enact that the exemptions on the ground of poverty are to continue notwithstanding the compounding arrangement?—That is so.

11,256. And I see what you propose in Paisley is that the present right of appeal should continue?—Yes.

11,257. And that in the event of any occupier being exempted on the ground of poverty, he should be credited with the amount so paid, and the owner should be entitled to charge that amount from the occupier holding such a certificate?—That is so.

11,258. In your view, and in the view of the Corporation, that would fit in quite properly with any scheme of compounding?—I should think so.

11,259. (*Mr Howden.*) Under what rental in Paisley do you think a Bill like Mr Cross's would be required?—I think, as it presently stands, it would give great satisfaction to people up to £20, of whom a large number in Paisley would benefit.

11,260. Is there much difference between the rents in Paisley and Glasgow?—No, I do not think so. There may be in some localities in Glasgow slightly over those in

Bailie H. Baird.
30 Jan. 1907.

Paisley, but I think we are very nearly as highly rented in Paisley now as even in Glasgow.

11,261. For modern houses?—Yes.

11,262. Do you think it would be unfair to say that the £20 rental should also apply to Paisley as it applies to Glasgow? Do you think it would be unfair to raise the rental from £16, as proposed, to £20?—Certainly not, I think £20 would be quite fair.

11,263. How does the present system affect your trade in Paisley?—Very badly; there is usually a rush before the May term, and then there is a slackness, and men have to walk about.

11,264. Then, assuming we cannot get direct rating, which you favour, what is your opinion in connection with voids under compounding. That is, if houses are standing empty, do you think these should not be taken into consideration in fixing a compounding rate, but rather that the landlord should get a deduction for these voids?—While they are empty?

11,265. Yes?—Well, I have not really given that serious consideration. I know that is a question which excited a good deal of attention in Paisley for a long time. For instance, they were exempted up to the present year from paying rates on unlet property, and there was an outcry against it for some time, and this year they have agreed that they must pay rates on unlet property.

11,266. That is the landlord's portion?—The landlord's portion, of course.

11,267. But it is the tenant's portion that I am referring to?—Well, you can hardly expect it if they are not getting it from the tenant.

11,268. It would be a much more suitable system to let them get a reduction from unlets instead of giving you an additional rate to cover unlets?—I should think so.

Bailie H. Baird.
30 Jan. 1907.

Councillor J. Graham.

Councillor JOHN GRAHAM, Falkirk, called and examined.

Councillor J. Graham.

11,269. (*Mr Dobbie.*) You are a member of the Town Council for the Burgh of Falkirk?—Yes.

11,270. Has this question been before the Town Council of Falkirk?—Yes. But not for any great length of time, and that was the reason why my precognition does not go into so much detail as it might have done.

11,271. When was it last before the Town Council?—It was before a Committee of the Council in the early days of this year, and before the last monthly meeting of the Council.

11,272. Had they Mr Cross's Bill before them?—Yes.

11,273. Did they appoint you to give evidence in support of that Bill?—Yes.

11,274. What is your business?—I am a pattern-maker.

11,275. Living in Falkirk?—Yes.

11,276. In Falkirk, it is the case, as in most other burghs, that in the case of houses with rentals under £4 at present the rates are collected from the landlord?—That is so.

11,277. Also, I assume, where the tenancy is less than a year?—Yes.

11,278. What allowance is given in Falkirk to landlords who collect under £4?—I am not aware that there is any allowance. The practice of less than yearly rentals is not very great. I don't think the landlords care much about entertaining it.

11,279. Is there any allowance under £4?—No.

11,280. Have you heard of any complaints from landlords owing to their being compelled to pay the rates for the small houses?—No, even as you will see there in my precognition where, the water area being much larger than the Burgh area, and the Council have not power to levy outside the compulsory area, the landlords lifted that rate for the water trust, and there has never been any complaint from these districts.

11,281. Do they make no allowance to the landlord from the water rate?—I do not think so. I could not exactly say.

11,282. Is the Council in favour of the provisions of the Bill for short lets?—Yes, that is their principal reason for sending me here. They consider it would be a great advantage to the working population.

11,283. What class of population have you mainly in Falkirk?—The staple industry is the iron foundry industry.

11,284. Is that a movable population to any large extent?—It is tending in that direction more than ever. The iron industry is spreading more, and there is a greater tendency to removals.

11,285. What is the population?—Approximately about 33,000.

11,286. Can you tell us what the normal average rent of a house occupied by a typical working man might be?—I would say the average would be about 10 guineas.

11,287. Are these houses presently let monthly, quarterly, or yearly?—Mostly yearly.

11,288. The rents are paid half-yearly?—Yes.

11,289. And what change do you think is called for, in order to meet the wants of those occupiers?—The first objection is, that a tenant has practically to sign on for his house fifteen or sixteen months in advance, and once that is done, the man is tied to his house, and has no way of getting rid of it unless there is a money demand.

11,290. You and your Corporation think the period between letting day and the term day should be shortened?—Yes.

11,291. Does your instruction go further; do you also object to the yearly let?—Yes.

11,292. Do you think there is any practical inconvenience in many cases in Falkirk in the tenants being tied to their houses for a year?—Yes, and it is on the increase now.

11,293. Owing to the shifting nature of the employment?—Yes, the tendency is greater now.

11,294. You see, under Mr Cross's Bill, in cases of houses let by the year at present, with half-yearly payments, that Bill would not alter that system, because it is simply to make a six monthly let?—Yes.

11,295. Would that meet the requirements of the Falkirk population?—To a certain extent it would, although we should prefer the privilege of shorter lets.

11,296. How did you come to vote? Was there a minority present at the Town Council against the Bill?—There was a small minority. The opposition was raised practically on the landlord being held responsible for the rates.

11,297. Did the minority consist of landlords, or had you any of them with you?—We had a good few landlords, but they did not wholly vote against it. One landlord in particular was greatly in favour of the Bill as a whole.

11,298. In spite of his being a landlord?—Yes.

11,299. Coming to the rates, what is your view as to the collection of rates, assuming short lets? Do you think as a rating authority that the present system should continue, and that you should collect the rates?—I should prefer that there should be another system.

11,300. What would you propose?—Either shorter periods for collecting by the Corporation, or as proposed in this Bill.

11,301. We have had evidence from rating authorities to the effect that it is impossible for them to collect oftener than once a year; would your experience suggest that?—My experience is not very old, as I only entered the Town Council in November.

11,302. Assuming the experts are right, and that rates cannot be collected by the Corporation oftener than once a year, in your view the next best thing would be to have the rates collected along with the rents?—Yes.

11,303. We have been told to-day, and at previous meetings, that it is practically impossible, assuming that this system should be selected, to distinguish how much is rate and how much is rent in monthly payments, and that in practice the tenant would be asked to pay one sum which might be to some extent rates and to some extent rent, but that they would not be extinguished. Do you think that would be a serious objection to any change?—I should prefer that there should be distinction as the Bills propose, but I don't think it would be a serious objection.

11,304. An alternative has been noted, namely, that once a year, say, the landlord should bring home to the tenant the actual amount of the current year's rates per £, so that he as a ratepayer would know that he was paying along with his rent so much per £ to the revenue of the burgh?—That is so.

11,305. If that were done, do you think it would be essential or necessary that the rate receipt should distinguish how much is rate and how much is rent?—I think if a notice was presented to the tenant yearly of the amount of rate per £, it would be sufficient.

11,306. In England there is no attempt made to distinguish. The landlord fixes the highest price he can get for his house, and he gets this payment weekly as a rule, and he has to say nothing about rates. The tenant knows he is paying everything?—I would be in favour of the tenant being kept in touch with the rates. The responsibility should be brought home to him in that way.

11,307. Have you views in regard to the effect on the Corporation of the transfer of the payment of rates of small houses from the occupier to the landlord. Would it pay the Corporation?—I believe it would. In Falkirk at least, I understand, although I had not time to get actual figures, there is a pretty large sum irrecoverable from that class.

11,308. In the case of small houses?—Yes.

11,309. You have not the amount?—I might get it.

11,310. If you could get it, it would be useful, the amount of actual loss on the present collection in respect of houses up to £10, up to £15, and up to £20. Do you think your Council had before them this scale attached to the Bill when they approved of it generally?—Yes, that scale was under consideration.

11,311. And what was the view taken by the landlord element in the Council? Did they think it adequate?—Well, they did not make any great pronouncement on it, but the opinion in general was that they thought it was very fair. I believe there was just a natural resentment on behalf of one or two of the members who were landlords, attributable, perhaps, to prejudice against the whole system.

11,312. It was natural also that the Corporation should want as small a scale as possible?—Just so.

11,313. (*Mr Howden.*) What do landlords usually charge for sub-letting a house to relieve a man of his bargain?—I believe it is 10s.

11,314. Do they relieve you altogether for 10s.?—Yes. I don't think that is altogether universal. The Landlords Association have, I believe, that rule, but I have known of a case where tenants have been warned out by mistake, and where an enquiry was made the landlord wanted 10s. to pay the expense of his mistake. There have been some difficult cases in the town, and great hardship in the way tenants have been treated, but I understand the Landlords Association take over the houses for a payment of 10s., but all the landlords in the town are certainly not in the association.

11,315. Have you known cases in Falkirk where a man has to pay the rent of the house he has left?—I have heard of such cases where the rent was forced.

11,316. Still you think—we had the evidence before us already—that 10s. relieves the tenant in Falkirk from further responsibility?—I understand that is the rule of the Landlords Association.

11,317. Do you think rental, as fixed in Mr Cross's Bill, would be a fair rental as applied to Falkirk?—I think so.

11,318. £16?—Yes.

11,319. Is there much difference between the rents in Falkirk and the rents in Glasgow?—I believe the rents in Glasgow are slightly dearer.

11,320. So that you think £16 would be a fair rental?—I think so, for this Bill in the present state of affairs.

11,321. How does the present system affect the building trade in Falkirk as regards the rush that takes place—if any takes place—just before the May term, and the slackness afterwards?—That is the universal experience.

11,322. Are you a member of the Falkirk Trades Council?—No, at present I am an ex-member; I am in touch with them.

11,323. You represent their views on this question?—Yes.

(*Mr Dobbie.*) That closes the taking of the evidence.

[Adjourned.]

APPENDICES.

APPENDIX I.

MEMORANDUM on the PRACTICE OF COMPOUNDING FOR RATES in the ADMINISTRATIVE COUNTY OF LONDON, prepared by EDGAR HARPER, F.S.I., Statistical Officer of the London County Council.

The practice of compounding, by which a landlord pays the rates on behalf of the occupier and obtains in return a rebate from the local rating authority, has been in force in London since the reign of George III. It was first regulated by Sturges Bourne's Act (59 Geo. III. cap. 12), but is now governed by the provisions of the Poor Rate Assessment and Collection Act, 1869 (32 and 33 Vic. cap. 41). The limits and conditions of compounding are contained in sections 3 and 4 of that Act, which read as follows :—

> 3. In case the rateable value of any hereditament does not exceed twenty pounds, if the hereditament is situate in the metropolis, or thirteen pounds if situate in any parish wholly or partly within the borough of Liverpool, or ten pounds if situate in any parish wholly or partly within the city of Manchester or the borough of Birmingham, or eight pounds if situate elsewhere, and the owner of such hereditament is willing to enter into an agreement in writing with the overseers to become liable to them for the poor rates assessed in respect of such hereditament, for any term not being less than one year from the date of such agreement, and to pay the poor rates whether the hereditament is occupied or not, the overseers may, subject nevertheless to the control of the vestry, agree with the owner to receive the rates from him, and to allow to him a commission not exceeding twenty-five per cent. on the amount thereof.
>
> 4. The Vestry of any parish may from time to time order that the owners of all rateable hereditaments to which section 3 of this Act extends, situate within such parish, shall be rated to the poor rate in respect of such rateable hereditaments, instead of the occupiers, on all rates made after the date of such order; and thereupon and so long as such order shall be in force the following enactments shall have effect :—
>
> 1. The overseers shall rate the owners instead of the occupiers, and shall allow to them an abatement or deduction of fifteen per centum from the amount of the rate :
>
> 2. If the owner of one or more such rateable hereditaments shall give notice to the overseers in writing that he is willing to be rated for any term not being less than one year in respect of all such rateable hereditaments of which he is the owner, whether the same be occupied or not, the overseers shall rate such owner accordingly, and allow to him a further abatement or deduction not exceeding fifteen per centum from the amount of the rate during the time he is so rated :
>
> 3. The Vestry may by resolution rescind any such order after a day to be fixed by them, such day being not less than six months after the passing of such resolution, but the order shall continue in force with respect to all rates made before the date on which the resolution takes effect :
>
> Provided that this clause shall not be applicable to any rateable hereditament in which a dwelling-house shall not be included.

The statutory conditions of compounding may therefore be briefly enumerated as follows, viz. :—

1. It is entirely at the discretion of the local authority.
2. It applies only to hereditaments with a rateable value not exceeding £20 (in London).
3. It may be made optional or compulsory to the owner.
4. If optional, the rebate must not exceed 25 per cent.
5. If compulsory, the rebate must not be less than 15 per cent. nor more than 30 per cent.

The following table shows the compounding arrangements existing in the Administrative County of London during 1906–7 :—

Cities and boroughs.	Maximum rateable value of properties in respect of which abatement is allowed.	Abatement allowed to owners.		
		If optional to owners (sec. 3, Act of 1869) with agreement to pay rates whether property is occupied or not.	If compulsory to owners (sec. 4, Act of 1869)	
			Without agreement to pay rates whether property is occupied or not.	*With* agreement to pay rates whether property is occupied or not.

The total amount allowed to owners by way of rebate in the year 1903–4 was £221,025, which is 1·68 per cent. of the gross amount of rates chargeable on all properties. No complete return exists for any other year; but it is safe to say that both the extent of compounding and the amount of rebate allowed exhibit a steady tendency to decline.

It will be noticed that in some cases the amount of the abatement varies in the same borough. In these cases the allowance made depends either upon the rateable value of the property or its class. In the case of Islington, the Borough Council allows only 10 per cent. and confines its compounding to a few special cases of block dwellings.

The marked tendency to reduce the rebate to the minimum at which owners are willing to compound is illustrated by the action of three metropolitan boroughs.

The Southwark Borough Council in 1898 reduced their compounding allowance from 25 to 15 per cent., and in 1901 to 12½ per cent. The effect of the latter reduction, however, does not appear to have been satisfactory, as at the expiration of one year the rebate was increased again to 15 per cent.

The Westminster City Council in 1902 also reduced their allowance to 12½ per cent. Several of the principal owners, however, refused to enter into agreements on these terms, and after six months' trial, during which representations were made to the City Council with regard to the hardships suffered by the tenants through being rated directly, the council passed an Order under section 4 of the Act. This involves an allowance of 15 per cent., and the additional allowance made by the City Council to owners paying on all properties, whether occupied or not, is only 1 per cent.

The St Pancras Borough Council, in January 1902, resolved to reduce the abatement from 25 per cent. to 15 per cent. for ordinary houses, and 10 per cent. for industrial dwellings and flats. On the owners of industrial dwellings receiving notice of this alteration they refused to accept the reduced rebate, and the Borough Council eventually decided to allow 15 per cent. in all cases.

From the experience of these three local authorities it would appear that owners will not, as a rule, compound for an allowance of less than 15 per cent.

In thus reducing the rebatement to the lowest percentage practicable, the Borough Councils are acting in the financial interest of the ratepayers as a whole. Large abatements to owners of properties under £20 cause a heavy additional burden on properties above that value. In Poplar (to take an extreme instance where there is a large proportion of small property) the abatement allowed for compounding was in 1902 30 per cent., and the additional charge included in the rate levied on properties above compounding value, to provide for the abatement on compounded properties, was in that year shown to be as follows:—

	s.	*d.*
Parish of Bow	0	10½
Parish of Bromley	1	1½
Parish of Poplar	0	9

In carrying out their policy of reducing the rebate the local authorities are no doubt seriously handicapped by the provisions of section 4 of the Act. As has already been mentioned, it appears that in practice owners will not, as a rule, compound for an allowance of less than 15 per cent. This is no doubt largely due to the fact that if owners are rated compulsorily an allowance of 15 per cent. must be made. Since they cannot be rated compulsorily without rebate of 15 per cent. being allowed (without agreement to pay full or empty) they are naturally slow to accept a smaller rebate *with* such an agreement.

The Governors of the Peabody Donation Fund, who own large estates of block dwellings in London, have left it to the local authorities to collect the rates from the occupiers direct in all cases where the deduction allowed for compounding is less than 15 per cent., and a similar course has been taken by the Improved Industrial Dwellings Company in the Borough of Islington. This has had the effect of bringing home to the minds of their tenants the true nature of their position as ratepayers. The compounding system undoubtedly disguises that position so far as the great majority of weekly tenants in London are concerned. They express their view of the subject, usually in the statement that they have no rates to pay. The tenants as a rule prefer this system, not only as saving them trouble, but also because the demand for a considerable sum only once in a half year is a difficult one for them to meet out of a limited income. Any system of collecting rates direct from occupiers of this class must, in order to succeed, provide for the collection of small amounts at short intervals.

It is necessary to draw a distinction between the two parts of which the compounding deduction consists, viz.:—

(1) Rebate in respect of the rating of owners.

(2) Allowance in respect of losses on empties, removals, etc. Although no separation is made between these two parts in the deduction under section 3 of the Act of 1869, it is important to keep the distinction clearly in mind, as the two parts of the deduction are essentially different in character. The former is in the nature of compensation to the owner for the trouble and expense to which he is put by being rated instead of the occupiers. The latter is an allowance for the loss incurred by the owner by paying rates in full whether the property is occupied or not, a loss which is of a much more indefinite and variable character.

With regard to the rebate, or first part of the deduction, there is a considerable difference between the percentage an owner can afford to accept and that which a rating authority can afford to allow. If owners are not rated the authorities are put to considerable expense in collecting rates from a large number of small occupiers, whereas if owners are rated the rates are collected as part of the rent, and the only expense the owners are put to is for the clerical work involved in making returns of periods of occupation and of rates payable, and perhaps a slight extra expense in enforcing payment of the higher rents necessitated by the inclusion of rates therein.

The rebate of 15 per cent., granted under section 4 of the Act, as commission to the owners for collecting the rates along with the rent, is extremely liberal. The extra expense to the owner would be adequately covered by a commission of 5 per cent.; on the other hand, it is quite possible that it would cost the rating authority as much as 10 per cent. in some cases to collect from this class of property. It would appear, therefore, that half the present statutory rebate (*i.e.* 7½ per cent.), while providing a liberal commission to the owner, might at the same time be a saving to the rating authority as compared with direct collection from the occupiers.

The allowance, or second part of the deduction (that in respect of losses on empties, etc.), is on an entirely different footing. Given that rating of owners is in force, the amount of the loss on empties, etc., sustained by an owner who undertakes to pay whether his properties are occupied or not, is precisely the same as would be lost by the rating authority in the absence of such agreement. But in substituting a fixed allowance for a varying loss, an owner requires to be assured against any loss on the transaction. Consequently as the arrangement is purely optional, unless the allowance offered was something more than the average loss on his property, an owner would not enter into such an agreement, and on all agreements with such owners, the rating authority must lose. In other words, if it pays an owner to enter into such an agreement, and to receive a certain allowance, it does not pay the rating authority to make that allowance.

And this consideration leads inevitably to the conclusion that the adoption of any uniform percentage for the allowance in respect of empties cannot operate equitably between owner and owner. In the case of tenements of a good class in a favourable locality, one tenant usually succeeds another without a break, except perhaps an interval of a week. The allowance to the owner of such properties is almost all clear gain to him. But property which for various reasons is less attractive has a considerable proportion of empties, and the allowance may then be little more than sufficient to cover the loss of rates due to empties.

These facts have no doubt influenced the Westminster City Council, which has passed an Order under section 4, and which makes an allowance of only 1 per cent. for empties in addition to the statutory 15 per cent.—obviously with the idea of minimising the loss incurred by the City Council, while securing the rating of owners of all property coming within the Act.

The only advantage to the rating authority of entering into agreements with owners, appears to be a more regular revenue enabling the produce of the rates to be estimated more closely than it otherwise could be.

It should be mentioned that outside the County of London there is an added complication, due to the fact that, while compounding takes place under the Act of 1867 so far as the Poor Rate is concerned, compounding for the General District Rate is governed by the Public Health Act, 1875, under which there are altogether different limits, both for the classes of properties to which compounding applies and the amounts of the deductions allowed. It will probably be undesirable to trouble the Committee with these complications.

The conclusions arrived at may be thus briefly stated:—

(*a*) The allowance for empties works inequitably.

(*b*) A rebate of reasonable amount to the owner, for relieving the local authority of the trouble and expense of collecting from each occupier, probably produces the most satisfactory result in a pecuniary sense.

(*c*) But it would be quite easy for the local authority to organise a system of direct fortnightly or monthly rate collection from occupiers on short tenancies at slight additional cost, if it be considered desirable to make clear the occupier's position as ratepayer.

Answers to Questions as to Practice in London.

1. What is the amount per pound of assessed rental of the tenant's rates paid by the landlord or owner?—In London it is not the practice for the landlord to pay any proportion of the tenant's rates. He either pays the whole or none at all. The average rate for the whole of London during the current year is about 7s. 6d. in the £.

2. What is the amount per pound of assessed rental of the rates charged upon the landlord or owner?—In London no rates are charged direct upon the landlord except in pursuance of a compounding resolution passed by the local authority under section 4 of the Act of 1869. There is nothing corresponding to the Scotch practice of charging part of the rates upon owners direct.

3. Are any houses rented at less than £19, 10s. let for periods longer than a week or a month? If so, what proportion?—It may happen in exceptional cases that houses rented at less than £19, 10s. per annum are let by the quarter or by the year, but the proportion is trifling. The great bulk of such houses are let weekly or monthly.

4. What is distraint? What is the cost of evicting a tenant paying £10 or less and one paying £10 to £19, 10s.?—In distraint for the recovery of rent due, the landlord instructs a licensed broker, who, failing payment on his first application, distrains upon the tenant's goods by scheduling such of them as he thinks necessary to cover the debt and expenses. After six days have elapsed the broker may remove these goods and sell them. During the interval he is allowed to place a man in possession of the goods distrained upon, in order to guard against their removal.

There is no practical difference between the cost of evicting a tenant paying more than £10 and that of evicting a tenant paying less than £10. In cases where the rent is less than 7s. 9d. per week (£20 per annum) proceedings can be taken in the Police Court. The hearing fee is 2s., and the fee for the attendance of an officer of the Court at the eviction is 1s. In addition, the landlord has to bear the expense of putting the tenant's goods out of the tenement, and he also suffers a loss of rent for a period which may be taken at about six weeks on the average.

Where the rent is 7s. 9d. per week or more (over £20 per annum), proceedings have to be taken in the County Court, where the fees are:—entering summons, 1s.; hearing fee, 2s.; bailiff's attendance at eviction, 1s. 6d. Owing to the difficulties in fixing the date of hearing, the landlord usually loses a larger number of weeks' rent under this procedure.

5. What percentage of removals is there in a year from houses let weekly or monthly?—There are no returns of the number of removals in London as a whole, but in the Council's own dwellings a record is kept which shows that during the year 1905–6 there were 1720 removals out of a total of 6326 tenements. This is 27 per cent.; but it is probable that the percentage is less in the case of tenements belonging to private owners, who usually select their tenants, whereas the Council accept all tenants in order of application, provided they are of respectable character, no preference whatever being given on account of high wages or permanency of employment.

6. Do tenants get any official intimation of the amount of the rates for which they are liable where the landlords compound? Is any separation made in the landlords, receipts between rates and rents?—Where the landlords compound, tenants receive no official intimation of the amount of rates chargeable.

In certain of the Peabody buildings the amount of rent and the amount of rates are separately stated in the landlords' receipts; but in all other cases, so far as I am aware, no such separation is made.

7. Do very poor tenants get any relief from rates otherwise than through the consideration of the owner who has compounded?—No.

8. Is there any loss of rates on small houses where rates are collected from tenants? If so, what is the percentage of loss?—In Lewisham, which is the only district in London where no compounding is allowed, the Deputy Town Clerk, at my request, recently analysed his rate books for one quarter so as to show the leakages or losses of rates on properties not exceeding £20 rateable value. The results were:—

	Loss.
Houses under £10 rateable value . . .	9·2%
„ above £10 and under £15 . .	8·4%
„ „ £15 to and including £20 .	7·7%
Average for all houses up to and including £20	8·1%

The percentage of leakages for all classes of property in the borough for the year ended March 1904 was 6·45, of which 6·33 was due to losses by empties.

(Signed) Edgar Harper,
Statistical Officer of the
London County Council.

* If Act limited to £10, would affect 22,938 out of 78,803 houses.
† Largest proportion of loss to rating authority is between £5 and £10.
‡ Compare number with 74,870 in Table No. I.

TABLE B.

CORPORATION OF EDINBURGH.

STATEMENT showing (1) Total amount of Charges for Burgh Assessments on Rentals—(*a*) Over £4 and under £7, (*b*) of £7 and under £10, and (*c*) of £10 and not exceeding £20; (2) Amount recovered; and (3) Amount written off, under each group of Rentals,—applicable to Year 1903–1904; and (4) Amount which would be allowed in deductions to Owners under Mr Cross' Bill.

Rentals.	(1) Charge for Burgh Assessments.	(2) Amount Recovered.	(3) Amounts written off as abated and irrecoverable.	Percentage of Loss.	(4) Amounts allowed to Owners under Mr Cross' Bill.
	£	£	£		£
(*a*) Over £4 and under £7, . . .	2,766	1,816	950	34·34	181
(*b*) Of £7 and under £10, . . .	8,145	6,756	1,389	17·05	338
(*c*) Of £10 and not exceeding £20, .	44,009	41,979	2,030	4·61	1,049
	54,920	50,551	4,369	7·95	1,568 or 36 per cent. of the amount written off.

Note.—The above figures include charges on business premises and amount recovered in respect of same, as time did not admit of these being eliminated. The amounts written off as abated and irrecoverable, however, may be taken as substantially correct, as applicable to dwelling-houses only.

TABLE B2.

CORPORATION OF EDINBURGH.

STATEMENT showing (1) Total amount of Charges for Burgh Assessments on Rentals—(*a*) Over £4 and under £7, (*b*) of £7 and under £10, and (*c*) of £10 and not exceeding £20; (2) Amount recovered; and (3) Amount written off as abated or irrecoverable, under each group of Rentals,—applicable to Year 1903–1904; and (4) Amount which would be allowed in deductions to Owners under Mr Cross' Bill.

Rentals.	(1) Charge for Burgh Assessments.	(2) Amount Recovered.	(3) Assessments written off.				(4) Amounts allowed to Owners under Mr Cross' Bill.
			Abated on Ground of Poverty.		Irrecoverable.		
			Amount.	Percentage of Loss.	Amount.	Percentage of Loss.	
	£	£	£		£		£
(*a*) Over £4 and under £7, . . .	2,766	1,816	415	15·00	535	19·34	181
(*b*) Of £7 and under £10, . . .	8,145	6,756	793	9·73	596	7·32	338
(*c*) Of £10 and not exceeding £20, .	44,009	41,979	1,504	3·42	526	1·19	1,049
	54,920	50,551	2,712	4·94	1,657	3·01	1,568

Note.—The total amount allowed under Mr Cross' Bill is equal to 57·81 per cent. of the assessments abated on the ground of poverty, and 94·62 per cent. of the assessments found to be irrecoverable.

APPENDIX IV.

THE "MODERN" RENT CARD.

SHOWING AT A GLANCE EXACTLY WHAT THE TENANT PAYS IN RENT AND WHAT IN RATES.

Name of Tenant.....

Address of Property.....

.....

Notice in writing of at least a week must be given to terminate tenancy, and is to be sent to :—

.....

.....

or handed to the collector when calling. Such Notice can only be accepted subject to due delivery of all keys, and inspection of premises by Landlord or Agent.

.....*Agent.*

The Tenants' attention is particularly directed to the form of this Rent Card, which shows separately the Rent for the premises, and the Rates payable on these premises, for it must not be overlooked that :—

The Landlord acts as collector of the Rates to obviate the Tenant being troubled by the Rate collector.
The Rent and Rates together constitute the charge for the premises.
The Rent is a standing charge and unalterable except by agreement.

Watch your Rates. Watch your Ward Member. Watch the Actions of your Council and Board of Guardians.

The House situate at.....

is let to Mr.....on the terms for Rent and Rates as stated on the inside.

The Rates are imposed quarterly by the Borough Council, and include the demands of the Guardians, both Council and Guardians being duly elected by Burgesses, and it is to the interest of every Tenant to see that the members of the Council and Guardians carefully administer their Trust, for any rise in the Rates will be duly charged, and any fall allowed. Therefore, Tenants should see that business men, capable of careful administration, are duly elected to serve them on the Council and Guardians.

This House being rated at £23 per annum, the Local Rates will be collected with the Rent as follows :—

When Rate made amounts to	but does not exceed	The amount payable weekly is	When Rate made amounts to	but does not exceed	The amount payable weekly is
per £ rateable value			per £ rateable value.		
8/9	8/11	3/11	12/1	12/4	5/5
8/11	9/1	4/0	12/4	12/6	5/6
9/1	9/4	4/1	12/6	12/8	5/7
9/4	9/6	4/2	12/8	12/11	5/8
9/6	9/8	4/3	12/11	13/1	5/9
9/8	9/10	4/4	13/1	13/4	5/10
9/10	10/1	4/5	13/4	13/6	5/11
10/1	10/3	4/6	13/6	13/8	6/0
10/3	10/5	4/7	13/8	13/10	6/1
10/5	10/7	4/8	13/10	14/1	6/2
10/7	10/10	4/9	14/1	14/3	6/3
10/10	11/0	4/10	14/3	14/5	6/4
11/0	11/2	4/11	14/5	14/7	6/5
11/2	11/4	5/0	14/7	14/10	6/6
11/4	11/7	5/1	14/10	15/0	6/7
11/7	11/9	5/2	15/0	15/2	6/8
11/9	11/11	5/3	15/2	15/4	6/9
11/11	12/1	5/4	15/4	15/7	6/10

The Rates levied by the Borough Council are :—

s. d. in £ s. d. in £

Quarter ending 31st Mar.....Quarter ending 30th Sept.....
do. 30th Jun..... do. 31st Dec.....

All Tenants have it in their power to vote in order that they may be suitably represented, and should do so if they wish their rates kept within bounds.

Then act in your own interest by seeing that the Rates are kept at the lowest possible figure.

You will then secure retrenchment with steady progress in your Borough.

The above is printed on the outside of the rent books ; while within are columns for Rent and Rates, thus :—

Due Date of Payment.		Rent of Premises as agreed.		Borough Rates as levied.		Weekly Total of Rent and Rates.		Received by

TWELFTH REPORT

OF THE

ROYAL COMMISSION ON HORSE BREEDING.

MAY IT PLEASE YOUR MAJESTY,

We, the Commissioners appointed to dispose of the money granted by Parliament for the encouragement of Horse Breeding in Great Britain, humbly desire to submit to Your Majesty this, our Twelfth Report.

2. Since we had the honour of presenting our last Report to your Majesty in August, 1907, we have been able to offer, at the Show held in London on March 10th, 11th and 12th of this year, 28 King's premiums of £150 each, for which 88 thoroughbred stallions were entered for competition.

3. Compared with previous years, the number of stallions competing for King's premiums shows a diminution, but considerable fluctuations in the number of horses exhibited, which range between 80 in 1889, when the first London Show was held, 88 in the present year, and 124 in 1905, have been constant, and we do not attach any special importance to them. The figures for each year since the commencement of the Shows are as follows:—

4.

1889	1890	1891	1892	*1893	1894	1895	1896	1897	1898
—	—	—	—	—	—	—	—	—	—

Premiums of £200 each.

1899	1900	1901	1902	1903	1904	1905	1906	1907
—	—	—	—	—	—	—	—	—
104	115	113	119	108	94	94	107	101

5. The Report which we received from the judges upon the horses competing for premiums at the recent Show, is as follows:—

> "Taking them as a whole, the stallions exhibited were of considerable merit, and the horses showed quality and substance combined, to a far greater extent than those we have seen in previous years.
>
> The Show was remarkable for the absence of weedy horses, and we are of opinion that the premium stallions were well up to the standard of excellence required for such animals. The stallions should prove of great benefit in the various localities they will stand in during the coming season.
>
> "Taking individual classes we should describe Class A as being very good. Class B moderate. Class C we consider was one of the best classes in the Show. Class D stood out very well indeed, the premium and reserve horses showing exceptional merit. Class E an excellent class. Class F, the premium winners and reserve, were all very good horses. Class G was a moderately good class.
>
> "The Scotch classes, though being weak in numbers, contained very good representatives."

---

* Since 1893 the Premiums have been of £150 value.

6. If the numbers exhibited were less, it is gratifying to know that, in the opinion of the judges, the general quality of the competitors was better than in former years.

The views which are expressed by the judges in the first paragraph of their Report, must be taken as relating, however, to the previous Shows in which they have been good enough to fill a similar position.

Your Commissioners are of opinion, taking them as a whole, that the competitors exhibited in 1908 were of average, but not more than average merit.

7. Much additional interest in the general question of horse breeding was aroused by the Conference which was summoned by Lord Carrington a year or more ago, and to which each of your Commissioners was invited.

8. As the meeting of that Conference has been followed by various criticisms of the work of this Commission, not always of a friendly character, it may not be unfitting if we submit to Your Majesty on this occasion a brief résumé of the work and proceedings of the Royal Commission since its first inception, and of the course which was pursued by the Commissioners in relation to the Conference which was summoned by the President of the Board of Agriculture.

9. As to the work of the Commission, which was appointed in 1887, it will be remembered that the terms of reference to this Commission were as follows:—

> "To consider and report to Us the regulations under which Our Royal Bounty may best be expended in prizes, to be bestowed by Us at the chief agricultural shows in Great Britain for the purpose of encouraging the breed and maintenance of a race of *sound* horses or in such other method as We may approve."

And with this object a sum, which was limited to £5,100, was placed at its disposal.

10. After their appointment, the Commissioners made it their earliest business to ascertain the cause of the deterioration of the breed which was already the subject of great and even general complaint, and their conclusions upon that point were expressed in their first report, which was issued on December 20th, 1887, from which the following passages may be quoted:—

> "Private enterprise was formerly sufficient to produce and to maintain a breed of horses in this country, which was unrivalled in the world; and that pre-eminence was successfully maintained until the Governments of foreign countries became alive to the importance of acquiring an equal advantage for themselves."
>
> "The foreign Haras, which were established for this purpose, in various countries on the continent, created a most serious drain upon our resources in this country."
>
> "There is no record, unfortunately, contained in any of the official statistics of the number of stallions which have been annually exported from the country, but it is a matter of common notoriety that year after year the United Kingdom has been swept by the agents of foreign Governments for the stallions and the mares best suited to their purpose, and they have been bought with public money, and taken from the country, frequently at prices with which it was impossible for private enterprise successfully to compete."
>
> "The consequence of this has been that with the exception of the highest class of stallions and of mares, for the breeding of race horses, this country has been left, for the most part, with the inferior and often unsound animals, which the foreign agent has rejected, and the result has been a gradual but marked deterioration in the general breed, for which England, at one time, was famous."

2000.—Wt. 1734/584. 5/08.

"Your Commissioners have therefore considered, in the first place, as the most effectual means of dealing with this evil, whether it was possible for them, by the formation of a Haras for stallions, to retain the most valuable animals, which at present leave the country, for the service and the use of the breeders of horses in the United Kingdom."

"We have not proposed, however, any scheme upon the subject, for the reasons which we state elsewhere; but we desire to express our strong and unanimous conviction that until some means are found of retaining in the country for the future such animals as we describe, it is vain to expect any marked or permanent improvement in the breed of horses."

"The formation of a Haras ought to be accompanied, we think, by a scheme for providing liberal premiums for competition by stallions; and if this were done we believe that most gratifying results would be obtained."

11. From these views the Commissioners have never departed. But with the funds at their disposal it has never been possible to carry out any schemes either for retaining the most valuable horses or for the general improvement of the brood mares in the country, which they likewise consider to be essential, and which is becoming more and more important every day. They had, therefore, to consider to what other purpose their limited means could most profitably be devoted, and the results of their deliberations were expressed in the following paragraph of the same report:—

"The means at our disposal are, however, insufficient to enable us to provide concurrently for each of these two schemes, and it is doubtful if they would have been sufficient for the formation of a Haras, even if we had thought it right to recommend that course alone. We had, therefore, directed our attention chiefly to the latter of these objects, viz., a scheme for the distribution of premiums for stallions."

12. On this point they came to the conclusion, having regard to the period of the year at which the Commission was issued, viz., December, 1887, and the amount of the funds at their disposal, that they will best be expended in the forthcoming year in premiums for thoroughbred stallions, suitable for getting half-bred horses for purposes of general utility, to be offered at a Show in conjunction with the Royal Agricultural Society, to be held in February, 1888.

They further expressed their opinion:

"That by a system of premiums, carefully guarded by adequate rules, some of the difficulties in the way of breeders of horses in securing the services of sound stallions could be overcome."

13. They also recorded their intention of taking further evidence and collecting all available information with reference to every recognised breed of horses in the United Kingdom, before arranging a scheme of distribution for 1889, and they recommended that in the statistics of the export of horses, the number of stallions, mares, and geldings should be distinguished and classified for the future, which has since been done.

14. The scheme for distribution in 1888 was embodied in the index of the first report of December 20th, 1887, and was signed by all the Commissioners, subject to a memorandum on a single point by Mr. Chaplin, in which he expressed the following views, while entirely concurring in all other respects, with the conclusions of his colleagues:—

"I dissent from Paragraph 15 so far as it limits the competition for the premiums exclusively to 'thoroughbred' stallions.

"I consider that horses with a stain in their pedigree, and which are not, therefore, in the Stud Book, are constantly found, and have frequently been proved to be among the best and most successful of country stallions; and it is, therefore, inexpedient and undesirable, in my opinion, that they should be excluded from all competitions for the premiums."

15. The result of the decision by the Commissioners to distribute the funds at their disposal under a system of premiums, may be traced in the ten subsequent reports of the Commission, which were issued from time to time.

16. In 1888, owing to want of funds, they were unable to take the further evidence which was thought to be desirable, upon the many important points affecting horse breeding in the country, but they make the following statement:—

> "Although, owing to want of funds, it has not been in our power to examine witnesses and take oral evidence direct, we have called for information from the local committees in the 22 districts, and having considered their replies to the questions submitted, which almost universally approved of the system hitherto pursued, we desire to express our opinion that no change in the system adopted last year is necessary, and that it will be advisable in the ensuing year to follow on the same lines."

17. But with the aid of a grant from the Treasury in the following year they state, in their Third Report for 1890, that they had been enabled to do so, and upon two most material points:—

> 1st. On the question as to what diseases should disqualify animals from the receipts of a premium—with the result that they were able to formulate a list of such diseases, which was embodied in a Schedule, and has remained in force with most gratifying results from that time to the present, and
>
> 2nd. Upon the general working and utility of the present scheme for the distribution of their funds.

Upon this latter question they point out that:—

> "It is gratifying to learn from the evidence that, bearing in mind the extent of the funds now available for distribution, the particular method of applying the grant which has been adopted by the Commission and approved by Your Majesty, is doing much to stimulate and encourage horse breeding in the country."

In a further paragraph they add:

> "It has come to our knowledge that one of the results of the present scheme has been that some high-class stallions, which would otherwise have been purchased to go abroad, have been retained in the country, and some of the evidence we have taken points to the probability that by augmenting the grant and by offering prizes for mares, a distinct inducement would be offered to owners to retain the best young mares in the country."

18. Again, the Commission called attention to the fact that a great number of the witnesses examined both orally, and by questions, were convinced that an increase of the funds of the Commission would largely augment the benefit of the good work they had been able to accomplish, and that, concurrently with this expression of opinion, notice had been given by the Royal Agricultural Society of England, which since 1887 had annually provided premiums for one of the seven administrative districts into which England has been divided, that the time had come when in their opinion premiums for all districts in the country should be supplied from the funds of the Commission. And the Society announced their intention to withdraw for the future the grant which they had hitherto devoted to one of these districts, and to that extent the work which had hitherto been carried out under the Commission was impeded.

19. Bearing this in mind, and in view of the practically unanimous opinion of the witnesses examined by them in their recent inquiry, the Commissioners suggested that the sum at their disposal should be raised to £10,000. In that case they considered, without binding themselves to any particular course, that it would be desirable to increase the number of premium stallions, to offer prizes for mares which had been served by them, and also prizes for young stock.

20. These complaints by the Commissioners of the inadequacy of their funds have been repeated again and again in 1895, in 1899, in 1901, 1903, 1905 and 1907. And they also point out, with regard to applications for premium stallions, and assistance for improving the supply of brood mares, and the benefit that a liberal concession on these points would confer on the Horse Breeding Industry, that they have been compelled again and again to reply:—That the provision either of more stallions, or of assistance for improving the supply of mares, was entirely beyond the resources of the Commission.

21. On the other hand, amid much that has been disheartening, it has been extremely satisfactory to learn from the information before us, that on two most material points the work of the Commission has been highly successful.

We find an increasing number of sound animals among the competitors for premiums and the young stock descended from winners of premiums. With regard to these latter, we would call attention to their rapidly-growing success as winners of prizes at agricultural shows all over the country.

22. Bearing in mind these results, and also the fact that this Commission was appointed "for the purpose of encouraging and maintaining a breed of sound horses," it seems to us that there can scarcely be a better test of the success of the present system of premiums which we have adopted, so far as we are able to extend it with our present means, and we desire once more to emphasise the great and general benefit to the Horse Breeding Industry, which could, we believe, with ease be accomplished by a sensible addition to the grant of £5,100 which is all that we have had at our disposal since the appointment of the Royal Commission for a great national purpose.

23. There are other matters of interest to which we think it is desirable to direct attention.

24. Up till 1903 the stallions had been judged entirely on their merits, the judges being given no information beyond their age and height. In that year, however, the Commissioners decided that if a horse had been through a course of training, remained sound, and had shown merit in his performances, these facts should be made known to the judges.

The effect of this decision will be best explained by two passages from the report of the judges in 1904 and1905.

In 1904 they say:

> "We found the information given by the Commission as to the length of time the stallions had been in training, and their performances on the Turf, to be of much assistance in enabling us to form an estimate of their natural soundness and constitution."

And again, in 1905, as follows:—

> "It was very gratifying to the judges to find that the efforts of the Royal Commissioners to ensure that none but sound stallions should be exhibited, has been so entirely successful, very few, indeed, of the horses sent to be examined failed to satisfy the veterinary surgeons. Finally, the judges desire particularly to express their gratification that the Royal Commissioners have allowed the Turf careers of the competing stallions to be somewhat taken into account when awarding the premiums. By this means, horses that, probably from some natural defect of limb, or temper, which effectually prevented their appearance on a racecourse, have been in some instances passed over in favour of others which have been able to bear the test of training. The judges did not consider it necessary that the horses competing should have actually won a race, but considered it much in their favour if they have been able to run respectably for a certain period."

25. Again, we have had constantly brought to our notice the question of the purchase of remounts for the Army; and the great encouragement that would be

given to horse breeding in the country if horses were purchased for that purpose at a somewhat earlier age than they are at present.

We are advised that horses are bought for military purposes by Foreign Powers now, in the United Kingdom, at the age of three years, and that consequently the best are gone before the English authorities come into the market.

In the interests of the horse breeding industry of the Kingdom, we can only repeat the recommendations we have made before, viz., that remounts should be purchased at the age of three years instead of four, thereby securing a double advantage for ourselves, viz., the first choice of our own horses for our own Army, and a distinct encouragement to the horse breeding industry of the Kingdom.

26. Lastly, there is the question of improving the supply of brood mares, which has been repeatedly brought to our notice. This question is dealt with in considerable detail in the Report of the Brood Mare Society, issued in May, 1907, with a memorandum of their conclusions, which was prepared after the close of the Conference summoned by Lord Carrington in July, 1906. They will be found in Appendix I. to this Report, and are deserving of attention and perusal by every one who desires to see the decadence of the English breed of horses checked, and its old supremacy restored before it is too late.

27. In summarising briefly the results of the work which has been accomplished by the Royal Commission since it was appointed in 1887, we may point to the following facts:—

583 stallions have been awarded premiums under the direction of the Commission, including 15 premiums which were provided by the Royal Agricultural Society between 1889 and 1903.

By these premium winners, there were served up to the end of 1907—30,836 mares, of whom, after allowing for 2,433 mares of which no returns were received, an average of 58 per cent., or, in round numbers, 14,250, were left in foal.

The returns of mares left in foal for 1907 and 1908 are not yet forthcoming, but applying the average annual production of foals to those two years, it would show, since the Premiums were first awarded in 1888, an average annual production of 783 foals.

28. This number of foals is, of course, but a trifling addition to our stock, compared with the requirements of the country, but it must not be forgotten

Firstly: That they are all of them the produce of perfectly sound horses.

Secondly: That for some years past their success in winning prizes for young stock at the leading shows* in the United Kingdom has been conspicuous, and

Thirdly: That during 1907 the descendants of these horses were winners of no less than 489 prizes.

29. We are well aware that the work of this Commission has been freely criticised, and numerous suggestions have been made for a different distribution of its funds, which the Commissioners have carefully considered, but its main and primary duty being, as we have already pointed out, to encourage the breeding and maintenance of a race of sound horses, it is permissible, we think, to doubt whether the Commissioners could have used their extremely limited means to better advantage for the purpose of the special duty which had been entrusted to them.

---

30. Turning now to the proceedings of the Conference on Horse Breeding held at the Board of Agriculture in October, 1906, your Commissioners were invited by Lord Carrington individually to attend it: and they were informed that the Conference was summoned "in consequence of the debate in the House of Lords on Horse

* The shows referred to are the shows at which medals are awarded by the Hunters' Improvement Society. They are 96 in number, in 52 different Counties.

Breeding in the month of July, 1906," for the following purpose:—"To discuss the question generally and to see if some arrangement could be reached as to the best lines on which a scheme should be drawn up for submission to the Treasury" with the special object, viz., "To improve the present position of the industry, and to find a remedy for the unsatisfactory and even dangerous state of things which admittedly exists at present."

31. In obedience to his summons, the Commissioners, being anxious to render Lord Carrington every assistance in their power, were, with one exception, present at the Conference. They took part in the discussions, and Mr. Chaplin, in particular, after tracing the causes of the difficulty and the deterioration of the breed, which was the subject of so much complaint, laid before the President and the Conference for their consideration, the outlines of a scheme, which was practically complete, for the improvement and gradual rehabilitation of the breed of English horses; recommending in the first instance that it should be tried as an experiment.

32. The scheme which was submitted in response to the invitation of the President was entirely in accord with the views expressed in the First Report of the Commission in 1887, and it rests upon the proposition that if the breed of horses in the United Kingdom is to be restored to anything approaching to its former excellence, it is essential, and, indeed, imperative, that the best horses and best mares of the class required to breed animals for purposes of general utility, which are at present bought by Foreign Governments for the use of foreign countries, should be retained in the United Kingdom.

33. With regard to the horses, it was proposed that the English Government should find the means for the purchase of the pick of these animals at all events, and keep them for our own use in the country.

That, when thus secured for our use, they should be kept at convenient depôts to be provided for them, and should travel at the proper season, in selected districts, precisely as an ordinary country stallion travels now, that the fee charge for their use should be moderate, and that the rule to be observed in the service of mares should always be as far as possible that the horses should go to the mares instead of the mares being sent to the horses.

34. With good management, in this way, each of these horses, on the average, should be self-supporting and earn his keep; and while the most valuable animals would be kept at home, the cost of their acquisition in any year, neither would nor could be great, because the number of horses annually produced, of the best and highest class for this particular purpose, perfect in shape and make, with power, bone, quality and action, but not fast enough for racing, is seldom more than three or four, and always very limited in number.

35. As to the provision of brood mares and their improvement as a class in the United Kingdom, it was pointed out that the policy suggested in the Third Report of the Brood Mare Society, issued in that year, was a means, and probably the best means of dealing with that branch of the question, and that it should be considered as an integral part of the scheme which was then submitted to the Conference.

36. The retention of the best of the stallions and the improvement and provision of brood mares having thus been dealt with, the means of encouraging breeders to make use of them had still to be considered.

The best inducement, it was pointed out, was the prospect of a quick return, and this, it was suggested, could most easily be given by a large and liberal addition to the prizes which are offered now for foals at agricultural and other shows and meetings in all parts of the United Kingdom.

In reference to this proposal we desire to add here that if the recommendations in Paragraph 25 could also be adopted, viz., that the purchase of remounts for the Army could be made at three years old instead of at their present age, a material encouragement would be given to horse breeding in this country.

37. There still remained the question as to the machinery by which these proposals should be carried out, and it was suggested that perhaps the simplest and the best means of doing it would be by a considerable addition to the grant already made to the existing Royal Commission (or such other central authority as the Government might appoint), to be used under their authority, and for the purposes already mentioned, viz., the retention in the country of the most desirable stallions, the improvement and provision of brood mares, and further inducements to be offered to breeders.

The central authority, it was thought, should be the distributing authority, with power to delegate the application of their funds to other bodies, subject to its supervision and control, if that course was thought to be desirable.

The sum mentioned in the Conference was an addition of £20,000 to the sum already provided for the use of the Commission. The Brood Mare Society, in their report for 1907, recommend an additional grant of £25,000. We concur in their recommendation.

38. That was briefly the purport of the scheme submitted for the consideration of the President of the Board of Agriculture at the Conference, and though it was submitted by a member of the Commission in his individual capacity, it had the concurrence of many of his colleagues at the time, and it has the sanction and approval now of this Commission.

39. Upon the question of horse breeding generally, and the measures which are needed for the aid and improvement of the industry, we desire, in conclusion, to direct special attention to the Report of the Brood Mare Society for 1907, which, by the permission of that body, is included in the appendix to this Report.

40. The Brood Mare Society is a voluntary association which has devoted much time, trouble and attention to the improvement of the brood mares in the country, and to a study of the measures which are needed for that purpose. We have carefully considered their proposals, and as we have already stated in paragraph 35 of this Report, we think that the general views which they embody should form part of any scheme which is adopted for the improvement of the breed of horses.

41. We desire to call special attention to the following paragraphs in the Memorandum of conclusions which was proposed by them and submitted to the Board of Agriculture shortly after the Conference summoned by the President had been held.

> (5.) " We think that the 28 King's premium stallions which are allowed for Great Britain are wholly insufficient for the wants of the country. We note the great use made in some districts, not only of unsound, weedy, thoroughbred stallions, seldom if ever exhibited, but also of inferior mongrel half-bred stallions, of bad quality. We regret the continual purchase by Foreign Governments of many of our best stallions, and we think that measures should be taken to counteract this evil which has been so appropriately referred to by the Royal Commission.*
>
> (6.) " The deterioration has steadily increased since this representation was made, and improvement is unlikely with the growth of the motor and tramway systems. We think that the Irish plan of providing funds to associations or individuals for the purchase of stallions in certain districts, with a provision for repayment by instalments, ought to be developed in Great Britain as supplementary to the system of King's premiums. Stallions should, as has been the case in Ireland, be eligible for prizes varying from £5 to £25, for the points gained by their stock exhibited at shows approved by the Department of Agriculture.
>
> (7.) " We do not think, however, that the Irish plan will be sufficient in itself, or that it would prevent Foreign Governments from continuing to get the best of our thoroughbred stallions, adapted for country purposes.
>
> (8.) " Something more than that is needed when, as in this case, we have to compete with the resources of Foreign Governments for their possession.

* See paragraph 10 of this Report.

(9.) "We consider it essential, for the real and permanent improvement of the breeds, that the majority of these horses which now go abroad should be secured for use in the United Kingdom.

(10.) "But if they are to remain in the country it can only be by the aid and the resources of the Government at home, in view of the competition for their possession by various Governments abroad, and we think that arrangements for their purchase and care should be made with the assistance of the Government, and that these arrangements should be under the control of some central authority, either the Royal Commission or some other body appointed by the Government for that purpose.

(13.) "In order to re-stock the country with suitable registered mares, we recommend the adoption of the system initiated by the Brood Mare Society which is described in their Report, and that the machinery of that Society be made available by constituting it the agent of the Royal Commission. The rules proposed by that Society for the purchase, custody, and distribution of mares and their stock, if appointed agents, are attached." (See page 9, Appendix J, of the Report.)

42. We concur generally in the views expressed in the seven paragraphs which we have quoted; we regard them as a valuable contribution to the discussions on this question, and we think they should be most carefully considered in connection with any scheme which may be formulated for the purpose of improving the breed of horses in the United Kingdom.

43. We are also glad to notice that the Council of the Hunters' Improvement Society thoroughly endorse the importance of this Memorandum, and that after full consideration the following resolution was unanimously adopted in its support:—

"This Council is in entire concurrence with the views expressed in the Memorandum on National Horse Breeding, and think it advisable to forward this Memorandum to the Minister for Agriculture, signed by the President of this Society, together with a covering letter, expressing the opinion of this Council as to the great and urgent need of a substantial addition being made to the grant already made to the Royal Commission on Horse Breeding."

44. It is likewise deserving of note that paragraph 14 of the same Memorandum practically embodies the suggestion made to Lord Carrington by Lord Sefton on behalf of the Commission on the 8th November, 1906.

"We recommend that the Royal Commission be invited to appoint a Central Committee in London to consider in detail the question of the purchase and maintenance of a proportion of Government stallions and the applicability of the Irish, Nomination, Premium, Stallion Registration, and Purchase system to registered mares in this country."

This paragraph, together with the resolution of the Hunters' Improvement Society, strongly confirm the opinion which we then expressed to Lord Carrington, that an arrangement as to a scheme such as he indicated could and should be arrived at without any serious difficulty by the various organisations concerned, provided the requisite funds could be available.

45. Seventeen months have now elapsed since the suggestions in Lord Sefton's letter, in November, 1906, were submitted on behalf of this Commission to the President of the Board of Agriculture, but we are still left in this country without the aid and encouragement for the horse breeding industry which is so urgently needed, though we believe it to be vital to its future wellbeing and prosperity. The main causes of the trouble are still in operation. The best of our sires and our mares, which are so greatly needed for our own requirements, continue steadily to leave the country, purchased by Foreign Governments, to improve the breed of horses in foreign countries.

No efforts on the part of this Commission to assist the industry, unless they are provided with further means, can effectually help it, and it becomes our duty once again to urge with all the force we can that the difficulties which confront an interest of so much importance to the welfare and even the safety of the nation, are increasing every year, and with every day's delay in dealing with the question they will continue to increase more seriously in the future.

ALL WHICH we humbly submit to Your Majesty's most gracious consideration.

GRANARD, *Chairman.*

13th April, 1908.

MEMORANDUM BY SIR WALTER GILBEY, BART.

I am in accord generally with the Twelfth Report of the Commissioners, with the exception of the paragraphs referring to the Brood Mare Society. It is a fallacy to suppose that all our best mares are being sold out of the country. I am strongly of opinion that there are plenty of good, sizeable mares available for breeding horses suitable for Cavalry, Artillery and general purposes, if it paid to breed them. Were the other recommendations of the Commissioners carried out, particularly the one advising the purchase of remounts for the Army at *three years old*, there is no doubt it would be an encouragement to breeders, and the country would be amply supplied with horses for all its requirements.

WALTER GILBEY.

SUPPLEMENTARY REPORT

BY

THE DUKE OF PORTLAND, K.G., EARL OF COVENTRY LORD MIDDLETON, LORD RIBBLESDALE, RT. HON. HENRY CHAPLIN, M.P., SIR WALTER GILBEY, BART., SIR JOHN GILMOUR, BART., AND MR. J. BOWEN JONES.

1. Had it been possible for us to do so, we should have been glad to avoid the necessity of dealing with the matters referred to in this Supplementary Report. But we pointed out in Section 8 of the Main Report that the meeting of the Conference summoned by Lord Carrington had been followed by adverse criticisms of the work of this Commission.

Coming, as they did in one case, from a prominent and unexpected quarter, we think that some reply is called for to an unprovoked attack upon its members, and we desire to add the following observations to those which we have signed already in the Main Report:—

2. At the close of the proceedings the President made a brief reply, in which occurred the following statements:—

> "It is absolutely necessary for us to have some scheme, some basis to work upon, and I am informed that a great deal of practical information has been laid before the Board" . . .
>
> "I am really encouraged to hope that after the valuable suggestions, with the help of the gentlemen I see before me, something useful and practical may be done. As Mr. Chaplin and the Duke of Portland have said, pounds, shillings and pence is at the bottom of everything."
>
> "The Chancellor of the Exchequer has a great duty to perform. . . . But if I am supported by the noblemen and gentlemen who are here to-day, and if I can put before him a definite proposal, I am not at all without hopes that Mr. Asquith would see the great necessity of doing something towards this great and important national object, and that we should be able to get some measure of assistance towards carrying out a scheme to remedy what is at present a thoroughly unsafe and unsatisfactory position."

He concluded with the expression of his hope that:—

> "This practical Conference may bring forth some practical fruit, and we may get some practical appreciation of it from the Chancellor of the Exchequer."

3. Encouraged by the sympathetic and the friendly tone of the President's reply, the Commission promptly held a special meeting to consider whether it would be possible for them by any means to take any further action for the assistance of the President, and the promotion of the object which he had in view.

And after some discussion it was resolved that a communication should be addressed to Lord Carrington by Lord Sefton, as President at that time of this Commission, embodying their views as to further steps which, in their opinion, might be taken.

4. On the 8th of November accordingly, after alluding to the proceedings of the Conference and the purpose for which it had been summoned, the President wrote as follows:—

> "November 8th, 1906.
>
> "I am requested by my colleagues, as President of this Commission, to assure you of their desire to render you any assistance in their power, in

so laudable an object, and to express their belief that an agreement such as that which has been indicated could, and should, be arrived at, without any serious difficulty. Provided, firstly,

"That the co-operation of public bodies connected with horse breeding, such as the Brood Mare Society, and others be obtained,

and secondly,

"That it is understood that if an agreement is reached, which is regarded by the Government as satisfactory, further assistance from the Treasury, in addition to that which is now placed at the disposal of the Commission, will be forthcoming.

"I am to add that the Commissioners attach great importance to this second proviso in view of the time, labour and possible expenses which concerted action with other bodies must mean and involve.

"May I, therefore, very respectfully inquire, when your Lordship has fully considered the Proceedings of the Conference, whether we may expect to hear anything further on the subject, and to receive any definite assurance from your Lordship on this point.

"I have the honour to be, My Lord,
"Your obedient servant,
"(Signed) SEFTON,
"President,
"Royal Commission on Horse Breeding.

"The Earl Carrington,
"President,
"Board of Agriculture,
"4, Whitehall Place, S.W."

5. Having already had some informal communication with other bodies interested in the question, some of the Commissioners were of opinion that if the various organisations connected with horse breeding could be brought together into council a general agreement could be arrived at, and that it would not be beyond their province to endeavour to arrange it. Hampered, as they always have been, by the want of funds, the Commission was not in a position to undertake it without some further guarantee on that point.

6. The letter of the President was acknowledged on the following day, but to that communication no other reply of any kind was received until more than twelve months afterwards.

7. The next public expression of the views of Lord Carrington upon the question of horse breeding was reserved for what appeared to him to be "a most fitting opportunity," viz., a meeting held at Scarborough on the 18th October, 1907. He was reported* at that meeting to have referred to the Royal Commission and its members in the following terms:—

"At the present time the encouragement of horse breeding in this country was entrusted to a Royal Commission, who received a grant of £5,000 a year, which was expended in improving sires by offering King's premiums. He arranged a Conference last year of those best qualified to advise on the subject, but almost the whole time of the Conference was occupied by speeches from members of the Commission, who enlarged on the need of more money, but proposed no plan for dealing with the question, and it was impossible to ignore the fact that many agriculturists were very dissatisfied with the Royal Commission."

8. Whether the President is more accurate in the final statement of the paragraph we quote than he is in others which that paragraph contains, we are not in a position to judge, nor would it be for us to say. But if it does exist, we believe it will be found that the feeling of dissatisfaction is entirely confined to those who are either ignorant of the difficulties that this Commission has always had to contend with, or who are unaware how entirely inadequate are the means at their control.

---

*"Scarborough Evening News," October 19th, 1907.

9. The other accusations which are made against us in that statement are sufficiently refuted firstly by the record of the proceedings at the Conference, of which a verbatim report has been circulated by the Board of Agriculture, and secondly, by the explanation we have thought it right to give in this Report, of the plan which was submitted upon that occasion by one of our colleagues to the Conference.

On this point we are quite content to leave it to the public to decide between the President of the Board of Agriculture and ourselves, but we cannot refrain from expressing our regret that such statements should have ever been allowed to come from the quarter that they have done.

ALL WHICH we humbly submit to Your Majesty's most gracious consideration.

13th April, 1908.

MEMORANDUM BY THE EARL OF GRANARD.

I concur generally with my Colleagues in the recommendations and reviews which are expressed in the Twelfth Report of the Commissioners which I have signed. The Supplementary Report by which it is accompanied relates to matters which occurred before I became a member of that body, with which I was not concerned, and which do not therefore call for any expression of opinion on my part; my appointment dating only from September, 1907.

GRANARD.

APPENDICES.

APPENDIX A.

The following are the Conditions under which the Show in the Spring of the Year 1908 was held (those for 1906 and 1907 forming an Appendix in the last Report), together with Details of Distribution for this year :—

The show was held in London in conjunction with the Hunters' Improvement Society.

Twenty-eight equal premiums, consisting each of £150, are offered for thoroughbred stallions (between four years old and not exceeding 20 years) for England, Wales, and Scotland.

Each stallion winning a premium shall serve not less than 50 half-bred mares, if required during the season, and shall stand or travel as the Commissioners may direct in the district for which he is exhibited, at a fee not exceeding 40s. for each mare and 2s. 6d. for the groom.

It shall be a condition that no premium stallion shall be allowed to be exhibited *for competition* during the season of service.

It shall be a condition that a stallion which has won four Queen's or King's premiums in the same district class shall be ineligible for entry again in the same class, but shall be eligible for any other district class.

Stallions shall compete in the district class *only* for which they are entered, and exhibitors may not enter more than one stallion in each class.

The Commissioners reserve power to award to a stallion unsuccessful in the district class for which he is entered a premium in the class for any other district *provided* the exhibitor enters the stallion on these terms. Should a premium be awarded in such other class, the obligations as to location and service shall apply to the district for which the premium is awarded, instead of the district for which the stallion is exhibited.

The following diseases shall disqualify a thoroughbred stallion for the purposes of this Commission, viz. :—

Roaring—whistling.
Ringbone.
Unsound feet.
Navicular disease.
Spavin (bone).
Cataract.

If any stallion winning a premium should not serve at least 30 half-bred mares during the season, the Commissioners reserve the power to reduce the premium.

The season of service commences :—

On April 2nd and terminates on July 31st.

The Distribution of Premiums for 1908, in the respective Districts for England, Wales and Scotland, was as follows:—

District Class.	Counties.	——	District Class.	Counties.	——
A	Bedfordshire Buckinghamshire Cambridgeshire Essex Hertfordshire Huntingdonshire Middlesex Norfolk Oxfordshire Suffolk	Three stallions at £150 each.	E	Yorkshire	Three stallions at £150 each.
B	Cumberland Durham Northumberland Westmoreland	Three stallions at £150 each.	F	Gloucestershire Herefordshire Monmouthshire Shropshire Staffordshire Warwickshire Worcestershire South Wales	Four stallions at £150 each.
C	Derbyshire Leicestershire Lincolnshire Northamptonshire Nottinghamshire Rutlandshire	Three stallions at £150 each.	G	Cheshire Lancashire North Wales	Three stallions at £150 each.
D	Berkshire Cornwall Devonshire Dorsetshire Hampshire Kent Somersetshire Surrey Sussex Wiltshire	Four stallions at £150 each.	H	Roxburghshire, Berwickshire and district	One stallion at £150.
			I	Fifeshire and district	One stallion at £150.
			J	Ayrshire and district	One stallion at £150.
			K	Forfarshire and district	One stallion at £150.
			L	Ross-shire	One stallion at £150.

APPENDIX B.

Season 1906.

Percentage of Foals left by the King's Premium Stallions from the Half-bred Mares served during the Season 1906.

APPENDIX D.

RETURN of the NUMBER of STALLIONS exhibited in each DISTRICT CLASS at the LONDON SHOW in the Year 1908. NAMES of OWNERS and winning STALLIONS, together with NAMES and ADDRESSES of the DISTRICT COMMITTEE.

District Class.	Number of Stallions Exhibited.	Owners of Stallions.	Stallions.	District Committee.
A	13	Mr. Stephen Mumford	Curio	Mr. W. L. Hirons, Grange Farm, Chacombe, Banbury. (*Corresponding Member.*) Mr. H. C. Jagger, Kilglass House, Bicester. Mr. B. W. Millington, Deddington, Oxford.
		Miss Hester Bancroft	Drummond's Pride	Mr. P. Ashburnham, Estate Office, West Wretham, Thetford, Norfolk. (*Corresponding Member.*) Mr. John Beck, 16, Bank Street, Norwich. Mr. D. W. Taylor, The Grange, Bury St. Edmunds.
		Sir Walter Gilbey, Bart.	Flambeau	Mr. George Baynes, Broxted Hall, Dunmow, Essex. Mr. W. Smith, The Links, Bishop's Stortford. (*Corresponding Member.*) Mr. Arthur Waters, Coopersale Lodge, Epping, Essex.
B	7	Mr. Edward Charles Winter	President Roosevelt	Mr. W. Davidson, East Learmouth, Cornhill-on-Tweed. Mr. G. G. Rea, Middleton, Wooler, R.S.O., Northumberland. Mr. W. W. Rhoades, Estates Office, Alnwick Castle, Northumberland. (*Corresponding Member.*)
		Mr. Eustace Barlow	Stamford	Mr. Charles H. Backhouse, Bank, Darlington. (*Corresponding Member.*) Mr. C. E. Faber, Stockton-on-Tees. Mr. W. H. Ralston, Streatlam Castle, Darlington.
		Mr. Frances Rickaby	Time Table	Mr. Fred Armstrong, George Hotel, Penrith. Mr. George John Bell, 1, Lonsdale Street, Carlisle. (*Corresponding Member.*) Mr. John Sewell Rigg, Elm Bank, Appleby, Westmoreland.
C	13	Mr. John Drage	Ethelbruce	Mr. James Brown, Earls Barton House, Northampton. Mr. E. Messinger, Chapel Brampton, Northampton. (*Corresponding Member.*) Mr. H. R. Roe, Cranoe, Market Harborough.
		Southwold Hunt Sire Association	Frobisher	Mr. H. D. Addey, Claythorpe Manor, Alford, Lincolnshire. (*Corresponding Member.*) Mr. Richard H. Barker, Martin Manor, Horncastle, Lincolnshire. Mr. W. B. Swallow, Wootton Lawn, Ulceby, Lincolnshire.
		Mr. Richard Louis Fenwick	Whistling Crow	Mr. J. Frederic Cartmell, Manor House, Kirby Bellars, Melton Mowbray. Mr. R. C. Cooper, Waltham, Melton Mowbray. Mr. Guy Fenwick, North Luffenham Hall, Stamford. (*Corresponding Member.*)
D	13	The Earl Cowley	Akbar	Mr. James Hibbard, 46, Clarendon Road, Redlands, Bristol. Mr. Arthur Rich, Oaksey, near Malmesbury. Mr. John E. Taylor, Elm Lodge, Biddestone, Chippenham. (*Corresponding Member.*)
		The Gosford Stud	Cheery Cove	Mr. C. I. L. Allix, Port Eliot Estate Office, St. Germans, R.S.O., Cornwall. Mr. Edward L. Marsack, Haye, near Callington, Cornwall. (*Corresponding Member.*) Mr. W. C. Peel, Trenant Park, Duloe, R.S.O., Cornwall.
		Mr. William Wilson	Rightful	Mr. W. Worsley Ashcroft, 83, High Street, Croydon. (*Corresponding Member.*) Mr. W. A. Calvert, Broomells, Holmwood, R.S.O., Dorking. Mr. Hubert F. Sturdy, M.F.H., Felcourt, East Grinstead.
		Mr. Thomas Kinsman Bickell	Rockaway	Mr. Reginald W. Fox, Grimstone, Horrabridge, S. Devon. Mr. Charles L. Hancock, The Manor House, Cothelstone, Bishops Lydeard, Taunton. Mr. E. P. Northey, Higher Bowden, Okehampton. (*Corresponding Member.*)

District Class.	Number of Stallions Exhibited.	Owners of Stallions.	Stallions.	District Committee.
E	8	Messrs. Walton Bros.	Burnock Water-	Colonel R. G. W. Chaloner, Gisboro' Hall, Guisborough, Yorks. Mr. Hubert Godman, Guisborough, Yorks. (*Corresponding Member.*) Major R. B. Turton, Kildale Hall, Grosmont, Yorks.
		Mr. Thomas L. Wickham-Boynton	Denis Richard	Mr. G. W. Brigham, The Grange, Burton Agnes, Yorks. Mr. Frederick Reynard, Sunderlandwick, Driffield, Yorks. (*Corresponding Member.*) Mr. John J. Ridley, Osborne House, Beverley, Yorks.
		The Lord Middleton	Scotch Sign	Mr. Edward Parsons, Birdsall, York. Mr. Frederick Reynard, Sunderlandwick, Driffield, Yorks. (*Corresponding Member.*) Hon. Tatton Willoughby, Hildenley Home Farm, Malton, Yorks.
F	14	Mr. Herbert Clifford Walton	Bird of Paradise	Mr. W. S. Carless, M.R.C.V.S., Worcester. (*Corresponding Member.*) Mr. G. H. Green, Wigmore Grange, Leintwardine, R.S.O. Mr. Colin MacIver, Blaisdon Hall, Longhope, S.O., Glos.
		Mr. Albert Octavius Haslewood	Landsman-	Mr. J. H. James-Moore, High Ercall Hall, Wellington, Salop. Vet'y. Capt. T. Mayor Parker, Whitchurch, Salop. (*Corresponding Member.*) Mr. Edward A. Saxton, M.R.C.V.S., Beam Street, Nantwich. Mr. John Anthony, Cilveithy, Kidwelly.
		Mr. John Forsyth Rees	Red Hat	Mr. Grismond Philipps, Cwmgwilly, Bronwydd Arms, R.S.O., South Wales. Mr. G. E. S. Prothero-Beynon, Trewern, Whitland, R.S.O., South Wales. (*Corresponding Member.*)
		Mr. Stephen Mumford	Sundorne	Mr. Philip S. Danby, Church Farm, Offchurch, Leamington. (*Corresponding Member.*) Mr. Charles L. Kendall, Mount Pleasant, Walton, Warwick. Mr. G. Wilson, Bull Hotel, Rugby.
G	8	Mr. David Davies, M.P.	Likely Bird	Mr. T. Green, The Bank, Pool Quay, Welshpool, N. Wales. Mr. Ernest C. Morgan, 22, High Street, Newtown, N. Wales. (*Corresponding Member.*) Mr. Richard Morgan, Snowfield, Kerry, Montgomeryshire. Mr. W. Scott Owen, Cefngwifed, Newtown, N. Wales.
		Mr. Thomas James Hillman	Thalaba	Mr. W. Denson, Picton Hall, near Chester. Mr. R. Johnson Houghton, Newbold, Saighton, Chester. Mr. R. Parker, Gt. Stanney, Sutton, Chester. (*Corresponding Member.*)
		Mr. Edward Charles Winter	Thurles	Mr. J. Kerr Calderwood, Clitheroe, Lancs. Mr. W. Garnett, Linton Croft, near Clitheroe, Lancs. Mr. Rowland Robinson, Estate Office, Gisburne, Clitheroe, Lancs. (*Corresponding Member.*)
H	4	Mr. Charles William Dixon-Johnson	Palaver	Mr. J. Hastie Brydon, Haddon, Kelso. Mr. R. Grieve, Branxholme Braes, Hawick. Mr. Robert Henderson, Mount Hooley, Jedburgh. (*Corresponding Member.*)
I	2	Mr. William Wilson ...	Chibiabos	Mr. Charles H. Beveridge, Crombie, Cairneyhill, Dunfermline. Mr. W. Blackie, The Stables, Montrave, Leven, Fife. (*Corresponding Member.*) Mr. T. Webster, Nisbetfield, Collessie, Fife.
J	2	Mr. William Leng	Haakon	Mr. George Barclay, M.F.H., Thornhill, Johnstone, Renfrewshire. Mr. Hugh Neilson, Chapeltoun, Stewarton, N.B. Mr. David W. Shaw, 5, Wellington Square, Ayr. Mr. J. Harling Turner, Portland Estate Office, Kilmarnock. (*Corresponding Member.*)
K	2	Mr. Eustace Barlow	Dealaway	Mr. W. Banks, Invergowrie, Dundee. (*Corresponding Member.*) Mr. James Carmichael, Arthurstone, Meigle, N.B. Mr. Herbert K. Ogilvy, Auchterhouse, Forfarshire. Mr. Gavin Ralston, Glamis, N.B.
L	2	Mr. Thomas James Hillman	Christmas Greeting	Mr. C. J. Ness, Calrossie Mains, Nigg Station. (*Corresponding Member.*) Mr. William Ross, Kinnahaird, Strathpeffer. Mr. David W. Simpson, Arcan Mains, Muir of Ord.

	or average of 58 per cent. of mares served are left in foal.		

1907 figures not known until end of August, 1908.

APPENDIX J.

Report of the Brood Mare Society for 1907.

Preface.

This Society was established in 1903 for the purpose of obtaining suitable mares by gift or purchase and lending them to farmers and others on certain conditions, the object being to keep good brood mares in the country and restrict their wholesale exportation, and the consequent deterioration in the breed of horses in the United Kingdom.

Great stress is laid on the necessity of obtaining a good stamp of mare, free from hereditary disease, and able to earn her living on a farm. Some fine specimens of strong hunter-built mares have been acquired, and, by retaining a lien on the first two fillies (see paragraph 7, Appendix A, page 12) of such mares, the Society hope gradually, but surely to raise the standard of excellence, diminish the proportion of misfits, and thus enhance the value of the young stock. In some instances stallion owners have granted a preferential rate for service fees for the Society's mares, reducing the charge by 40 and even 60 per cent. Other facilities have also been granted, all tending to a reduction in the initial cost of the article produced.

It is in the power of the War Office, masters of hounds and others to do much to aid the objects of the Society by purchasing the filly produce of the Society's mares, and by restoring such to the Society at a later period of the careers of such animals.

Report.

We have the honour to lay before our subscribers the third Report of this Society.

The efforts of your Committee in the past year have been concentrated on the attempt to bring prominently before Parliament and the nation the urgent necessity of at once taking action with a view to increase and improve our national horse supply. This question has been under discussion over 30 years, and little, very little, in the direction of an organized system has been achieved.

It may be advantageous to review the various stages through which the question has passed in recent years.

A discussion initiated by the Council of the Hunters' Improvement Society led to the birth, in 1903, of the Brood Mare Society, and the issue of a valuable report by the Council.

In 1905 the Brood Mare Society brought about the important meeting at Bridgewater House, under the presidency of the Earl of Minto, when its plan of action was unanimously approved. The Society put that plan into operation in order to test the machinery, and received sufficient encouragement to proceed with it.

The experience gained shows that an efficient system can be organized, but the resources at the disposal of the Society are too limited to enable it to move with the desired celerity.

In July, 1906, the Society, through its President, the Earl of Donoughmore, brought forward a motion in the House of Lords, which led to an interesting and instructive debate, in the course of which Lord Carrington, on behalf of the Government, expressed great sympathy with the movement, accepted the motion, and promised consideration.

In October last, his Lordship summoned an important conference at Whitehall, when a discussion was opened by the Right Hon. Henry Chaplin, in which many members of the Royal Commission on Horse Breeding and other influential persons took part.

Lord Carrington then observed, that if he could get something tangible, definite, and practical, backed by the noblemen and gentlemen present, he would be in a stronger position to approach the Chancellor of the Exchequer. In expressing himself as entirely at the orders of the agricultural interest, one of the most important portions of which he declared to be the great horse-breeding industry of the United Kingdom, he said that he was not at all without hopes of being able to get some measure of assistance towards carrying out a scheme to remedy what "is at present a thoroughly unsafe and unsatisfactory position."

The outcome of that conference, and of these encouraging remarks, was a carefully prepared outline of a scheme which, before being presented to the Government, received the unanimous approval of the Council of the Hunters' Improvement Society and of your Committee.

Copies of that document and the letters above referred to are printed on pages 10 and 11.

The Society, together with all those who are interested, anxiously await the decision of H.M. Government on this important paper.

The Committee are impressed with the fact that organization, and organization alone, can overcome the difficulty. The experience and the best services of the Breed Societies are unreservedly placed at the disposal of the President of the Board of Agriculture, and it is for that Minister to construct the instrument which will accomplish the end.

Your Committee can do but little more at this stage. They feel that precious time is slipping away, that the appropriate season for action is passing, and that there is a fear that another year will be lost.

A small effort and a moderate sum now provided by the Government would set the machinery in motion and be the means of gathering the knowledge so essential to success, and your Committee express the hope that this appeal may not be in vain.

The stud of mares now belonging to the Society numbers 53, and the young stock number 24. A different system of selecting the mares must be adopted, and more care taken to secure younger animals. A proper system can only be devised by the light born of experience, and experience cannot be acquired till more funds are supplied.

The Committee intend to inaugurate a system of compiling records relating to all known stallions, which promises to be of great service to breeders. This record will show the information collected as to the public performances of sires, the characteristics of the families from which they spring, the stamp which they impress on their stock, and other details, which will not only help the breeder to resort to blood which may counteract defects in his own strain but will become an important guide in the selection of sires.

The Committee wish to strongly support a suggestion, made by the Leicestershire Branch, that a register be kept at the office of some local newspaper, or other place in the market town, recording the names and addresses of owners of animals within the district which are for sale, so as to aid in bringing buyer and seller together.

The appendices to this Report show the mares belonging to the Society, the names of the custodians, and the localities where they are maintained, and give the following aggregate results:—

Blackmore Vale Branch	16
Hereford Branch	15
Leicestershire Branch	5
Liskeard Branch	18
Grand Total ...	54

The first mare, "Czarina," was presented to the Society Christmas, 1903, since which date the stud has increased, up to April, 1907, to 54 mares. 24 foals have been bred alive and one died. The record of the foals dropped this season is not yet complete.

Your Committee consider that increased care should be exercised in the purchase of all mares, and every endeavour should be made to secure, by competent purchasers, only those who give reasonable hope of being prolific. Even with gift mares great caution should be exercised before they are accepted, as it is not remunerative to keep old, or barren mares, because their retention is not encouraging to their custodians.

The want of some regular provision for the temporary reception of newly purchased or gift mares is felt, as it is often necessary to have a place of this kind where the mares could be sent previous to distribution. It is hoped that such arrangements may be made in each branch, as this would do much to further the objects the Society has in view.

The rules and conditions under which mares are placed in the custody of farmers and others for breeding purposes, as well as those for the formation of local committees, are attached. These rules have been found to work fairly well up to date, and should be observed in future. If alterations are necessary they can be effected by resolutions of the Central Committee, after due consideration of the proposals, to be submitted in the usual manner. The Committee quite recognise that it is almost impossible to devise hard-and-fast rules on the subject of breeding, and, therefore, changes may from time to time be necessary, but these changes should only be effected after careful consideration of the reasons to be placed before the Central Committee.

Your Committee have seen it stated that there is no necessity for the existence of a Society called The Brood Mare Society, on the ground of the scarcity of mares; that catalogues at auction marts prove that there are mares in abundance, in fact, more than could be used for breeding purposes; that suitable mares are within the reach of the farmer; and that the quality of horses generally is higher than it was thirty years ago.

Your Committee quite believe that catalogues at auction marts disclose the existence of a considerable number of animals of the female sex, but frequent attendance at those marts convinces them of the difficulty of securing the very few high-class suitable mares which come to the hammer, and which usually realise prices far beyond the pocket of the farmer. No one would deny that the quality of mares belonging to a comparatively few distinguished breeders is very high, but what is wanted is to improve the quality amongst the undistinguished, and re-stock the districts which have been denuded for many years. No one is weak enough to suggest that farmers should be started to breed £40 military horses. Their ambition should be to produce the more valuable animal which commands a remunerative figure.

This Society does not want, and would not take, worthless third-rate remount mares. But there is no reason why the Government should not eventually get hold of a much larger proportion of first-rate mares, such as can now be found amongst the officers' chargers, and even in the ranks.

The whole question resolves itself into organisation and the construction of a proper system, but is too large an undertaking to come within the unaided power of any voluntary society; and it is evident that nothing short of the resources of a Government, utilising the Societies, can meet the case.

The attraction of a substantial premium to the breeder in addition to the fixed price for every filly taken as an officer's charger with the probability of its ultimate return to the breeder, when its good record has been established, would be not only an inducement worth having, but would establish a continuity of good blood.

The characteristics of the breed, carefully recorded, constitute a vital point, and a proper method of obtaining these would be of the utmost value. This is one of the main objects of your Society, and a more useful one can scarcely be conceived.

Horse breeding amongst the generality of farmers does not pay. Because, without system, they cannot conduct it on the right lines.

Gradually to bring about a change in suitable districts amongst those who do not fully understand the art or who have not sufficient opportunity to travel in the right direction, is a purpose which few will be found to condemn.

Amongst the successes of the Society's mares, the Committee notice with satisfaction that "Czarina" still does well in the Blackmore Vale Branch, having won annually three premiums at the Compton Show, besides being reserve for the Championship on two occasions. Her foal by a King's premium stallion also took a prize. The success of the mare "Lady o'Leary" at the same branch is also noticeable, as she took two premiums in three years, her foal being also awarded a prize. As many of the mares about to foal this season have been served by stallions of distinction, it is anticipated that the produce of this year will be generally satisfactory.

Great assistance can be given the Society by the presentation to it of suitable gift mares, of which there must be numbers available throughout the country, and it is hoped that all concerned in the advancement of horse breeding will aid the object the Society has in view by informing the Hon. Secretary whenever such mares may be available. The proposals made by the members of the Committee who submitted the Paper on National Horse Breeding to the Government for consideration, will, if undertaken in the manner set forth, result in certain districts being restocked with suitable registered mares; but, meanwhile, reliance must be placed on public support to achieve the desirable objects sought.

Gentlemen can become members by subscribing annually one guinea or upwards, cheques being sent to 24, Martin's Lane, Cannon Street, E.C., and made payable to G. B. Manley, Esq., or order, or by sending enclosed order form to their bankers.

The gift of a suitable brood mare constitutes a Life Member, and the Society has had great pleasure in conferring such membership on the following ladies and gentlemen for their valuable gifts:—

The Right Hon. Viscount Portman ...	2
The Hon. Mrs. Tremayne	1
The Hon. A. H. Mills	1
Mr. W. Astor, Jun.	1
Mr. James Buchanan	1
Major J. Bennett-Stanford	1
Mrs. F. M. Carlton	1

Copy. *4th December*, 1906.

To the President of the Board of Agriculture,
4, Whitehall, S.W.

My Lord,

I have the honour, on behalf of the Committee of the Brood Mare Society, to enclose for your consideration a copy of a memorandum drawn up by certain gentlemen who were present at the Conference on Horse Breeding, held at your office on the 31st October, representing the conclusions to which they came after carefully considering the speeches to which they listened on that occasion.

This memorandum has been carefully considered by the Committee of the Brood Mare Society, who have passed a unanimous resolution supporting the scheme therein set forth, and I am to urge on your lordship the desirability of taking steps to press this scheme, or one founded on a similar basis, on the attention of the Treasury.

I have the honour to be,
Your obedient Servant,
ALGERNON TURNOR,
Chairman.

Copy.

Hunters' Improvement Society,
12, Hanover Square, London.
27th December, 1906.

Dear Sir,

I beg to inform you that the Council at their meeting yesterday considered the memorandum enclosed in your letter of December 4th, when the following resolution, moved by Sir Merrik R. Burrell, Bt., seconded by Colonel Victor Van de Weyer, was unanimously adopted:—

"This Council is in entire concurrence with the views expressed in the memorandum on National Horse Breeding, and think it advisable to forward this memorandum to the Minister for Agriculture, signed by the President of this Society, together with

a covering letter, expressing the opinion of this Council as to the great and urgent need of a substantial addition being made to the grant already made to the Royal Commission on Horse Breeding."

Yours faithfully,
A. B. CHARLTON.

Colonel T. Deane, C.B.,
Newlands,
Surbiton.

NATIONAL HORSE BREEDING.

1. In connection with the debate on horse breeding, which took place in the House of Lords on the 16th July, 1906, and which resulted in a conference summoned by Lord Carrington, on the 31st October, at the Board of Agriculture, and at which the Royal Commission on Horse Breeding, and the various societies concerned in a subject so important to the nation, were represented, we, the undersigned, desire to record our conclusions in view to their being placed before the authorities who will have the final settlement of the question, and for whom definite proposals are required.

2. We are convinced that many parts of the United Kingdom, which are suitable for horse breeding, require to be re-stocked with brood mares of the right stamp to produce the general utility horse, and particularly the class required for military purposes. To obtain this object it is preferable that many persons should keep one or more mares each, and not exceeding, say, three, rather than that one person should keep a large number of mares, on account of the risk and expense which are inseparable from the industry.

3. We are satisfied that many districts proved to be in every way suitable for horse breeding are almost denuded of the class of mare required, the old strains of blood having been lost, chiefly in consequence of the exportation of the best mares. We recognise, however, that there are still, here and there, wealthy breeders who keep good strains.

4. We consider that by good organisation and by acting in concert, the Board of Agriculture, the War Office, the Royal Commission on Horse Breeding, the Hunters' Improvement Society, and the Brood Mare Society, can greatly improve the standard of excellence, possibly diminish the cost of production, and make the industry more profitable.

5. We think that the twenty-eight King's Premium stallions which are allowed for Great Britain are wholly insufficient for the wants of the country. We note the great use made in some districts, not only of unsound weedy thoroughbred stallions, seldom if ever exhibited, but also of inferior mongrel half-bred stallions, of bad quality. We regret the continual purchase by foreign Governments of many of our best stallions, and we think that measures should be taken to counteract this evil which has been so appropriately referred to by the Royal Commission of 1887 in the following terms:—

"There is no record, unfortunately, contained in any of the official statistics of the number of stallions which have been annually exported from the country, but it is a matter of common notoriety that year after year the United Kingdom has been swept by the agents of foreign Governments for the stallions and mares best suited to their purpose, and they have been bought with public money, and taken from the country, frequently at prices with which it is impossible for private enterprise successfully to compete.

"The consequence of this has been that, with the exception of the highest class of stallions and of mares, for the breeding of race horses, this country has been left, for the most part, with the inferior and often unsound animals, which the foreign agent has rejected, and the result has been the gradual but marked deterioration in the general breed, for which England at one time was famous."

6. The deterioration has steadily increased since this representation was made, and improvement is unlikely with the growth of the motor and tramway systems. We think that the Irish plan* of providing funds to associations or individuals for the purchase of stallions in certain districts, with a provision for repayment by instalments, ought to be developed in Great Britain as supplementary to the system of King's premiums. Stallions should, as has been the case in Ireland, be eligible for prizes varying from £5 to £25, for the points gained by their stock exhibited at shows approved by the Department of Agriculture.*

7. We do not think, however, that the Irish plan will be sufficient in itself, or that it would prevent foreign Governments from continuing to get the best of our thoroughbred stallions, adapted for country purposes.

8. Something more than that is needed when, as in this case, we have to compete with the resources of foreign Governments for their possession.

9. We consider it essential, for the real and permanent improvement of the breeds, that the majority of these horses which now go abroad, should be secured for use in the United Kingdom.

10. But if they are to remain in the country it can only be by the aid and the resources of the Government at home, in view of the competition for their possession by various Governments abroad, and we think that arrangements for their purchase and care, should be made with the assistance of the Government; and that these arrangements should be under the control of some central authority, either the Royal Commission, or some other body appointed by the Government for that purpose.

11. Horses of the class we speak of are by no means numerous, very few, comparatively, are bred in a single year, and we are of opinion that the cost of their acquisition could not be great, while the best possible material would be retained for the service of the country.

12. Arrangements should be made by which all Government stallions should travel under a more extended system than they do at present, visiting as far as possible all registered mares. These mares should, as in Ireland, be eligible for Government stallion service, under the nomination system, and for prizes for themselves and stock, under the Irish premium system.

13. In order to re-stock the country with suitable registered mares, we recommend the adoption of the system initiated by the Brood Mare Society which is described in their report, and that the machinery of that Society be made available by constituting it the agent of the Royal Commission. The rules proposed by that Society for the purchase, custody, and distribution of mares and their stock, if appointed agents, are attached (*see page* 12).

14. We recommend that the Royal Commission be invited to appoint a Central Committee in London to consider in detail the question of the purchase and maintenance of a proportion of Government stallions and the applicability of the Irish, nomination, premium, stallion registration, and purchase system* to registered mares in this country. Several of these rules may prove of much supplementary value to the King's premium system. This committee might also consider the compilation by degrees of a record showing the family characteristics of stallions in use.

15. We strongly support the proposal advocated† by the Brood Mare Society that the War Office should have the refusal of the first two or more fillies bred under the system with a view to accepting them as officers' chargers, and that the higher price thus obtained may be made available to enable that Society to award a substantial additional premium to the breeder for every filly bought for that purpose. Such fillies, after a certain period of service with the army, to be returned, if good enough, to the Society at its option, in order to be restored to the breeder.

16. In order to give effect to the above proposals we recommend that an additional grant of £25,000 per annum be made to the Royal Commission, which has repeatedly urged the necessity for having its grant increased, the small sum at present allowed being totally inadequate for its needs. The additional grant to be expended by it in such manner as may

* See Appendix B, Loans for the purchase of Stallions, attached.

* See Appendix B, Prizes for registered Stallions and Mares.

† See Appendix A.

appear best calculated to give effect to the proposals here set forth.

17. We are authorized to express the entire concurrence of Mr. Henry Chaplin with this memorandum.

[*Appendix A.*]

BROOD MARE SOCIETY.

PROPOSED RULES FOR THE PURCHASE, CUSTODY, AND DISTRIBUTION OF THE BROOD MARES AND THEIR STOCK, should the Royal Commission on Horse Breeding make use of the Society in connexion with the Grant for King's Premium Stallions, or any other source from which funds may be hereafter available.

1. Brood mares to be purchased only by such individuals or agencies as may be appointed for the purpose by the Central Committee of the Brood Mare Society.

2. It must be regarded as essential that those who purchase have had practical knowledge and experience of horse breeding, so that hereditary characteristics may be studied, and only good strains of blood secured.

3. All such mares must obtain a certificate of soundness from hereditary disease signed by a member of the Royal College of Veterinary Surgeons. Their age must be between three and ten years, and preference will be given to those which have foaled, or are in foal to the class of stallion detailed.

4. All mares purchased from Government grants must be insured in an approved live stock insurance office for the full amount of their purchase price, and the annual premium on this insurance shall be a charge against the funds of the Society.

5. The causes of disqualification of brood mares for hereditary unsoundness shall be the same as those laid down for Premium stallions—viz., roaring, whistling, ringbone, unsound feet, navicular disease, spavin, and cataract.

6. The average price for brood mares shall not exceed £50, except in exceptional cases at the discretion of the Society, such sum to include all charges, including stabling, food, attendance, etc., from date of purchase to that of issue to the farmer or custodian taking over the brood mare, as referred to in the Society's rules and conditions under which mares are placed out for breeding purposes.

7. As the main object of the Society is the improvement in the breed of horses and the inducement of farmers to retain their best young mares for breeding purposes, it shall be optional with the custodian to retain for breeding purposes all fillies bred, or to offer the refusal of the first two from each mare to the Society at a certain price to be placed elsewhere, at three and a-half years old.

8. The prices at which these fillies shall be taken by the Society shall, if accepted, be £35, but if purchased for over that price from the Society by the Remount Department, on an agreement that they shall be subsequently made available for breeding purposes, a higher price by way of premium may be awarded to the breeder at the discretion of the Society.

9. All colts will be the property of the custodian, who may sell them at any time. But if retained to three and a-half years of age and offered to the Society, it will endeavour to secure a sale for them to the Remount Department at remount prices, which vary according to class, being about £35 for troopers, to £60 or £70 for chargers.

10. The Society or its local agents will advise the breeders in regard to the disposal of misfits and the rearing of young stock, and it will give all help possible in effecting sales. A register will be kept of all stock produced, and all the Society's brood mares will be branded with the broad arrow on the near shoulder, their fillies being similarly branded at one year of age.

11. As considerable sums of money are annually collected for local horse shows to encourage horse breeding, the Society's various branches should endeavour to act in co-operation with them in view to securing if possible prizes for its brood mares, yearlings, two, three, and four year old colts and fillies. The detail of such awards can only be worked out by the local horse show and branch Society's committees, but as the objects both have in view are identical, co-operation in this matter is likely to result in public benefit.

12. Any grants of money which the Royal Commissioners may assign for the improvement of horse breeding by the purchase of brood mares shall (if the Brood Mare Society be made agents for that purpose) be duly accounted for, according to such rules and regulations as the Commissioners may approve, a schedule of the various selected districts in which the mares are to be distributed being submitted for the confirmation of the Commissioners, so that if possible those districts in which mares are comparatively few may be strengthened by more.

[*Appendix B.*]

LOANS FOR THE PURCHASE OF STALLIONS IN IRELAND, 1905.

1. No applications for a loan for the purchase of a stallion will be considered if coming from a locality in which, in the opinion of the Department, there is already a sufficient number of registered stallions for the purpose of their scheme.

2. The individual or association applying for a loan must be approved of by the Department.

3. No loans will be made save for the purchase of stallions passed by the Department as eligible for registration.

4. The purchase price of the stallion must be approved by the Department.

5. Before the loan is granted the stallion must be insured in the name of the Department by the purchaser in an approved live stock insurance office for the full amount of his purchase price, and the payment to the Department of the annual premiums on this insurance must be secured under conditions similar to those provided for the repayment of principal interest. (See 7 and 8.)

6. Approved applicants for a loan must lodge with the Department the policy of the insurance, together with one-third of the purchase price of the stallion.

7. As soon thereafter as possible the individual or association to whom the loan is granted shall enter into a bond to repay the Department the amount which will be advanced by them—viz., two-thirds of the purchase money—in five equal annual instalments, at the end of one, two, three, four, and five years respectively, from the date of payment of the full purchase price to the vendor by the Department, together with interest at the rate of 2½ per cent. on the outstanding balance.

8. In the case of an individual, two or more solvent sureties approved by the Department, in addition to the purchaser, must guarantee repayment. In the case of an association, repayment must be guaranteed by the committee of the association, or in such other manner as the Department may require.

9. On receipt by the Department of (1) the policy of insurance, (2) one-third of the agreed-on purchase money, (3) the bond duly completed, and (4) the necessary stamp duty, the Department will pay to the vendor the full amount of the agreed-on purchase price, and intimate to him that the stallion may be given up to the borrower.

10. If the vendor, before being paid by the Department, gives up the possession of the stallion, the Department will hold themselves free of any liability to the vendor.

11. The individual or association must offer the stallion each year for registration, must undertake to conform at all times to the regulations of the Department's schemes for encouraging improvement in the breeds of horses, and during the continuance of

the loan must allow the stallion to serve nominated mares at a fee to be fixed by the Department.

Such fee, however, in no case to exceed £3 per mare.

12. Nominated mares, the property of the members of an association purchasing a stallion under this scheme, shall not take priority of service over nominated mares owned by non-members.

As soon, however, as the number of nominated mares required by the scheme may have been served, the service of the stallion may be retained exclusively for the use of the members of such association.

13. The individual or association in whose favour the loan is being granted must, at his or their own expense, provide suitable accommodation for the stallion, procure all necessary veterinary attendance, and care for the animal in a proper manner, to the satisfaction of the Department.

14. The Department shall have the right to inspect the stallion at any time, and to remove him at any time, if it is found, in the opinion of the Department, that he is not being properly cared for, or if an instalment of the principal and interest is in arrear for more than four weeks.

15. The stallion shall remain the property of the Department until all instalments and arrears of principal and interest are paid off, and shall not be disposed of, without the consent of the Department, for five years.

16. Should the stallion be awarded a premium, such premium shall not be paid to the individual or association in possession of the stallion, but shall be credited, after the close of the season, towards the payment of the loan.

17. The Department reserves the right to refuse any application for a loan without assigning any reason for such refusal.

18. The decision of the Department in all matters relating to these loans shall be final.

Forms of application can be had from the Department.

Registered Stallions.

The Department of Agriculture and Technical Instruction for Ireland makes it a condition that a stallion, to be entitled to a prize, a subsidy in the form of nominations, or a premium, must be entered in the Departmental Published Register of Stallions for the current year, or accepted for registration.

The following prizes were offered to the owners of thoroughbred stallions which had been registered with the Royal Dublin Society for service under the horse-breeding scheme, 1900, whose stock win most points in prizes at the Horse Show, a cup to count eight points, a first prize seven points, a second prize six points, third prize five points, a fourth prize four points, reserved, very highly commended and reserved, highly commended and reserved, commended and reserved, three points, very highly commended three points, highly commended two points, and commended one point:—

First Prize, for not less than	8	points	-	£25
Second Prize,	„	„	6	„	- £15
Third Prize,	„	„	4	„	- £10
Fourth Prize	„	„	2	„	- £5

It was not necessary that the registered stallions should be exhibited at the Horse Show. In the event of an animal winning both a cup and a prize, or more than one cup or prize, only one cup, or one prize (the highest) should count.

Registered Mares.

Nominated or registered mares. These have to be approved by the Department of Agriculture in Ireland. If they comply with the regulations laid down on the subject, their owners receive nominations for a registered stallion, preference being given to the best young mares under six years of age. The mares are selected by judges of the Department. The owner of the mare must select one of the registered stallions, in Ireland, of any breed sanctioned for the county, provided the service list of the stallion selected is not already full.

The value of the nomination or service fee may vary with the breed of stallion selected, but shall not be less than £2, or more than £3, exclusive of groom's fee of 2s. 6d. When the service fee exceeds the value of the nomination, the excess is paid by the owner of the mare. The nomination fee of £2 is paid by the Department to the owner of the stallion. Thus, if a stallion is registered to serve farmers' mares at £5 the Department pays £2, and the owner of the nominated mares £3 2s. 6d. (including groom's fee). As soon as the Department is satisfied that the conditions of service have been met, its share of the nomination fee is notified to the Treasurer of the County Council Committee of Agriculture, for payment to the stallion owners.

Under certain conditions premiums or prizes are awarded to the owners of mares, and their stock, viz., 10 per cent. to prizes for yearlings, 30 per cent. to mares between two and six years of age, stinted to, or with foal at foot by a registered stallion. The sum to be provided for the purpose by the Department of Agriculture depends on the amount provided in aid of the scheme, by local authorities or sources. If aid is not given by the latter, the Departmental grant may be withheld. The schemes for the encouragement of horse breeding in Ireland are, however, very elastic, and constantly changing, as may be seen from the rules of the Department of Agriculture in Ireland, and those of the Royal Dublin Society during the past ten years.

Rules and Conditions under which Mares are placed in the custody of Farmers and Others for Breeding purposes.

In the following conditions the expression "the Society" shall mean the Brood Mare Society, the "custodian" the person receiving the mare and signing the receipt, and the "local committee" the committee representing the Society in the district, and the "district" the area assigned to a local committee.

1. The mare shall remain the property of the Society, and shall be returnable to the Society on demand.

2. The custodian shall be solely responsible for any damage done or injury caused by the mare while lent to him.

3. The mare may be used for such work as she may be capable of performing, having due regard to the foal and period of foaling.

4. The mare must at all times be properly cared for.

5. Any change of the address at which the mare is kept must be notified to the local committee, but no mare may be removed out of the district.

6. The mare must be served only by a sire selected and approved by the local committee, but all serving fees are to be paid by the custodian.

7. Within one month after foaling the Society's Form "B" must be filled up and forwarded to the secretary of the local committee.

8. All foals shall belong to the custodian absolutely except as provided in the condition following.

9. The first and second fillies foaled of any mare shall on or before the 30th October in the year in which they respectively attain three and a-half years of age be offered to the local committee for purchase by them, and the local committee shall have the option until the 31st December next following of purchasing such filly at such price, not exceeding £35, as may be agreed upon.

The operation of Rule 9 is suspended by resolution of 11th June, 1906, which reads as follows:—

> "That in respect of the first four branches, which are the pioneers of the movement, and in respect of such others as the Committee by resolution may decide, the operation of Rule 9 be suspended for the present, in order to enable the Committee to judge with greater accuracy as to the characteristics of the breed emanating from mares whose genealogies are practically unknown."

10. Should the custodian, through removal out of the district or for any other reason, wish to surrender the mare, he may do so on giving one month's previous notice in writing of such intention to the secretary of the local committee, and he shall accordingly deliver the mare to such person as may be authorised by the local committee to receive it.

11. A custodian shall subscribe not less than £2 a year to the Society in respect of each mare in his custody, and he shall thereby become a member of the Society during the currency of the subscription. The

first subscription shall be payable on receipt of a mare and shall be for the period ending 1st June in the year following, at which date the next subscription shall become due, and so on in each succeeding year.

12. No mare shall be shown at any horse show without its being stated in the entry form that she is the property of the Society, so that she may be so described in the catalogue, but all entry fees shall be paid by the custodian, and any prize awarded shall belong to him.

13. The custodian shall not oftener than once in any year on receiving not less than one month's previous notice from the local committee, produce the mare and her produce, if any, for inspection at a time and place, within the district, to be specified in such notice. The mare to be sent and taken back by and at the expense of the custodian.

LASTLY. If the local committee and the custodian cannot agree in respect of any question, the same shall be referred to the Central Committee of the Society, in London, whose decision shall be final.

Formation and Functions of Local Committees.

It is suggested that any members of the Society who consider that a branch could be usefully formed in their district should call a meeting of gentlemen interested in horse breeding, and lay the objects of this Society before them, and obtain the names of those willing to join the Society and form a local committee. Assistance in this direction would readily be given, if desired, by the honorary manager, W. Phillpotts-Williams, Esq., 7, Carwinion Terrace, Liskeard, Cornwall. The names, when selected, and the boundaries of the proposed district to be then forwarded to the Central Committee for approval.

Copies of the Society's annual Report, conditions on which mares are lent, and all other information can be obtained from the Honorary Secretary, 24 Martin's Lane, Cannon Street, London, E.C.

The functions of a local committee shall be:—

1. To obtain gifts of brood mares to the Society, with a view to their being located in their district.

2. To obtain donations to supplement the funds at the disposal of the Society for the purchase of brood mares.

3. To obtain donations and subscriptions to meet the current expenses of the local committee, it is to be distinctly understood that the Society will not be responsible for any liabilities of a local committee except such as shall have been incurred with the written sanction of the Central Committee.

4. To collect the annual subscriptions due from custodians of mares located in their district, and forward same to the Society's honorary treasurer.

5. To advise the Central Committee as to the class of mare best suited to the district, and, if possible, arrange for a member of the local committee to act in conjunction with a member of the Central Committee in the purchase of mares for loan in that district.

6. To see that the conditions on which mares are lent are in all respects properly observed by the custodians in their district, and in particular Conditions 7 and 9.

7. Each local committee may make regulations for its own management.

8. To furnish annually lists and descriptions of all suitable stallions available in the district, and to obtain special terms from stallion owners for the Society's mares.

Generally, to suggest measures for the advancement and efficient working of the Society, and to assist the Central Committee in carrying into effect the objects of the Society in their district.

VICE-REGAL COMMISSION ON IRISH RAILWAYS, INCLUDING LIGHT RAILWAYS.

SECOND REPORT

OF

THE COMMISSIONERS.

Presented to both Houses of Parliament by Command of His Majesty.

VICE-REGAL COMMISSION ON IRISH RAILWAYS, INCLUDING LIGHT RAILWAYS.

WARRANT APPOINTING THE COMMISSION.

DUBLIN CASTLE,
July 19, 1906.

The Lord Lieutenant has been pleased to issue a Commission to the following effect :—

BY THE LORD LIEUTENANT GENERAL AND GENERAL GOVERNOR OF IRELAND.

ABERDEEN.

WHEREAS it is deemed expedient that a Commission should issue to inquire into the present working of Railways in Ireland, including Light Railways, and to report how far they afford, separately or in conjunction with other means of transit, adequate facilities for the cheap and rapid transport of goods and passengers within the island and to Great Britain; what causes have retarded the expansion of traffic upon the Irish lines and their full utilisation for the development of the agricultural and industrial resources of the country; and, generally, by what methods the economical, efficient, and harmonious working of the Irish Railways can best be secured :

Now We, John Campbell, Earl of Aberdeen, Lord Lieutenant General and General Governor of Ireland, do hereby nominate, constitute, and appoint you, Sir Charles Scotter, Chairman of the London and South-Western Railway (Chairman); the Right Honourable William James Pirrie, Chairman of Harland and Wolff, Limited, Shipbuilders and Engineers; Sir Herbert Jekyll, Knight Commander of the Most Distinguished Order of St. Michael and St. George, an Assistant Secretary of the Board of Trade; Lieutenant-Colonel William Hutcheson Poë, Companion of the Most Honourable Order of the Bath; Thomas Sexton, Esquire; William Mitchell Acworth, Esquire; and John Audley Frederick Aspinall, Esquire, General Manager of the Lancashire and Yorkshire Railway, to be Commissioners for the purpose aforesaid.

And for the better effecting the purpose of this Our Commission, We do by these presents authorise and empower you, or any two or more of you to be named by you, to call before you or any two or more of you, to be so named, such persons as you may think fit to examine, and by whom you may be the better informed of the matter hereby submitted for your consideration and everything connected therewith, and generally to inquire of and concerning the premises by all other lawful ways and means whatsoever. And also to call for and examine such books, papers, documents, writings, or records, as you or any two or more of you as aforesaid shall think useful for the purpose of the inquiry.

And We also by these presents authorise and empower you, or any two or more of you as aforesaid, to visit and personally inspect such places as you, or any two or more of you, may deem expedient for the purpose aforesaid. And Our pleasure is that you, or any two or more of you as aforesaid, do from time to time and with all convenient speed report to Us what you shall find touching and concerning the premises.

And We further by these presents ordain that this Our Commission shall continue in full force and virtue, and that you, Our Commissioners, do from time to time proceed in the execution thereof, although the same not be continued from time to time by adjournment.

And We do hereby appoint George E. Shanahan, Esquire, the Assistant Secretary to the Commissioners of Public Works in Ireland, to be the Secretary of this Our Commission.

Given at His Majesty's Castle at Dublin, this 18th day of July, 1906.

By His Excellency's Command.

J. B. DOUGHERTY.

VICE-REGAL COMMISSION ON IRISH RAILWAYS, INCLUDING LIGHT RAILWAYS.

SECOND REPORT.

MAY IT PLEASE YOUR EXCELLENCY,

We, the Commissioners appointed by Your Excellency, on 18th July, 1906,

> "To inquire into the present working of Railways in Ireland, including Light Railways, and to report how far they afford, separately, or in conjunction with other means of transit, adequate facilities for the cheap and rapid transport of goods and passengers within the island, and to Great Britain; what causes have retarded the expansion of traffic upon the Irish lines and their full utilisation for the development of the agricultural and industrial resources of the country; and, generally, by what methods the economical, efficient, and harmonious working of the Irish Railways can best be secured,"

Availing ourselves of Your Excellency's permission to report our proceedings from time to time, consider it desirable to submit to Your Excellency, as an Appendix to this Second Preliminary Report, minutes of the evidence taken in Dublin and in London from the 12th March to the 9th July last, inclusive; and statements and returns that have been furnished to us in connection therewith, together with certain tables, and an index.

We think the immediate publication of these documents is desirable.

All of which we humbly submit for Your Excellency's most gracious consideration.

CHAS. SCOTTER, *Chairman.*
PIRRIE.
HERBERT JEKYLL.
W. HUTCHESON POË.
THOMAS SEXTON.
W. M. ACWORTH.
JOHN A. F. ASPINALL.

GEO. E. SHANAHAN,
Secretary.

TERMS OF REFERENCE.

"To inquire into the present working of Railways in Ireland, including Light Railways, and to report how far they afford, separately or in conjunction with other means of transit, adequate facilities for the cheap and rapid transport of goods and passengers within the Island and to Great Britain; what causes have retarded the expansion of traffic upon the Irish lines and their full utilisation for the development of the agricultural and industrial resources of the country; and, generally, by what methods the economical, efficient and harmonious working of the Irish Railways can be best secured."

A.

VICE-REGAL COMMISSION ON IRISH RAILWAYS.

DRAFT HEADS OF EVIDENCE FOR TRADERS, INDUSTRIAL ASSOCIATIONS, COMMERCIAL AND PUBLIC BODIES, &c., ISSUED BY THE COMMISSION IN OCTOBER, 1906.

I.—BROAD GAUGE RAILWAYS.

1. The trade or industry represented.

2. The districts affected and the railways, and the other means of transit concerned.

3. Nature of complaints as to existing facilities:—

(*a.*) Local goods, mineral, and live stock rates, and their effect, generally, on trade and the development of industries;

(*b.*) Through rates for goods and live stock, and their effect, generally, on trade and agriculture in Ireland.

(*c.*) Passenger fares, ordinary, special, and excursion; whether reasonable or excessive.

(*d.*) Whether reductions in the existing rates and fares would be likely to produce eventually a remunerative growth of traffic.

(*e.*) Train service—(1) Passenger; locally on the lines serving the district, and through trains connecting with the systems of other companies; whether the service is efficient in respect of speed; whether the accommodation is satisfactory; the number of trains sufficient for the traffic, and if the through connections are convenient and suitable. (2) Goods and cattle: whether the service is sufficient and suitable and worked with reasonable expedition.

(*f.*) Combined services, *e.g.*, train and car, train and steamer: whether such services have been worked in the district and with what results, or if not, whether services of this nature, if introduced, would be beneficial.

(*g.*) Canals and waterways: whether any existing waterway in the district is worked in conjunction with a railway system so as to give the full benefit of the double means of communication to the public, or whether, in effect, it is worked to the disadvantage of traders from a competitive point of view; if the latter, what quantity of agricultural and other produce and general goods (approximately) at present conveyed by rail could be advantageously carried by water.

(*h.*) Whether there is any evidence of undue preference in respect of rates or facilities.

4. The management of Irish railways: whether this is regarded as satisfactory or otherwise; if unsatisfactory, in what respects has it adversely affected the development of the resources of the country, agricultural and industrial, and to what extent has it retarded the expansion of traffic upon the Irish lines.

5. What suggestions are offered that would be conducive to better management and more effective service, with a view to the proper development of the resources of the country:—

(*a.*) By way of reduced rates and fares, and the payment of a subsidy to the Companies for a period.

(*b.*) By increasing the number of trains in such districts as at present suffer from an insufficient service, and the recoupment to the Companies concerned of the whole, or a portion, of the extra cost.

(*c.*) By the establishment of goods and passenger motor services in districts at present without railway communication, to be worked in conjunction with the Irish Railways, subject to satisfactory arrangements as to the extra cost of maintenance of roads.

(*d.*) By the voluntary or compulsory amalgamation of the Irish railways, and the formation of two or three important systems.

(*e.*) By the nationalisation of all the Irish railways, by way of State purchase or otherwise.

6. Whether the right of appeal to the Board of Trade on certain questions, and the appeal to the Railway and Canal Commissioners as to excessive rates, and, generally, as to unsuitable or improper traffic conditions or arrangements at present open to traders is regarded as satisfactory.

7. Whether the powers given to the Department of Agriculture and Technical Instruction by Sections 17 and 30 of the Act of 1899 (62 and 63 Vic., cap. 50) have been to any extent beneficial to traders and others having complaints against the Irish Railway Companies—particularly as regards Section 17, which enables the Department to take steps for complaining on behalf of any person aggrieved by undue preference, unfair rates, or any matter which the Railway and Canal Commissioners have jurisdiction to determine.

8. Whether there is any other question that might be usefully considered in determining the causes that have retarded the expansion of traffic upon the Irish lines, and their full utilization for the development of the agricultural and industrial resources of the country.

B.

II.—LIGHT RAILWAYS.

1. The trade or industry represented.

2. The districts affected and the railways, and the other means of transit concerned.

3. Nature of complaints as to existing transit facilities:—

(*a.*) Local goods, mineral, and live stock rates, and their effect, generally, on trade and the development of industries;

(*b.*) Through rates for goods and live stock, and their effect, generally, on trade and agriculture in Ireland.

(*c.*) Passenger fares, ordinary, special, and excursion; whether reasonable or excessive.

(*d.*) Whether reductions in the existing rates and fares would be likely to produce eventually a remunerative growth of traffic.

(*e.*) Train service—(1) Passenger; locally on the lines serving the district, and through trains connecting with the systems of other companies; whether the service is efficient in respect of speed; whether the accommodation is satisfactory; the number of trains sufficient for the traffic, and if the through connections are convenient and suitable. (2) Goods and cattle: whether the service is sufficient and suitable and worked with reasonable expedition.

(*f.*) Combined services, *e.g.*, train and car, train and steamer: whether such services have been worked in the district and with what results, or if not, whether services of this nature, if introduced, would be beneficial.

(*g.*) Canals and waterways; whether any existing waterway in the district is worked in conjunction with a railway system so as to give the full benefit of the double means of communication to the public, or whether, in effect, it is worked to the disadvantage of traders from a competitive point of view; if the latter, what quantity of agricultural and other produce and general goods (approximately) at present conveyed by rail could be advantageously carried by water.

(*h.*) Whether there is any evidence of undue preference in respect of rates or facilities.

4. The management of Irish Light Railways; whether this is regarded as satisfactory or otherwise; if unsatisfactory, in what respects has it adversely affected the development of the resources, agricultural and industrial, of the districts served by those lines, and to what extent has it retarded the expansion of traffic.

5. What suggestions are offered that would be conducive to better management and more effective service, with a view to the proper development of the resources of those districts, and having regard to the object for which the lines were constructed:—

(*a.*) By way of reduced rates and fares, and, in the case of non-guaranteed lines of the payment of a subsidy to the Companies for a period.

(*b.*) By increasing the number of trains in such districts as at present suffer from an insufficient service, and the recoupment to the Companies concerned of the whole, or a portion, of the extra cost.

(*c.*) By the establishment of goods and passenger motor services in districts adjacent to, but not directly served by, these lines, to be worked in conjunction with the light railways, subject to satisfactory arrangements as to the extra cost of maintenance of roads.

(*d.*) By amalgamation with other light railways, where possible.

6. Whether the right of appeal to the Board of Trade on certain questions, and the appeal to the Railway and Canal Commissioners as to excessive rates, and, generally, as to unsuitable or improper traffic conditions or arrangements at present open to traders is regarded as satisfactory.

7. Whether the powers given to the Department of Agriculture and Technical Instruction by Sections 17 and 30 of the Act of 1899 (62 and 63 Vic., cap. 50) have been to any extent beneficial to traders and others having complaints against the Irish Railway Companies—particularly as regards Section 17, which enables the Department to take steps for complaining on behalf of any person aggrieved by undue preference, unfair rates, or any matter which the Railway and Canal Commissioners have jurisdiction to determine.

8. Whether there is any other question that might be usefully considered in determining the causes that have retarded the expansion of traffic upon the Irish lines, and their full utilization for the development of the agricultural and industrial resources of the country.

VICE-REGAL COMMISSION ON IRISH RAILWAYS.

MINUTES OF EVIDENCE.—Volume II.

LIST OF WITNESSES (74).

Name.	Description.	Day.	Date.	Evidence.		Appendix.	
				Question.	Page.	No.	Page.
Anderson, Mr. J. T. Noble, M.Inst.C.E.	Past President Institute of Engineers, Victoria, Melbourne.	Twenty-seventh,	23rd April, 1907, ..	15598–15954	112–122	19	582
Ballantine, Alderman M. A. J.P.	Londonderry Corporation, ..	Twenty-ninth,	25th April, 1907, ..	16796–17052	151–158	—	—
Batchen, Mr. Thomas M., M.Inst.C.E.	Engineer, Board of Public Works (Ireland).	Twenty-sixth,	22nd April, 1907, ..	14933–15464	93–108	5 and 8	558 & 561
Boyd, Mr. R. N., ..	Belfast Provision Curers' Association,	Forty-first, ..	4th July, 1907, ..	24141–24264	388–391	—	—
Burke, Mr. J. M., J.P.,	Chairman, Skibbereen Urban District Council, and Baltimore and Skibbereen Harbour Board.	Forty-first, ..	4th July, 1907, ..	24015–24140	385–388	—	—
Carvill, Mr. J., ..	Newry Urban District Council, and Chamber of Commerce.	Thirty-sixth, ..	7th June, 1907, ..	20749–20918	285–291	—	—
Clarke, Mr. J., ..	Secretary, Mayo County Council, ..	Thirty-eighth,	11th June, 1907, ..	22012–22153	325–328	—	—
Collery, Alderman B. (since deceased).	Sligo County Council, ...	Twenty-eighth,	24th April, 1907, ..	16687–16795	146–150	—	—
Corscadden, Mr. T., J.P.,	Cattle Trader, Manorhamilton, co. Leitrim.	Thirty-sixth, ..	7th June, 1907, ..	20585–20748	282–285	—	—
Cosby, Colonel R.G., V.L.	Queen's County County Council, ..	Forty-third, ..	8th July, 1907, ..	25422–25546	429–432	—	—
Cox, Mr. J. M., ..	Seed Merchant, Dundalk, co. Louth,	Twenty-fifth,	15th March, 1907,	14676–14807	86– 89	13 and 31	577 & 599
Craven, Mr. F. J., ..	Messrs. Ransomes, Sims, & Jefferies, Agricultural Machinery Manufacturers, Ipswich.	Thirty-fifth, ..	6th June, 1907, ..	19552–19692	251–255	—	—

SUMMARY OF EVIDENCE.

Mr. M. A. ENNIS, J.P.

Counsel's opinion as to the General Council of County Councils' desire to appear by Counsel, 12458.
Action taken by Local Government Board, 12460.
Question of the stopping of the Great Southern and Western Mail Train at Wellington Bridge, 12462.
Correction of Witness's previous evidence at Q. 12436, 12462.
Inequitable Rates and insufficient facilities complained of by Traders, 12463.
Bacon Rates, Liverpool and Enniscorthy, Inwards and Outwards, 12479, 12494, 12535.
Potato and Corn Rates, Bridgetown and Wexford, 12480, 12542.
Waiting Room at Strabane not heated for night passengers, 12490.
Delay to the public road traffic at Level Crossings, South Wexford Railway Station, complained of 12492.
Unification of Railways and State Control advocated, 12495.
Excessive Terminal charges arising out of present Railway system, 12505.
Combinations between English Companies and the principal Irish Companies not to the advantage of Ireland, 12511.
Large portion of Loan from Board of Works to Rosslare and Wexford Railway written off, 12515.
Question of the possibility of Political or Religious views influencing an Irish Authority in the matter of appointments discussed, 12519.
Question of present majority and minority representation on County Councils, 12525.
Desirability of giving the minority a fair representation on Public Bodies, 12531.
Suggestion that any surplus beyond a certain dividend earned by Railway Companies should be devoted to the increase of accommodation or the reduction of rates, 12557.
Desirability of the provision of Industries for female workers, 12563.
Approval expressed of the work done by the Department of Agriculture and Technical Instruction, 12563.
Special concessions to travellers selling products of Irish Industries suggested, 12565.

Mr. THOMAS MAYNE.

High Railway charges for goods complained of generally, 12569.
Specific Complaint of Excessive charge for conveyance of a Lantern Screen from Kingsbridge to Roscrea and back, 12571.
Irish Railways worked in the interests of people outside of Ireland, 12620.
Nationalisation of the Irish Railways necessary to secure just treatment for Irish Industries advocated, 12624, 12657.
Courtesy and businesslike methods of English Railway Companies in dealing with the Public contrasted with Irish Companies, 12650.

Mr. DAVID S. PRENTICE.

List of Rates reduced on the representations of the Department of Agriculture to the Railway Companies concerned, 12680.
Recommendations of the Departmental Committee in 1897 and action taken thereon, 12700.
Question of co-operation amongst Traders to prepare consignments for transmission on certain specified days at low rates discussed, 12711.
Improvement in the handling of goods by Railway employees visible, 12716.
Iced refrigerator vans provided but little used by the public, 12718.
Uniced Refrigerator and insulated Vans largely availed of for Butter traffic without extra charge, 12723.

Mr. DAVID S. PRENTICE—*continued.*

Question of provision of cold storage at certain railway stations discussed, 12730.
Supervision of the handling and transport of Butter Traffic by the Department's Inspectors, 12740.
Necessity for Cattle Inspection Yards at Belfast Quay urged, 12748.

Mr. A. POOLE WILSON.

Action taken by the Department of Agriculture in connection with the export of Dairy produce, 12774.
"Surprise" Butter Competitions conducted by the Department described, 12777, 12847.
Improvement observable in the packing and finish of the Butter Exhibits, 12814.
Improvement in the packing and handling of Butter packages in transit, 12820.
Leaflet on the subject of packing issued to makers of Butter by the Department, 12825.
Foreign sample packages shown to Exhibitors, 12829.
Conference of Butter Package Manufacturers called and a standard laid down for boxes and kiels, 12830.
Irish standard Butter Packages now quite equal to those of any other country, 12841.
Precautions taken by the Danish Government as to the sale of Danish Butter, 12865.
Precautions taken by the Department as to the export of Irish Butter properly so called, 12876.
Output and prices of Butter at different seasons of the year, 12879.
Necessity for increase in Department's powers as to inspection of Dairies and Creameries, 12915.
Question of provision of cold storage by Railway Companies for Butter traffic, 12920.
Estimated value of Butter produced in Ireland in 1905, 12939.
Difficulty of obtaining accurate Statistics of Irish Imports and Exports, 12947.

Mr. JAMES HARPER.

Value of yearly export of Eggs, Poultry, and Fruit, 12949.
Department of Agriculture Inspectors' duties, 12954, 13033.
Improvement in Egg packages, method of packing and handling of the traffic, 12963.
Samples of improved Egg Packages distributed to Shippers and instructions issued at the expense of the Department, 12972
"Non-returnable" Cases described, 12988.
Necessity for proper grading of eggs when packing, 12991.
Damage and loss in transit attributable to faulty cases and packing, 13008.
Improved Poultry crates and boxes brought into use, 13014.
Use of non-returnable standard boxes for fruit traffic for English markets advocated, 13021.
Ireland a good fruit-growing country: value of the fruit crop in the year 1904, 13023.
Very little damage to fruit in transit when properly packed, 13027A.
Desirability of interviewing Retail Customers, 13050.
Poultry schemes encouraged by the Department, 13059.

Mr. WILLIAM FIELD, M.P.

Resolution moved in the House of Commons on the question of State Control or Purchase of Irish Railways, Session 1899, 13081, 13332.
Resolution adopted unanimously by the International Agricultural Congress at Buda Pesth as to Railways and Canals, 13086, 13291.
Injury caused by Preferential Through Rates, 13090, 13114.

Mr. WILLIAM FIELD, M.P.—*continued.*

Necessity for a cheaper tribunal in lieu of the Railway and Canal Commission Court, 13092, 13301-2.

Department of Agriculture charged with certain portion of duties of Board of Trade, 13098, 13393.

Present system of Irish Railway management and the Companies' policy as regards rates condemned, 13105.

Suggested predominating influence of English Railway Companies over Irish Companies at Rates Conferences, 13112.

System of Private Railway ownership condemned, 13117.

Allegation that Irish Railway policy is tending to extinguish industries and promote emigration, 13118.

Improvement in means of communication for Passengers between the different Dublin Railway Termini and Steamers necessary, 13122.

Cheaper fares and better accommodation generally for third-class passengers urged, 13125.

Opinions of Mr. Acworth and Mr. Balfour Browne, K.C., on British and Irish Rates and Fares quoted, 13138.

Cheap transit an important factor in the development of Industries, 13145.

Policy of State-owned Railways in other Countries as regards Rates for Imports and Exports, 13149.

Statements by Mr. Cunningham in his book on Railway Nationalisation, 13156.

Irish dividend-paying Companies have paid higher dividends than the average of British Railways, 13162.

Cheaper cost of construction of and lower rates on Irish Railways as compared with Great Britain, 13163.

Government Grants to Irish Railways, quoted from return furnished by Financial Secretary of the Treasury, 13167, 13421.

Grievances of Live Stock Dealers, 13174.

Failure on the part of the Companies to carry out the recommendations of the Departmental Committee, 13179.

Complaints as to delays in transit of Live Stock, 13181.

Conditions on Live Stock consignment notes regarded as unsatisfactory, 13194, 13419.

Recommendations of the Irish Cattle Traders and Stockowners' Association as to improvement in Live Stock transit arrangements, 13197.

State Ownership and Management, in witness's opinion, the only remedy for existing defects in Irish Railway management, 13199.

Action of the G. N. Rly. (I.) in the matter of Balbriggan Cattle siding referred to, 13203.

General views of witness on the unification or nationalisation of Irish Railways, 13206.

Drummond Commission Report, year 1838, quoted, 13208.

Lord George Bentick's proposition for purchase of Irish Railways in 1846, 13208.

Report of Devonshire Commission, 1867, 13210.

Allport Commission Report, 1888, 13211, 13329.

Lord Kelvin's views on State Control of Railways, 13215.

Suggestion that the Government have always shelved State Purchase, 13223.

Motion by Mr. Hayden, M.P., in 1901 in favour of Amalgamation or State Purchase, 13224, 13332.

Views of Sir Michael Hicks-Beach and Mr. George Wyndham, 13225, 13332.

State Ownership of Railways practically the system in all countries except Great Britain and Ireland and the United States, 13238.

Movement in the direction of State Ownership in the United States, 13241.

Ireland favourably situated for the Nationalisation of her Railways, 13244.

The purchase of Irish Railways by a grant from the British Exchequer advocated, 13246.

Estimated cost of the Irish Railways, 13248.

Various heads under which economies might be effected under State Ownership indicated, 13254, 13409.

Mr. WILLIAM FIELD, M.P.—*continued.*

Unqualified disapproval of British Railway Companies having any share or control in Irish Railway management expressed, 13277.

Cheaper export and higher import rates advocated, 13280.

The forcing of traffic by routes other than its natural channels deprecated, 13281.

Quotations from an article published in the "Financial News" as to the adverse effect of the present railway freights on Ireland's prosperity, 13284.

The creation of an Irish Council to look after Irish Trade urged, 13287.

Proposed scheme for a new Management under a National Council, 13288.

Mr. Lloyd's statement as to the advantages derived from the system of State Management of New Zealand Railways approved, 13289.

Mr. Field's Parliamentary question as to the apportionment of through rates, 13300.

A tribunal such as the Allport Commission recommended approved of, 13304.

Two classes of passenger fares only recommended, 13308.

Reduction in Second Class fares, if retained, urged, 13308.

Vital necessity for effecting economies and cheapening transit pointed out, 13312.

Difficulty of obtaining reductions in Rates under present system of ownership of Railways indicated, 13313.

Advantage of co-operation amongst producers to forward large consignments at low rates, 13318.

Actual dividends paid English, Scotch, and Irish Railways compared and explained, 13321.

Cattle Traders' complaints against Irish Railway Companies, 13323.

Action taken by the Irish Cattle Traders and Stockowners' Association thereon, 13324.

Results of representations to the Railway Companies not satisfactory, 13325.

Nationalisation of the Railways stated to be now the desired object of Irish public opinion, 13336.

The analogy of State working of Parcels Post, Telegraphs, etc., 13339.

Financial aspect of State Purchase discussed, 13342.

Question of the purchase of the subsidiary undertakings of the Irish Railways by the State, 13345.

Working of Irish Canals: practically free transit for coarse traffic, not able to bear present transit charges suggested, 13348.

Ratio of working expenses to receipts on English, Scotch, and Irish lines, 13353.

Reduction in the Irish ratio considered probable under unified management, 13356.

Reduced rates of expenditure on Scotch lines owing to concentration of management instanced, 13357.

Effect of English Railway Companies' influence in Ireland on the development and flow of traffic discussed, 13365.

The encouragement of the flow of traffic through its natural channel advocated, 13366.

Constitution of suggested new controlling body, 13374.

Question as to Religion and Politics having an undue influence over an Irish-constituted controlling body discussed, 13377.

The rights of the minority in Ireland to full representation admitted and recommended. 13391.

Ownership of the Irish Canals discussed, 13397.

The proportion of miles of State-owned to Private lines discussed generally, 13404.

Question of Wagon supply at Fairs, 13416.

Resolution of Wexford County Council protesting against being debarred from availing of legal assistance when appearing before the Commission, 13423.

Mr. J. DOLAN.

Railway Rates generally in Ireland considered excessive, 13430.

Great Northern Railway Company charged with favouring Belfast Port as against Dundalk and Drogheda—Example, Cattle Rate, Ardee to Glasgow, 13435.

Mr. J. DOLAN—*continued.*

Steamship sailings Dundalk and Glasgow for cattle traffic, 13442.
Cattle Rates, Ardee to Belfast and Ardee to Dundalk, quoted, 13447.
Complaint that privilege of cheap Excursion Fares from country stations on G.N. (I.) Rly. to Belfast not extended to Dublin, 13454.
Pooling agreement between the L. and N.W. Rly. Co. and the L. and Y. Rly. Co. as regards receipts from cross-Channel traffic *via* Greenore and *via* Drogheda alleged and complained of, 13458.
Grievance of the Guarantors of the Ardee branch of the G.N. (I.) R. that they are treated unjustly in the matter of receipts to the branch, 13470, 13505.
No particular grievance against the management of the G.N. (I.) R. as regards Ardee, 13483.
A better passenger train service to towns north of Dundalk asked for, 13483.
Preferential cross-Channel through rates complained of, 13484.
Nationalisation of the Railways under an Irish Authority advocated, 13490.
Mr. Field's (previous witness) views on Nationalisation approved of, 13497.
Population of Ardee—Constitution of the Board of Town Commissioners, 13498.
Question of the purchase of the Drogheda Steam Packet Co. by the L. and Y. Rly. Co., 13500.
Cattle Rates from Ardee to Belfast, Dundalk, and Glasgow discussed, 13503.

Mr. ALEXANDER WEIR.

Through Rates from Strabane to Southern towns considered excessive compared with rates from Ireland to English and Scotch stations, 13524, 13579.
Suggested placing of obligation of refunding voltarily all cartage charges when included in rates but service not performed by the Railway Companies, 13537.
"Smalls" (small parcels rate) complained of, 13551.
Short distance rates considered excessive, 13558.
Rate for Woollen goods from Londonderry to St. Johnston station complained of, 13558, 13588.
Absorption of the small railways by the larger approved of, 13576.

Mr. W. A. CURRIE.

Railway Companies serving Belfast, 13605.
Insufficient supply of wagons for Coal traffic at Belfast complained of and unsatisfactory result of applications to the Railway Companies on the subject, 13610.
Alleged preferential treatment of Newry as against Belfast in the matter of Coal rates, 13621.
Alleged disregard of the decision of the Railway and Canal Commissioners as to Coal rate, Belfast and Armagh, by the G.N. (I.) Rly. Co., 13637.
Tonnage of Coals to Belfast and Newry, year 1905, 13641, 13710.
Comparison of the increased tonnage into Belfast and Newry (year 1905 against 1900), 13646.
Alleged rebate on coal rate from Larne to Ballyclare by Midland Railway (Northern Counties Committee), 13653.
A cheaper and more accessible tribunal than the Railway and Canal Commission Court for adjudicating disputes advocated, 13680.
The railway arrangements generally, apart from the Coal traffic, considered satisfactory, 13693.
Nationalisation or Amalgamation of the Irish Railways under a single Central authority disapproved of, 13698.
The acquisition of the Northern Counties and the Donegal lines by the Midland Railway considered advantageous, 13702.
The absorption of some of the smaller lines by the greater approved, 13709.
The expense of the Railway and Canal Commission Court discussed, 13716.

Mr. W. A. CURRIE—*continued.*

Number of wagon per day required at Belfast for Coal traffic, 13726.
Comparison of number of goods wagons per mile available for traffic in Ireland and Scotland, 13731.
Healthy competition between the smaller Ports and Belfast not objected to if rates are reasonable, 13734.
Belfast and Newry coal rates considered higher than is necessary to give the Railway Company a legitimate profit on working, 13738.
The small ports entitled to the advantages of their geographical position, 13746.
Reluctance of some Traders to make complaints against the Railway Companies discussed, 13748.
The amalgamation of the small lines in the North of Ireland considered to have been for the general good of the country, 13751.
Question of the amalgamation of the Londonderry and Lough Swilly line, 13755.
Resolution of the Belfast Harbour Commissioners against amalgamation and centralisation of control discussed, 13759.
The reasons for the attitude adopted by the Harbour Commissioners on the subject of the constitution and working of the Irish Railways not given, 13773.
Question of the unanimity of the Harbour Board in adopting their Resolution discussed. 13776.
Apparent apathy of the Harbour Commissioners with regard to the question of rates from Belfast to inland towns discussed, 13794.
Question of the charge per head made by the Belfast Harbour Board on outwards Cattle and the services rendered for the payment, 13824, 13875.
The Harbour Board not aware of any complaint having been made by the Department of Agriculture of want of lairage or any other inconvenience to Cattle on the Belfast Quays, 13839.
Question of allowing through traffic from inland towns to inland towns to run over the Board's connecting Tramways in Belfast, 13841.
The practice of exchanging through traffic between Railway termini in Southampton over the Quay Tramways instanced, 13844.
Inconvenience to through Irish traffic owing to the Quay Tramways in Belfast controlled by Harbour Board not being used to link up the different Railway Termini discussed, 13851.
Suggested cause of the objection of the Board to the use of the Tramway lines for through traffic, 13859.
Former proposal of Belfast Harbour Commissioners to buy Larne Harbour, 13863.
Practice of keeping loaded wagons standing on the Quay an undue time alleged against the Merchants, 13866.
The rates for Coal, Belfast to Armagh and Newry to Armagh, discussed, 13867.
Explanation of the low Grain rate from Belfast to Londonderry, 13871.

Mr. ROBERT H. TODD, LL.D.

Promotion of Light Railways and Tramways, 13866.
Action taken in connection with the Tramways (Ireland) Act, 1883, 13888.
Evidence given before the Allport Commission *re* proposed Light Railways, 13890.
Schemes then suggested since carried out with beneficial results, 13893.
Light Railways Londonderry to Park, Donemana to Cookstown, and from Castlederg to Pettigo suggested, 13901.
Coalfields in Cookstown district awaiting development, 13905.
Description of districts to be developed and industries to be promoted, 13909.
Existing railway communication with Cookstown not satisfactory, 13916.
Injurious effect of preferential cross-Channel rates on the prosperity of inland towns, 13919.
Alleged injurious effect to parts of Ireland by the acquisition of Irish railways by the English Companies, 13920.

Mr. ROBERT H. TODD, LL.D.—*continued.*

Allegation that the acquisition of the Northern Counties Railway by the Midland of England led to diversion of traffic from Derry to Larne and Belfast, 13922.
Suggestion that the partnership in Railways in the North of Ireland between the G.N. (I.) R. and Midland of England destroys competition, 13927.
Actual mileage basis for all cross-Channel through rates recommended, 13929.
Preferential treatment of Belfast as against Londonderry alleged, 13932.
Cost of appeal to Railway and Canal Commission Court prohibitory, 13933.
Cross-Channel steamer services from Derry, 13934, 14003.
Unification of the Irish Railways recommended, 13937.
Compulsory unification of the Irish Railways on just terms to the existing Companies recommended, 13496.
Suggestion that the unified Railways be managed by a Board of Irish Experts, 13947.
History of the promotion and construction of the Letterkenny Railway, 13949.
Loans obtained through the Board of Works and method of repayment, 13950.
Annual rate in repayment of Board of Works loans paid by Londonderry City, 13951.
Burtonport Railway constructed by a Treasury Grant under Railways Act of 1896, 13954.
Treasury agreement with Lough Swilly Company, 13954.
Provision authorising the Board of Works to construct and equip the line acted on, 13954.
Line opened for Traffic 9th March, 1903, 13955.
Allegation of the Lough Swilly Company that the line as handed over to them was not constructed or equipped in accordance with the Contract and Specifications, 13956.
Tank engines supplied by the Board of Works in opposition to the wishes of the Lough Swilly Company, 13959.
The number of engines supplied alleged to be insufficient for the line, 13961.
Controversy with the Board of Works as to the alleged defects in construction and equipment of the line, 13963.
Powers of the Board of Works under Section 7 of the Railways Act of 1896, 13963.
Mr. Tatlow, Manager of the M.G.W. Railway, sent by the Board of Works to report on the condition and working of the line, 13963, 14048.
Lease in perpetuity held by Lough Swilly Company for working of line if done satisfactorily, 13964.
Clause in Act of 1896 empowering the Lord Lieutenant to make an Order for the line to be taken over and worked if the Company are not working the line satisfactorily, 13964.
Arbitration Clause in Treasury Agreement, 13964.
Alleged conditional offer by Board of Works of additional rolling stock, 13964.
The Railway Company refuse the Board's offer and press for a Public Inquiry, 13964.
The Board of Trade had no powers of Inquiry except as provided for in Section 24 of the Authorising Order in Council of 1898, 13964.
Section 24 quoted and the effect of an application under it explained, 13964.
Suggestion that Mr. Tatlow's opinion as to the condition of the Burtonport line generally should be obtained, 13965.
Carndonagh line said to be working satisfactorily, 13971.
Allegation that the public suffers from the present state of affairs on Burtonport line, 13974.
Beneficial effects of extension of Light Railways in Donegal, 13975.
Financial aspect of proposed further extensions in the North, 13979.
Engineering difficulties of proposed extensions and advantages to be derived from the latter, 13984.
Effect of the existing lines on the flow of traffic *via* Derry and *via* Belfast, 13990.
Passenger fares, Draperstown and Derry, 13993.
Probable effect on flow of traffic if the Lough Swilly system were absorbed by the Great Northern Railway, 13998.

Mr. ROBERT H. TODD, LL.D.—*continued.*

Promotion, date of construction, and method of financing the Letterkenny line, 14008.
The line a financial failure, 14015.
Scheme for affording relief to the ratepayers by sale to the Lough Swilly Railway as submitted to Treasury and Board of Works, 14018.
Proposals declined by both Departments, 14021.
Increase of receipts of Letterkenny line for last quinquennial period, 14024.
Probability of the new branch from Strabane to Letterkenny diverting traffic from Letterkenny line, 14028.
Necessity of relieving the ratepayers of liability in respect of the Letterkenny line urged, 14034.
Cost per mile of Burtonport Railway, 14036.
Cost per mile of Buncrana and Carndonagh Railway, 14037.
Condition of Burtonport line when handed over to the Lough Swilly Company, 14038.
Further expenditure on Burtonport line totalling £70,000 alleged to be necessary, 14040.
Profit on working of Burtonport line described, 14043.
The question of arbitration between Board of Works and Lough Swilly Company discussed, 14046.
Question of the sufficiency of Rolling Stock on Burtonport Line, 14052.
Improvements by Board of Works on Letterkenny Line, 14054.
Board of Works' treatment of the Letterkenny and the Burtonport lines contrasted, 14058.
Source from which cost of further extensions should be derived, 14063.
Suggestion that full inquiry should be made before the Routes, Termini, etc., of new lines should be decided, 14066.
Determination of Routes, &c., after full inquiry, to rest with the Lord Lieutenant, 14067.
Suggestion that the Treasury should guarantee the whole sum necessary for future extensions and recover from the Baronies, 14069.
English Railway Companies' control of Irish lines disapproved of, 14070.
The effect of previous amalgamations of North of Ireland lines on the Port of Derry discussed, 14073.

Mr. ROBERT WATSON.

Liverpool through rate for flour to inland Irish towns complained of as unfair, 14086.
Foreign wheat usually imported direct to Londonderry, 14089.
Reduction in the local rates for Indian meal sought, 14093.
No general complaint to make of the Railways, 14097.
Conference between the Railway Managers and the Traders at certain places and at certain times suggested, 14098.
Question of unification or nationalisation of Irish Railways, 14101.
Absorption of the Donegal system by the Midland and Great Northern Cos. disapproved of, 14108.
The acquisition of Irish Railways by English Railway Companies regarded as disadvantageous, 14110.

Mr. R. L. YEATES.

Complaints as to Rates for cotton goods, 14135.
Preferential cross-Channel rates complained of, 14137.
Rates for bleached and unbleached Manchester cotton goods, 14143.
Complaint as to through Irish rates from Derry to Southern stations, 14149.
The acquisition of Irish Railway lines by English Companies not approved of, 14153.

Mr. W. J. HANNA, J.P.

History of the promotion and financing of the Letterkenny Railway, 14162.
Government Loans obtained through Board of Works and the security given, 14163.
Alleged excessive rate of interest exacted by the Board of Works, 14165, 14199.

Mr. W. J. HANNA, J.P.—*continued.*

Earnings of line and payments by guarantors, 14167.
Proposal for the sale of the Railway to the Lough Swilly Company in 1900, 14170, 14190.
Anticipated effect of the railway extension from Strabane to Letterkenny on the Letterkenny Railway receipts, 14173, 14204.
Burtonport State Railway—unsatisfactory working since opening in 1903, 14173.
Alleged defective construction and equipment, 14173.
Necessity for arbitration between the Board of Works and the Lough Swilly Railway on the subject of the Burtonport line urged, 14173.
Failures of engines and collapse of bridge mentioned, 14173.
Allegation that the present condition and working of the Burtonport line retard the progress of the district served, 14187.
Profit on the working of the Burtonport Line, 14207.
Industries developed and capable of being developed in the district served by the Burtonport Railway, 14212.
New Pier at Gortnasate built by Board of Works recently, 14217.
Action taken by Board of Trade on the petition of the Donegal County Council for an inquiry into the construction and working of the Burtonport Railway, 14222.
Unification of the Irish Railways under an Irish authority advocated, 14229.

Mr. W. K. FAYLE, J.P.

Method of charging "mixed' consignments under "smalls" scale condemned, 14237, 14422.
Complaint as to cross-Channel through preferential rates, London and Tralee, 14251.
Action of the G.S. and W. Rly. Co. in attempting to raise certain rates which the Railway and Canal Commission declined to approve, 14292.
Alleged increase of rates by the Company between Glasgow and Birr, 14296, 14431.
Complaint that local rates are not carted and delivered, while cross-Channel rates are, 14303.
The G.S. and W. Rly. Co.'s management condemned—*e.g.*, alleged insufficiency of staff and inconvenient hours of arrival of goods trains, 14318.
Birr station, facilities for transacting business alleged to be inadequate, 14334, 14446.
Complaint as to "owner's risk" conditions and the difficulties in getting claims settled, 14359.
Insufficient supply of wagons for goods traffic alleged, also unsatisfactory condition of passenger coaches on branch lines, 14372.
System of Private Ownership of Railways alleged to retard further extension, 14383.
Birr to Portumna Derelict Railway, original cost and how subscribed: line leased to G.S. and W. Co., but badly worked by latter, 14385, 14456.
Train service on the Portumna line when worked by G.S. and W. Co., 14387.
The line offered to G.S. and W. Co. for £10,000, but declined; railway now derelict and dismantled, 14395.
Failure of a second proposal for the G.S. and W. Co. to take over and work the line owing to the grant asked for by the Company not being forthcoming, 14398.
Possibilities of the line paying under proper management considered, 14399.
State Purchase of Irish Railways advocated, 14404.
Suggested reduction in Second Class fares, 14409.
Special rates and secret rebates given to individual traders denounced, 14417, 14477.
Preferential cross-Channel through rates prejudicial to home manufacturers, 14430.
Necessity for a cheaper and simpler Court than the Railway and Canal Commission to adjust disputes urged, 14443.
German railway rates and methods not admitted to be analogous, 14455.
Suggestions as to passenger fares and accommodation, 14464.

Mr. W. K. FAYLE, J.P.—*continued.*

Resolution in favour of State Purchase and Control of Irish Railways, 14468.
Special rates and secret rebates and inequality between through and local rates objected to, 14477.
Resolution of the Birr Urban District Council re working of Nenagh and Limerick Branch, 14489.

Mr. EDWARD SCLATER, J.P.

Railway Companies' method of dealing with cattle traffic—some improvements noticeable, 14496.
Instances of faulty arrangements for dealing with traffic from Fairs on M.G.W. Rly. system, 14501.
Recommendation that a responsible Railway Official should be placed in charge of loading banks at all big fairs, 14512.
Alleged faulty arrangements for the conveyance of cattle to the Dublin weekly market, 14516.
Conveyance of cattle by night goods trains condemned, 14528.
Suggested arrangement as to telegraphic communication, 14531.
Suggestion that all cattle trucks should be covered and have a falling flap for unloading, 14539.
A cheaper and more accessible Court than that of the Railway and Canal Commission advocated, 14552.
Recommendation that a minimum rate of speed for cattle trains should be fixed, 14559.
Extra cost for conveyance of cattle on Passenger trains, 14571.
Amalgamation of the smaller systems with the larger Railways recommended, 14577, 14650.
More consideration to suggestions from the Cattle trade by the Railway Companies suggested, 14583.
State Ownership of the Irish Railways not endorsed, 14591.
Condition in which cattle arrive after long sea passages, 14595.
The general use of screw couplings on cattle trains recommended, 14601, 14675.
Cost per head for freight, etc., on cattle sent to Manchester market, 14604.
Complaints as to injury to cattle conveyed by goods trains, 14614.
Suggestion of combination on the part of senders to enable larger number of cattle to be railed, 14618.
The recovery of compensation for injuries to cattle discussed, 14625.
Department of Agriculture's recommendations as regards cattle transit, 14631.
Reasons for objections to State Ownership, 14635.
Limited competition between Irish Railway Companies under existing conditions, 14643.
Reduction in rates through amalgamation anticipated, 14652.
Delays to live stock from M.G.W. Rly. fairs and arrangements for transit, 14657.
Question of screw couplings for cattle wagons—Recommendations of the Transit Committee, 14675.

Mr. JOHN M. COX.

Allegation that seed rates to South of Ireland are prohibitive, 14691.
Difficulty in obtaining reasonable through rates from the G.S. and W. Rly. Co., 14702.
Excessive rate to Tralee compared with rate from Belfast instanced, 14703, 14776.
Steamer service from Dundalk to Southern ports, 14711.
Instances of rates from Dundalk to English and Continental towns comparatively lower than Irish inland rates, 14720.
Alleged disinclination on the part of Irish Companies to meet Traders' requirements, 14748.
Rate for Grass Seeds, Dundalk and Youghal, higher than the sum of the locals, 14749.
Complaint as to passenger service: Night Mail from Belfast to Dublin, 14756.

Mr. JOHN M. COX—*continued.*

Better train connection to Dundalk with steamer service, Holyhead and North Wall, urged, 14760.
Exclusion of third class passengers from G.N. (I.) R. Co.'s mail train complained of, 14763.
Necessity for a cheaper tribunal than the Railway and Canal Commission Court, 14766.
Low rate for seeds from Belfast to Dublin owing to sea competition, 14787.
Suggestion that excessive inland local rates help foreign competition, 14800.

Mr. JOHN SWEENEY.

Rates for fish, Burtonport and London, compared with rates to London from Scotland, 14810, 14922.
Complaint as to rates for returned empty fish barrels, 14822, 14919.
Cheap fares for female fish curers between Burtonport and Scotland recommended, 14827.
Complains, in his official capacity as a Baronial Director of the line, that the development of tourist traffic is retarded by the inefficient working of the Burtonport line by the Lough Swilly Company, 14832.
English people deterred thereby from travelling on the line, 14842.
Neglect of Lough Swilly Company to summon the Baronial Directors to attend at Board meetings, 14843.
Baronial Directors' appeal to the Board of Works on this point, 14845.
The Burtonport line a paying concern, notwithstanding bad working by the Company, 14846.
Instances of alleged anomalies in goods rates, 14848.
Through drapery rate, Belfast and Burtonport, in excess of combined local rates, 14850.
Rates for cured herrings in barrels alleged to be excessive and an impediment to home trade, 14854.
Extent of the herring curing and fresh fish trade at Burtonport, 14855, 14901.
The advantage of having coasting steamer services to keep down railway rates pointed out, 14863.
Nationalisation of the Irish Railways under control of an Irish body advocated, 14870.
Necessity for employment for female workers in poor districts, 14875.
Rate for granite from Dungloe station to Burtonport complained of, 14879.
Unsatisfactory working of Burtonport line attributed to bad management on the part of the Lough Swilly Company, and not to defective construction, as alleged by the Company, 14887.
Constitution of the Lough Swilly Board of Directors and attendance of Baronial Directors at Meetings discussed, 14894.
Composition of Donegal County Council, 14904.
Rates for cured herrings to Irish towns, 14909.
Question of Baronial Directors' right to attend Board Meetings of the Lough Swilly Company, 14930.

Mr. THOMAS M. BATCHEN, M. Inst. C.E.

Burtonport Railway—Provision of funds for construction, 14937.
Agreement as to the construction and working of the line and the obligations of the Lough Swilly Railway Company, 14938.
Right reserved to the Board of Works in certain eventualities to construct the line, 14943.
Free Grant provided by the Treasury, 14944.
Acquisition of the lands and the construction and equipment of the line undertaken by the Board of Works, 14945.
A running shed to be erected, 14947.
Preparation of plans, specifications, etc., 14948.
Tenders advertised for, 14952, 15361.
Lough Swilly Company's refusal to be present at the opening of tenders, 14955.
Line constructed by the Board of Works owing to refusal of company to sign the contract, 14967.

Mr. THOMAS M. BATCHEN, M. Inst. C.E. —*continued.*

Engineer and Solicitors employed by company for the new line taken over by the Board of Works, 14970, 15374.
Disputes with company as to promotion, expenses, 14979.
Deviations for original plans proposed by contractors and approved by Board of Works, 14988.
Acquiescence of Lough Swilly Company in the deviations and Orders in Council promoted, 14997, 15380.
Inspection of the works during construction by the Engineers, the Board, and the Company, 15001.
Report of an independent Engineer obtained by Board, 15012, 15386.
Deviations carried out on Carndonagh line also, 15025.
Board of Trade inspection of Burtonport Railway, 15028.
Intimation from Lough Swilly Railway Company of willingness to take over and work the railway on certain conditions, 15039.
Date of opening of Burtonport line, 15045.
Application from working company for additional works and equipment, 15051.
Arbitration proposed, 15057.
Increased list of additional works put forward by working company eleven months after opening of line and refused by Board of Works, 15077.
Additional supply of rolling stock conditionally promised by the Board of Works, 15097, 15246, 15429.
Conference with the company suggested by the Board of Works, 15101, 15328.
Enormous claim for new works put forward by company, 15101, 15297, 15439.
Refusal of Board of Works to submit claim to arbitration, 15112.
Large claim for extras made by the contractors declined by Board, 15117, 15282.
Present position of the Board of Works regarding the claim for omitted works, 15122.
Items of the claim—Viaducts, 15130; permanent way, 15138; ballasting, 15140; fencing, 15145; earthworks, etc., 15150-1; formation of railways over bogs, 15155; signalling, 15159; level crossings, sidings, station platforms, new crossing places, etc., 15160-4.
Obligations of the company under Clause 11 of Agreement, 15167.
Company's objection to tank engines supplied by Board for Burtonport Railway in accordance with original specifications, 15182.
Tank engines originally contemplated by company, 15190.
Desire of company to obtain tender engines to run between Londonderry and Burtonport, 15199.
Objections to working tender engines over Burtonport line stated, 15202.
Tank engines the usual type used on narrow-gauge railways in Great Britain and Ireland, 15208.
Specification of the tank engines prepared by Mr. Livesey, Donegal Railway, and approved by Engineer representing the company, 15213.
Method of computing the amount of rolling stock required to work the line, 15225.
Increased traffic after opening of line found to necessitate additional supply of rolling stock owing to increased train service, 15237.
Working expenses retained by the company, 15259.
Dr. Todd's and Mr. Hanna's evidence at the previous sittings, 15263.
Collapse of railway bridge near Foxhall, 15270.
Alleged faulty construction of bridge contradicted, 15270.
Abnormally heavy fall of rain the cause of the collapse, 15274.
The suggested inquiry as to the condition of the line generally not considered necessary, 15278.
Contractor's work done satisfactorily, 15279.
Cost of construction of line and contractors' additional claim for extras discussed, 15280.

Mr. THOMAS M. BATCHEN, M. Inst. C.E.
—*continued.*
The delays, inconveniences, and suggested danger to the public due to bad management of the Lough Swilly Company, 15308, 15340.
Sections of the Act of 1896 and of the Order in Council bearing on the subject of inquiries regarding construction, etc., and the powers of the Treasury, 15312.
Mr. Tatlow's report under Section 7 of the Railways Act, 1896, 15317.
Proposed inquiry as to construction under Section 21 of the Treasury Agreement, 15320.
The payment to company of £3 10*s.* per mile per week discussed, 15332.
Suggestion that some concessions should be made to the working company in the public interest disapproved, 15339.
Lines comprising the Lough Swilly Railway system, 15344.
Sum advanced by Treasury for Letterkenny Railway and interest charged, 15344.
Lough Swilly Company's offer to buy the Letterkenny line, and relay it with heavier rails, 15349.
Suggested inconvenience of running different engines on separate sections of the system denied, 15355.
Burtonport Railway—Terms of the Agreement between the Board of Works and promoting Company discussed, 15358.
Method of arriving at amount of free grant, 15363.
Sum allocated towards promotion expenses and amount vouched for by the company and paid by the Board, 15365.
Private agreement between the company and the contractors relative to the deviations, 15390.
Board of Trade Report confined to the question of construction, 15417.
Certain minor improvements agreed on with company's engineer carried out, 15419.
Willingness of the Board of Works to make reasonable concessions to the working company under certain conditions, 15423.
The working company's obligations under Clause 12 of the Agreement, 15426.
The claim for £70,000 only made more than two years after the opening of the line, 15439.
The larger items of claim discussed, 15442.
Mr. Malcolm's Report as to alleged inadequacy of tank engines, 15445.
Suitability of tank engines for the Burtonport Railway explained, 15448.
Promotion and construction of the Carndonagh line, 15453.
Cost of construction of Carndonagh line, 15455.
Alleged extravagant works, 15457.
Accuracy of Dr. Todd's statements *re* Burtonport Railway impugned, 15462.

Mr. JOHN M'COLGAN.
Demand for cheaper rates and fares, 15476.
Comparison of Cross-Channel rates for boots from English stations to Strabane and Londonderry, 15481.
Decline of the leather-tanning industry, 15491.
Complaint as to rates for Wines and Spirits, 15496.
Comparison of the rates for Stout from Dublin to Strabane and Londonderry, 15508.
Equal passenger train service and facilities to those afforded Londonderry advocated for Strabane, 15512.
Extension of market ticket facilities urged, 15516.
The advantage of the introduction of the Midland Railway into Strabane district, 15528.
Alleged excessive rates for small parcels, 15535.
Increased lavatory accommodation for 3rd class passengers, 15541.
Extension of railway from Strabane to Cookstown advocated, 15545.
Industries awaiting development in the district, 15547.
Importance of Strabane as a Post Office centre, 15558.
Alleged diversion of traffic from Strabane to Londonderry, 15560.
Recommendation that the control of the railways should be in the hands of a central Irish authority, 15573.

Mr. JOHN M'COLGAN—*continued.*
The Association unanimous in favour of State purchase, 15588.
The disparity in the rates to Strabane and Londonderry discussed, 15589.

Mr. J. T. NOBLE ANDERSON, B.E.
Witness's experience as regards ownership and working of Australasian Railways, 15605.
Ninety-one per cent. of Australian Railways, and the New Zealand Railways, with one exception, State-owned, 15607.
Eighty per cent. of the Australian Railways constructed by the Government with Government funds, 15616.
The Tasmanian Railways largely privately owned and worked in the interests of the Mining Companies, 15624.
Value of Government Railways in the opening up of backward districts, 15631.
All land claims on projected new routes must be met locally in the case of extensions into the bush, 15640.
Mileage of the Australian Railways (State-constructed) compared with the mileage of Railways in Great Britain, 15644.
History of the management of the Australian State Railways, 15653.
Practically controlled for past twenty years by three Commissioners appointed by the Government, 15658.
Constitution and emoluments of the Commission, 15662.
Exception to the system of management by Commissioners as regards the Tasmanian and New Zealand Railways, 15676.
Victoria, New South Wales, and New Zealand the most successfully worked railways in Australasia, 15686.
Tenure of employment of the Commissioners, 15692.
The public better served by the State-owned than by the private lines, 15701.
Passenger fares in Australia practically the same as in Great Britain, 15708.
Colonial system of Coupon tickets and monthly tickets explained, 15711.
Special travelling facilities for school children, soldiers in uniform, working men, etc., 15723.
New Zealand railways worked just to pay expenses, not for profit, 15731.
Colonial public opinion entirely favourable to the system of State ownership, 15735.
The system of State Ownership and management approved, 15739.
Low initial cost of construction of Australasian State Railways explained, 15745.
Cost of construction per mile compared with railways in Great Britain and Ireland, 15746.
Difference in railway gauges in the different States a cause of great inconvenience, 15764.
Greater facilities of State Railways for the encouragement of new industries, 15770.
Colonial public interest in railways alleged to be keener than in Great Britain, 15776.
State Ownership and concentration of the Irish Railways recommended, 15785.
State Ownership of Irish Railways and control under an Irish authority advocated, 15789, 15885.
The progress of Australia and New Zealand largely attributable to their railways being State-owned, 15795.
Comparison of mileage and revenue of Victorian Railways in proportion to population, 15798.
Railway mileage of the Australian Colonies, 15806.
Mileage of Australasian State-owned and private railways, 15810.
Colonial Railway rolling stock and facilities for public alleged to be better than in Ireland, 15818.
Beneficial result of the system of allowing the officials a percentage of surplus revenue, 15821.
Rates and fares on Australian Railways, 15822.
Comparison of the results of State and private management, 15828.
Constitution of the management of the State Railways and tenure of office, etc., 15838.
Effect of public opinion on the management of the Australian Railways, 15857.

Mr. J. T. NOBLE ANDERSON, B.E.—*continued.*

The Legislature the final authority on railway policy, 15858.
Question of the State as employers discussed, 15862.
Allegation that State ownership would not accommodate itself to public needs denied, 15868.
Railways extended and industries encouraged under State ownership in the Colonies, 15870.
Want of rail communication to Castlecomer Colliery instanced as a result of private ownership system, 15872.
Direct State management and management by Commissioners discussed, 15887.
The position and powers of Australian Railway Commissioners, 15899.
Preferential rates given to colonially raised coal and other products, 15911.
Extent of Government control over the Colonial private railways, 15919.
Tribunal for adjudicating between the public and the management of the State-owned Railways, 15922.
The promotion of the public interest the primary object of the State Railways' working, 15927.
Capital of Irish and Australasian Railways, 15929.
Comparison of Irish and Australasian Railway dividends, 15933.
Colonial Railway policy as regards the development of Industries, 15937.
Basis upon which the Colonial rates are compiled, 15940.
Terms on which the State acquired the privately-owned Colonial lines, 15943.

Mr. R. H. PRIOR-WANDESFORDE, D.L.

Extent of Castlecomer coal fields and transit facilities, 15959.
Yearly output of the colliery and the class of coal raised, 15965.
Nearest railway station to collieries and cost of road cartage, 15972.
Condition of roads, 15982.
Railway Rates for coal, 15984.
Competition by Welsh coal and rates to the Welsh seaboard, 15988.
Welsh coal rates, 15990.
Area of supply for the Castlecomer coal, 16000.
Necessity for railway communication to render an extension of markets possible, 16002.
Market value of the coal compared with Welsh, 16006.
Absence of shipping facilities at Waterford for dealing with coal traffic, 16008.
Waterford Port Dues compared with Swansea, 16012.
Price of Castlecomer coal at pit's mouth, 16017.
Absence of facilities at Abbeyleix station for dealing with coal traffic, 16019.
Canal rates higher than railway rates for coal traffic, 16028.
Fireclay available in district, 16033.
Thickness of the coal seams, 16035.
Increasing demand for anthracite coal, 16037.
Output and prices of Welsh anthracite coal, 16038.
Suitability of Castlecomer coal for manufacturing graphite, 16045.
Want of transit facilities restricting the output of colliery, 16050.
History of former attempts to get better transit facilities since 1801, 16056.
Schemes for railway communication and action of the Great Southern and Western Company in connection therewith, 16060.
Output of colliery less than before the advent of railways, 16080.
The South suffering from lack of competition, 16083.
State control of the railways preferred to present system, 16093.
Prices of Castlecomer and Welsh coals compared, 16094.
Yearly output of and market for Castlecomer coal, 16106.
Testimonials as to the quality and expert analyses of Castlecomer coal, 16110.
Possibility of quadrupling the output of Castlecomer Colliery under favourable conditions, 16115.

Mr. R. H. PRIOR-WANDESFORDE, D.L.—*con*

Number of the employees, 16116.
State ownership as a remedy for existing defects in Irish railway management discussed, 16120.
Public ownership of railways and canals advocated, 16126.
State should work, as well as own, the railways for a period, 16130.
Suggested investigation by a competent expert as to the quality of the Castlecomer coal, and extent of the deposit, 16131.
Method of arriving at the comparative prices of the Castlecomer and Welsh coals, 16134.
Abbeyleix and Dublin coal rate, 16137.
Value of Castlecomer coal for malting purposes, 16145.
Proposed tramway from Athy to Castlecomer, and estimated cost of construction, 16149.
Excessive cost of upkeep of Queen's County and Kilkenny roads caused by coal traffic, and estimated saving if the traffic were transferred to rail, 16157.
No objection to a satisfactory central Irish authority to control the railways, 16165.
Question of the competition between Welsh and Castlecomer coal in Kilkenny, 16168.
Recent negotiations with the Great Southern and Western Railway Company as to construction of rail connection, 16200.

Mr. JAMES G. DOOLEY.

Inconvenient passenger train connections between Dublin and South Eastern Railway and Great Southern and Western Railway trains at Palace East Junction, 16221.
Alleged insufficient provision for comfort of travellers at Palace East Junction, 16230.
Anomalies in goods rates between Liverpool and New Ross, 16231.
Alleged excessive rates charged in absence of competition, 16239.
State ownership of the Irish railways and control by Irish Central authority advocated, 16245.
Necessity for lower rates and better facilities for Show cattle urged, 16253.

Mr. EDWARD FENNESSY.

Two resolutions of Kilkenny Corporation as to railway extensions, 16271.
Complaint as to disparity between Waterford and Kilkenny and Waterford and Clonmel rate, 16275.
Great Southern and Western Railway Amalgamation Bill opposed by Kilkenny, 16281.
Bad treatment of goods traffic at Kilkenny station complained of, 16294.
Uniform system of mileage rates recommended, 16299.
Effect of water competition on railway rates discussed, 16303.
Unification of the railways recommended, 16308.
Complaint as to insufficient staff at Kilkenny station, 16315, 16326.
State ownership of the railways and control by an Irish central authority advocated, 16320.

Mr. P. J. KENNEDY, B.A.

Disparity between goods rates, Waterford and Kilkenny and Waterford and Clonmel, 16343, 16357, 16449, 16479.
Complaint as to excessive porter and wheat rates from Kilkenny to Waterford, 16357.
System of granting secret rebates condemned, 16392.
Question of equal mileage rates, 16394.
Alleged scarcity of wagons for grain traffic, 16398.
Disparity in the coal rate between Waterford and Kilkenny and Kingsbridge, 16406.
Advantages to be derived from a railway connection with Castlecomer colliery, 16410.
Other proposed railway connections in the district discussed, 16417.
Unification of the railways under State control advocated, 16426, 16475, 16492.
Kilkenny Corporation unanimously in favour of this solution of the railway difficulty, 16428.

Mr. P. J. KENNEDY, B.A.—*continued.*

Probable attitude of railway shareholders towards the question of State purchase discussed, 16432.
Possibilities of reductions in rates and economies in working under State ownership, 16436.
Commercial system of railways unsuitable for Ireland apart from any question of whether the companies were doing their best for the public interest, 16441.
The economy of concentrated administration, 16444.
The difficulty in the way of adjusting existing anomalies in rates under present system of ownership discussed, 16456.
Effect of sea competition in determining rates, 16482.
Necessity for reduced rates to foster industries and arrest decrease in the population, 16487.
The obligation of earning reasonable dividends prevents reduction in rates, 16489.
Question of the representation of the minority on Irish Boards, 16495.
Manufacture of rolling stock by Irish companies, 16497.

Mr. MICHAEL M'NELIS, J.P.

Complaint as to rate for herrings, Glenties to Londonderry, 16514, 16569.
Want of through live stock rates to England, 16518, 16571.
State ownership of Irish railways under an Irish committee advocated, 16527.
Need of improved facilities for fish traffic to Scotland, 16528.
Value of Glenties herring trade and duration of fishing season, 16530.
The District Council and the Glenties district in favour of State purchase, 16536.
Complaint as to rate for hosiery, Glenties to Dublin, 16536.
Suggested constitution of the controlling body under a system of State ownership, 16550.
Existing "Owner's risk" conditions in connection with rates considered inequitable, 16555.
Advantage of canals for conveyance of heavy traffic at reduced rates, 16563.
Passenger fares too high, 16567.

Mr. W. T. GREEN.

Resolution of the Cork Incorporated Chamber of Shipping and Commerce on the subject of excessive rates, 16579.
State ownership of the Irish railways to develop the industries of the country urged, 16581.
The maximum rates as authorised by the Act considered unfair, 16582.
The influence of English railway companies in the management of Irish railways considered a disadvantage to Ireland, 16584, 16638.
Frequent scarcity of wagons at Cork a source of loss to traders, 16585.
Complaint as to preferential cross-Channel through rates, 16588; Flour rate, Liverpool and Tralee, instanced, 16588.
Private arrangements between railway and shipping companies as to certain fixed rates condemned, 16593.
State ownership and State control advocated, 16606.
Excessive rates for grain, Cork and Kilrush, 16608.
Complaint as to grain rate, Cork and Croom, 16619.
The majority of Cork traders in favour of State purchase of the railways, 16628.
The relation of maximum rates to the actual rates charged, 16630.
Private lines burdened with heavy Parliamentary and legal costs under present system, 16643.
Advantages arising from uniformity in rates and facilities under State control, 16647.
Necessity for very low rates for Irish produce to the English markets, 16649.

Mr. W. T. GREEN—*continued.*

Ill effect of preferential cross-Channel through rates on Irish industries, 16658.
Probable effect of the necessary reductions in rates on the Irish companies' dividends, 16660.
The alternatives of the State either subsidising or buying out the railways discussed, 16669.
Probability of the State undertaking to work the railways without a profit at the beginning, 16670.
System of State management to be adopted in Ireland discussed, 16673.
Constitution of an Irish controlling body under State ownership, 16676.
The absence of competition not an objection to State purchase in the matter of rates, 16678.

ALDERMAN B. COLLERY.

Complaint as to rate for "smalls," 16693, 16749.
Railway extension from Sligo to Rosses Point suggested, 16707.
Promotion of a railway from Arigna to Sligo *via* Collooney, 16712.
Railway extensions stopped by local disputes as to routes, 16714.
Proposed line to Belmullet, County Mayo, 16717.
Improved management, and not amalgamation, of railways suggested, 16720.
Combinations of railway and shipping companies in fixing rates condemned, 16728, 16750.
A central authority in Dublin with limited control of all Irish railways recommended, 16735.
Complaint as to high rates for cattle, Sligo and Dublin, 16738.
Local industries described, 16739.
Effect of the railway rates on the development of local industries and the traffic of the port, 16741.
A general reduction in rates and fares recommended to stimulate traffic and improve the railways, 16751.
Irish railway companies not likely to reduce rates of their own motion, 16763.
Nationalisation of the railways and constitution of a suitable controlling authority discussed, 16765.
Suggestion to place the existing railways under the control of an authority with power to regulate their general management, 16779.
Functions and powers of the controlling authority, 16784.
The proposed Arigna extension of the Cavan and Leitrim Railway—action of the County Council which prevented expenditure of the money, 16787.
The alternative scheme for a line from Arigna to Collooney, 16790.

Alderman MATTHEW A. BALLANTINE, J.P.

Railways serving Londonderry, 16804.
Population of Londonderry and steamer sailings, 16808.
Claim for differential rates on cross-Channel traffic *via* Londonderry, 16812.
Differential clause inserted in the Great Northern and Midland Companies Bill, which was dropped in consequence, 16818.
Fresh Bill promoted following year, 16820.
Amended differential clause inserted as a compromise, 16827.
Through interior Irish rates with Londonderry alleged to be excessive and a handicap to trade, 16831.
Local rates generally alleged to be excessive, 16843.
Alleged preferential treatment of Belfast in the matter of rates by the Great Northern Railway Company, 16856.
Imports of maize to Londonderry injured by preferential treatment given to Belfast, 16869.

Alderman MATTHEW A. BALLANTINE, J.P.—*con.*

Absorption of the smaller lines by the greater Irish railways suggested, 16879.
Advantageous effect of the acquisition of Irish lines by the English railway companies discussed, 16885.
Differential rates *via* Londonderry from the Donegal Railway withdrawn since its acquisition by the Great Northern and Midland Companies, 16890.
State purchase disapproved, 16894.
Complaint as to unfair treatment of Londonderry by the Great Northern Railway Company, 16900.
No complaint as regards Scotch traffic from the Great Northern Railway, 16903.
Necessity for a cheaper and more convenient tribunal in lieu of the Railway and Canal Commission Court urged, 16911, 17033.
Present system of reference to the Board of Trade, as well as the Railway Commission Court, considered unsatisfactory, 16922.
Powers to be conferred on the suggested Board of Control, 16929.
The inequality between cross-Channel through rates and local rates discussed, 16932.
Difficulties under existing system of railway control of obtaining equal justice for the ports, 16941.
The probability of fairer consideration for all interests under public management of railways discussed, 16956.
Respective capitals of the British and Irish Railways, 16957.
Question of nationalising all the British and Irish railways, 16959.
Effects of existing rates on the export of Irish produce, 16963.
Problem of how to meet the deficit which reduced rates would entail, 16969, 16998.
Board of Control for the settlement of grievances against the railway companies suggested, 16977.
Suggestion that the country is not ripe for State ownership, 16985A, 17032.
Method of remedying the disparity between through and local rates, 16987.
The Irish companies could not be expected to experiment in reducing rates if loss of revenue were involved, 17003.
Effect of present railway rates and facilities on the traffic through the ports of Londonderry and Sligo, 17008.
Traffic over the Lough Swilly and Letterkenny Railways to be diverted *via* Strabane when the new line, Strabane to Letterkenny, is built, 17021.
Routing of Enniskillen cross-Channel traffic, 17043.

Sir F. HENRY MILLER.

Promotion of the Letterkenny Railway, 17057.
Earnings of the Letterkenny line since 1890, 17060.
Amounts of first and second mortgages on line, 17061.
Agreement with Lough Swilly Company, who work line for a percentage of the receipts, 17065.
Repayment of the Treasury loans, 17072.
Payments by Londonderry City under the Guarantee, 17074.
Anticipated loss of receipts from opening of the new line from Strabane to Letterkenny, 17076.
Resolution from Corporation asking Board of Works to relieve them of liability in respect of the Letterkenny Railway, 17090.
Assistance of the Viceregal Commission invoked, 17092.
Bill for the construction of the Strabane and Letterkenny Railway opposed by Harbour Trust, who also voiced the opposition of the Corporation, 17094.
Only a section of the line authorised the first year, but the remainder approved in the following session, 17099.
Evidence in support of whole scheme given by Mr. Wyndham, the late Chief Secretary, 17102.

Sir F. HENRY MILLER—*continued.*

Conditions under which the Treasury loans were advanced for Letterkenny line, 17111.
Guarantee given in expectation of increased traffic through Londonderry, 17116.
Present position of Londonderry with respect to the mortgages, 17127.
Alleged excessive rates of interest charged on the Treasury loans, 17130, 17168.
Londonderry considered to have a strong equitable claim for relief, 17142.
Suggestion that the Commission might make an interim report relative to the relief sought by Londonderry, 17144.
Amount of the balances due on Treasury loans, 17145.
Conditions for the repayment of the loans, 17148.
Offer of the Lough Swilly Company to purchase the Letterkenny line favoured by the Londonderry Corporation and other local bodies in 1899, 17152.
Concessions by the Treasury in the case of mortgages on lines sold to other companies, 17159.
Possibility of the acquisition of the Letterkenny line by a larger company, and a recoupment to Londonderry of the moneys paid under guarantee, 17162.
Purchase proposal of the Lough Swilly Company not before the Corporation since 1899, 17166.
Arrears of interest due on first Letterkenny Railway loan, 17170.
No prospect of relief to guarantors under the second loan under existing circumstances, 17173.

Mr. JOHN KELSO REID, LL.D.

Complaint of diversion of traffic to eastern ports from Londonderry route, 17183.
Question of differential rates through the port of Derry, 17189.
Alleged scarcity of wagons at Londonderry quays, 17202.
State ownership of the railways conditionally approved, 17214, 17314.
Dissatisfaction with the Railway and Canal Commission Court expressed, 17217.
Action instituted by the Londonderry Harbour Commissioners instanced, 17222.
Suggestions as to another tribunal, 17234.
Necessity for fuller information in railway rate-books, 17244.
Inability of the Board of Trade to enforce its decisions a drawback to its utility, 17251.
Cost of appearing before the Railway and Canal Commission Court excessive, 17256.
Constitution and procedure of a new tribunal discussed, 17259, 17316.
Question of reduction of rates generally and consequent loss of revenue discussed, 17264.
Reduced rates if ordered by the new tribunal to be imposed on the companies, 17274.
Question of the diversion of traffic from its natural route discussed, 17283.
The probability of fair treatment to all ports under State management of railways, 17286.
Suggested economies under State working by forwarding goods by the shortest routes, 17297.
Question of the loss of competition if railways were State-owned, 17301.
Analyses of rates required by, but not always furnished by the companies to, traders, 17323.
Probable economies in working expenses under State control discussed, 17328.
Probable effect on traffic through Londonderry of the line from Strabane to Letterkenny, 17334.
Relief sought in respect of mortgage on Letterkenny line, 17337.
Powers to be conferred on the proposed new tribunal, 17340.
Question of Londonderry's claim to differential rates on through traffic with England discussed, 17346.

Mr. WILLIAM H. M'COWEN.

Extent of witness's traffic, 17367.
Extent of the accommodation for ships at Fenit Pier, 17371.

Mr. WILLIAM H. M'COWEN—*continued.*

Present satisfactory working of traffic from Fenit to Tralee by railway company, 17376.
Rates from Fenit to inland towns considered excessive as compared with other ports, 17381.
Instances of rates from Fenit to inland towns, 17387.
Mallow rate for breadstuffs to Kerry stations alleged to be unfair to Tralee, 17397.
Tralee and Dingle Light Railway, 17403, 17449.
Low through rates from Liverpool to Dingle detrimental to the trade of Tralee, 17411, 17467.
Amalgamation of the railways of Ireland into one or two systems under present management advocated, 17424.
Government to purchase the lines in the first instance, 17431.
Railways to be leased to one or two companies after purchase, 17438.
Grant from the Ireland Development Grant for improvement and equipment, 17455.

Alderman WILLIAM REIGH.

State purchase and control of Irish railways advocated, 17484, 17524.
Total mileage and capital of the English and Irish railways compared, 17484.
The total capital, class of stock and dividends paid by the G.S. and W. and M.G.W. Railway Companies, 17487.
Alleged savings that could be effected on the dividends paid under a State purchase scheme based on Government Loan Stock at 3 per cent., 17592.
Probable attitude of railway shareholders towards a State purchase scheme, 17494.
Probable savings in net revenue, 17500.
Present prices of G.S. and W. and M.G.W. Railway Stocks, 17503.
Anticipated saving of £8,000,000 for development purposes by the purchase scheme proposed, 17508.
The difficulty of raising further capital by the Irish companies a hindrance to the country's development, 17515.
The companies' present method of raising capital criticised, 17518, 17533, 17598.
State purchase considered the only remedy for present lack of development of the country, 17524.
Financial aspect of the proposed State purchase scheme discussed, 17534.
Further railway extension in Ireland considered necessary in the public interest, 17539.
The probability of further extensions of railways becoming paying lines, 17539A.
Cheaper passenger fares all round advocated, 17543.
Necessity for cheaper rates for Irish produce to British markets urged, 17547.
The financial position of Irish railways debar them from assisting in the further development of the country, 17551.
Question of improper charges against capital, 17554.
The financial advantages to be derived from State purchase and control discussed, 17562.
The question of adequate reductions in rates and fares by way of subsidy to the companies or under National control discussed, 17565.
State purchase alleged to be in the best interests of the shareholders themselves, 17569.
Necessity for a responsible Irish authority to control the railways if State-owned, 17571.
Suggestion as to the composition of a Board to undertake the practical management of the railways, 17572.
The advantages generally to be expected from State ownership summarised, 17578.
The adoption of the Continental railway policy as regards low export rates a necessity for Ireland, 17581.
Effective reduction in rates only possible under State ownership, 17584.

Alderman WILLIAM REIGH—*continued.*

Any consequent loss justifiable if it had the effect of promoting prosperity of country, 17586.
Relative value of Danish and Irish butter in English market discussed, 17589.
The Post Office in Ireland worked at a loss, 17593.
Percentage of Preference to Ordinary Stock in England and in Ireland, 17600.

Mr. W. T. TRENCH, D.L., J.P.

Present railway system and rates and fares generally complained of, 17607
Main industries of the North Riding of Tipperary, 17609.
Alleged undue preference by the G.S. and W. Railway Company in the matter of rates on goods for Borrisokane, 17631.
Rates complained of generally as being excessive for a country like Ireland, 17643. Instance—Feeding-stuffs, etc., Dublin and Nenagh, 17652.
The Railway and Canal Commission Court condemned, 17672.
State ownership of the permanent way of the railways urged, 17688.
Necessity for the publication of fuller railway accounts, 17693.
Birr and Portumna Derelict Railway Resuscitation Committee appointed by the people of the district, 17716.
Construction, temporary working and abandonment, 17723.
Loss incurred by the G.S. and W. Company under the working agreemeent, 17732.
Advance by the Public Works Loan Commissioners and action of that Board after working of line ceased, 17740.
Seizures on the abandoned line for county cess; inaction of the Public Works Loan Board, 17746.
The property of the railway stolen, 17750.
Applications made to successive Chief Secretaries for resuscitation of the line, 17762.
Failure of negotiations with the G.S. and W. Railway to re-open and work the line, 17768.
Letter from the company, July, 1891, 17778.
The line a source of loss on working to the G.S. and W. Railway Company, 17782.
Reason for the inactivity of the local shareholders as regards the dismantling of the line, 17784.
Revenue of the line was insufficient to pay cost of working, 17788.
The action of the G.S and W. Railway Company as regards the Birr and Portumna line discussed, 17792.
Action of the Government (the mortgagees) in allowing the line to be dismantled criticised, 17801.
The steps to be taken to have the line resuscitated, 17804.
Sir A. Rendel's figures *re* possibilities of effecting large savings in the working of Irish lines criticised, 17813.
Suggestion that the Portumna line might, with profit, be extended to Ennis, 17819.
Necessity for convenient railway facilities and low rates to assist peasant proprietors to market their produce, 17825.
Combination and co-operation amongst the farmers to take advantage of low quantity rates suggested, 17825.
State purchase and control approved by the County Council, 17829.
Competition in railway working either under State or private control advocated, 17832.

Mr. LAURENCE TAYLOR.

Portumna derelict railway, anticipation of the line paying well if re-opened, 17839.
Better prospects of profitable working than 30 years ago, 17841.
Railway accommodation for the district needed, 17842.
Necessity for the Government to forego their mortgage on the line, 17846.

Mr. GEORGE E. SHANAHAN.

The unsatisfactory working of the Letterkenny to Burtonport Railway, 17849.
Frequency of engine failures owing to serious mismanagement, 17851.
Engine drivers' neglect and incompetency, 17855, 18088.
Instances of irregularities in 1903, from opening of line, 17857, 17878.
Sources through which the Board of Works obtained information as to unsatisfactory working by Lough Swilly Company, 17873.
Report in each case sent to the working company, 17883.
Evidence as to the character of some of the engine-men employed by the Lough Swilly Company on the Burtonport line, 17887.
Reports obtained from independent locomotive engineers, 17893, 18096.
Extracts from the reports of the locomotive engineers of the D. & S.E. and M.G.W. Railways, 17893.
Bad management of the engines (not defective construction) the cause of the failures, 17899.
Substance of Mr. Basil Hope's report communicated to the working company in 1903, 17900.
Continuance of the irregularities in working, 17906.
Mr. Tatlow's report on the working of the railway in 1905, 17907.
Extract from the report on the class of engine-drivers employed, 17909.
Resident Agent appointed by the Board of Works to report on irregular working of the Burtonport line, 17912.
Report on the failures obtained by the Board of Works from the builders of the engines in 1904, 17917.
Extensive repairs recommended and agreed to by Lough Swilly Company, but not carried out, 17918.
Consequent recurrence of the engine failures in 1905, and great inconvenience caused to the public, 17921.
Indifference of the Lough Swilly Company to the inconvenience caused to the public by inefficient working, 17926.
Engines thoroughly overhauled and renovated in 1906, 17929.
Satisfactory working of the tank engines on the Burtonport line for a period in 1906, 17929.
Tank engines withdrawn by company from Burtonport Railway, and new tender engines substituted with unsatisfactory results, 17933.
Instances, with dates, of serious irregularities in train working in 1906, 17940.
Particulars of several hundred other instances of irregularities communicated to the working company by the Board, 17950, 18096.
Powers of inspection, etc., by the Board of Works under the Railways (Ireland) Act of 1896; appointment of Mr. Tatlow to report on the working of the Burtonport line, 17953.
Extracts from Mr. Tatlow's report of 1905, 17958.
Table of six weeks' train delays furnished by Mr. Tatlow, 17959.
Percentage of Burtonport Railway trains arriving more than thirty minutes late at destination for six weeks ending 30/9/05, 17965.
Mr. Tatlow's opinion that the train delays are a source of public inconvenience and a bar to the development of the district, 17968.
Temporary improved working constrained the Board of Works to refrain from taking action on Mr. Tatlow's report, 17969.
Memorial to the Board of Trade from the ratepayers in Burtonport district, but that Department refrained from taking action owing to improvement in the working, 17972, 18040.
Improved working in 1906 not maintained, but irregularities less frequent, and management now regarded as relatively fairly satisfactory, 17975.
Terms under which the Lough Swilly Company work the Letterkenny Railway, 17977.
Correction of some points in Sir F. Henry Miller's evidence, 17983.

Mr. GEORGE E. SHANAHAN—*continued.*

Board of Works' reason for submitting evidence *re* the Burtonport line, 17990.
Question of the sufficiency of the rolling stock equipment of the Burtonport line, 17994.
Best method of obtaining engine-drivers for small lines, 18005.
Contention of the Board of Works that the Lough Swilly Company have failed to carry out their obligations under agreement *re* Burtonport Railway, 18007.
Rolling stock equipment of the Burtonport Railway supplied by the Board of Works, 18010.
Provision of rolling stock out of free grant for Burtonport line, 18018.
Amount provided for rolling stock on Carndonagh line, 18022.
Working company's obligation as regards provision of additional rolling stock, sidings, etc., required by increase of traffic, 18026, 18103.
Provisions of Order in Council relating to baronial director, delegates, and Board meetings, Burtonport Railway, 18031.
Baronial director not summoned to Board meetings by Lough Swilly Company, 18035.
Complaint on subject made to the Board of Works, 18039.
Desire of Board of Works to give Lough Swilly Company time to improve their working of the Burtonport Railway, 18045.
Action of the Board of Works explained, 18045.
Outstanding items in dispute between the Board of Works and the Lough Swilly Company, 18047.
Effect of opening of Letterkenny and Strabane line on the Letterkenny Railway, 18050.
Mr. Wyndham's evidence *re* the Strabane and Letterkenny Railway before the Parliamentary Committee, 1904, 18051.
Letterkenny Railway: Donegal and Derry guarantors' claim to consideration as regards relief in connection with their guarantees for repayment of loans, 18058.
Rate of interest charged by Board of Works under 1 and 2 William IV., cap. 33., 18066.
Proposal of the Lough Swilly Company to purchase the Letterkenny line, 18069.
Question of the responsibility of the directors of the Lough Swilly Railway for the unsatisfactory working of the Burtonport line, 18077.
The qualifications and experience of the Board of Works' agent on the Burtonport and Letterkenny Railways, 18084.
Sources of information as to unsatisfactory working open to the Board of Works' agent and the functions of that officer, 18090.
Method of ascertaining the amount payable by the baronies under guarantee, 18106.
The equity of the working company's claim to be supplied with additional rolling stock for the Burtonport Railway, 18113.
The Board of Works' advisers on the question of the equipment of the Burtonport line, 18117.
Estimate for rolling stock based on a service of two trains each way made by manager of working company at the preliminary inquiry when Burtonport line was being promoted, 18119.
Qualified assent of the Board of Works to supply additional rolling stock explained, 18129.
Counsel's explanation of the working company's position as regards the matters in dispute with the Board of Works, 18129.
Letter of 27th July, 1901, from Mr. Malcolm, Locomotive Engineer, *re* type of engine for Burtonport Railway, 18129.
List of Irish railway companies showing gauge of line, miles open, and capital paid up, 18137.

Mr. ALFRED D. PRICE, M.Inst. C.E.

Witness's experience in connection with railway construction in Ireland, 18143.
The first Irish railway—the Dublin and Kingstown, 18154.

Mr. ALFRED D. PRICE, M. Inst. C.E.—*con.*

Mileage and gauge of railways in Ireland in year 1905, 18156.
Average cost of working expenses, 18158.
Cause of disparity between receipts per mile in England and Ireland, 18160.
Present uniform gauge in Ireland regulated by Act of Parliament, 5ft. 3in. (except for light railways), 18162.
Mileage of light railways with 5ft. gauge in Ireland, 18170.
Average cost of narrow gauge lines, 18177, 18292.
Ruling gradients and curves on the light railways in Ireland, 18178.
Advantages claimed for narrow gauge railways and the disadvantages of such lines, 18179.
Light railways constructed on the standard gauge, and cost, 18185.
Receipts and expenses of working light railways, 18187, 18293.
Abandonment of Red Bay Railway, County Antrim, 18190.
Further extension of railways and reduction in freights advocated, 18193.
Public funds a necessity for further extensions in Ireland, 18195.
New railways from Tramore to Dunmore East and from Middleton to Ballycotton suggested, 18199.
Suggested extensions of railways—Kenmare to Castletown-Bere, 18207; Valentia Harbour to Waterville, 18209; Listowel to Tarbert, 18210; Killala to Belmullet, 18211; Glenties, to Ardara, 18213, 18305; Letterkenny to Milroy Bay, 18216; Londonderry to Moville, 18218.
Reconstruction of Parkmore to Red Bay line recommended, 18226.
Importance of proper gradients and curves on light railways, 18230.
Weight of rails necessary, 18232, 18383.
Question of the use of road motors to develop backward districts, 18235, 18280, 18388, 18431.
Question of the nationalisation of Irish railways, 18239.
Provision in the Act of 1844 regarding State purchase of Irish railways, 18240.
Reports of Devonshire Commission in 1868 and the Allport Commission of 1888, 18243.
Compulsory amalgamation of the Irish railways advocated, 18245.
Three systems considered to be sufficient for Ireland, 18248.
Government control recommended, 18253.
A State guarantee against loss a necessary condition of compulsory amalgamation, 18256.
State purchase of the railways disapproved, 18257.
Engineering difficulties in the construction of the Red Bay line discussed, 18262.
Prospects of traffic for the Red Bay line and question of the best route, 18268.
Small prospect of further light railways by private companies or local authorities, 18300.
Extension of the guaranteeing areas for future light railways advocated, 18304.
Negotiations with regard to the Glenties and Ardara extension, 18305.
Advantages of the amalgamation of the railways into one instead of three systems urged, 18308.
State control, *i.e.*, an official on each Board recommended, 18311.
Management of Colonial railways, 18316.
State ownership of railways in Continental countries, 18319.
Alleged disadvantages of State-subsidised railways under private ownership, 18324.
Advisability of following the Belgian model in any further railway extensions discussed, 18329.
The difficulties arising from difference in gauge, 18333.
Relaxation of the Board of Trade regulations in regard to light railways recommended, 18340.
Extent of the accommodation for vessels at Ballycotton Harbour, 18342.
The value of conclusions drawn from a comparison of Irish and English percentages of working expenses, 18345.

Mr. ALFRED D. PRICE, M. Inst. C.E.—*con.*

The question of the conversion of the gauge of light railways from narrow to broad, 18363.
Cost per mile of substituting standard for narrow gauge, 18368.
Possibilities of increasing the receipts of existing railways by improved methods of working, 18378.
"Pick up," or roadside traffic not fully catered for, 18378.
The proposal for State-aided compulsory amalgamation, 18393.
Suggested apportionment of the country under a scheme of amalgamation into three systems, 18400.
The position of the English companies with reference to an amalgamation scheme, 18414.
The powers of the Government representatives on the proposed amalgamated Boards, 18417.
Local opposition to proposed railway to Moville, 18424.
Renard system of road transit, 18428.

Mr. EDWARD GREER, B.L., J.P.

Carlingford Lough Improvement loans, 18440.
Importance of the port of Newry, 18441.
Principal traffic dealt with at that port, 18443.
Service of steamers, Newry Canal, 18444.
Extent of the jurisdiction of Carlingford Lough Commissioners, 18448.
Extent of traffic through Newry seventy years ago, 18451.
Diversion of the traffic of the port of Newry to Belfast, 18454.
Belfast alleged to be favoured in the matter of railway facilities, 18459.
Facilities for steamers at Newry port, 18460.
History of the Newry and Armagh Railway, 18469.
Instances of preferential treatment of traffic from Belfast to inland towns as against Newry in 1870, 18470.
Newry traffic to the interior destroyed by preferential treatment to Belfast in consequence, 18471.
Absorption of the Newry and Armagh line by the G.N. (I.) R. Co. in 1885, 18474.
Inconvenience and loss to Newry owing to the railway from Newry to Goraghwood Junction being a single line, 18479, 18570.
Representations from the local authorities on the subject, 18481.
Advantages of low rates for agricultural produce urged, 18487.
Prevalence of secret rebates alleged, 18489.
Suggestion that the Courts should take the place of the Railway and Canal Commission to hear traders' complaints, 18491, 18664.
Present expensive cost of working of guaranteed light railways said to be a severe tax on the ratepayers, 18500.
Impossibility of obtaining baronial guarantees for further railway extensions, 18506.
Provision of future capital must be by the State, 18511.
State purchase of the Irish railways advocated, 18512.
State purchase of railways as authorised by Act of 1844, 18518.
Local control in Ireland urged, 18520, 18585.
The question as to the diversion of traffic from its natural channel, 18521.
Equal mileage rates from all ports advocated, 18528.
Constitution of the controlling authority of the railways if State-owned, 18531, 18563, 18600.
The excessive cost of procedure in the Railway and Canal Commission Court a serious tax on litigants, 18534.
Recent case by Dublin Port and Docks Board instanced, 18534.
The advantages expected from a unified State system of railways, 18537.
Excessive cost of the construction of existing light railways, 18543.
The advantages of deep water ports over tidal ports in influencing the flow of traffic, 18547.

Mr. EDWARD GREER, B.L., J.P.—*continued.*

Accessibility of Newry as a tidal port for steamers, 18550.
The L. & N.W. steamer service from Greenore, 18556, 18579.
Gradual revival of Irish industries expected from a system of reduced rates under State control, 18556.
Litigation between traders and the railway authority under public control improbable, 18590.
The loss involved by rate reductions in the event of State purchase to be borne by the Treasury, 18594
Treasury control in the case of rate reductions, 18606.
Suggested arrangements for preventing excessive reductions with consequent loss of revenue required for payment of interest, 18617.
The question of the manufacture of rolling stock in Ireland, 18623, 18658.
The average expenditure on rolling stock renewals, 18636.
The grievances on the part of Newry traders, 18640.

Mr. ROBERT M. D. SANDERS, J.P.

Objects and work of the Tourist Development Company, 18677.
Improved railway facilities for tourists, 18685.
Extent of the traffic dealt with by the company, 18686.
The Fishguard and Rosslare scheme and the G.S. & W. Railway amalgamation in the South, 18688.
History of the amalgamation and the satisfactory results consequent thereon, 18689.
Unification of the railways under limited State control suggested, 18695.
Control by State; appointed and paid Railway Commissioners recommended, 18700.
Proposed consolidation of stock, 18703.
Position of shareholders in reference to the proposed unification scheme, 18714.
Functions of the proposed Railway Commissioners, 18718.
Debenture and Preference shareholders to be guaranteed a fixed dividend, 18722.
Financial aspect of the proposed unification scheme generally, 18726, 18823, 18852.
Suggested apportioning of the net revenue under the proposed scheme as regards dividends and reserve for improvements, 18742.
The probable difficulties of arriving at a satisfactory scheme of control by Commissioners, 18746.
Constitution of the Commission, 18753.
The questions of competition and the flow of traffic, 18760.
Safeguards in management required to prevent undue preference, 18769.
Peculiarities of the Mexican Railway system, 18776.
Claims of the existing shareholders under a State-controlled scheme, 18780.
Approval of the recommendations of the Allport Commission as regards compulsory amalgamation, 18787.
Mr. Childers' views as set out in the Financial Relations Report, 18790.
Suggested Government Guarantee against loss by reason of compulsory reductions in rates, 18793, 18810.
Estimated value of the present interest of all classes of shareholders in the Irish railways, 18795.
Purposes to which the probable savings to be effected under a system of central control might be devoted, 18805.
Sir H. Plunkett's approval of subsidies to the companies for reduced rates, 18813.
Suggested continuance of State grants for railway extensions in Ireland, 18817.
The anticipated savings from the conversion of the existing stocks into a 3 per cent. railway stock, 18836.
Expenditure on improvements and betterments necessary, 18842.

Mr. ROBERT M. D. SANDERS, J.P.—*continued.*

The prospects of increasing traffic, 18858.
Necessity for co-operation amongst the farmers, 18862.
The provision of collecting depots and cold storage for agricultural produce essential to further development of traffic, 18862.
Co-operation for the despatch of goods in large consignments considered desirable, 18866.

Mr. ANDREW SPENCE.

Preparation of the specification for the engines supplied for the Burtonport line by the Board of Works, 18873.
Objection by Lough Swilly Company to "Tank" engines, 18881.
Mr. Malcolm's recommendation as to the most suitable type of engines, 18882.
Allegation that the Board of Works' order for "Tank" engines was placed in face of Lough Swilly Company's objection to them, 18890.
Specification said to have been issued and tenders invited without any consultation with Company, 18897.
Type of engine in use on Glenties line ("Tank") selected by the Board of Works, 18898.
Interview between the former General Manager and the Board of Works, 18906.
Former General Manager's recommendation to Board of Works as to design of tender engines for Burtonport Railway in 1901, 18911.
Decision of Board of Works under Clause 11 of the Treasury Agreement as to selection of type of engines and rolling stock, 18917, 19180.
Difference in the gradients on the Glenties and Burtonport lines, 18923.
Correspondence between the Board of Works and the Company anterior to the issue of the order for the engines, 18934.
The Board of Works' expert advisers, 18950.
Allegation as to neglect to supply a section of the gradients on the Burtonport line to the builders of the engines, 18962.
Allegation as to insufficient details in the specification of the engines furnished to the builders, 18966.
Complaint as to the insufficiency of engines and rolling stock required, 18974.
Protest as to the inadequacy of the proposed supply made by Company before opening of line, 18977, 18982, 18997.
Dates of Company's communications with the Board of Works, 18988.
Letter of the 26th January, 1903, to the Board of Works quoted, 18990.
Board of Works' reply of 28th January, 1903, 18992.
The alleged incompetency of the engine drivers on the Burtonport line, 19002.
Suggestion that many of these men were employed during the strike in November, 1903, 19007.
The employment of incompetent engine men on the Burtonport line admitted, 19024.
The Company's adviser condemns the use of tank engines on the Burtonport Railway, 19026.
Burtonport line said to be working satisfactorily now, 19031.
Quality of coal used on the Burtonport engines, 19039.
Effect of the Treasury Agreement in respect of Carndonagh and Burtonport lines, 19045.
Bearing of Clause 11 of Treasury Agreement on the question of promoting Company's obligation to start the construction of the line within a specified period, 19049, 19109.
Alleged cause of delay on the part of promoting Company in proceeding to take up a contract for the construction of the Burtonport line, 19056.
Dates of the Inquiry by the Investigators, the Treasury Agreement, and the Order in Council, 19059.
Absence of the representatives of promoting Company at the opening of the tenders by the Board of Works explained, 19066.

Mr. ANDREW SPENCE—*continued.*

Manner in which the Free Grant was determined, 19073.
Alleged variation of Clause 3 of the Treasury Agreement by the Board of Works, 19075.
Amount of the Free Grant and amount allocated for the provision of rolling stock for Burtonport line, 19078.
Cost of construction and equipment of Carndonagh line, 19081.
Cost per mile of Burtonport line considered excessive for the class of work done by the contractors, 19087.
Explanation regarding the money received by the promoting Company from the Contractors for agreeing to the deviations from the original plans, 19092.
Allegation of promoting Company that the plans with the deviations agreed to by them were departed from without their consent and to their loss, 19104.
Board of Works' letter to Company of 23rd October, 1903, 19105.
Money paid to Dr. Todd for acting as Solicitor to Company, 19107.
Allegation that the Company's negotiations with Board of Works broke down because of complaint made to the Treasury, 19118.
Denial by the Lough Swilly Company that their Engineer was afforded opportunities of supervising the Burtonport line during construction, 19118.
Receipts of the Burtonport line much underestimated previous to opening, 19128.
The recommendations of the Investigators on the subject of the rolling stock, 19132.
The relative merits of tank and tender engines with reference to provision of turn-tables, 19138.
Tank engines run to and fro in England without being turned, 19146.
Working Company's real objection to the tank engines the want of sufficient coal and water storage, 19149.
Suggested difficulty of designing a suitable tank engine for Burtonport line, 19155.
The Treasury Agreement with the Lough Swilly Company and the powers of the Board of Works, and the obligations of the Company as regards the Burtonport Railway, 19164.
The general policy of the continuance of Government Grants for railway extension under similar conditions to those imposed in the case of the Burtonport line, 19185.
The question of the Lough Swilly Company's inattention to the Board of Works' complaint, 19198.
The information given to the Board of Works by the Company, 19199.
Audit of the accounts by the Board, 19202.
The necessity for a better supply of rolling stock alleged to have been demonstrated from the opening of the line, 19205.
The traffic receipts on the Burtonport line in the first year, 19209.
Two Board meetings for Burtonport line business held since 1903, 19215.

Mr. JOHN M'FARLAND, J.P.

Alleged serious alterations in the contract plans of Burtonport Railway, 19234.
The supply of the permanent way materials by the Contractors objected to, 19238, 19493.
The question of the provision of a running shed, 19240, 19364.
Negotiations with the Board of Works as to the site for the erection of a running shed, 19243, 19368.
Ownership of the Burtonport line claimed by the Lough Swilly Company, 19245.
Lough Swilly Company's reason for not attending at the opening of the tenders, 19247.
Alleged protest by Lough Swilly Company against the deviations from the contract plans for Burtonport Railway, 19252.

Mr. JOHN M'FARLAND, J.P.—*continued.*

Subsequent approval of the deviations by the Company, 19253.
Deviation from original plan for construction of Owencarrow viaduct suggested, 19255.
Allegation that the savings due to the deviations were divided between the Board of Works and the Contractors, 19259.
Alleged enormous savings effected by the deviations from the original plans for Burtonport Railway, 19269.
Explanation of why the Contractors paid the Lough Swilly Company £4,000 for consent of latter to the deviations, 19274, 19479.
How the £4,000 was disposed of by the Company, 19292.
The plans for the deviations agreed to by the Lough Swilly Company under pressure, 19300.
Complaint of Lough Swilly Company that the actual works were varied, and not in accordance with the plans, 19305.
Lough Swilly Company's £70,000 claim for additional works, 19310.
How the claim of £78,000 for additional works was compiled, 19323.
The first claim made by the Company shortly after opening of line very much smaller, 19331.
Explanation of the delay in furnishing final claim, 19338, 19352.
The preparation of the Company's first claim, 19346.
Repudiation of claim by Board of Works, 19360.
Readiness of the working company to submit all matters in dispute with reference to the Burtonport line to arbitration, 19361.
Company's application to Board of Trade to appoint an Arbitrator not complied with, 19382.
Objection of the Board of Works to submit the matters in dispute to arbitration, 19383.
The balance of promotion expenses due to Lough Swilly Company, 19395.
Board of Works' contention that the expenditure had not been properly vouched denied, 19398.
Dispute with the Board of Works as to the proper vouching of the Company's promotion expenses, 19404.
Agreement between the Lough Swilly Company and Mr. Radcliff, engineer, regarding the preparation of necessary drawings, specifications, etc., for construction of Burtonport line, 19425.
Agreement between Mr. Radcliff and Messrs. M'Crea and M'Farland, contractors, relative to certain Parliamentary plans, drawings, etc., of Burtonport Railway, 19425.
Mr. M'Farland's position with regard to his firm's agreement with Mr. Radcliff, 19426.
The present value of the Burtonport Railway, 19449.
Agreement *re* Burtonport Railway entered into with the Board of Works by Lough Swilly Company alleged to be unreasonable, 19453.
The alleged want of combined action by Lough Swilly Board, 19459.
Bearing of Clause 21 of the Treasury Agreement on the question of an Inquiry, 19462.
Suggestion that the working company's claim against the Board of Works is not a monetary one, 19466.
Allegation as to the failure of the Contractors to carry out the works in accordance with the deviation plans, 19470.
Apportionment of the savings on the deviations, 19473.
Balance of £2,600 on promotion expenses claimed by Lough Swilly Company is still due, 19487.
Terms of the contract for the construction of the Burtonport Railway, 19504.

The Right Hon. Sir JOSEPH G. WARD, K.C.M.G.

Population of New Zealand, 19509.
Mileage of the State Railways, 19510.
Mileage of private lines, 19514.
Policy of the State administration of the New Zealand railways, 19515.

The Right Hon. Sir JOSEPH G. WARD, K.C.M.G.—*continued.*

Allocation of surplus earnings, 19517.
Rates for agricultural produce in New Zealand and Great Britain, 19520.
Comparison of the passenger fares and goods rates in New Zealand and Great Britain, 19521.
Concessions given in rates for purposes of developing agricultural districts, 19525.
System of free conveyance of school children, 19529.
Advantages derived from the concessions in rates, 19530.
Advantages of the system of State ownership over private ownership of railways, 19531.
Distribution of the population over the country districts, 19533.
A good and cheap system of transport a necessity for the development of an agricultural country, 19535.
Constitution of the management of the New Zealand Railways, 19537.
Method of appointment and term of office of the staff, 19358.
State ownership of railways advocated, 19541.
Original cost per mile of the New Zealand railways, 19543.
Method of acquiring land for railway construction explained, 19544.
Rate of interest on capital considered sufficient, 19546.
The surplus revenue from the richer districts devoted to the development of less prosperous parts of the country, 19547.
Reductions in rates and fares found to result in increased revenue, 19548.
Basis of passenger fares, 19549.
Rates once fixed rigidly adhered to on the New Zealand railways, 19551.

Mr. F. J. CRAVEN.

Reduction of cross-Channel rates on agricultural machinery urged, 19553.
Comparison of "show-to-show" rates in Great Britain and in Ireland on machinery, 19562, 19624.
Alleged excessive rates for conveyance of heavy traction engines to interior Irish stations, 19567.
Machinery traffic with Ireland handicapped for want of through mileage rates to interior Irish towns, 19576.
Comparison of through charges on machinery from England to Scotland and to Ireland, 19585.
Instance of an excessive rate from Ipswich to Ballywilliam, 19594.
Date of alteration in the through booking arrangements, 19596.
Extent of traffic sent Dublin Spring Show (1907), 19613.
The necessity for cheap through rates for machinery in the interests of Irish agriculture urged, 19620.
Date of cessation of cross-Channel through bookings for heavy machinery, 19633.
No appeal against the increased rates made to the Board of Trade, 19638.
Machinery shipped to Ireland by non-Conference steamers at low rates, 19639.
Traction engines steamed by road to interior places in Ireland to escape excessive railway freights, 19639.
Infrequent sailings of non-Conference steamers an objection to their use, 19642.
The importation of heavy machinery alleged not to compete with any existing industries in Ireland, 19648.
Low rates for machinery to Irish shows asked for large quantities only, 19659.
The possible effect of low through rates on competing Irish manufactures, 19665.
The facilities for obtaining raw material in Ireland as compared with East Anglia, 19667.
The extent of the export trade in agricultural machinery from England to Ireland, 19673.

Mr. F. J. CRAVEN—*continued.*

The high charges for cranage at ports, and their bearing on the rates, 19678.
Conformity of the Irish with the English railway rates, etc., for "show-to-show" traffic urged, 19686.

Mr. JOHN M'LAUGHLIN.

Rates for cotton cloth, Manchester and Londonderry, and for linen, Belfast and Londonderry, 19702.
Alleged excessive rate for linen from Belfast to Londonderry, 19712.
Complaint of want of through rates from Manchester to Buncrana, 19715.
Complaint of added cartage charges in Londonderry on goods transferred from steamers to Lough Swilly Railway, 19718.
Instances of cartage charges imposed by Lough Swilly Company for transfer at Londonderry on goods booked from Manchester at "collected and delivered" rates, 19732.
Alleged refusal of the Lough Swilly Company to investigate complaints relative to improper cartage charged at Londonderry, 19739.
Result of the action of the Lough Swilly Company alleged to impose double cartage charge on consignees, 19751.
Complaint of excessive rates for shirts by railway from Buncrana to Waterford, Cork, etc., 19757.
Complaint of excessive rates for parcels by "mixed trains" on the Lough Swilly Railway, 19773.
Alleged refusal of the Lough Swilly Company to arrange through rates from England to Buncrana, 19786.
Complaints as to scale of charges for small parcels between Londonderry and Buncrana at "ordinary'" and "owner's risk," 19790.
The Great Northern Company's rates for goods by passenger train, 19793.
Inconvenience caused by absence of through passenger bookings to England from Lough Swilly Railway stations, 19800.
Reduction in freights and improved facilities generally called for to develop local industries, 19804.
Complaint as to frequent delays to traffic in transit from Londonderry, 19807.
The impossibility of competing with the American and Belgian shirtmakers for London trade owing to transit charges, 19817.
State ownership of the railways advocated, 19824.
The question of the obligation of the Lough Swilly Company to arrange for through bookings generally, 19833.
Alleged inconvenient working of passenger trains on Lough Swilly Railway for through traffic, 19836.
Reduction in rates under State control anticipated and required for the development of industries, 19842.
Rate for shirts, Londonderry and London, 19850.
The reduction in rates necessary to materially affect the cost of production, 19863.
Proportion of transit charges to total cost of production, 19867.
Question of whether the State should meet any loss to railway companies arising out of reductions in rates, 19872.
Complaints made to the manager of the Lough Swilly Company, 19880.

Mr. C. S. R. PALMER, M.Inst. C.E.

Mileage, gauge, and cost of the State-owned and privately-owned West Australian railways, 19897.
Method by which purchase money was raised, 19905.
Date of the commencement of construction of the State railways in Western Australia, 19906.
Policy of the Western Australian Government as regards the construction of railways, 19909.
Conditions attached to the loans raised for railway construction, 19911.

Mr. C. S. R. PALMER, M.Inst. C.E.—*continued.*

The system of State control of the Western Australian railways, 19917.
Control of the Ministers of Works and of Railways as regards expenditure, 19933.
Mileage of railways constructed (1893-1906), 19935.
Improbability of private enterprise ever accomplishing the results achieved by the State in developing industries, 19938.
Capital cost per mile of the State Railways, 19946, 20105.
System of providing cheaply constructed lines for agricultural districts, 19946.
Surplus revenue devoted to reduction of railway rates, 19960.
Method of dealing with receipts and providing for the expenditure, 19973.
Position and authority of the Minister of Railways, 19981, 20158.
Comparison of West Australian with British passenger fares, 19997.
Workmen's and school childrens' tickets, 20006.
West Australian goods and mineral railway rates, 20012.
The system of State ownership of the railways a great benefit to Australia, 20067.
The possibility of applying the Australian system of raising capital to Ireland, 20080.
Gross earnings per mile of the Australian railways, 20083.
Policy of the Australian State Railways for the development of industries, 20101.
Similarity of the Australian Railway system of dealing with receipts and expenditure to the English Post Office system, 20119.
Question of Parliamentary action interfering in Railway management, 20122.
The Victorian Railway system, 20127.
The extent the Railway Commissioners' powers should be independent of Parliamentary interference, 20130.
The experience of other Australian colonies of the system of the control of railways by a Commissioner, 20142.
Particulars of ten-mile rates on Australian Railways not available, 20165.
Question of the average length of haul of traffic in Australia, 20171.
Percentage of short and long distance passenger traffic, 20177.
Powers and tenure of office of the Railway Commissioners and the relations existing between them and the Minister for Railways, 20181, 20195.
Extent of political influence on the action of Railway Commissioners, 20188.
System of apportioning the surplus profit, 20206.
Estimate for new works left to the Public Works Department, 20213.
Question as to the permanency of the cheaply constructed lines, 20217.
Weight of rails used on the West Australian Railways and speed limits, 20218.
The Commsisioner and Minister of Public Works the judges of construction, safety, etc., of the lines, 20224.
Preferential rates given to colonial produce, 20225.
The West Australian railways treated financially as a whole, the more profitable districts helping to pay for the less prosperous, 20233.
Gauges of the Australian railways, 20237.
Each State's railways a separate undertaking, 20238.
Initial cost of land and promotion expenses, 20239.
Decisions as to rate of pay and hours of employment of workmen subject to Court of Arbitration, 20248.
Government enforcement of rate reductions to encourage industries where necessary, 20252.
Comparison of coal rates in Ireland and West Australia, 20261.

Mr. THOMAS O'DONNELL, B.L., M.P.

Traffic dealt with within the Tralee and Dingle Railway district, 20264.
Date of opening of Tralee and Dingle Railway, 20265.

Mr. THOMAS O'DONNELL, B.L., M.P.—*continued.*

Development of the fishing industry, 20268.
Reduction in cost of conveyance of goods between Dingle and Tralee since opening of railway, 20271.
Extent of the fishing industry of Dingle peninsula, 20273.
Trade with French and English fish markets opened up, 20276.
Development of passenger traffic in the district, 20278.
Length of railway, Guaranteed capital, and its allocation between the Baronies, 20282, 20285.
Liability of the Baronies, 20286.
Cost per mile of the construction and equipment of the railway, 20287.
Government's aid to the railway, 20293.
Act under which Railway was constructed (Tramways Act, 1883), 20294, 20438.
Saving effected by arrangement with Government to redeem their annuity, 20295.
Excessive risk and expense in working the line owing to faulty construction, 20298, 20467.
Amount, in addition to the Governmental Grant, spent by the County on the line, 20307.
Cost of the Camp accident, 20308.
Rates in respect of the Tralee and Dingle Railway paid by the Baronies (years 1891-1907), 20312.
Recommendations of the Board of Trade after inquiry into the Camp accident, 20317.
Estimated cost of necessary alterations in the curves, gradients, etc., of the line, 20318, 20480.
Grant for improvements from the Development Grant, 20324.
Irish Judge's condemnation of Board of Trade for certifying the line as constructed, 20328.
Hardship entailed on the taxpayers by reason of the heavy railway charge, 20328.
Annual loss on working expenses since opening of line, 20332.
Improvement in construction a necessity to the railway paying, 20334.
Inability of the district to provide the money necessary for improvements, 20335.
Development of industries retarded owing to the present condition of the line, 20333.
Receipts and Expenditure for years 1900, 1903, 1904, and 1905, 20339, 20347.
Train accident on a steep gradient in 1907, 20352.
Decreased deficit on working in 1906 alleged to be due to control exercised by the County Council over the management of the line, 20354.
Heavy payments of Railway guarantees by County Kerry, 20359.
Railways a necessity for proper development, 20360.
£20,000 or one-third of the total Railway guarantees in Ireland (excluding County Cork) paid by Kerry in 1906, 20365.
County Kerry's high percentage of total railway guarantees up to year 1899, 20368.
List of Government Free Grants for railways in Ireland under Light Railways Act, 1899, 20371.
Lines on which there is a Treasury contribution in addition to free grants, 20373.
Suggested scheme to effect a reduction in the annual amount payable by the County Kerry in respect of the Headford and Kenmare and Killorglin and Valentia lines, 20376.
Nationalisation of the Irish Railways under an Irish authority recommended, 20386, 20530.
The Belgian State controlled railways:—Instances of low goods rates, 20392.
Reference to low passenger fares, 20410.
Reduced fares charged to school children, 20411.
Workmen's fares, 20414.
Statistics showing the commercial growth of Belgium under the State railway system, 20423.
Restrictions attached to the issue of workmen's tickets, 20428.
Question of the low estimate of cost of construction of the Tralee and Dingle Railway, 20441.
Responsibility of the Board of Works, 20442.
Disproportion of promotion and legal expenses to total capital, 20445.
The payments under the guarantee a small item compared with the loss in working expenses, 20453.

Mr. THOMAS O'DONNELL, B.L., M.P.—*continued.*

Average annual deficit on working expenses for five years ending 1898, and for similar period ending 1905, 20456.
Average baronial levy since opening of line the highest in Ireland for light railways under Act, 1883, 20463.
Necessity for some relief to be afforded the ratepayers by the Treasury redemption of other guarantees in Kerry urged, 20468.
Impossibility of any large reductions of rates and fares under the existing railway system, 20470.
State purchase of Irish railways would induce larger savings, which would be applied to reductions in rates and fares, with consequent development and increase of traffic, 20471, 20539.
Reference to the great growth of passenger traffic in Belgium following concessions in fares, 20473.
Prospects of saving in expenses and increase in traffic discussed, 20483.
Necessity for a central works in Ireland for building and repairing the rolling stock of small lines, 20487.
The claim of the guarantors of the Tralee and Dingle line for relief discussed, 20492.
Constitution of the Committee of Management, 20509.
Method of allocating the deficit and the baronial guarantees, 20513.
Passenger traffic undeveloped owing to the unsafe construction of the line, 20515.
Alleged diversion of fish traffic from Dingle, 20517.
Amalgamation of the Tralee and Dingle line with the Great Southern and Western Railway disapproved, 20519.
The method of guaranteeing the purchase price of Irish railways, 20533.
Guarantee of British Government not required, 20535.
The working of French and Belgian railways compared, 20545.
The possibility of adopting the Belgian railway rates in Ireland, 20556.
The system of cheap workmen's tickets on the Belgian railways as applicable to Ireland discussed, 20559.
The establishment of a State Department to control the Irish railways preferred to a continuance of the existing system, 20567.
The analogy between the conditions in Belgium and Ireland as regards traffic, 20573.

Mr. THOMAS CORSCADDEN, J.P.

Complaint of delay to cattle in transit between Westport and Manorhamilton, 20590.
Proposal to substitute a rate per head for cattle for the wagon rates, 20605.
Complaint as to ill-usage of cattle at loading banks and over-crowding of trucks, 20612.
Equal mileage rates between all Irish stations advocated, 20640, 20664.
Reduction in second-class fares suggested, 20646.
Train service generally considered satisfactory, 20654.
Improved transit facilities sought for Keenagh coal mines—Extension of the canal suggested, 20656.
Amalgamation of the railways approved, 20665, 20672.
Motor services between Bundoran and Manorhamilton and between Sligo and Bundoran suggested, 20667.
State purchase of the railways objected to, 20677.
Alleged difficulty of moving the Board of Trade to deal with complaints, 20680.
Necessity for a cheap and easily-accessible court to settle complaints urged, 20690.
Probable results of the application of equal mileage rates discussed, 20707.
Question as to whether efforts should be made to improve the canals, 20711.
Canals should be improved and utilised, 20714.
Local public opposition to road motor services, 20720.

Mr. THOMAS CORSCADDEN, J.P.—*continued.*

The public opposition given to the scheme of extension of Cavan and Leitrim Railway to Arigna Mines discussed, 20723.
The reason for the opposition on the part of the ratepayers, 20727.
Amalgamation of the railways with retention of the present system of management preferred to State ownership, 20734.
Protest on behalf of the guarantors of the Cavan and Leitrim Railway of unfair treatment in the matter of State aid, 20747.

Mr. JOHN CARVILL.

The evidence of a previous witness (Mr. Currie, Belfast), discussed, 20755.
Suggestion that Newry gets preferential treatment by the Great Northern Railway as against Belfast in the matter of coal rates contradicted, 20758.
Comparison of distances from Newry and from Belfast to Armagh, Portadown, and Banbridge, 20764.
History of the Newry and Armagh Railway and of its subsequent absorption by the Great Northern (Ireland) Railway, 20767.
Preferential rates given by Great Northern Company to Belfast as against Newry to inland towns, 1879 to 1889, 20773.
Discontinuance of the preferential rates from Belfast ordered by the Railway and Canal Commission, 20773.
Newry's dissatisfaction with the railway company's compliance with the Commission's order, and arbitration of the Board of Trade sought, 20774.
Decision of the Board of Trade ignored, and further recourse had to the Railway and Canal Commission, 20776.
Fresh list of revised rates from Newry submitted to and approved by the Railway and Canal Commission, 20776.
Allegation that the railway company are charging preferential rates from Belfast at the present time, 20780.
Instances in support of charges as to preferential treatment of Belfast, 20784.
Coal rates, Newry and Belfast to Stewartstown, 20784, 20844.
Timber rates from Newry and from Belfast to Ballyroney and Cootehill, 20800, 20845, 20908.
Cement rates from Newry and from Belfast to Ballyroney and Portadown, 20808.
The rates issued in connection with a new station opened at Belfast alleged to be unfair to Newry traders, 20817.
Complaint of insufficient passenger train service between Newry and Bessbrook, 20820.
Alleged excessive charges on nurserymen's exhibits, 20822.
Insufficient supply of wagons at Newry for coal traffic, 20823.
State ownership and centralisation of the control of Irish railways recommended, 20831, 20853.
Adjustment of disputes by the present Railway and Canal Commission Court without employment of counsel recommended, 20836, 20885.
The general policy of the Great Northern Railway Company alleged to tend to the disadvantage of Newry, 20841.
Alleged insufficient mail train service for Newry passengers, 20849, 20883.
Cost of the Newry case before the Railway and Canal Commission, 20860.
Alleged failure of the Great Northern Railway to fully comply with the Railway and Canal Commission's decision as to Newry rates, 20863.
Instances of rates alleged to be disproportionate, 20870.
Increase in coal traffic through Newry not due to any concessions in rates, 20877.
Advantages to be expected from concentration of railway management, 20889.
The difficulty of obtaining lists of railway rates, 20895.

Mr. JOHN CARVILL—*continued.*

Suggestion that the information as to rates should be supplied by the companies on payment, 20895.
Evidence of a previous witness (Mr. Thomas Irwin) discussed, 20904.
The percentage difference in the Newry rates to interior stations as compared with the rates from Belfast, 20916.

Mr. JOHN DAVIES.

Population of the various States in Australasia, 20924.
Mileage of Australasian State and privately owned railways in 1906, 20926.
Practically all important railways in Australasia State-owned, 20934.
Gauges of the Australasian railways, 20936.
Average capital cost per mile of the English, Scottish and Irish railways compared with the Australasian State lines, 20939.
Receipts on Irish railways for 1905 compared with Australasian railways for 1906, 20959.
Mileage and receipts of the Victorian, New South Wales, Queensland, and New Zealand railways, year 1906, 20973.
Total of receipts on Australasian railways for 1906, 20984.
Comparison of percentage of working expenses on British and Irish lines with Australasian Railways, 20985.
Percentage of net earnings to capital on Australasian railways, 20999, 21223.
Effect of the inclusion of nominal additions to Capital when comparing the dividends paid by British lines with Irish Railways, 21004.
Comparisons between British and Irish lines and Australasian Railways, (a) total receipts per mile, (b) working cost per mile, (c) coal rates, 21006, 21211.
Australasian minimum rate per ton for coal and the mileage scale explained, 21034.
Difference between the British and Australasian basis for calculating long distance rates, 21052.
The necessity for high long-distance rates in Australia, 21061, 21229.
Method of administering the Australian railways explained, 21066.
Commissioners and Assistant Commissioners of railways, 21070.

Growth of West Australian railways for decade ending 1902, 21091.
Financial position of the lines in 1891 and 1902, 21096.
West Australian industries developed by the extension of railways, 21121.
Question of political interference in the control of the State railways, 21124.
Rates of interest earned on the capital of the railways, 21127.
Surplus earnings devoted to reductions of rates and fares, 21132.
Prosperity of the Australian Colonies largely due to their system of State railways, 21137.
Principle by which the profits of paying sections are set off against losses on non-paying sections, 21140, 21293.
The construction and equipment of the railways adapted to the requirements of the districts, 21142.
Australian railway experience shows there is no necessity for interlocking signals on lines with infrequent train service, 21151.
The advantage of State ownership of railways as applied to the existing state of affairs in Ireland, 21161.
Curtailment of expenses follows diminution of receipts on State railways in common with privately owned lines, 21172.
Rate of pay for unskilled labour on the Australian railways, 21177.

Mr. JOHN DAVIS—*continued.*

The tendency of State railways to pay higher wages than the ordinary market rate discussed, 21185.
How changes of rates get initiated on Australian railways, 21198.
Australian railway fares and rates higher than in Ireland, 21210, 21277, 21284.
Alleged lower rates and better service on Irish than Australian railways, 21217.
The ratio of goods to passenger receipts in Australia and in Ireland compared, 21218.
State management of the Irish Railways recommended, 21242, 21301.
Explanation of the powers of the General Managers of Australian Railways as to expenditure on urgent new works, 21246.
The system as regards provision for renewals of stations, etc.—Annual estimates prepared, 21251.
Working expenses of the Victorian, New South Wales, and Queensland Railways, 21266.
Train mileages in New South Wales and Victoria compared with those of Irish Railways, 21266.
No reductions in rates for large lots of traffic on Australian Railways, 21272.
Facility for obtaining particulars of rates and fares in Australia, 21288.
Greater cost of construction of Victorian and New South Wales lines over the rest of the States explained, 21303.
Australian Railways promoted without legal Parliamentary expenses, 21306.
Australian system of dealing with Capital and Revenue charges identical with the British, 21312.

Mr. A. C. LARMINIE.

Alleged excessive rate for Cattle, Castlebar to Dublin, 21321.
Complaint as to excessive cattle rates in Ireland generally, 21328.
Complaint as to greater facilities granted to large dealers than to small, 21334.
Losses incurred owing to slow railway transit of cattle, 21338.
High rates for cattle feeding stuffs, 21343.
High passenger fares and inferior carriage accommodation on Irish Railways, 21344.
Policy of the Midland Great Western Railway with respect to the issue of Market Tickets condemned, 21352, 21391.
Alleged loss of traffic arising from high fares on the Midland Great Western Railway, 21363.
Complaint as to want of through carriage accommodation between Castlebar and Dublin, 21365.
Delays arising at junctions from want of co-operation in the running of passenger trains, 21372.
Amalgamation of the Railways into three systems advocated, 21381.
Neither Nationalisation or State Purchase of the Irish Railways approved, 21390.
Reasons for disapproval of State purchase of the railways, 21403.
Suggested allocation of the country between three large systems, 21405.
The probability of reductions in rates and fares under a State-owned system, 21414.
Present favourable condition of the farmer as compared with twenty years ago, 21418.
Improvement in travelling facilities, rolling stock, speed, etc., in recent years on the Midland Great Western Railway as compared with twenty years ago, 21424.
The effect of the division of the Irish railways into three Companies discussed, 21437.
The Amalgamation Act of 1900 and competition, 21443.

Colonel G. O'CALLAGHAN WESTROPP, J.P.

Improved facilities for passenger traffic at Ennis station since the amalgamation of Waterford and Limerick with the Great Southern and Western Railway, 21452.

Colonel G. O'CALLAGHAN WESTROPP, J.P.—*continued.*

Alleged penalising of Ennis by the late Waterford and Limerick Company, 21453.
Complaint as to excessive cross-Channel goods rates with Ennis, 21459.
The promotion of the proposed East Clare Railway, 1886 to 1896, 21466.
Negotiations with the Government and the Board of Works in 1896, 21473.
Rejection of the scheme by the Grand Jury of Clare and the diversion of the Grant to Donegal, 21482.
Two classes only for passenger traffic recommended, 21490.
Improved sleeping car and lavatory accommodation on passenger trains suggested, 21495.
Alleged deterioration of cattle owing to slow transit, 21502.
Amalgamation of the Irish railways into three or four systems recommended, 21522.
Suggestion as to a substituted authority in Ireland for the Railway and Canal Commission Court, 21525.
Question of the proposed conversion of the West and South Clare Railways into broad gauge lines discussed, 21529.
The annual liability of the County Clare in respect of the West and South Clare Railways, 21533.
East Clare's contribution to the West and South Clare Railways Guarantee, 21538.
The heavy expenditure on the West Clare Railway discussed, 21540.
The Board of Works Inquiry into the working of the Clare railways in 1898, 21546.
The effect of the agreement between the Great Southern and Western Railway Company and the Grand Canal Company on competition discussed, 21548.
Efficiency of the Canal service on the Shannon and Lough Derg discussed, 21553.
The tolls charged by the Board of Works on Lough Derg, 21557.
The agreement between the Shannon Development Company and the Grand Canal Company as to goods traffic, 21559.
The Shannon Development Company's steamer services and their value to the districts served, 21562.
Subsidies given by the counties, 21564.
Extent of the services, 21571.
Termination of the subsidies from the Board of Works and the Counties, 21578.
The value of the Coach Services from Ennistymon to Ballyvaughan and from Listowel to Tarbert to the districts and the financial results discussed, 21581.
Discontinuance of the services on the expiration of the subsidy, 21587.
The coach services not considered a proper test as to the desirability of railway extension, 21591.
Explanation of the County Clare Grand Jury's action in refusing the proposal for the East Clare Railway, 21593.
The necessity for some extension of light railways in the East Clare district strongly urged, 21598.
Willingness of the ratepayers to contribute towards the cost of railway extension, 21600.
State purchase and control of the Irish Railways desirable in time, 21604.
The country alleged not to be yet ripe for a scheme of State control, 21606.
Inefficient train service between Ennis and Dublin, 21607.
Anomaly with reference to Euston and Ennis return ticket conditions, 21607.

Mr. EDWARD WATSON, J.P.

Date of the starting of the Mail Service between Dublin and Holyhead, 21614.
The Mails contract between the Post Office and the City of Dublin Steam Packet Company of 1892, 21618.
Existing arrangements for conveying the mails across Dublin, 21618.

Mr. EDWARD WATSON, J.P.—*continued.*

The connection made by the construction of the City of Dublin Junction Railways for the transit of the Mails, 21621.
The "Loop" Line worked by the Dublin and South-Eastern Company and guaranteed by the latter and the Great Northern Company and the City of Dublin Steam Packet Company, 21622.
The existence of preferential cross-Channel through rates in favour of imports to Ireland, 21631.
City of Dublin Steam Packet Company have no voice in the fixing of through rates, 21632.
Cost of the City of Dublin Junction Railway (the "Loop" Line), 21636.
Saving of time effected in Mails service by the City of Dublin Junction Railway, 21640.
Mail service with the North of Ireland said to be satisfactory, 21642.
Arrangement for transfer of the South of Ireland Mails from Kingstown to Kingsbridge, 21644.
Complaint as to late start of the Great Southern and Western Company's morning mail train, 21649a, 21715, 21815.
Alleged failure of the Great Southern and Western Company to accelerate the morning mail between Kingstown and Inchicore over the Drumcondra Link Line, 21649.
Relevant quotations from speeches of the late Chairman of the Great Southern and Western Railway Company, 21650.
Comparison of the running of the Great Southern and Western Railway Company's morning mail between Kingstown and Kingsbridge before 1st April, 1897, and after that date, 21663.
The mail train services in Ireland generally considered quite satisfactory, 21666.
Proposed acceleration of the Irish Mail Train between Euston and Holyhead, 21669, 21714.
Nationalisation of the Irish Railways disapproved, 21677.
State purchase of the Irish railways and control by a State Department advocated, 21682.
Appointment of Railway Commissioners same as in Australia and India recommended, 21684.
The alternative proposal to amalgamate the Irish Railways discussed, 21686.
The extent of previous amalgamations of Irish railways, 21687.
Suggestions as to further amalgamations, 21690.
The amalgamation of the Dublin and South-Eastern with the Great Northern (I.) Railway recommended, 21691.
Alleged irregular expenditure of capital, 21692.
Further capital powers recently obtained not utilised, 21692.
Savings in working expenses and benefits to the public likely to arise from an amalgamation of the Dublin and South-Eastern and the Great Northern (I.) Railways, 21693.
Suggested electrification of the Dublin and South-Eastern Railway, 21694.
Suggestions as to financing the proposed amalgamation of the Dublin and South-Eastern and Great Northern (I.) Railways, 21697.
Absence of the railway professional element on Irish Railway Boards, 21702.
The policy of the expenditure on the construction of the Drumcondra Link Line, 21722.
The desirability of maintaining competition between the different railway systems in Ireland, 21737, 21802.
The fixing of cross-Channel port-to-port rates, 21741.
The existing system of railway control in Ireland on the whole considered the most desirable, but the amalgamation of the small lines recommended, 21751-2.
Favourable comparison of Irish with Scotch railways, 21759.
Question of the necessity for further State aid to Irish railways discussed, 21762.
Irish railway rates as a whole stated to be reasonable, 21766.
Condition of Irish railways steadily improving, and do not call for exceptional treatment, 21773.

Mr. EDWARD WATSON, J.P.—*continued.*

Extent to which Government aid would be required in the proposed Dublin and South-Eastern and Great Northern (I.) Railways amalgamation scheme, 21776.
Effect of preferential cross-Channel through rates on Irish industries, 21782.
Reductions in local rates as an assistance to Irish industries approved, 21789.
The influence of the London and North Western Company in the fixing of cross-Channel rates with Dublin, 21791.
Similar local steamer rates, Liverpool to Dublin and Dublin to Liverpool, 21794.
Continuity of line a reason for the suggested amalgamation with the Great Southern and Railway with the Great Northern (I.) Railway in preference to the Great Southern and Western Railway, 21797.
Amalgamation with the Great Southern and Western Railway objected to, 21799.
Anticipated advantage to the Dublin and South-Eastern Railway shareholders from an amalgation with a strong company, 21806, 21853.
The financial difficulties in connection with a scheme of Nationalisation or State purchase discussed, 21808.
No difficulty apprehended to State purchase and control by a State Department of the Irish railways, 21812.
Delays to the Mails and consequent failure to connect with the Great Northern Company's train to Belfast, 21821.
The possibility of accelerating the morning mail train by half an hour between Kingstown and Kingsbridge, 21831.
The recent Order as to through rates on the Great Southern and Western Railway of the Railway and Canal Commission, 21863.

Mr. WILLIAM T. WATSON.

Alleged unfair treatment of Irish producers in the matter of local rates for cattle feeding stuffs, 21871.
Instances of through rates for this traffic disproportionate to the local rates, 21876.
Complaints as to higher rates for "superphosphate" than for "basic slag," 21892.
Abortive negotiations on the subject with the Irish companies, 21900.
Extent and importance of the traffic in chemical fertilisers, 21906.
Preferential treatment accorded to Liverpool in the matter of rates for feeding stuffs to Irish towns, 21925, 21997.
Question of State purchase as a remedy for existing anomalies, 21933.
Disproportion between Irish local rates and the amount accepted by the Irish railways in division of through rates, 21938.
The resource of an appeal to the Board of Trade in settling disputes with the Railway Companies, 21939.
The resource of an appeal to the Railway and Canal Commission an expensive and unsatisfactory proceeding, 21945.
A Dublin tribunal cheaper and more accessible recommended, 21947.
The Irish feeding stuffs and chemical fertilisers industries handicapped by preferential treatment afforded to Liverpool, 21952.
Temporary low rates for fertilisers granted by the railways where steamer competition exists, 21959.
Suggested transfer of the powers of the Board of Trade under the Conciliation Clause of the Railway and Canal Traffic Act, 1888, to the Irish Board of Agriculture, 21962.
Reduction of the minimum quantity on the low special rates sought, 21965.
The powers of the Irish Board of Agriculture to cite Railway Companies before the Railway and Canal Commissioners, 21970.
The equity of the rates for feeding cake in Ireland generally, 21975.
The higher minimum quantity at low rates by railway as compared with steamer transit, 21986.
Question of the classification of "basic slag" and superphosphates, 21988.

Mr. WILLIAM T. WATSON—*continued.*

Extent of the traffic in both commodities, 21990.
Alleged effect of the preferential through rates from Liverpool for feeding stuffs on the Dublin producer's trade, 21997.

Mr. J. CLARKE.

Resolution of the Mayo County Council recommending the acquisition of the Irish railways by an Irish body with the rates of the country at large as a guarantee, 22014.
Existing obligations of the County of Mayo in connection with guaranteed railways, 22022.
Amount of baronial guarantees paid in respect of the Ballymote and Claremorris and the Claremorris and Swinford Railways, 22027.
The working companies concerned, 22040.
Ballinrobe and Claremorris line worked under an agreement at 50 per cent. of receipts, 22044.
The annual baronial and Treasury contributions for five years ending 1905, 22047.
Baronial guarantee for the Athenry and Tuam Railway taken over by the Great Southern and Western Railway in 1902, 22051.
The agreement under which the late Waterford and Limerick Railway Company undertook to work the Claremorris and Swinford line, 22057.
Amount paid by the guaranteeing area in respect of Claremorris and Swinford line, 22062.
Baronies, etc., comprised in the guaranteeing area, 22063.
Anticipated large saving in working expenses under a system of unified management of the Irish Railways, 22066.
Instances of Canadian rates compared with Irish rates for similar traffic, 22073.
Improvement in the Irish third-class carriages considered necessary, 22083.
Extent of passenger traffic on Ballinrobe, Claremorris line, seven years, ending October, 1906, 22094.
Reduction in fares and improved accommodation suggested, 22099.
Complaint as to inconvenience at Clara station owing to friction between Midland Great Western and Great Southern and Western Companies, 22108.
Personnel and functions of the Directorate of the Athenry and Tuam line, 22118.
Comparatively favourable position of Mayo with other counties as regards liability for railway guarantees, 22128.
Reduction of second-class fares as a means of increasing passenger traffic recommended, 22134.
State ownership and control of Irish railways preferred to the continuation of present system, 22142.
Counsel's statement that the Ballinrobe and Claremorris line is worked at a loss, 22150.

Alderman HENRY DALE, J.P.

Alleged inequalities in goods rates prejudicial to the interests of the country, 22158.
Alleged disproportion between through and local rates, 22161.
Complaint on behalf of Cork brewers of unfair treatment as to rates compared with Dublin brewers, 22165.
Rates for porter, Dublin and Tralee and Cork and Tralee, 22167.
Rates for porter, Dublin and Killarney and Cork and Killarney, 22176.
Rates for porter, Dublin and Listowel and Cork and Listowel, 22189.
Refusal of the Railway and Canal Commissioners to sanction increases in the low rates from Dublin in 1901, 22196, 22237.
Inequalities in the rates for drapery to Irish stations, 22200.
Instances of through rates for drapery in excess of the sum of the local rates, 22203.
Ineffective representations made to the companies, 22207.
Unanimous resolution of the Cork Incorporated Chamber of Commerce and Shipping on the 29th November, 1906, favouring State purchase of the Irish Railways, 22210.

Alderman HENRY DALE, J.P.—*continued.*

The private management of the Irish Railways condemned, 22213.
The suitability of a system of State-owned rather than of privately-owned railways to the wants of Ireland, 22214.
The improved railway facilities to be induced by State purchase would improve tillage and discourage emigration, 22214.
The probability of large development of agriculture and of industrial enterprises if assisted by low railway rates, 22215.
The advantage of combination in securing low rates for large consignments, 22221.
A State authority in Ireland the only manner of securing a general reduction of rates involving loss of revenue, 22224.
Reasons for preferring State purchase to amalgation of the railways under present ownership, 22226.
The necessity for further extensions of Light Railways in the South and West of Ireland, 22228.
An appreciable diminution of the carrying charges in Ireland considered a necessity to any real industrial revival in Ireland, 22232.
Question of whether the Irish taxpayer or the Imperial Exchequer should be at the loss in the case of reduced rates and fares and further extensions in Ireland, 22246.
Money due to Ireland in respect of over-taxation should be applied to railway extensions, 22251.
Question as to whether State management of the railways would be acceptable to the Irish public, 22255.
Inability of the Great Southern and Western Company to alter the Dublin and Southern stations porter rates, 22263.
The position of the Great Southern and Western Railway Company as regards rates to certain stations under the Amalgamation Act of 1900, 22267.

Mr. E. J. LONG, J.P.

Facilities afforded by the Great Southern and Western Railway Company at Limerick to traders considered satisfactory, 22278.
Alleged disproportionate through rates for leather as compared with local rates, 22280.
Necessity for lower rates for leather from Limerick to Irish stations to compete with the foreign trade, 22286.
American manufacturers the keenest competitors, 22288.
The system of giving cheap cross-Channel through rates into Ireland objected to, 22290, 22487.
Complaint as to the through rate for leather from Liverpool to Tralee compared with the local rate, Cork to Tralee, 22297.
Claim for a mileage rate from Cork to Tralee based on the Liverpool through rate, 22300.
The through rate from Liverpool to Limerick compared with the local rate, Cork and Limerick, 22307.
The rates, Liverpool to Listowel and Waterford to Listowel, for leather, 22311.
The method of calculating the Irish rail proportions out of the through rates, 22313.
The divisions of the rates a matter of assumption, 22318.
The right of the local Irish goods traffic to the same mileage charge as the local proportion of the freight on through booked goods, 22337.
Complaint as to the failure to obtain favourable rates from Limerick to the North, 22345.
Allegation that the existing rates shut out the Belfast and Northern markets generally from the Limerick manufacturers, 22351.
A lower rate in operation in pre-amalgamation days, 22357.
The alleged prohibitive cost of appeal to the Railway Commissioners' Court, 22363.
The County Court suggested as a substitute for the Railway and Canal Commission Court, 22364.
Alleged neglect of the railway management to develop the industries of Ireland, 22366, 22557.

Mr. E. J. LONG, J.P.—*continued.*

Complaints as to excessive rates for conveyance of small parcels in Ireland, 22371, 22503.
Instances of excessive charges on parcels from Limerick to Belfast and Schull and from Dublin to Limerick, 22379.
Complaint as to charges for delivery of parcels, 22394.
A uniform parcel rate including cost of delivery advocated to encourage the distribution of agricultural produce, 22399.
The distribution of small parcels of agricultural produce restricted owing to excessive rates, 22414.
Reduction in the second-class fares recommended, 22416.
Comparison of selected second-class fares in England and Ireland, 22418.
Irish first and third-class fares considered reasonable, 22422.
Suggested extension of the market ticket principle to the large centres, 22425.
Improvment in the passenger train service between Cork and Limerick necessary, 22430.
Resolutions unanimously passed by the Limerick Corporation on Irish railway policy, unification, and State or public control, 22436.
State purchase of Irish railways advocated, 22443.
The country should pay any deficiency in revenue available for interest in the event of State purchase, 22445.
The percentage of the railway rates to the selling price of leather, 22450.
The complaint of exclusion from distant Irish markets owing to high rates discussed, 22463.
The home market for goods preferred on account of its accessibility apart from the question of rates charged, 22478.
Reduction of rates if necessary, even at the expense of the Irish taxpayers, recommended, 22510.
The position of the Irish shareholders and the necessary protection from loss required by them if rates were compulsorily reduced, 22525.
The extent of goods traffic between Limerick and Belfast, 22536.
The question of applying public taxes to railway rates reduction discussed, 22540.
The policy of the railway companies with regard to the charging of low cross-Channel rates discussed, 22545.
Puzzling nature of the railway rates question, 22561.
Rates for perishables in England and in Ireland, 22567.

Mr. HENRY J. FORDE, J.P.

Extent of the home and foreign trade of Waterford, 22577.
Cross-Channel steamer services with Waterford, 22580.
Amalgamation of the Great Southern and Western and the Waterford and Limerick Railways originally opposed by Waterford, 22586.
Protective clause for Waterford inserted in the Amalgamation Act of 1900 alleged to be nullified by a recent decision of the Railway and Canal Commissioners, 22586, 22642, 22693.
The increased flow of traffic through Rosslare not of any benefit to Waterford, 22590.
Irish railway management as a whole considered fairly satisfactory, 22594.
The controlling influence of English railways over the Irish lines considered to be to the disadvantage of Ireland, and a hindrance to the development of Irish industries, 22596.
The system of low cross-Channel through rates into Ireland and disproportionate local rates condemned, 22600.
Improvement in the train service to Waterford called for, 22607.
Alleged preferential treatment of some traders by the railway company, 22611.
Suggestion as to the constitution of a less expensive and more satisfactory court of appeal than the Railway and Canal Commission Court, 22616.

Mr. HENRY J. FORDE, J.P.—*continued.*

Elimination of legal representatives from the new Railway Commission Court recommended, 22617.
Difficulty of dispensing with legal assistance admitted, 22632.
The difficulties of proving cases of undue preference discussed, 22635.
The difficulty of reconciling the claims of various ports in Ireland for differential rates, 22643.
The objection to English railway control over Irish lines explained, 22651.
The alleged dominating influence of the Great Western over the Great Southern and Western Company as regards traffic by the Rosslare route, 22656.
The alleged policy of English companies in promoting the flow of traffic to Ireland rather than from it discussed, 22660.
The claim of Ireland to special treatment in the matter of railway rates and preferential treatment urged, 22671.
Amalgamation of Irish railways and limited State control advocated, 22679, 22709.
Great Western subsidy to Irish railways at Waterford previous to amalgamation, 22685.
The position of traders using the Waterford route in the matter of rates before and since the G.S. and W. and W. and L. W. Railways amalgamation, 22686.
Provision in the Amalgamation Act of 1900 regulating the rates on the railways affected, 22690.
The probability of more equitable treatment for all ports under a unified system of railways urged, 22700.
The necessity for encouraging Irish trade by low rates, 22705.
A reduction in rates and fares considered a necessary condition of amalgamation, 22715.
Equal treatment of all traders as regards rates and concessions advocated, 22717.
The *personnel* of the Fishguard and Rosslare Company's directorate, 22722.
Growth of the desire of the Irish people to manage their commercial affairs free from outside control, 22727.

Mr. ST. JOHN HENRY DONOVAN, J.P.

The system of giving preferential cross-Channel through rates alleged to be detrimental to Irish industries, 22735.
Grain rates, Liverpool and Tralee and Cork and Tralee, compared, 22743.
Instances of disproportionate rates between Tralee and certain stations compared with through rates from English stations, 22756.
Injury to local industries in Kerry alleged owing to the low rates for grain charged from Mallow to certain Kerry stations compared with the rates from Tralee and other Kerry towns, 22768.
Extent of the guarantees to Railways in Kerry, 22777.
Rates with Youghal and Templemore quoted, 22778.
Cheaper fares and a more frequent train service to Dublin to encourage passenger traffic from Kerry recommended, 22784.
Complaint as to unsatisfactory passenger train service between Tralee and Killarney, 22800.
Question of State purchase of Irish railways, 22810.
Resolution of the Kerry County Council on the subject of the policy and management of Irish railways and State or public control, 22816.
State purchase and control by an Irish authority recommended and constitution of a suitable controlling body outlined, 22823, 22849, 22859.
The excess of the local grain rate Waterford and Tralee over the through rate Liverpool to Tralee, 22828.
Issue of tickets at excursion rates to Dublin from Killarney and Tralee recommended, 22834.
The taxation in respect of the heavy liabilities of Kerry in the matter of railway guarantees, 22846.

Mr. ST. JOHN HENRY DONOVAN, J.P.—*con.*

State purchase and control of the Irish railways preferred to the existing arrangements, 22858.
The adoption of the Australian method of management by three Commissioners with absolute control suggested, 22865.
Local Councils in Kerry convinced that the present policy of the Irish railways is non-progressive, 22868.
The effect of sea competition on railway rates discussed, 22870.
Difficulties in the way of increased train service on Tralee branch owing to single line working, 22877.
The possibility of increasing the present traffic from Killarney and branch stations to Dublin by reducing the fares discussed, 22881A.
The likelihood of the Irish railways being worked more satisfactorily under State control, 22900.
The hardship on the local merchants of the high rate for grain between Waterford and Tralee as compared with the Liverpool and Tralee rate, 22907.
The reason for the retention of the low Mallow to Kerry stations grain rate, 22921.
The justice of enforcing a general reduction of railway rates discussed, 22929A.
Extension of time of week-end tickets advocated, 22942.
The failure of the G. S. and W. Co.'s application to the Railway and Canal Commission to increase some through rates in 1901, 22950.
Resolution of the Kerry County Council complaining of the injury to traders caused by the discontinuance of parcels conveyance by the Express service *via* Rosslare, 22951.
Results of the amalgamation of the G. S. and W. and W. and L. Railways alleged to be a loss to Tralee, 22961.

Mr. RICHARD W. WALSH, J.P.

Principal industries of Castlebellingham district, 22975.
Increased facilities asked for to encourage small traders in agricultural produce, 22977.
A public accommodation footpath and bridge over the river for passengers near Castlebellingham station required, 22980, 23145.
Great Northern (I.) Company's refusal to construct a footpath, 22995.
Question of action by the local authority, 23002.
Estimated cost of the improvements, 23006.
Want of a railway station between Drogheda and Dunleer complained of as an inconvenience to a largely populated district, 23008, 23156.
The necessity of a railway station between Drogheda and Dunleer urged to accommodate and develop the villages of Clogher Head, Newtown, Termonfecken and Cartown and the surrounding districts, 23013.
Inexpensive station without signals suggested, 23021.
The loss to the barley growers by having to cart their produce to Drogheda and Dundalk for disposal, 23023.
Year's value of the barley and potatoes produced in the district for which the proposed station is asked, 23025.
Anomalies in the rates charged for goods between Castlebellingham and Dublin and between Dundalk and Dublin, 23032.
Coal rate Dundalk and Castlebellingham, 23051.
Excessive barley rate Dunleer and Drogheda, 23051.
Rates for grain, etc., Dunleer and Dublin, compared with the Dundalk and Dublin rates, 23078.
Complaint as to anomalies in connection with passenger fares, 23088.
The issue of mileage coupons in lieu of present railway tickets recommended, 23111.
Proposed extension of time for return tickets, 23111.
State purchase of the railways and management by an Irish Board of Experts recommended, 23137, 23162.

Mr. RICHARD W. WALSH, J.P.—*continued.*

The Board of Trade and cheaper station equipment, 23150.
Suggestion that competitive carting should be abolished by reduced rates, 23166.
Time of availability of ordinary return tickets in Ireland, 23168.
Alleged injury to agricultural producers by excessive rates for conveyance of such goods to market, 23172.
The advantage to the community at large of extended railway facilities, 23182.
Complaint as to inconvenient excursion train arrangements on Great Northern (Ireland) Railway, 23186.

Mr. MICHAEL LYNCH, J.P.

Construction of a light railway between Cookstown and Strabane advocated, 23204.
Branch line from Greencastle to Omagh recommended, 23207.
Direct line of railway from Clogher to Omagh suggested, 23212.
Claim of Omagh to better railway facilities urged, 23216.
Industries of the districts to be opened up by the suggested light Railways, 23223.
Alleged failure of the Clogher Valley Railway to properly develop passenger traffic, 23226.
The probability of the proposed new railways being a financial success, 23230.
Complaints of insufficient and inconvenient passenger train service between Omagh and intermediate stations to Dungannon, 23232, 23387.
Complaint as to insufficient facilities and inconvenient passenger train service between Omagh and Dublin, 23253, 23255.
Suggested extension of the excursion ticket system, 23266.
Goods rates said to be detrimental to the development of the industries of the district, 23270.
Staple industries of Omagh district, 23276.
Rates for shirts and underclothing, Derry and London quoted, and preferential treatment of Derry alleged, 23280.
Rates for drapery from Manchester to Omagh, Strabane, and Derry compared, 23300.
Excess of the local goods rates from Belfast to Omagh over the rates to Strabane and Derry, 23312.
Low rate for bread from Belfast to Omagh complained of as unfair to Omagh bakers, 23322, 23426, 23496.
Through rates from and to all Irish stations advocated, 23339.
Complaint of excessive charges for the conveyance of newspapers and printed matter from Omagh to stations in the district, 23345, 23367.
The general scale of charges for conveyance of newspapers in Ireland, 23362, 23436.
Lower rates for conveyance of agricultural produce recommended, 23369.
State purchase of the railways and control by an Irish Central Authority recommended, 23380, 23385, 23483.
The financial prospects of the proposed new railway from Strabane to Cookstown, 23409.
The probability of increased traffic resulting from cheaper fares, 23424.
The route traversed by the Clogher Valley Railway, 23458.
Proposals for extension to Bawnboy-road on Cavan and Leitrim Railway, 23462.
The anticipated advantages from the construction of the Newry, Keady and Tynan Railway and the linking up of Clogher Valley and Cavan and Leitrim Railways, 23462.
Government Grant for the Newry and Tynan section, 23469.
The preferential treatment of Strabane in the matter of goods rates, 23476.
Lower rates from Omagh in operation in pre-amalgamation days, 23482.
A reduction and uniformity in rates advocated, 23483.
Failing State Purchase the alternative arrangement of a Railway Board subject to Government control approved, 23487.

Mr. MICHAEL LYNCH, J.P.—*continued.*

The passenger train facilities at Omagh discussed, 23489.
The effect of the sea rates on the freights by rail from Belfast to Derry, 23502.

Mr. ANTHONY MACKEY.

Complaint as to high rate for eels to the London market from Killaloe, 23508.
Rate for eels from Denmark to London and the extent of the Danish competition with the Irish trade, 23508.
Comparison of the quantities of eels sent from Ireland and from Denmark to the London market, 23515.
Average weight of the daily consignments of eels from Castleconnell and Killaloe to London, 23523.
Close season for eels in Ireland, 23526.
Comparison of rates on Salmon from Ireland and from Denmark and Norway to London, 23528, 23703.
The practice of charging the weight of the salmon boxes and ice packing with the fish condemned, 23536, 23658.
Complaint as to extra charges for any weight over 1 cwt. in boxes of salmon, 23540.
The icing of small senders' consignments of fish by the Railway Companies suggested, 23546.
Prevalence of this practice in Denmark, 23548.
The necessity of weighing consignments of fish at both forwarding and receiving stations urged, 23554.
Agent employed by Danish Government in England to look after exports, 23557.
The desirability of the Railway Companies supplying information to senders of traffic as to suggested suitable markets and consignees, 23560, 23684.
Free railway travelling for representatives of the fishing industry suggested, 23565, 23730.
The traders' ticket system not considered sufficient, 23567.
The necessity for further precautions to prevent pilferage urged, 23571, 23661.
Free Railway conveyance for fish for propagation purposes suggested, 23583, 23731.
Use of double-decked wagons for conveyance of sheep and swine recommended, 23589, 23721.
The amalgamation of the smaller Irish lines with the greater railways recommended, 23595, 23687.
The granting of State subsidies towards the reduction of rates to encourage local industries suggested, 23597, 23688.
The lowering of rates would induce development of stagnant industries, 23601.
Advantages alleged to have resulted from the amalgamation of the Great Southern and Western and Waterford and Limerick Railways, 23605.
Equality of rates for inwards and outwards cross-Channel traffic advocated, 23607.
Local Irish railway rates alleged to be excessive, 23608.
State ownership of and control by an Irish authority with safeguards for vested interests advocated, 23609, 23691.
Double-decked wagons not considered a necessity for poultry traffic, 23613.
Complaint as to the charging of a minimum weight of 1 cwt. for each fish package, 23617.
Irregularity in charging as disclosed by Salesmen's dockets, 23620.
Careful weighing of fish by the receiving Company urged, 23638.
The necessity for the provision of refrigerating space on cross-Channel steamers, 23639.
Suggestion that the powers of the Board of Trade as regards Irish Railway complaints should be transferred to the Department of Agriculture approved, 23653.
The extent of the fishing industry in Limerick and Castleconnell districts, 23666.
Increased statutory powers for the Irish Fishery Boards as to the preservation of salmon throughout the Shannon district suggested, 23672.

Mr. ANTHONY MACKEY.—*continued.*

The assistance afforded by the Department of Agriculture in developing the Irish fishing industries discussed, 23676.

Suggestion that the Department of Agriculture should look after the fish traffic from Ireland as well as other industries, 23694.

The effect of direct foreign imports to Irish ports on home industries, 23698.

The suggested appointment of an official to watch the interest of the Irish fishing industry in England, 23741.

The provision by the Railway Companies of ice for sale at certain depots recommended, 23747.

Mr. W. A. LINDSAY.

Membership of the Royal Ulster Agricultural Society, 23760.

No complaints of any consequence against the Irish Railways received from the farming community, 23761.

Show traffic treated more generously by the Irish Railways than by the English, 23765.

The Irish railway rates alleged to be reasonable, 23770.

The alleged disparity between the Belfast to Strabane and Belfast to Omagh rates, 23775.

Contention that all cross-Channel through rates apply equally to inwards and outwards traffic, 23778.

Rates for linen between Belfast and London, 23780.

Comparison of passenger fares in England and Ireland, 23788.

Irish third class fares compare favourably with those in Great Britain, 23798.

Comparison of the fares and services on Belgian railways with the Irish, 23803, 23995.

Speed of Continental trains, 23817.

Comparison of Australian and Irish passenger fares, 23820.

Instances of cheap excursion fares on Irish railways, 23833.

The Irish railway fares on the whole alleged to be cheaper than the English, 23837.

The evidence relative to passenger fares in England and in Ireland given on behalf of the Irish Commercial Travellers' Association discussed, 23840.

The issue of cheap yearly tickets to commercial travellers by the Irish companies, 23857.

The extension of the existing arrangements for running through carriages over the Irish lines recommended, 23859.

The amalgamation of the smaller Irish lines with the greater recommended, 23866.

Four separate companies proposed, 23867, 23962.

The granting of subsidies by the State disapproved, 23869.

State ownership and control of trading concerns objected to, 23870.

The necessity for further railway extensions in Ireland, 23872.

The acquisition of Irish lines by English companies considered to be advantageous, 23879, 23939, 24000.

The acquisition of the Donegal Railway by the Great Northern (Ireland) and Midland (England) Companies, 23884.

The Killybegs and Glenties extensions of the Donegal Railway built by the State, 23888.

English and Irish railway fares discussed, 23892.

The advantages arising from competition between railway companies, 23904.

Instances of Irish railway competition, 23908.

The possibility of competition under State ownership of Irish railways, 23920.

The probability of a remunerative increase of traffic resulting from a general reduction in rates and fares, 23924.

The desirability of the state guaranteeing railways against a temporary loss of revenue resulting from reduced rates and fares, 23933.

Suggested method for the amalgamation of the Irish railways, 23943.

Mr. W. A. LINDSAY—*continued.*

The problem of Irish agricultural depression and its remedy, 23956.

Government control of Irish railways disapproved, 23969.

Ulster's belief in maintaining competition on the railways, 23976.

The Australian policy of using the net gain on the whole railway system to help the poorer districts, 23978.

The policy of granting public money to reduce the rates, and thereby relieve the depression in Irish agricultural districts, 23984.

Reduction of rates below the point enabling interest on capital to be paid objected to, 23993.

Reduction of second-class fares in Ireland suggested, 24000.

Extension of the powers of the Department of Agriculture for settling railway disputes advocated, 24009.

Mr. JAMES M. BURKE, J.P.

Suggested railway extension at Baltimore to deep water, 24018.

Injury to Baltimore fishing industry owing to absence of railway to extension, 24022.

Treasury grant towards the cost of the extension sought, 24023.

Contributions promised by the County Council and the Congested Districts Board, 24030.

Advantages to traders anticipated from a deep-water quay at Baltimore, 24039.

Government grant sought for the Schull and Skibbereen Light Railway, 24046.

History of the railway, 24051.

Alleged defective design, construction, and equipment, 24055.

Useless engines supplied, 24056.

Line closed seven months after opening owing to unsatisfactory construction and equipment, 24061.

Condemned by the Board of Trade at second inspection, 24061.

Loss on working and consequent heavy tax on the county in respect of payments under guarantee, 24065.

Recoupments by the Treasury and from the local taxation account, 24068.

Annual baronial contributions to the Schull and Skibbereen line for five years, 24070.

Responsibility of the Board of Trade as to the line, 24074.

Cost of construction of the Baltimore and Skibbereen and Schull and Skibbereen lines, 24078.

Constitution of the present Committee of Management of the Schull and Skibbereen line, 24086.

Representations to the Board of Works, 24089.

Purchase of new rolling stock, 24091.

Value of the Baltimore fishing industry, 24095.

Work done by Lady Burdett-Coutts' school at Baltimore, 24100.

No financial aid obtained from the Department of Agriculture or the Board of Works for the Baltimore fisheries, 24111.

Sources from which the cost of the Baltimore extension could be obtained, 24117.

The possibility of improved management of the Schull and Skibbereen line, 24127.

County Council prepared to hand over the line to any company to work, 24135.

Total payments by baronies to the light railway, 24137.

County guarantee given on the expectation that the Cork and Bandon Company would have worked the line, 24140.

Mr. R. N. BOYD.

Peculiarity of the North of Ireland bacon-curing, 24142.

Disagreement with the opinion expressed on behalf of the Belfast Chamber of Commerce on Irish railway management, 24145.

The Royal Ulster Agricultural Society not representative of the farmers or the traders, 24151.

Mr. R. N. BOYD—*continued.*

Resolution of the Belfast Harbour Commissioners expressing satisfaction with the existing state of affairs on Irish railways, 24155.
Average weekly number of dead pigs brought into Belfast by rail, 24159.
Complaint as to high rates for dead pig traffic, 24162.
Alleged injury to Belfast provision-curing trade by the low rates from inland towns to Scotland, 24168.
Comparison of the rates from Enniskillen to Belfast and Enniskillen to Glasgow, 24172.
Complaint as to low rates for American bacon into Ireland, 24172.
Comparison of the rates for dead pigs and the cured product between Londonderry and Portadown and Belfast, 24185.
Complaint as to the high local rates charged by Irish railways compared with the proportion they accept out of through rates, 24191.
Neither the Board of Trade nor the Department of Agriculture appealed to for redress, 24196, 24259.
The question of preferential cross-Channel through rates, 24204.
Ballymena and Leeds rate instanced, 24209.
The equity of the present classification of dead pigs in comparison with other traffic, 24214.
Complaint as to delays in delivery of dead pigs, 24231.
The advantage of dead pig traffic as suitable back loading for trucks to the ports, 24237, 24262.
Dead pig traffic confined to Ireland and increasing, 24245.
The importance of the pork industry to Irish farmers, 24249.
Th suggested necessity for reduced rates, even if a State subsidy were involved for a time, 24252.
Disproportionate rates, Portadown and Ballymena to Glasgow, as compared with Belfast and Glasgow, 24254.
The companies should be forced to disclose the analysis of through rates, and precluded from giving preferential rates, 24255.
The expense of appeal to the Railway and Canal Commission Court objected to, 24259.

Mr. J. ORMSBY LAWDER, M.INST.C.E., D.L.

Rate levied on the ratepayers under the guarantee for the Cavan and Leitrim Light Railway, 24271.
Inception of the line, 24278.
Cost of construction per mile, 24281.
Mileage (railway and tramway respectively), 24282.
Earnings per week per mile (1905-6), 24284.
Working expenses percentage, 24285.
Original estimate of earnings, 24285.
Original estimate of working expenses, 24290.
Payments by the ratepayers under the guarantee since the opening of the line, 24291.
Decrease in passenger traffic attributed to an increase in fares, 24296.
Recent creation of a reserve fund and consequent increase of rate in guaranteeing area, 24306, 24546.
Location of head office of line in Dublin objected to; representations made to directors, 24309, 24324, 24327.
Number of baronial and shareholders' directors respectively, 24322, 24456.
Refusal of the directors to receive a deputation of the traders and ratepayers, 24323.
The situation of the head offices of other Irish light railways, 24331.
Extent of the office accommodation at Ballinamore (Cavan and Leitrim Railway), 24333.
Complaint as to the absence of cart weighbridges at the stations, 24335, 24635.
Instances of alleged serious shortages in coal consignments, 24337.
Complaint as to the issuing of advice notes for coal without either weight or rate, 24342, 24459.
Alleged pilfering of coal in transit, 24344, 24635.
Ineffective representation to the Cavan and Leitrim Company on the subject, 24353.

Mr. J. ORMSBY LAWDER, M.INST.C.E., D.L.—*continued.*

Suggested reasons for the pilfering of coal, 24353.
Complaint as to cattle traffic, 24357.
Unsatisfactory treatment of claims by the company, 24359.
Date of first development of the Arigna coal mine, 24369.
The connection of the Arigna Mining Company with the Cavan and Leitrim Railway, 24376.
The refusal of the Leitrim County Council to accept a Government grant for extensions of the railway to Arigna mine and Rooskey, 24381, 24387, 24486, 24589.
Alleged breach of faith on the part of the Mining Company, 24387.
The contingent liability of the ratepayers on the acceptance of the grant, 24392.
The working of the Cavan and Leitrim line generally regarded as unsatisfactory, 24395, 24581, 24627.
Alleged inefficiency of the passenger train service, 24401.
Complaint as to the rate for flour from Belfast to Ballinamore, 24411.
Unsuccessful representations to the company, 24412.
Anomalies in the rates for oil cake between Liverpool and Ballinamore, 24417.
Correspondence with the Cavan and Leitrim Company, 24422.
Ineffective representations to the company, 24423.
Alleged neglect on the part of the company to obtain equitable through rates, 24426.
The competition of the M.G.W. Railway at Killeshandra station for Ballinamore district traffic, 24429.
The employment given by the Arigna Mining Company, 24435.
The ratepayers' grievance as regards the price of Arigna coal, 24437.
The proposed extension to Arigna Mine and Rooskey advocated, 24440.
State purchase of all the Irish railways recommended now as previously before Allport Commission in 1887, 24442.
Failing State purchase, transfer of Cavan and Leitrim line to Great Northern Company suggested, 24444.
The apparent inaction of the Leitrim County Council in not bringing about better management of the Cavan and Leitrim line, 24446.
Correspondence with the Board of Trade and the Railway and Canal Commission as to weighbridge accommodation at Ballinamore station, 24463.
Company's loss of traffic owing to alleged faulty management of line, 24475.
Turf as fuel replacing coal, 24482.
The action of the County Council regarded as foolish in refusing grant for the extensions, 24488.
The original intention of the promoters as to the extent and direction of the Cavan and Leitrim Railway, 24489.
The possibility of the development of the resources in the Arigna district, 24497.
The extent of employment given in the Arigna district in 1833, and the cause of the subsequent decline of trade, 24500.
The superior quality of the iron ore at Arigna, 24503.
Cause of decrease in receipts—Cavan and Leitrim Railway, 24508.
Alleged excessive price paid by the Cavan and Leitrim Company for Arigna coal, 24512, 24624.
The employment of the manager of the line as secretary of the Mining Company condemned, 24519.
The action of the County Council in rejecting the Goverment grant for railway extensions criticised, 24521.
Inconsistency of the Council who had previously approved of scheme, 24524.
Conditions under which grant was promised discussed, 24529.
Personal guarantee against loss to baronies re extension given by the Cavan and Leitrim directors, 24531.
Possible compensation payable for accidents on the line discussed, 24532.

Mr. J. ORMSBY LAWDER, M.INST.C.E., D.L.—*continued.*

The scheme for the Newry, Keady, and Tynan Railway (Ulster and Connaught), and its probable effect on the prosperity of the Cavan and Leitrim Railway, 24539, 24541.
Flow of the cattle traffic from the Roscommon district, 24540.
Physical objections to the port of Newry, 24540.
The omission of any provision for compulsory reserve funds from the Irish Light Railway Acts regarded as a serious defect, 24546.
Improbability of any further baronial guarantees for railway extensions in Ireland, 24551.
Further extensions dependent on the acquisition of the Irish lines by the State, 24554.
Control of the Irish railways by a State Department advocated, 24556.
Enforced weighing of all goods by the railway companies recommended, 24556.
The advantage of having uniformity of gauge on all connecting railways discussed, 24562, 24618.
The relative cost of building narrow and broad gauge railways, 24571, 24622.
The justice of the ratepayers contributing something towards the proposed extensions, 24615.
The question of gauge and the advantage of interchange of rolling stock, 24618.

Mr. ROBERT GRIFFITH, J.P.

Alleged excessive poultry, game and fish rates in Ireland and to England, 24662.
Rates for poultry, etc., from Enniskillen to Birmingham, 24672.
Rates from Mullingar to Birmingham, 24681.
Rates for poultry, etc., between inland Irish towns and ports compared with the rates from English ports to the interior, 24686.
Rates from Irish ports to English towns and to Scotland, 24700.
Rates from the Colonies compared with English and Irish rates, 24712.
Complaint that sea insurance is not covered by cross-Channel through rates, 24724.
The rate for poultry, etc., from Greenore to Holyhead and from Hamburg to Birmingham *via* Hull and *via* Harwich, 24735.
Excessive rates for home produce seriously handicap Irish trade in competition with colonial and foreign products, 24752.
The grievance also applies to England, 24756.
State ownership of the railways strongly advocated, 24759.
British management under a Minister responsible to Parliament preferred, 24763.
The British market glutted with cheap and inferior foreign poultry, to the detriment of the Irish trade, 24768.
The fair price that should be paid for the railways by the State, 24770.
The advantages to be expected from the adoption of the Australian railway system, 24774.
The percentage of the carriage to the cost price of poultry, etc., 24795, 24859.
Particulars of sales and freight charges, 24799.
English poultry rates alleged to be higher than Irish, 24812.
Comparison of English and Irish poultry rates, 24813.
Comparison of the Colonial and Continental rates for poultry, 24818.
Seasons for the large supplies of English, Irish, and Continental poultry, 24828.
Packing and size of consignments of poultry from Ireland, 24837.
Falling off in the supply of Irish poultry and increase in the product of eggs, 24841, 24857.
Result of inquiry by Committee of Board of Agriculture, 24846.
Alleged preferential Continental rates for poultry, 24848.
Suggested reduction of the Irish railway rates even if increased taxation resulted, 24854.
No appreciable reduction in rates considered possible without a subsidy to the companies, 24867.
Complaint as to excessive through rates from inland Irish towns to English compared with the sum of the local rates, 24872.

Mr. JAMES M'DONNELL.

Improved passenger train service and better facilities generally required, 24881.
Ineffective representations to railway company, 24885.
Complaint as to inferior passenger rolling stock on the Tuam section, 24889.
Excessive passenger fares, Tuam and Galway, 24891.
Comparison of fares, Tuam to Dublin with Dublin and Bradford, 24894.
Excessive bacon rates, Dublin and Tuam, compared with Dublin and Ballyglunin and Liverpool and Tuam, 24899, 24926.
Excessive sugar rates, Glasgow and Tuam, compared with Liverpool and Ballyglunin, 24908.
Preferential cross-Channel rates for drapery and wool, 24909.
Excessive wool rate, Tuam and Galway, 24913, 24927.
Complaints as to delays to Tuam traffic at Athenry Junction from the Midland Great Western Company's system, 24916.
Faulty arrangements at Tuam station as regards wagon supply, 24919, 24944.
Unsatisfactory negotiations with the company, 24920.
A reduction in passenger fares generally recommended, 24924.
Unification of the Irish railways recommended, 24933.
State control preferred, 24940.
Complaint as to the treatment of competitive traffic by the Great Southern and Western Company, 24949.

Mr. HANBURY CLEMENTS GEOGHEGAN, B.L.

Mileage of Victorian State railways, 24975, 25206.
Establishment of the Australian Commonwealth, 24979.
The State management of the Australian railways, 24986.
Australian passenger fares lower and train service more frequent than in Ireland, 24990.
Disappearance of political patronage and diminution of overplus staff, 24991, 25217.
Management of the Victorian railways by Commissioners, and the policy adopted by the latter, 24993, 25003.
Capital of the Victorian railways and the financial result of their working (year 1906), 24994, 25211.
Practically no canals or rivers in Victoria, 25001.
Method of settling railway disputes in Australia, 25007.
The Victorian Railway Commissioners liable to be sued in the County Courts, 25011.
Maximum damages obtainable from the Victorian Commissioners by law, 25020.
Non-existence of undue preference on the Australian railways, 25031.
Australian railways controlled by an inter-State Commission for military and naval purposes, 25033.
The constitution of the Australian inter-State Commission and its functions, 25051.
Their powers as to settlement of through rates, 25056.
Advantages to be expected from State ownership of the Irish railways and canals, 25063, 25071, 25172.
Acts preventing the control of railways by canal companies and *vice versa* (Vic. 21 and 22, cap. 75, and Vic. 23 and 24, cap. 41), 25065.
The connection between the Victorian Mining and State railway departments, 25071.
Extent of the Ballycastle (County Antrim) coalfield, 25071.
Ballycastle Harbour improved by a grant in pre-Union days, 25072.
The necessity of a mining department and a boring plant to ascertain the mineral resources of Ireland, 25072.
Extent of the coal-fields of Ireland, 25078.

Mr. HANBURY CLEMENTS GEOGHEGAN, B.L. —*continued.*

The Victorian Mining Department and its equipment, 25078.
Anticipated reduction of railway rates and fares in Ireland under State ownership, 25090.
Relief of the burdens of Irish baronial guarantees advocated, 25091.
A cheaper tribunal than the Railway and Canal Commission Court suggested, 25096.
Imperial benefits to be derived from the State control of Irish railways and the converse by private ownership, 25101, 25143, 25144.
The petitions presented to Parliament in 1871 and 1873 by Irish peers and members recommending State purchase of Irish railways and reductions of its rates, 25103.
Debate in the House of Commons in 1873 in favour of State purchase of Irish railways, 25112A.
Quotation from the majority report of the Devonshire (1867) Royal Commission against State purchase of the railways, 25113.
Right of State purchase reserved in the Railway Regulation Act, 1844, 25118.
The necessity for a Mining Department in Ireland owing to the working of the Irish Land Act, 25120.
Australian opinion said to be continuing steadily in favour of State ownership, 25126.
Remuneration for management under State control, 25130.
The administration of the Australian railways free from the interest of any political party, 25136.
The policy of Australian railway management as regards rates and fares, 25140.
A united system of State-owned railways recommended as the best method of developing Ireland, 25148.
The tendency of State railways to promote efficient service, 25149.
The necessity for and the functions of the Australian Inter-State Commission, 25157.
The Australian County Courts satisfactory, and inexpensive for adjudicating on railway complaints, 25164.
The future prospects of the Irish railways as at present constituted alleged to be dull, 25183.
The further expansion of the Irish railways under private ownership impossible, 25187.
Extension of railways in Ireland a necessity for the development of the country, 25191.
A single railway authority in Ireland better able to deal with British railways than private companies, 25194.
The rejection of the Irish petition for State purchase in 1873, 25200.
Evidence of a former witness (Mr. Davies) as to Australian rates and fares and train service, 25222.
The purchase of the Irish railways out of Imperial funds and their management by a purely Irish authority advocated, 25232.
The improbability of any discord arising under a unified Irish control, 25237.
State purchase of the Irish railways would be advantageous to everybody, 25246.
The certainty of the County Courts being suitable substitutes for the present Railway and Canal Commission Court contended, 25251.
The remedy available to the public in case of dissatisfaction with State-owned railway management, 25263.
Extreme improbability of irregularities in management under State control, 25267.
The desirability and effect of canal competition with railways, 25277.
The evidence of Sir Alexander Binney on the subject before the Canals Commission, 25281.
Sir Richard Griffith's recommendation for the development of the Irish canals, 25283.
The justice of applying public funds to the assistance of Irish industries by enabling transit charges to be reduced, 25291.
The necessity for a scientific research into the mineral resources of Ireland, 25302.
The County Antrim coalfield, 25303.
Australian State methods of dealing with mining development, 25308.

Mr. HANBURY CLEMENTS GEOGHEGAN, B.L. —*continued.*

Equitable treatment of individuals and districts to follow from State ownership of the railways, 25311.

Mr. JEREMIAH JORDAN, M.P.

Dissatisfaction expressed with the railway rates and charges generally in the Enniskillen district, 25324.
The management of the Great Northern Railway condemned, 25329.
Discourtesy in dealing with traders alleged against the management of the Great Northern (Ireland) Company, 25333.
The assistance of the House of Commons invoked, 25336.
Improvements in the sanitary arrangements of the stations and carriages in recent years, 25337.
Tribute to the late Mr. Thomas Robertson's ability and courtesy when general manager of the Great Northern (I.) Railway, 25342A.
Complaint as to the Great Northern (Ireland) Railway Company of unreasonable and litigious method of dealing with claims, 25345.
The abolition of "owner's risk" rates recommended, 25353.
Extension of lavatory accommodation to all third-class carriages recommended, 25361.
Complaint as to the heavy tax on Irish industries by the operation of high railway rates, 25372.
Instance of goods carted twenty miles to Enniskillen to avoid the payment of excessive rates, 25372.
Nationalisation of the Irish railways and control by an Irish central authority advocated, 25379.

Colonel R. G. COSBY, V.L.

Population and importance of Stradbally town, 25425.
Products and industries of Stradbally district, 25428.
Inconvenience arising from want of railway accommodation, 25429.
The construction of a railway from Stradbally to Portarlington recommended, 25435.
Reduction of railway rates and the imposition of a tax on foreign goods producable at home recommended, 25443.
State purchase and control by a central authority of the railways in Ireland recommended, 25446, 25477, 25531.
The decline in the prosperity of Stradbally attributed to the absence of railway connection, 25448.
Refusal of the Great Southern and Western Company to construct a line from Stradbally to Portarlington, although land offered free, 25456.
The case of the Portumna Railway now derelict owing to want of enterprise on the part of the Great Southern and Western Railway, 25460.
The present difficulty in getting further extensions of railways in Ireland urged as an argument for State purchase, 25465.
The anticipated advantages from unified working of the Irish railways, 25467.
The question of mileage rates, 25481.
The recent decision of the Railway and Canal Commission in the Gt. S. and W. and D. and S.E. case, 25482.
The extent of the Stradbally limestone industry, 25492.
The question of extra cost for upkeep of roads owing to heavy traffic, 25498.
Large saving in road maintenance to be effected if a railway were made, 25500.
Unwillingness of the Stradbally ratepayers to give a baronial guarantee for the proposed line to Portarlington, 25506.
The possibility of development of the agricultural industry in the district, 25514.
The production of barley a special industry in the district, 25515.

Colonel R. G. COSBY, V.L.—*continued.*

The prospects of traffic for the proposed railway from Stradbally to Portarlington, 25518.
Suggested provision of a road motor service as an alternative scheme to a railway between Stradbally and Portarlington, 25528.
Failing State purchase of the Irish railways amalgamation under State control recommended, 25535.
The offer of free land for the proposed railway made to the Irish Government and the Gt. S. and W. Railway, 25538.
Alleged combination among the buyers to keep down the price of barley, 25542.
Encouragement to Irish growers by Messrs. Guinness and Co., 25546.

THOMAS F. HIGGINS, F.R.C.S.I.

The construction of a new railway from Castlecomer to Portarlington *via* Clough, Timahoe, and Stradbally suggested, 25551.
Acreage of coal fields that the proposed line would tap, 25555.
Description of the Castlecomer coal, 25561.
Length and estimated cost of proposed line, 25572.
Proposed Government Grant and Baronial guarantee, 25575.
£40,000 voted by the Irish Parliament for the construction of a canal from the collieries to the River Nore, but never received and still due, 25577, 25589, 25596.
The purchase of the Irish railways by the State recommended, 25586.
The Baronies willing to bear half the cost of the proposed line, 25600.
Estimated value of the traffic, 25601.
The saving in maintenance of the public roads estimated to balance the baronial contributions to proposed line, 25603.
The closing of one of the pits owing to lack of capital and enterprise, 25605.
The opinion expressed by the Allport Commission on the subject, 25612.
The coal supply alleged to be abundant, 25615.
Explanation of the failure of the Castlecomer and Nore Canal construction scheme, 25618.
Railway extension in Ireland under private ownership impossible, 25622.
The necessity for a national authority to properly develop the districts by the provision of the necessary transit facilities urged, 25624.
The acquisition of the railways by the State the only remedy, 25629.

Mr. JOSEPH O'CONNOR.

Proposed speed limit for cattle trains with compensation for delays, 25639.
Suggested daylight service for cattle traffic, 25646, 25748.
Estimated value of a train load of stock, 25653.
Proposal to run a train from Kingsbridge station at 6 a.m. for the convenience of cattle buyers, 25656.
Improved train service, Dublin and Maryborough, suggested, 25663.
Complaint as to excessive half-wagon rates for cattle, 25669.
Suggested re-adjustment of wagon and head rates for cattle, 25673.
The insufficiency of assistance in the loading, &c., of cattle provided by the Irish companies, 25681.
The English practice explained, and its adoption in Ireland recommended, 25685.
Equivalent services for the terminal charges included in their cattle rates not given by the Irish companies, 25712.
The railway companies' explanation as regards the loading and unloading service terminal included in the Irish cattle rates, 25721.
Arrangements made by the dealers for loading and disloading of cattle in Ireland, 25723.
Excessive passenger train rates for cattle, 25728.
Profits of a large consignment of cattle for London swallowed up by the excessive freight, 25729.

Mr. JOSEPH O'CONNOR—*continued.*

Complaint that the Irish cattle trade with London is crippled owing to excessive freight charges, 25739, 25871, 25908.
Suggested reduction in the Dublin to London rate, 25746.
The early hours at which Irish fairs are generally held, 25751.
Only one (an insured) cattle rate urged, 25761, 25924.
Abolition of "owner's risk" rates suggested, 25765.
The present system of insuring cattle while in transit, 25773.
Suggestion that the rates for cattle should be the present "owner's risk" rates, with a small percentage to cover insurance, 25785.
Improvement in transit conditions secured through the Association, the Department of Agriculture, and Mr. Field, M.P., 25788.
Compulsory insurance for goods and cattle on all Irish railway and shipping companies urged, 25789.
Improved cattle wagons suggested, 25795.
Complaint as to defective cattle loading banks in Ireland, 25809.
The railway companies' indifference to the complaints of the cattle trade due to want of competition, 25821.
Delays in transit of cattle from intermediate stations, Limerick Junction and Dublin, 25824.
The system, not the railway officials, condemned, 25831.
State ownership of the Irish railways advocated, 25839.
Fairs injured by the want of an early morning passenger train from Kingsbridge, 25841.
The complaint as to excessive cattle rates and want of proper assistance at loading, 25848.
The cruelty inflicted on cattle owing to want of V-guides on the loading banks, 25857.
The difficulty in making the fat cattle export trade pay owing to high rates, 25859.
Transit of cattle by night trains injurious to the stock, 25866.
The advantage of one rate only (covering carriers' ordinary liability) for cattle urged, 25880.
Nationalisation of the Irish railways and management by a representative Irish body strongly recommended, 25886.
A Treasury loan through an Irish authority responsible for its repayment advocated, 25890.
The necessity for immediate legislation to redress the grievances against the railways pending a full purchase scheme urged, 25896, 25957.
The Commission asked to make a special recommendation on the subject, 25896, 25954.
Reduction in local and through rates asked for, 25899.
A reduction in rates proportionate to the falling-off in the value of live stock proposed, 25915.
The decrease in the cattle traffic from Dublin to London, and the extent of the trade from Ireland with Great Britain, 25934.
Complaint as to the practice of charging full wagon rates for live stock when the number allowed for a half-wagon is slightly exceeded, 25946.
Why the conveyance of cattle by steamers at night is less injurious than by railway explained, 25964.
The cruelty caused to cattle by standing in trucks for hours at stations awaiting transit, 25971.
The competition of the foreign producer as against the Irish cattle trade assisted by high rates, 25983.
The "delay" note which senders of live stock have to sign complained of as a grievance, 25986.

Mr. ROBERT GRIFFITH.

Districts represented by the South of Ireland Butter Merchants' Association, 25992.
Complaint as to the rates for butter and eggs from Knocklong to Rosslare, 25994.
The difficulty in obtaining through rates from many Irish towns to English stations, 26000.

Mr. ROBERT GRIFFITH—*continued.*

Complaint of the Great Southern and Western Companies action in increasing the prices of traders' season tickets from Limerick, 26012.
The facilities for outwards goods traffic at Limerick, 26025.
Complaint as to serious inconvenience arising from constant delays to traffic caused by the late arrival of goods trains at Limerick, 26030.
Restriction of the Limerick butter trade owing to heavy rates limiting the area of supply, 26040.
Lower and more uniform rates for butter to Limerick to enable the trade to be developed required, 26048.
Preferential rates from Cork to Cardiff and Newport *via* Rosslare compared with the rates from Limerick, 26056A, 26191.
The question of water competition from Cork, 26060.
Ineffective representations to the Great Southern and Western Company, 26066.
Nationalisation of the Irish railways advocated, 26075, 26255.
The Railway and Canal Commission Court too expensive for private persons, 26076.
The creation of a cheap Irish tribunal for the settlement of disputes between traders and railways recommended, 26079.
Tonnage of butter dealt with by the Butter Merchants' Association for year 1906, 26083.
Estimated tonnage of the butter made in Ireland (year 1906), 26084.
Large increase in the Irish butter trade, 26091.
The necessity for encouraging dairy farming so as to develop the Irish export butter trade, 26094.
The assistance afforded by the Department of Agriculture in encouraging the rearing of milch cattle, 26096.
The desirability of teaching the farmers how to have supplies of milk in winter for butter-making, 26102.
The importation of New Zealand butter into Limerick in the winter, owing to scarcity of Irish butter, 26104.
The refusal of the Department of Agriculture to deal with the question of the supply of Irish butter in the winter months, 26110.
The absence of through rates from certain Southern stations an inconvenience to the butter trade, 26113.
The accuracy of the butter trade statistics of the Department of Agriculture impugned, 26125.
The area from which the Limerick butter is collected, 26131, 26167.
The process of blending and branding, 26134.
The allegation that Irish butter is less uniform in quality than Continental butter denied, 26135.
Uniformity of New Zealand butter, 26136.
The higher price commanded by Danish butter not due to superior quality, but to the presence of a representative of Denmark in the English markets, 26138.
The difficulty of getting claims settled by railway companies, 36139.
Instances of unsettled claims, 36139.
Damage to butter in transit diminishing owing to the improvement in the packages, but delays in transit frequent, 26143.
Amalgamation objected to as likely to remove competition, 26147.
A State subsidy for immediate reduction in rates, also the appointment of a cheap legal tribunal asked for pending a scheme of State purchase, 26148.
Suggested exclusion of lawyers from the proposed new Railway tribunal, 26151.
A central station like Limerick for the collection and grading of butter, 26157.
The necessity for grading and distributing stations for butter at Belfast, Dublin, Waterford and Cork, 26164.
Reasonable mileage rates for butter asked for, 26165.
The quantity of butter exported by the Association, 26170.
The packages used, 26172.
The use of the Parcels Post in connection with the butter trade disapproved, 26175.
The Parcels Post trade regarded as foolish by the Association, 26182.
Reduced mileage from Cork *via* Fishguard a reason for disparity in rates, 26196.

Mr. ROBERT GRIFFITH—*continued.*

The trouble and loss occasioned to the butter trade by the absence of through bookings to all English stations, 26199.
Excessive rates from Limerick to Creshunt, Maldon, London, etc., 26203.
The Cattle service good, but excessive, 26206.
Proposed reduction in passenger fares and more liberal terms as to the issue of traders' tickets urged, 26209.
The 1*d.* per mile for third-class passengers considered too high for Ireland, 26212.
A reduction in passenger fares the best means of filling railway carriages in Ireland, 26218.
The difficulty of getting redress from the Irish railway companies as at present administered, 26222.
The present inland rates in Ireland hinder the movement and sale of Irish food products and to encourage the importation of foreign articles in competition, 26225.
High inland rates compared with low import rates prevent development of Irish manufactures, 26231.
Irish through rates to large English centres reasonable, but to other places prohibitive, 26233.
Competition not feared by the Irish producer, but fair play in the matter of rates and transit facilities required, 26235.
The powers suggested for the proposed new tribunal, 26240.
The possibility of a scheme of subsidies for the reductions in rates, 26248.
The immediate creation of a fund for this purpose urged, 26253.
The question of delays in transit to Irish butter sent to England, 26260.
Alleged better handling and more regular deliveries of the Continental butter by the English railway companies than of Irish butter, 26262.
The practicability of a regular and expeditous service for butter from Ireland, 26269.
Instances of alleged deliberate delays to Irish butter in England, 26272.

Mr. P. J. KETTLE.

Railway extension in the north of the County Dublin sought, 26277.
Decline in tillage and in population owing to want of railway facilities, 26280.
Proposed line from Dublin to Garristown, 26283.
A Government subsidy towards the construction of the line asked for, 26287.
A road motor service inadequate for the needs of the district, 26289.
Action of the Great Northern Company in connection with a former proposal for a line from Dublin to Garristown, 26294.
The refusal of the Grand Jury to give a guarantee for the line, 26302.
The Garristown district practically grass lands owing to want of railway accommodation, although suitable for tillage, 26310.
The improbability of the line asked for being constructed by private enterprise, 26321.
The Baronies concerned willing to contribute towards the cost of the line, 26327.

Mr. JOHN J. ROONEY.

The history of former proposals to construct a line from Dublin to Garristown, 26332.
Estimated receipts and expenditure, 26341.
The scheme opposed by the Great Northern (I.) Railway Company and thrown out by the Grand Jury although approved of by the Board of Works, 26343.
A former alternative proposal for a line from Malahide to Garristown, 26351.
A second former alternative for a line from Dublin to Slane, 26353.
A direct connection with Dublin by rail wanted, 26361.
The probable cost per mile for construction, 26364.
The original proposal for a railway approved by the Board of Works and the County Surveyor, 26369.
The alleged opposition of the Great Northern (I.) Railway Company to the Garristown railway project, 26373.
No recent application to the County Council owing to the expense of promotion, 26378.

Vice-Regal Commission on Irish Railways, including Light Railways.

MINUTES OF EVIDENCE.

TWENTY-SECOND PUBLIC SITTING—TUESDAY, 12TH MARCH, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Reception Room, Royal Dublin Society, Leinster House, Dublin.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; and Lieut.-Col. WILLIAM HUTCHESON POË, C.B.;

Mr. GEORGE E. SHANAHAN (Secretary).

Chairman.—Our colleagues, Mr. Sexton, Mr. Acworth, and Mr. Aspinall are unable to be present to-day.

Mr. M. A. ENNIS, J.P., examined by The CHAIRMAN.

Mar. 12, 1907.

Mr. M. A. Ennis, J.P., Vice-Chairman Wexford County Council, and Representative of the General Council of County Councils.

12458. Mr. Ennis, the last time we met here, I think, I went through your proof, but I think you have something to add?—Just one or two small matters, with your permission. On the last occasion I handed in a copy of the opinion of Mr. Ronan, K.C., with regard to enabling the General Council of County Councils or the Irish County Councils individually to appear before this Commission, represented by counsel. On that occasion I stated that we were aware that the Local Government Board for Ireland seemed to hold a somewhat different opinion on the subject. And since the last sitting of the Commission I have been in consultation with the Local Government Board and they very kindly, at my request, consented to take the opinion of their legal adviser on the question, and I have received within the last couple of days a letter from the Local Government Board on the subject, which, with your permission, I will read and hand in a copy.

12459. I do not see what is the object of bringing it before our notice. It has nothing to do with our inquiry?—This is our object. You very kindly gave permission to the General Council of County Councils to be represented by counsel, and I am anxious to make it clear that it is from no lack of desire to avail ourselves of your kindness that we are not here so represented.

12460. We are quite aware of that?—The Local Government Board——

12461. I do not want to encumber the notes with anything that is not pertinent to our inquiry. You have mentioned the fact, and that is quite sufficient without reading the letter. We know that if the County Council could have used their funds for instructing counsel they would have been represented here?—The Local Government Board say that they referred the question for the opinion of their legal adviser, who says that he agrees with Mr. Ronan as to the inability of the County Councils. I have their letter, and I will hand in a copy.

12462. Your statement is quite sufficient. What is your other point?—There is a small inaccuracy—I do not think it is material, but for the sake of accuracy I would wish to correct it. You asked me on the last occasion, question 12436, when was the last application we made to the Great Southern and Western Company with regard to stopping their mail train at Wellington Bridge, and my reply was, "On the 6th of the present month, the last meeting of our County Council." On returning home I referred to the minutes, and I found it was not at the last meeting, but at the prior meeting, on the 25th of January, that the resolution was passed. You asked for a copy of the letters of the Great Southern and Western Railway, and of the resolution of the County Council, and I have these with me, and I would like to say also that with regard to the letters of the Great Southern and Western Railway Company that you asked if they gave any reason, and I said I did not recollect any reason, but in their first letter there is given as a reason that they considered the present arrangement sufficient. They state "With regard to the present arrangements we consider them sufficient." With that I altogether disagree. I have prepared a table of the times of arrival and departure of the mail trains and the local trains on the Kingstown and Holyhead service, and on the Larne and Stranraer service, and on other services, and I hold that in no similar case is a district so badly served as the south of the county of Wexford is served. I pointed out on the last occasion that a man desiring to travel by a cross-Channel steamer fifteen to twenty miles from his residence would have to leave home nearly five hours before the sailing time, and a glance at the map will show that the south of Wexford is practically a pocket, and that the estuary of Waterford Harbour runs so far inland that though portion may be comparatively near Waterford, yet to get to it by road would be a forty to fifty miles journey, so that the inefficient train service is a great drawback to the locality.

12463. It will be on the notes, and we shall, no doubt, hear from the railway companies in regard to the complaint. Is there any other point?—Following the evidence that I gave on the last occasion, I think the next point is the complaints of traders on inequitable rates and insufficient facilities—statements lodged on that point.

Inequitable rates, and insufficient facilities complained of by traders.

12464. But are you speaking on matters that have been brought under your own knowledge, or are you giving us something secondhand?—I inquired before sending in my evidence if I would be limited to absolutely legal evidence—that is, what comes within my personal knowledge—or whether I would be permitted to hand in certain statements by traders and others in the district in reference to the complaints that they made, and I was informed that I could hand in statements in writing.

12465. For us to look at?—And to refer to.

12466. If we consider it necessary, but we will not begin again with your evidence. I thought I had finished on the last occasion?—No, I had gone as far as that point. "Motor transit" is the last thing.

12467. The last thing is, you finished in this way, that on the 11th of July, 1906, the Wexford County Council passed a resolution, and you read the resolution?—That is so, but my note of evidence contains later than that complaints of traders *re* inequitable rates. I sent these documents to Mr. Shanahan. I have not a very large number of these complaints, but there are one or two that are striking instances of what we complain of as injuriously affecting Irish industries.

12468. Will you let me look at one of your complaints and I will see if they are such complaints as we can deal with. I have got in my hand a letter addressed to you from a firm at Enniscorthy. How did you get that letter?—I was informed that a firm at Enniscorthy made this complaint.

12469. Did you issue any circulars?—I did not, but I told the principal of the firm that if he wished to put the complaint in writing I would put it before you.

12470. How many firms did you ask?—I asked this gentleman.

12471. This one. How did you elicit the information that this letter contains?—By speaking to the principal of the firm.

Mar. 12, 1907

Mr. M. A. Ennis, J.P., Vice-Chairman Wexford County Council, and Representative of the General Council of County Councils.

12472. He says here "in reply to your inquiry," and I want to know whether it was verbal or written?—It was verbal. I was speaking to the principal.

12473. Now, then, I will read it. I think this is a case that you might mention, but I want you to be as brief as possible. Tell me what is the rate for bacon from Liverpool to Enniscorthy?—From Liverpool to Enniscorthy *via* Dublin, 10*s.* a ton.

Bacon rates Liverpool and Enniscorthy inwards and outwards.

12474. What is it from Enniscorthy to Liverpool *via* Dublin?—20*s.* a ton *via* Dublin.

12475. They are both *via* Dublin?—Yes.

12476. In one direction it is 10*s.*?—Yes, and in the other 20*s.*

12477. Irish bacon going to Liverpool *via* Dublin is double the rate of Liverpool bacon *via* Dublin to Enniscorthy?—Quite so.

12478. Do you know is there any traffic or is it a book rate. Is there any traffic from Liverpool to Enniscorthy?—There is.

12479. And from Enniscorthy?—Perhaps I might explain. I do not want to be unfair to the railway company. The incoming rate from Liverpool to Enniscorthy *via* Dublin is 10*s.*, but the rate is in competition with the steamer service at Wexford; there is a steamer service to Wexford from Liverpool, and this rate is given by the railway company in order to compete with the steamer service to Wexford, but though the steamer service exists it is a weekly service, and it does not suit the deliveries that are required of the Enniscorthy bacon to Liverpool, and consequently they must send it by rail, and they are charged 20*s.* a ton.

Potato and corn rates Bridgetown and Wexford.

12480. Very well. What is your next point?—The next thing is a case by a member of the Wexford County Council with regard to the rate for potatoes from the station of Bridgetown to the North station at Wexford.

12481. What is the distance from Bridgetown station to Wexford?—Eleven miles.

12482. What railway?—The Great Southern and Western Railway (the Fishguard and Rosslare). The rate that we complain of in this case is made up of the direct rate from Bridgetown to South Wexford station and a terminal charge, or what you may call it, from South Wexford to North Wexford, a distance of three-quarters of a mile only.

12483. *Lord Pirrie.*—What is the rate?—The rate for one ton of potatoes from Bridgetown station to South Wexford is 3*s.* 2*d.*, and the terminal charge is 2*s.* 4*d.*, making a total cost of 5*s.* 6*d.* for one ton of potatoes for eleven miles.

12484. *Chairman.*—One ton of potatoes—that is all right?—This is another letter from the same County Councillor complaining of the rate for barley and corn from Bridgetown.

12485. Yes, mention it, Bridgetown to Wexford. "Barley, oats, and other corn": do you remember the rate?—2*s.* 8*d.* a ton.

12486. That is for six ton lots?—Yes, wagon loads.

12487. What comment do you make upon that?—That the rate for agricultural produce is a high rate. I have also a letter from Surgeon-Colonel Gibbon complaining of similar rates for similar goods for the carriage of corn, and I have a complaint from the ex-Mayor of Wexford with regard to passenger facilities between Wexford and Killybegs, Co. Donegal.

12488. That is right across the country?—Right across the country. Here is a letter complaining that people who are paying considerable sums, second-class passengers, were kept at the station in the snow at night without a fire or other convenience. This is a complaint as to passenger facilities not rates.

Waiting-room at Strabane not heated for night passengers.

12489. That is a cross-country service with a lot of junctions and changes of trains—there is no through train?—That is so. The complaint practically amounts to this, that the passengers were left in the middle of the night, at a wayside station, without any fire in the waiting room, and the snow was lying heavy on the ground.

12490. What is the station?—It is Strabane.

12491. There are waiting rooms at Strabane, but no fire?—No fire, and there was six inches of snow on the ground.

Delay to the public road traffic at level crossings. South Wexford Railway Stn. complained of.

12492. What is the next?—I have also "Complaints of the public *re* unreasonable delays at level crossings at South Wexford." Written statements have been lodged. There were very great public complaints about a number of level crossings—that they were not sufficiently attended, and that people could not get across, and I sent to the secretary a report of proceedings at the Quarter Sessions, where the Chairman of one District Council was proceeded against for his servant breaking the locks one night that he could not get through. The judge expressed a pretty strong opinion on the subject, and though he held there was a technical offence, he only fined the defendant 1*s.* I do not wish to labour that, because if you will permit me to read this note, received by Mr. Peter Ffrench, it practically amounts to an undertaking on the part of the railway company to remedy this evil and have the matter righted.

12493. Why mention it any further?—I have sent it in my notes of evidence, and I wished to say that the railway company having admitted their error, and having practically undertaken to mend it, that I do not wish to press the point any further.

Chairman.—We will leave it there.

Examined by Colonel HUTCHESON POË.

12494. With regard to the last point, the rate for bacon from Liverpool to Enniscorthy and from Enniscorthy to Liverpool, you explained that in the one case sea competition enters into the question, and you are aware that Parliament, when this question of rates came before them, always recognised that where sea competition enters into the question the railways are entitled to and are justified in making a competitive rate?—I am aware, but my point is that though that is so, the net result to an Irish industry, which would be a great advantage to the county of Wexford—this bacon factory, is that it is penalised by a double rate in getting its products into the market.

12495. I quite see, but I want to know how you propose, under the existing state of the law, to remedy it?—Our proposal is that the railways should be unified and under State control.

12496. In your opinion that is the only solution. Then, with regard to the potato rate between Bridgetown and North Station, Wexford, are the North and South stations both on the same system? The North station is on the Dublin and South Eastern, but the line connecting them is on the Fishguard and Rosslare.

12497. That is worked by the Great Southern and Western?—It is worked by the Great Southern and Western, and as a matter of fact it runs from the one side of the town of Wexford to the other, and along the quays of the port of Wexford. The railway charge for hauling a ton is 2*s.*4*d.*, and I may say that the ordinary cartage rate at which any individual may get a ton of goods carted is a shilling.

12498. Have you represented the very high cartage rate between the two stations to the railway company—have you brought it to their notice?—No.

12499. Until it has been put before them they are not in a position to deal with it?—I have the correspondence on the subject here, and that speaks for itself. Mr. Browne, the gentleman who sent these potatoes, explained that he could get no satisfaction with regard to this charge.

12500. Will you read it?—"January 23, I consigned one ton of potatoes from Bridgetown Station to Wexford for the Rev. J. Furlong. I wished to have them sent to the North Station, but the stationmaster said he could only book to the South Station. I paid the rate to the South Station, 3*s.* 2*d.*, and told him to have them sent on to the North Station. They were forwarded by the 7.7 p.m. train to Wexford, 23rd inst., and reached the North Station, Wexford, a distance of 11 miles, some time on the evening of the 24th, and a rate of 2*s.* 4*d.* was charged to the Rev. J. Furlong for bringing a ton of potatoes from the South to the North Station." This is the letter from the Rev. Mr. Furlong:—"Dear Mr. Brown—I enclose cheque for £2 13*s.* 0*d.* and also receipt for the cartage from South to North Station, Wexford. I would have written you sooner but thought there was a mistake about this 2*s.* 4*d.*, as I have often sent potatoes to Dublin for something like 8*s.* per ton, and could not believe there would be such a charge for that small distance. I wrote to the clerk in the goods store and found it was quite correct. I would have sent my man to South Station, but was sending half a ton up the line and thought I might as well have them brought up together. They did not reach the North Station till some time on Thursday evening. Of course that made no matter, but it only shows how these companies get on."

12501. According to that correspondence, and according to the stationmaster's statement, there was no through rate to the South Station, Wexford?—That appears to be so, but they are on the same line.

12502. I thought you said the South Station was on the G. S. and W. Railway and the North Station on the Dublin and South Eastern?—The buildings at the North Station are Dublin and South Eastern, but the line connecting the two stations belongs to the Fishguard and Rosslare Company.

12503. Of course there are through rates from stations on the G.S. and W. Railway from the South of Wexford to Dublin, and stations on the Dublin and South Eastern line. I presume there are through rates?—I have no information on the point, but I rather doubt it. My complaint here is that the G. S. and W. Railway do not wish in any way to give their traffic to the Dublin and South Eastern.

12504. You are not in a position to say of your own knowledge that through rates are not given between the two systems?—I am not in the position of my own knowledge, but I call attention to the fact that this system has only been open a few months and matters have not yet had time to settle down.

12505. Then with regard to rates for corn?—Might I say also with regard to this terminal charge (I take it it is a terminal charge), that we make a strong point for the unification of Irish railways that one of the great evils at present is that a man sending goods across any considerable section of Ireland has not alone the rates to deal with but terminal charges as well, which run up the total cost, and the unification of the railways of the country would largely cure that evil.

12506. Still I presume that even with the amalgamation of all the railways some charges would have to be made for terminal service?—Undoubtedly, but a much smaller charge than at present exists.

12507. With regard to the rate for corn from Bridgetown to Wexford, that, I presume, was to the South Station?—Yes.

12508. That was 2*s.* 8*d.* a ton for 11 miles?—11 miles.

12509. In other words, 3*d.* a mile for a ton?—Yes.

12510. That seems a very excessive charge. To refer to the evidence which you gave a week or ten days ago, you spoke of the disadvantage which in your opinion had accrued to the South of Ireland owing to the buying up, so to speak, of the Waterford and Wexford, and of the Waterford, Dungarvan and Lismore Railway by the G. S. and W. Railway and the G. W. Railway of England?—Yes.

12511. Without going into the terms on which these lines were bought, the point you wish to emphasise is that the combination between the large English companies and the principal companies of this country is not to the advantage of Ireland, whatever it may be to that of England?—That is so.

12512. That is the point you wish to emphasise?—If I may be permitted to state with regard to a question asked at the Commission of another witness,—whilst we hold that this control by the English companies of Irish lines is not desirable, if it were not a fact that at the time of the transfer of the Fishguard and Rosslare undertaking to the G.S. and W. Railway and the G.W. of England, the Irish people did not claim that the majority of the Board of the joint company should be controlled by the G.W. of England. That is perfectly true, that we did make that claim, and we strongly made it. I wish to explain our reason, and it was this. We have always held that the railway companies endeavour to obtain the longest haulage possible for their traffic, and our fear was that the G.S. and W. Railway, which was at the time, running its service from Cork to Dublin, and working in conjunction with the L. and N. W. Railway by Kingstown and Holyhead route, would not serve the interests of the districts in the South of Ireland as efficiently as we would desire. We were afraid of their monopoly, and therefore we preferred a dominant control by the G.W. Railway of England.

12513. Considerable losses, I think, were incurred in respect of these systems that were bought up by the G. S. and W. Railway and the G. W. of England?—I think that is so.

12514. Large sums were remitted by the Board of Works?—That is so. The Waterford and Wexford had only been constructed from Wexford to Rosslare Harbour, and the line across South Wexford has been constructed by the two great companies since their control of that undertaking.

12515. As a matter of fact, I think something like £38,000 was written off the Board of Works loan of £53,000, on the transfer of that line to the Fishguard and Rosslare Line Harbour Company, 1905?—I am sure that must be correct. Sir Richard Sankey told me about 1892 that the total expenditure of public money on the line amounted to £170,000.

Large portion of loan from Board of Works to Rosslare and Wexford Rly. written off.

12516. And also with regard to the Waterford, Dungarvan and Lismore line?—That £170,000 included the harbour at Rosslare.

12517. With regard to the Waterford, Dungarvan and Lismore line the Board of Works lost something like £55,000 over it?—I am not conversant with the figures, but I have no doubt it is substantially correct.

12518. Still, I suppose it was more to the advantage of the districts you represent that these small lines should be taken over by some one, rather than that they should have an independent existence?—Yes, but the scheme which originally came before Parliament contemplated their being taken by an independent company.

Question of the possibility of political or religious view influencing an Irish authority in the matter of appointments discussed.

12519. You have given your evidence so very fully and clearly as to the importance, in the opinion of the General Council of County Councils which you represent, and also of your own County Council, of the railways being amalgamated and taken over by some national authority, that I do not propose to ask you any question on that point, with this exception. At the last sitting you were at some pains, I think, to impress the Commission with the view of the General Council that in the event of some central national authority being created, to which amongst other things, would be entrusted the control of the Irish railways, you were anxious, I say, to impress upon us that in such an event political and religious views would have no consideration?—That is so. I believe that political and religious opinions would not adversely affect important appointments by that body. I believe the members of that body would feel too keenly the responsibility placed upon them, and I am under absolutely no illusion as to the difficulty and magnitude of the work which the central Irish authority will be called upon to undertake; but I think the men who compose the authority, if they are wise men, will realise that they must put forth their best energies and, with time and patience, work out a successful result.

12520. I quite agree with you. On the last occasion you also tried to impress upon us your belief that in such a central authority place would be found for representatives of every shade of political and religious opinion?—It is my earnest hope that that will be the case, and I may say, sir, that I read with very great pleasure the evidence given by the Rev. Mr. Stack before this Commission, in which he said that for the sake of the country, though he was a Protestant and a Unionist, that he would like to see the control of the railways of the country put in the hands even of a Home Rule government. I think that is a very commendable spirit. I think it shows that our fellow-countrymen will, when this scheme that the Government have in incubation, takes shape, I have every hope that they will come together, and that fears of anything like religious intolerance that might exist may be dissipated by the actual trend of events.

12521. I quite share those hopes, but do you not know that one of the principal objections, perhaps the only real and substantial one which—I won't speak of them as Protestants or Unionists—but which the minority in this country have to any further extension of local government is the fear—amounting almost to a certainty—that in the administration of such extended powers they would be given neither hand nor voice?—I am aware—at least I gather from the public press that such a fear does exist—but I believe it to be a fear without any foundation, and I instance the action of my own County Council of Wexford on the first election they had power to co-opt two members to their body and they co-opted two Unionist gentlemen. They co-opted His Majesty's Lieutenant for the county and they co-opted another Unionist gentleman at the same time. When the second election came they co-opted His Majesty's Lieutenant, a Unionist gentleman, the second time. He succeeded the first.

12522. *Chairman.*—What is the composition of the Council?—The Council consists of nineteen elected, four *ex-officio*, and two co-opted members. The population is in round figures 100,000.

Mar. 12, 1907.

Mr. M. A. Ennis, J.P., Vice-Chairman Wexford County Council, and Representative of the General Council of County Councils.

12523. What is the composition of the Council?—The composition of the Council is largely Catholic and Nationalist.

12524. Largely Catholic and Nationalist, and yet they co-opted a Protestant and a Unionist?—They co-opted two. They filled up the vacancy caused by the death of the first gentleman by co-opting his successor. There is only one elected Unionist on the Wexford County Council. The gentleman is not a strong politician in any way, but I take it he may be counted as a Unionist, and he is not alone elected a member, but he is Chairman of the County Committee of Agriculture and Technical Instruction, and the representative of County Wexford on the Council of Agriculture.

Question of present majority and minority representation on County Councils.

12525. *Colonel Hutcheson Poë.*—Your experience, as far as your own Council is concerned, is very satisfactory, but, of course, you are aware that in the light of past experience, and judging by the working of the Local Government Act during the past eight or nine years, such an experience as you speak of is not prevalent throughout the country. I think you cannot be surprised at the feeling of suspicion, not to say hostility, with which the minority look upon any further development of self-governing powers?—The feeling may be a natural one—I grant that it is a natural one—but my earnest hope is that that feeling will be dissipated when the central body that it is proposed to establish, takes shape, because I cannot suppose that any political body will go so far as to hold aloof and not share in the government of the country, in the event of such a body being created.

12526. I do not think there is any disposition on the part of the minority, whose political views are not coincident with those you express, to hold aloof from any share in the government. They are simply, by the force of circumstances at present, deprived from taking such a part. On the last occasion you referred to a letter which had recently appeared in the English *Times* from Mr. Arbuthnot, and you took exception to the conclusion which that gentleman drew from the facts which he brought forward?—I did, and I may say that my chief reason for taking exception was that he gave a statistical table showing the proportion of representatives of the minority on the first Councils after the passing of the Local Government Act, and he gave tables for comparison with it containing statistics of the proportion of Unionists and Nationalists on the existing Councils. I hold that that was an utterly fallacious method of dealing with the question for this reason—that the Local Government Act provided that there should be as members of the first Councils in each county three members nominated by the existing Grand Jury. These were, of course, members of the first Councils, and no matter how efficiently or admirably these gentlemen performed their duties during their term of office, it goes without saying that when the second elections came on, the power of appointment by the Grand Jury ceased, and even if their fellow-members on the Council were desirous, they could only elect them by ejecting from their office some other member who had probably fulfilled his duties well also.

12527. I take it that was not quite the view of Mr. Arbuthnot's letter. As I read it, I think the conclusion he drew—it is one with which I do not at all agree was that the presuppositions which had been made on the introduction of the Local Government Act by the minority or Unionists, if you like to call them so, viz., that the majority would use their powers to the detriment of the minority—to perpetrate jobs, to oppress the minority, and to raise the taxes had been amply justified?—I think those were the conclusions he tried to draw, and I do not think anything he brought forward, or the experience or the testimony which the Local Government Board itself has borne to the working of the administration of the County Councils of Ireland, in any way warrants such a conclusion. I quite admit that, but allowing all that, and allowing that the Councils have performed their work with credit to themselves, and with advantage to the country, as I think they have done, with few exceptions; still it cannot be denied that the facts which Mr. Arbuthnot brought forward are absolutely true, and that they admit of perfectly easy verification. With the exception of the province of Ulster, where the minority, to use an Irishism, are in the majority, with this exception, as you are aware, in the remaining three provinces you can count the representation of the minority on your fingers. Munster has not a single representative of the minority. Connaught has two, I believe, and in Leinster there are some ten or a dozen. For all practical purposes, in three provinces out of four at the present moment, the minority are absolutely prohibited and deprived from taking any part in the conduct of the local government of the district in which they reside. I put it to you is not that a fair statement?—I disapprove of Mr. Arbuthnot's statement, because he brings into it figures which I hold should not appear.

12528. Do you dispute the figures?—No, but the conclusion.

12529. I said I did not agree with the conclusion. He tried to prove that these figures show that the County Councils had exercised their powers to oppress the minority, and he writes to this English paper that if they got further powers they would use them in the same way. I can say that they have done nothing of the kind, but at the same time I wish to make it perfectly clear that I do consider that the minority at the present moment are absolutely unrepresented on these Councils, and I shall be very glad if you dispute that assertion?—I do not dispute it, but in the case of my own Council—I am not competent, though I represent the General Council of County Councils, to speak of individual Councils except my own—but with regard to my own, I wish to point out that it is quite true that at the present time two Unionist gentlemen who were co-opted as members of that Council do not retain their seats, but the fault has been their own. They did not appreciate the compliment paid to them by the members of the County Council in electing them to the office which they placed in their charge, and they attended so few meetings of the Council that it was manifest that they did not care themselves to occupy the position, and they were not an advantage—though men of great ability—they were not an advantage to the body by reason of their failure to fulfil the duties efficiently.

12530. That is a perfectly fair argument for excluding them from the Council, but you must be well aware that in the great majority of cases the only reason that prevents members of the minority coming forward for election is that they know perfectly well that they have not the smallest chance. I speak of my own experience. I have been a member of the District Council, the only member of my class, ever since it came into office, but I went up for the County Council, and I took as much interest in the affairs of my own county as any other gentleman, but I had not the ghost of a chance, and I know I should not have the ghost of a chance again. There is no good hitting your head against a stone wall. One must face the inevitable, and recognise facts, and I think the facts are as stated. I presume you do not claim a monopoly of all the talents or of all the virtues for the party you represent—and that you will allow that there are amongst the minority a certain number of men fitted by education, by position, by experience, by their own past records, who are in every respect well qualified to take an active and useful part in local administration?—I willingly admit it, as I have expressed my own personal opinion, and I think my colleagues of the General Council of County Councils will not disagree with me, that it is our earnest wish to see such men represented in the new central body which may be created to administer the affairs of Ireland.

12531. Then you recognise that it is not in the interests of this country that any class such as I refer to, who contribute very largely to the taxation of the country, and who give employment, that these classes should be absolutely excluded from public life?—I think it would be very undesirable and very much to be regretted that any class should be excluded from a fair and equal share, but not from the predominant position which the minority have, in the past, occupied.

12532. There is very little fear, as you, I think, will admit, of their ever occupying that position again, and I think quite rightly so, but I claim that they should be given their fair representation on public bodies?—I am in thorough accord.

12533. I am much obliged, and I hope, as far as you are concerned, you will endeavour to impress those views not only on your own Council, but on the members of the General Council of County Councils, and I hope the result may be as you anticipate.

Examined by Lord PIRRIE.

12534. I presume that in giving information as to certain rates, and complaints about the excessive rates charged, it is with the object of showing that the railway companies, as managed to-day, are not managed in the interests of the traders and the industries of the country, or for the benefit of the people living in these districts?—That is so.

12535. I did not understand your answer to Colonel Poë, or even to the Chairman, when you gave the explanation about the rate for bacon from Liverpool by Wexford to Enniscorthy being 10*s.* a ton, but from Enniscorthy by Wexford to Liverpool 20*s.*?—It was by Dublin.

12536. Oh, by Dublin. That is quite the same, 10*s.* a ton in the one case from Liverpool, and back 20*s.* a ton, and you said that the reason that rate was so low from Liverpool was because of the competition by steamers?—Yes, to Wexford.

12537. Surely the competition exists both ways equally—going from Enniscorthy as well as going to Enniscorthy. I thought your answer was rather misleading?—The principal of the firm in Enniscorthy. Messrs. Buttle, who gave the information, said that he believed the reason of the difference was that whilst the steamer service suited him to bring in bacon—anyone in a large business like him has to bring in bacon in quantities from Liverpool—his customers for the Irish bacon on the other side demanded deliveries which could not be successfully made by the Wexford steamer, which has only a weekly sailing.

12538. Is bacon not unlike butter in that if it is delivered on a Wednesday, say, it suits just as well as if it is delivered on Tuesday?—His customers would not have weekly deliveries. He says he is obliged to send it by Dublin to meet the requirements of his customers on the other side.

Colonel Hutcheson Poë.—They could get it in by steamer, but could not get it out.

12539. *Lord Pirrie.*—I do not understand it yet. That does not meet the question that Mr. Ennis wanted to make. If a steamer competition lowers the rate inward to the same port, surely it must lower it outwards from the same port. I want to be perfectly clear—if the rate from Liverpool to Enniscorthy by Dublin is 10*s.* a ton, why should the rate, by the same route, from the same town not be the same, and the place exactly the same?—You say you could get it daily if you bring it by Dublin, and you cannot send it back the same way?—I hold the rate should be the same.

12540. Have your County Council made any complaints to the railway companies?—It is a matter between the private trader and the railway.

12541. Did not you hear Mr. Knox, on behalf of the railway companies, say that there was no case in Ireland of a rate from a town by a certain way not being also applied backwards?—I have given the written statement of Messrs. Buttle.

Mr. Tatlow.—Mr. Knox was quite correct. The rates are applicable in both directions. Of course the traffic may go according to the way in which sent, but the rates apply between the stations in either directions.

Lord Pirrie.—I think it is a very serious question. If Mr. Ennis's statement is correct, for Mr. Knox's statement was clearly—and I believe the Chairman said the same—that by Act of Parliament you must charge the same to and from a place. If this information is correct it is a very serious matter, this 20*s.* rate, must hamper the Irish farmer or trader, It is a complaint that I have no doubt the railway company will explain.

Mr. Tatlow.—Will you allow me to say one word? I have got information from the Wicklow Company, which Mr. Reid gave, distinctly showing that the rate is 13*s.* a ton. That is applicable to Irish bacon or any bacon, from Enniscorthy to Liverpool by Dublin, not 20*s.*

Lord Pirrie.—That is against what Mr. Ennis says is 20*s.*

Mr. Tatlow.—Of course the Wicklow Company will deal with it in the evidence, but I thought it right to mention it.

Lord Pirrie.—It is 10*s.* inwards?

Mr. Tatlow.—It is for bacon in boxes. If the Irish bacon was sent in boxes instead of in bales it would be the same.

Lord Pirrie.—May I ask is there any greater risk with bacon in bales than in boxes?

Mr. Tatlow.—Certainly. It packs better, and the company gets paid for the boxes also.

Chairman.—Just look at that to clear it up. Lord Pirrie got on the right tack.

Lord Pirrie.—I want to get the facts.

Mr. Tatlow.—There must be something inaccurate about this. It is a quotation on the paper. Mr. Reid gave me distinctly these rates the other day. It can be cleared up further in the evidence of the Dublin and Wicklow Company.

Chairman.—All right.

Mr. M. A. Ennis, J.P., Vice-Chairman Wexford County Council, and Representative of the General Council of County Councils.

Potato and corn rate, Bridgetown and Wexford, discussed.

12542. *Lord Pirrie.*—We have got yours and theirs. To me a much more serious complaint is the one you speak about of potatoes from Bridgetown Station to Wexford, a distance of eleven miles, 5*s.* 6*d.* Now, is that a wagon load, per ton, or merely a single ton?—One single ton.

12543. Do you happen to know what the rate of a wagon load would be?—I can't say for potatoes what the rate per wagon load would be. We have the rate for corn.

12544. I know. I am coming to that in a moment. As a County Councillor and Chairman of the County Council, have you any rates before you to enable you to advise and assist the farmers as to sending their potatoes: because it must be a very large industry in Wexford?—This system has been opened very recently.

12545. The system of what?—The system—the Southern line.

12546. But surely the farmers have been exporting potatoes for generations?—Yes. These are some of the very first lots sent over the line. It is only open for traffic a few months.

12547. You can give us no assistance in the way of saying if you sent a large quantity—I mean per wagon load—what the rate would be?—No; I am not in a position to say that.

12548. As regards corn, which I presume includes oats, barley, and wheat?—Barley especially.

12549. 2*s.* 8*d.* per ton?—Yes, 2*s.* 8*d.* per ton.

12550. Eleven miles?—May I just read this passage referring to that.

12551. I want to get this cleared up?—"The line passes through South Wexford county, which is a tillage country, and farmers had great hopes that their condition would have been greatly improved by the opening of this line. These hopes have been disappointed owing to the excessive rates charged for local traffic. As an illustration, take the rate from Bridgetown to Wexford, a distance of ten to eleven miles. Barley, oats, and other corn are charged 2*s.* 8*d.* a ton for six ton lots and over. Corn is carried on the Dublin and Wicklow line from Wexford to Dublin, a distance of over ninety miles, for 4*s.* 6*d.* Manure is charged at the same rate, 2*s.* 8*d.*, from Wexford to Bridgetown. The rate on the Dublin and Wicklow line from Wicklow to Wexford, a distance of about fifty-five miles, is 4*s.* 9*d.* Proportionately high rates are charged from all the stations in South Wexford to Wexford town, so that the advantages of the new line to South Wexford farmers are practically nil. South Wexford is a great horse-breeding county, and Enniscorthy is the great horse fair for the district. A South Wexford farmer cannot use the Rosslare line passing through his district as a means of conveyance to or from Enniscorthy or any Dublin and Wicklow stations beyond Wexford. If he travels by the earlier train to Wexford he finds himself a few minutes too late to catch the 9.35 train from Wexford up the line."

12552. That doesn't affect it. I take it, the gentleman made complaint that the rate for potatoes and general farming commodities is much too high compared to the grain rates, which you also think are high for the short distance, compared with sending it to Dublin?—Yes.

Mar. 12, 1907

Mr. M. A. Ennis, J.P., Vice-Chairman Wexford County Council, and Representative of the General Council of County Councils.

12553. And compared to the low rate that we have in the North of Ireland between Belfast and Derry, ninety-five miles, 3*s.* per ton?—Yes.

12554. You would like in the South of Ireland such low rates as you have got in the North?—Yes.

12555. And you think the railways in the North, at least the Midland, has assisted the farmers by giving the low rate of 3*s.* per ton?—Certainly. We think the railway companies are acting neither in their own interest nor in the interests of the agricultural community by imposing such high rates.

12556. I take it in your answer to the Chairman—Question 12410—you object to the railway companies managing the lines for the benefit of the shareholders, that they have a monopoly granted by Parliament for the benefit of the district—am I right?—Yes.

Suggestion that any surplus beyond a certain dividend earned by railway companies should be devoted to the increase of accommodation or the reduction of rates.

12557. Have you ever, as a County Councillor, urged before any Parliamentary Committee that they should put in a clause that no railway company should exceed a certain dividend, and when they get a certain surplus that it should go for the benefit of either increasing the accommodation or reducing the rates?—In a similar manner to that in the Gas Companies at present.

12558. Certainly. Have you ever as a Vice-Chairman brought it forward?—I have not.

12559. Is it not the duty of the thinking men, whether the minority—as Colonel Poë says—or the majority, where you give a monopoly to impose such restrictions?—We have. In the suggestion we have made we cover the entire ground.

12560. To whom, to us?—To this Commission.

12561. To this Commission?—Yes.

12562. You as a County Council are relying on the information and evidence you are giving here rather than anything you have given previously?—Quite so. We have given nothing previously.

Desirability of the provision of industries for female workers.

12563. No?—As a County Council. Might I say as referring to industries, might I say this that we hold that the railway companies of Ireland might do a great deal to assist struggling Irish industries, that a heavy responsibility rests upon them in that regard. I don't like to associate myself with the view expressed a few days ago by Mr. Sweetman with regard to female industries. On the contrary, I regard female industry as being of enormous advantage to Ireland. We in Wexford have been fortunate in having successful engineering works giving employment to a considerable number of men—a large number of men for such a small place, and some years since some of our leading citizens took into consideration the necessity of establishing an industry for female labour, because we realised that in order to stop emigration from Ireland we should endeavour to raise the standard of comfort of the people. We felt that any attempt to raise wages on a large scale would be disastrous to the struggling industries, and that our only chance to accomplish the object of providing greater individual comfort for the people would be in endeavouring to make the family, and not the individual, the unit of population in Ireland, to make every member of the family contribute something towards the general good, and with that object in view we, with the assistance of the Department of Agriculture, started an industry in Wexford for the manufacture of straw hats. I wish to say with regard to the Department of Agriculture as expressing the view of the County Council's General Council, I don't associate myself with anything that may be said holding that the Department is useless. I gave evidence on behalf of the General Council before the Commission of inquiry into the Department, and our position is that we hold that the Department has been of very great benefit to Ireland, has done a very great work in Ireland. We object to its constitution, no doubt. We say they have made many grave mistakes, but they are breaking new ground, and we don't wish to criticise too severely work which is work more or less of an experimental character. We hold, on the whole, the Department has done good work and in connection with this industry——

12564. *Chairman.*—Which?—This industry, in conjunction with the engineering industry in Wexford, a hat factory for the manufacture of straw hats, for women workers. I happen to be one of the directors of that little undertaking. We are making an effort to provide employment for the women of our town, and we have met with a certain measure of success. Now, I mention that industry for this reason. A traveller going round to endeavour to sell these hats through Ireland has to carry large skips.

12565. Call them baskets?—Baskets. Yes; and low rates, passenger rates, given by the railway companies to travellers in industries of that kind would be an enormous advantage, and would help to develop and foster industries. It would be a great help to the country.

12566. We heard that from the representatives of the Commercial Travellers' Association?—I wish to associate the General Councils with that view.

12567. *Lord Pirrie.*—You would like to add that the travellers connected with Irish industry should travel practically free?—As nearly as possible.

12568. *Chairman.*—At the expense of the railway companies?—No, as low rates as could be reasonably granted.

Is there any other question?

Mr. Barrington (Solicitor).—No. We will have his questions checked, and give evidence.

Mr. Thomas Mayne examined by the Chairman.

Mr. Thomas Mayne, Photographic Optician, Dublin.

High railway charges for goods complained of generally.

12569. Mr. Thomas Mayne, I think you are in business in Dublin?—I am. I am a photographic optician—a photographic dealer generally—in Lord Edward-street. My object in coming before the Commission is to help in pressing before this Commission, in the minds of this Commission, the disadvantage that Irish traders are subjected to by reason of the high charges made by Irish railway companies for transit of goods between one town and another in Ireland, and again the advantage that the foreign trader has in low rates by means of through rates.

12570. Well, we will go by steps: allow me?—Very well.

Specific complaint of excessive charge for conveyance of a lantern screen Kingsbridge to Roscrea and back.

12571. Now, take first of all your own particular business. Have you any particular complaint in connection with that?—I have, sir. My parcels are usually optical goods, light in weight, and small in bulk, although costly, so I usually make use of the parcels post—it suits my business better—but in December last I had a most extraordinary experience in relation to goods. I sent in December last to Roscrea a magic lantern screen for showing magic lantern pictures at an entertainment. I sent it to Roscrea to the order of a customer. The customer was charged 16*s.* 11*d.* for transit from Dublin—Kingsbridge to Roscrea, 77 miles. That screen had been made in London, and was carried from London to Dublin by the Midland Railway Company of England for 4*s.* 10*d.*

12572. Have you got the note of that?—Yes.

12573. Let me look at that?—(*Note handed in*)—And it was delivered.

12574. Wait a minute, Mr. Mayne, please? This is a parcel?—It is a screen. A lantern screen. There is the invoice of it. (*Invoice handed in.*) They charged——

12575. One minute. Oh! I see. It is a parcel of woodwork. It is a frame like the frame of a picture?—No, sir. It is a coarse canvas, a piece of coarse canvas nailed to a heavy wooden roller somewhat like the scene of a very small theatre.

12576. Rolled up?—Rolled up.

12577. *Lord Pirrie.*—Eighteen feet long?—Yes. The roller is twenty feet long. They charged at first 7*s.*

12578. *Chairman.*—Stop?—I paid——

12579. One minute. First of all, according to this, it came from St. Pancras to Dublin by the Midland Railway?—Yes.

12580. Weight, 84 lbs.?—Yes; just under 84 lbs.

12581. They charged 7*s.* There is the word Refund 2*s.* 2*d.*?—Yes.

12582. Reducing to 4*s.* 10*d.* What was the explanation of that?—I objected to the charge of 7*s.*, and I paid it, but sent word for one of the clerks from the Dublin office of the railway company to call on me. When he called on me I put before him that 7*s.* for

¾ cwt. from London to Dublin was very high. It meant a rate of £9 6*s*. 8*d*. a ton, and that it was not a risky piece of goods—nearly all the weight was wood —a wooden pole, a beam. He took the bill away, but he called in a week or a little more afterwards and gave me back 2*s*. 2*d*. He said it had been charged in a wrong class.

12583. That is all right. In order to make it very short. It costs you 4*s*. 10*d*. to come from London to Dublin?—Yes.

12584. Delivered at your place in Dublin?—Delivered at my warehouse. I sent it to Roscrea.

12585. What distance is it from Dublin to Roscrea?—77 miles. From London to Dublin is 334 miles. That is the maker's invoice of the screen.

12586. The maker's invoice is, Opaque, 18 feet. Opaque?—If it was not opaque we could make it ourselves.

12587. It is an 18 feet opaque?—Yes. I need not mention the price.

12588. No?—All right.

12589. Well, you sent it. The same thing?—The very same thing. I have only one of them.

12590. You sent it from Dublin to Roscrea in Tipperary?—Yes.

12591. The railway company charges you 16*s*. 11*d*. for carriage to Roscrea Station. That is what they charged you?—Yes. That is what they charged him.

12592. Him?—Yes. That was sufficiently startling, but when they sent the screen back to me, there is their charge for transit between Roscrea and Dublin.

12593. Then the screen is used for an entertainment, and it comes back to you?—A series of entertainments —three or four.

12594. Then it came back to you from Roscrea to you in Lord Edward street?—Yes.

12595. A screen weight one ton?—Yes.

12596. And carriage £2 4*s*. 4*d*.?—Yes.

12597. Now, then, £2 4*s*. 4*d*. from Roscrea?—Yes, to Dublin.

12598. What did you do?—I wrote them the day after—the company—calling their attention——

12599. You paid the money?—Yes. I could not get the screen out unless I did, and what is more they refused to deliver it for the £2 4*s*. 4*d*. They insisted on getting 2*s*. for delivery. So that I had to pay the £2 4*s*. 4*d*. and send for the screen—for what cost me 4*s*. 10*d*. from London.

12600 Did you communicate with the railway company?—I did.

12601. What is the first letter you wrote?—I wrote calling attention to the fact that there was an enormous over-charge and to please refund it. They made no answer; they did not even acknowledge the receipt of my letter. I waited then until the 23rd of January.

12602. You wrote again?—I wrote again calling attention to the fact that they had put down here a ton, that it only weighed ¾ cwt., and I think I mentioned that I felt sore at not receiving some reply to my former letter—I allude to my letter of the 5th January. I received no communication in reply from them to that letter either—not even an acknowledgment of its receipt.

12603. Then when did you write again?—11th February, demanding the difference between 4*s*. 10*d*., the rate from London to Dublin, and the £2 4*s*. 4*d*. which they charged me. I demanded payment for £1 19*s*. 6*d*., and somewhat peremptorily, I think.

12604. Did you get it?—No. I didn't even get an answer to that letter. They took no notice of it; they treated me most discourteously. They didn't even acknowledge my letters.

12605. I have got the letters here—copies of the letters. The letters seem to be all right—one dated 5th January, next 23rd January, next 11th February, and you got no reply to any of them?—No reply to any of them.

12606. How did you address the letters?—To the Great Southern and Western Railway Co., Kingsbridge.

12607. Oh, yes. Generally to the company?—Yes.

12608. *Lord Pirrie.*—You didn't say general manager or secretary?—No. Great Southern and Western Railway Company, Kingsbridge, Dublin.

12609. *Chairman.*—Well, now?—I then communicated with the secretary of this Commission, and he wrote to me asking for an abstract of evidence that I proposed to give. I suppose it is your practice to communicate with a railway company that is complained of. Then, for the first time, I got, two days or three after writing, giving the abstract, sending it to Mr. Shanahan, I received then for the first time a notification that they recognised me at all as having any business with them. A clerk from their office called at my office and offered to reduce the charge to £1 7*s*. 5*d*. from £2 4*s*. 4*d*. Well, as my demand was for £1 19*s*. 6*d*. my book-keeper refused to accept it unless he paid the £1 19*s*. 6*d*. He called again to try and see me, but I was again out. I was not in my office, and he didn't call since, but his offer was to charge instead—to reduce the charge of £2 4*s*. 4*d*. to £1 7*s*. 5*d*. Well, that was still so enormous that I didn't consent to it. I would rather take legal proceedings for the recovery of the £1 19*s*. 6*d*.

Mar. 12, 1907.

Mr. Thomas Mayne, Photographic Optician, Dublin.

Complaint of excessive charge for conveyance of a lantern screen between Kingsbridge and Roscrea.

12610. I suppose the explanation of the railway company would be that this was too long for a truck?—That is the explanation that I saw here with Mr. Shanahan. The explanation came from the traffic manager, I think, saying that they had——

12611. What is the length of a truck in Ireland here?—I don't know, sir; but the screen is exactly the same length and thickness and the same weight as it was when the Midland Railway Company brought it from England and carried it from London for 4*s*. 10*d*.

12612. *Lord Pirrie.*—Ireland?—England.

Chairman.—From St. Pancras to Dublin.

12613. *Colonel Hutcheson Poë.*—And the same size as when it went down to Roscrea—the same size coming back as when it went down?—The very same size and weight.

12614. *Lord Pirrie.*—What port did it come from—from the Midland?—The Midland. It came from Liverpool. If it came from the London and North Western it would have come by Holyhead. It is 334 miles by Holyhead, and by Liverpool it would be more. What I complain of is that we are mulcted in Ireland, we traders. It has been given in evidence before you by several witnesses that the rates are against us. I am conversant with commerce in Germany. I do a business with Germany, and I know the rates there are not against the local trader. The rates are against the foreign producer. On goods manufactured in Germany if they are for transit to a port for export the rates are low; for transit from a port into Germany the railway rates are higher. It seems to be here totally opposite, because from the coast, I mean Dublin, as the coast, from the coast to Roscrea they charge 16*s*. 11*d*.; from Roscrea to the coast, to Dublin £2 4*s*. 4*d*. There is no trade, no commerce, could stand up against that.

12615. The probability is that there is some mistake you know?—Then they correct it by demanding £1 7*s*. 5*d*.—still enormous.

12616. You don't object to my saying this——

Mr. Croker Barrington (*Solicitor*).—I believe it is some mistake. We will get it cleared up afterwards.

12617. *Chairman.*—It seems perfectly *bona fide* though. Well, now, of course you know Germany has State railways?—I can't say I am conversant with the rates. The goods to me from Germany always come carriage paid, but I am aware from my conversation with German manufacturers and traders in Germany that that is the rule, and it has helped the trade of Germany enormously.

12618. This particular case, which, of course, requires some explanation, the one you have explained, has imbued your mind with the idea that this is not an exceptional thing, that it is going on generally?—I have read a good deal of the evidence given before this Commission, and I find it is the general tenor of the evidence that Irish traders and manufacturers feel a very serious grievance.

12619. Then have you formed any opinion yourself as to what in your judgment would be the best remedy for this state of things?—Yes.

12620. In your own words?—It is impossible to come to any other conclusion than that the railways of Ireland are worked not in the interests of Ireland but in the interests of people outside of Ireland.

Irish railways worked in the interests of people outside of Ireland.

12621. Shareholders?—No. I don't mean the shareholders. I am speaking as a commercial man, and I say that the railways are worked not in the interests of the commercial men of Ireland, the producers or the manufacturers of Ireland, but in the interests of foreign manufacturers and foreign producers by giving them low rates and charging the local producers high rates. No country could prosper commercially subject to that state of things.

Mar. 12, 1907.

Mr. Thomas Mayne, Photographic Optician, Dublin.

12622. What you are telling us now is gathered, I suppose, from what you read of the proceedings at this Commission?—Largely.

12623. But within your own knowledge you consider that for the country itself the rates, in your judgment, are too high to properly develop the industries of the country?—I hold that opinion. I hold the opinion that the rates for Ireland in Ireland, between one town and another, should not be higher to Irishmen than foreigners.

Nationalisation of the Irish railways necessary to secure just treatment for Irish industries advocated.

12624. *Pro rata?—Pro rata.* Ireland ought to get a chance. We all know many country towns in Ireland where labour is abundant and very cheap, and suitable to establish factories such as I have seen springing up in Germany; every visit I make there, I see new factories. We could have that state of things in Ireland if we had a railway system, a management that would give the manufacturers in Ireland a proper chance. He doesn't get it at present. The man that would start a factory, say, in Roscrea—would do a very foolish thing if he sunk his money in manufacturing goods in a town where he would be mulcted in all directions, when he would send his goods out by rail. The whole thing should be put an end to. One of the witnesses here advocated, I was in the room when he was giving his evidence, he advocated nationalisation of the railways in Ireland. I advocate that also.

12625. You concur?—I do. That is the system in Germany; every State manages its own railways. There is only one Board in each State except Prussia. There are three, I think, there the country is so straggled—it extends now from the Baltic to Alsace, which is now Prussia, and there they have a railway management at Strasburg.

12626. You think the real remedy, according to your judgment, would be for the railways to become the property of the State?—The property of the State, and be managed by a Board composed of men who would consider first the interests of Ireland.

12627. Oh, yes. I follow you?—That is absolutely necessary. Our people are leaving, people that are idle are leaving the country for America and elsewhere solely to get employment; here they would work for one-tenth of the terms they get in the United States, if they could only get employment.

12628. You think the remedy is the nationalisation of the railways?—I do.

12629. Am I right in assuming you were once a Member of Parliament?—I was, for over seven years, until my eldest son unfortunately died. He managed my business, and then I had to resign, and I was very sorry, for I had become almost fond of the House of Commons.

12630. And of course this is a subject you have given considerable attention to?—I have.

12631. Not only now but previously?—Now and previously.

12632. In past years?—Yes.

12633. That is your deliberate opinion?—Yes. It is my confirmed opinion.

Examined by Lord Pirrie.

12634. I see even the charge of 7*s.* from London to Dublin you thought too much, and you got a refund of 2*s.* 2*d.*?—Yes, and it was too much.

12635. I don't say it was not. You got a refund from the Midland without difficulty?—No difficulty whatever.

12636. They gave you that money back?—And they contrast very favourably with the treatment I received at the hands of an Irish railway.

12637. You say that distance was?—334 miles the shortest way.

12638. London to Liverpool?—London to Dublin, *via* Holyhead.

12639. This came by Liverpool, therefore it is longer?—That would be twenty to thirty miles longer. It would go farther north.

12460. When you got the account from the railway company in Ireland to take it from Dublin to Roscrea the first time they charged you 16*s.* 11*d.*?—Yes.

12641. Did you pay?—Mr. Jackson paid.

12642. And made no complaint?—Oh, he did, he complained.

12643. Did he?—Well, he complained that he thought it was too much.

Chairman.—He said so in his letter.

Lord Pirrie.—I only wanted to get it in evidence clearly, because I think there must be some mistake.

Witness.—He will not hire my screen again, because he can get a screen from Bradford, Birmingham or London at the same rate of hire as I charge, and he will get it carried at a low through rate. I am shoved out. I have my expensive screen on my hands, and anyone that knows what they will have to pay for carriage up and down won't deal with me.

12644. I think your evidence is some of the most important that came before this Commission while I have been present. You speak not only from your own knowledge, but you have put in papers to prove further it is not an imaginary phantom statement we are following?—Oh no.

12645. It was the same railway company that charged Mr. Jackson 16*s.* 11*d.* that sent you the account for £2 2*s.* 4*d.* and asked you to pay 2*s.* additional?—For delivery; yes, the very same railway.

12646. Do you mean to convey that the railway companies of Ireland do not abide by the Act of Parliament, that the rates are, as you know, put in the list, and that they charge when they can an exorbitant rate to the local people?—It is quite clear in my case, because in their explanation they say they put it into class 3, which is intended for goods traffic awkward to handle, or something like that, and that Parliament gave them a discretion. Well, I know enough of Parliament to know that Parliament does not intend a discretionary power of that kind which they give to be used for fleecing customers of the railway.

12647. And I take it, if you had not been a clever business man, but an innocent Irishman, you would have to pay it?—He would have to; he would not get the goods if he did not.

12648. He would not be able to make the claim?—No.

12649. Can you explain why the English line, the Midland Railway Company, called it a parcel and charged you only 4*s.* 10*d.*, and that the Great Southern and Western put in a ton when you yourself said it is 84 lbs.?—It is under 84 lbs.

12650. Have you not got a very serious claim for damages against the railway company for your waste of time over the false charge?—I will certainly go to recover the £1 19*s.* 6*d.* which they have taken from me that they should not have demanded at all. But see the treatment I received at their hands. They place me in that position and when I wrote complaining they didn't have the courtesy to even acknowledge my letter or explain whether they have a reason for doing it or not. The English Railway Company not only treat me with courtesy, but they actually give me a refund.

12651. Then you don't agree with the witness a few days ago when he said he didn't want any more English railways in Ireland. Your experience is the English railway has the right and business-like method?—The railway system in England seems to me to be very much fairer towards——

12652. I am not going to ask you on your answer—but this is the result, English railways are more obliging to their customers and traders—in your experience than the Irish railway management of to-day?—Unquestionably.

12653. I am much obliged to you: you have given your evidence very clearly.

Examined by Colonel Hutcheson Poë.

12654. Have you had any previous instances of overcharges like this?—We got complaints from customers as to excessive charges on cylinders of oxygen. But I have usually found that there is some little omission on their part—that they do not take the railway company in the way they ought. We send cylinders of oxygen—compressed oxygen. They use the oxygen for medical purposes and other purposes, and they send the cylinders back empty. These cylinders are very often charged not as empty, but as being full. We receive these complaints, but I have always found in most cases the fault lay with the customers in not declaring that they are sent as empties, so in that case they are charged as full cylinders of oxygen. That is the fault of the customers in not having declared them to be empties. I have had to suggest to customers that they should pay the carriage; that empties as a rule are sent carriage paid, and that therefore they act to their own disadvantage by not paying the carriage beforehand and declaring them to be empties. But I

Mr. Thomas Mayne, Photographic Optician, Dublin.

do not make any case out of that, because the customers we deal with for that class of goods are not commercial men; they are medical men that use compressed oxygen for medical purposes, and know very little about matters of business, or else they are show people giving entertainments, who are very nearly as bad managers commercially.

12655. I take it, then, that in your experience you have not had any serious ground for complaint?—I do not say that.

12656. With this exception?—Yes; my goods are small parcels, as a rule.

12657. When you speak of the nationalisation of Irish railways, by that I presume you mean their being taken over not by a State department, but by some Irish National authority?—What I mean by the nationalisation of Irish railways is to make their management as like the German system as possible. The system there has made Germany one of the greatest manufacturing countries in the world. When I went to Germany first, nearly forty years ago, goods trains were just as scarce as they are in Ireland to-day. Now any railway going down to an important port like Hamburg or Rotterdam—why I have counted five goods trains, long goods trains, trains a quarter of a mile long, going down within an hour carrying goods to the port of transit. That is what has built up the present industrial prosperity of Germany.

12658. When you speak of the favourable terms that goods in Germany receive are you aware of the time that goods take in transit, that from one station in Germany to another it often takes five or six days, while in this country it would not take one?—Yes, but Germany is a very much larger country than this.

12659. I am speaking of a distance of 200 miles?—That may be due to the use of their waterways. I know that a certain class of goods comes down from Dresden and Bohemia by the River Elbe to Hamburg.

12660. Are you not aware that in Germany if you consign goods from any station the railway company is not bound to handle these goods until twenty-four hours after you land them in the station?—That is one German regulation. In some cases they need not handle them for two days. A very interesting book I would recommend to your notice is a little book by Mr. Pratt, that on German railways as compared with English railways. He goes into that point very clearly. Goods that have to go a distance of 200 miles seldom arrive at their destination in less than four, five, or six days?—That may be explained by the enormous goods traffic in that country.

12661. I don't want you to run away with the idea that everything there is *couleur de rose*. Most of the traders in this country would not be satisfied with such slow transit?—We would put up even with that for the sake of a low rate.

12662. I think you will find that a good many traders would grumble if their goods were four, five, or six days in delivery. But reverting to the question I asked at first. You say you want Irish railways managed as the German railways are?—Yes. German railways are managed in the interests of Germany not in other interests. Their motto translated is, "Germany over everything." I want the Irish railways managed solely in the interests of Irish manufacturers and Irish producers.

12663. The only question I wish to ask you is, whether you think such management can be obtained by a State Department or alternatively by an Irish Board?—I would have more confidence in the Irish Department and in the way it would work.

12664. You think the Irish Department would be more responsible to public opinion?—I do unquestionably. If a wrong man were appointed Irish public opinion would soon see and have it corrected, and have a right man appointed.

12665. Have you considered at all the actual body which should be placed in control of the actual working of the railways?—I have not. I don't mind very much what body it would be if it managed them in the interests of Ireland.

Cross-examined by Mr. Croker Barrington, Solicitor.

12666. I think most of your traffic is by parcel post?—Yes; we don't handle bulky goods.

12667. We have the date when that screen was sent from London. What was the date?—It was in October, 1898.

12668. That is eight years ago?—Yes.

12669. Can you remember had this screen this 18-foot pole attached at that time?—It had. The screen is 18 feet wide, and the pole is 20 feet long.

12670. As far as we understand the matter it took two trucks, but how it came for 4*s.* in two trucks is another matter. But we will inquire into it. Have you any complaints of a similar character?—No; I have no traffic of that kind. I would explain if the Commission wished why I got it in 1898.

12671. *Chairman.*—We don't want a note of that.

12672. *Lord Pirrie.*—Won't the railway company take that up?

12673. *Mr. Croker Barrington (Solicitor).*—We will have to inquire into it.

12674. *Chairman.*—The great point is that the railway carried it from London here for 4*s.* 10*d.*, and that the short distance to its destination cost 16*s.* 11*d.*?

Witness.—From Dublin to Roscrea cost 16*s.* 11*d.*

12675. *Mr. Croker Barrington (Solicitor).*—It seems to me that the explanation is this. The charge is the minimum per ton per wagon going down to Roscrea. Probably there was a free wagon coming from London, which they used as a runner, and the company might not have charged for it. The charge between Dublin and Roscrea would be for two wagons.

Lord Pirrie.—But two wagons would not make £2 4*s.* 4*d.*

Mr. Croker Barrington (Solicitor).—They say they would be charged the same charge as in England. I believe it came without the pole eight years ago.

Witness.—It could not come without the pole; the screen would then be useless.

Mr. Croker Barrington (Solicitor).—It came apparently as a parcel.

Chairman.—Was this identical parcel just as you received it sent forward?

Witness.—Exactly as I received it.

Mr. Croker Barrington (Solicitor).—But eight years afterwards. There are eight years between the two invoices.

Chairman.—But the classification is the same.

Mr. Croker Barrington (Solicitor).—It is extraordinary.

Lord Pirrie.—Your argument is that the Irish railway companies charged more excess for a small parcel, whereas the English companies——

Mr. Dent (General Manager, G.S. and W. Railway).—No, it is an isolated case.

Lord Pirrie.—I think you would do more business—suppose if you had a thousand parcels of that sort would not you put them on two wagons?

Mr. Croker Barrington (Solicitor).—If you had them.

Chairman.—It evidently wants some explanation. There is the fact that it came from London to Dublin for 4*s.* 10*d.* There is no question about that, and the same identical parcel in the same condition costs so much more going from Dublin to Roscrea.

Mr. David S. Prentice, Superintendent Travelling Inspector of the Department of Agriculture, re-examined by the Chairman.

Mr. David S. Prentice, Superintendent Travelling Inspector, Department of Agriculture.

12676. You were asked to come up again on some question you were asked by Mr. Sexton?—Yes. Mr. Sexton asked me to hand in a return or statement as to rates which have been reduced on the representation of the Department.

12677. Have you got that statement?—Yes. (*Statement handed to Chairman.*)

12678. First let us take the local rates in Ireland. You have not got a summary of the local rates?—No, I did not quite understand what Mr. Sexton actually meant. In my evidence in chief—I refer to the passage——

12679. *Chairman.*—I got the impression that I asked you some question as to what had been the result of your applications to the railway companies so far as the trade of this country is concerned?—Yes.

12680. And you considered that in many cases applications had resulted in reduced rates being put into operation?—Yes.

12681. Then I think Mr. Sexton suggested that we

Mar. 12, 1907.

Mr. David S. Prentice, Superintendent Travelling Inspector, Department of Agriculture.

List of rates reduced on the representations of the Department to the railway companies concerned.

would like to see such of these rates as were reduced to ascertain if there was anything tangible in them or not?—Yes.

12682. Well, as Mr. Sexton is not here, I will look at the figures. You take yeast—Dublin to Cork. There is a traffic in that from Dublin?—Yes. This case refers to the traffic from different parts of Ireland to Cork.

12683. What was the point about that?—A complaint was received that yeast could be sent cheaper from Belfast to Cork than from Dublin to Cork. The trader asked my Department to intervene, and the result was that the Dublin rate was reduced to the same rate as from Belfast to Cork.

12684. *Lord Pirrie.*—The original rate was dear?—Yes, comparatively.

12685. *Chairman.*—The original rate for 56 lbs. was 2*s.* 10*d.*?—Yes.

12686. The new rate put into operation on your application or on your complaint was 2*s.* 3*d.*?—Yes.

12687. At the companies' risk?—Yes.

12688. And 1*s.* 9*d.* at the owners' risk?—Yes.

12689. Now, take Indian corn?—In that case a complaint was put forward to the Department that a rate of 11*s.* 6*d.* per ton was charged for corn from Dublin to Castlerea. The complaint was from a miller in Castlerea. The Department represented the matter to the railway company concerned, and they reduced the rate to 9*s.* 4*d.*

12690. There is no date on these figures?—No, they cover about six years.

12691. What I propose to do is this. I propose to have these all printed in the minutes of to-day so that they can be seen and they will be accompanied also by your statement that you have just made that these alterations have been the result of applications made by you to the railway companies during the last six years?—Yes.

12692. That will cover the whole thing?—Yes.

Chairman.—The railway company are entitled to a copy of these, and they shall have it.

12693. *Mr. Croker Barrington* (*Solicitor*).—They will do when they are printed.

12694. *Chairman.*—First there will be the list of local rates reduced; then there will be the list of through rates.

Witness.—There are through rates between places in Ireland to places in Great Britain.

12695. What is the other list?—They are matters of refunds where traders made representations to the Department that the traffic cost them more than they though it ought, and in a large number of instances the railway companies, on having the cases represented to them gave refunds.

Chairman.—Well, I think that will cover the whole thing.

The lists were as follows:—

RATES REDUCED.

Mar. 12. 1907.

Mr. David S. Prentice, Superintendent Travelling Inspector, Department of Agriculture.

List of rates reduced on representations of the Department to the railway companies concerned.

RATES REDUCED—*continued.*

Nature of Traffic and Places Concerned.	Amount. Demanded.	Amount. Reduced to	Observations.
CARRIAGE of 6 tons of SULPHATE of COPPER from Dublin to Virginia Road Station.	Per ton. C. & D. 14 4 Cl. 1. C.R.	Per ton. S. to S. 12 3 Cl. 1. C.R.	G.N.R. Company charged 14*s.* 4*d.* per ton, but admitted that as the consignment was not carted by them consignors were entitled to a refund of 12*s.* 6*d.*
BUTTER:—			
Limerick to Southend-on-Sea.	4 6	2 8	A consignment of butter, invoiced *via* Milford and Great Eastern Railway, was sent *via* Holyhead instead, and Company were claiming 4*s.* 6*d.* A re-entry was made, and claim was reduced by 1*s.* 10*d.*
BULL.			
Liverpool to Ferns:—			
Liverpool to Dublin,	C.R. 18 0	C.R. 10 0 Special case.	The City of Dublin Steam Packet Company stated the 18*s.* was for special pen accommodation, but agreed to refund 8*s.*
Dublin to Ferns, ..	33 11	16 9	£1 13*s.* 11*d.* was the ordinary part truck rate on D.W. and W. Railway, plus 33⅓ per cent. for carriage by Passenger train. Railway Company agreed to adopt scale of Head Rates in force generally on Railways in Ireland, and refunded 17*s.* 2*d.*
EMPTY POTATO BARRELS:—	Cl. 3.	Cl. 1.	
From Cork to Clonakilty.	13 6 per ton. S. to S. C.R.	8 4 per ton. S. to S. C.R.	Cork, Bandon, and South Coast Railway reduced rate and refunded difference between 8*s.* 4*d.* and 13*s.* 6*d* per ton, on consignment complained of.
POULTRY:—			
From Carrick-on-Suir to Reading.	5 10 per cwt. O.R.	4 9 per cwt. O.R.	Consignment of 4 cwt. 0 qrs. 24 lbs., incorrectly charged at 5*s.* 10*d.* per cwt.—should have been 4*s.* 9*d.* per cwt. The overcharge—5*s.*—was to be refunded.
BUTTER:—			
Limerick to Darlington,	64 2 per ton.	50 7 per ton.	A consignment of butter was forwarded to Leeds and there rebooked to Darlington — sum of rates being 64*s.* 2*d.* per ton; had it been booked to Liverpool and there re-booked, the sum of rates would have been 50*s.* 7*d.* per ton. Company made a re-entry of consignment and reduced charges.
TWO COWS from Hazlehatch to Newmarket.	Claimant alleged 275 0 was demanded. Railway Company stated claim was 187 3	103 7	Two cows conveyed by passenger train were booked from Dublin to Newmarket at rate applicable to horses. After correspondence Company applied the part truck rate and reduced the charges.
EMPTY DOG CRATE:—			
Cork to Dublin, ...	2 2	1 9	Overcharge of 5*d.* made — Company arranged to refund.
SALTED SKINS:—			
Mullingar to Liverpool, *via* Holyhead.	30 0 per ton, Cl. 2, S. to S. C.R.	24 2 per ton, Cl. 1, S. to S. C.R.	The rate of 30*s.* was charged in error. L. & N. W. R. Co. applied the correct rate and refunded difference—10*s.* 9*d.*—on consignment.
SIX BULLS:—			
Birmingham to Dublin,	292 6 C.R.	254 6	Bulls bought for Department (Glasnevin) at Birmingham — were sent in separate vehicles in lots of 1, 2, and 3 and charged accordingly. Company reduced charges to the collective rate of 1*s.* 1*d.* per mile, *i.e.*, as if all six bulls were in one lot.
TWO 28LB. BOXES BUTTER:—			
Ardagh to Liverpool, ..	Charged 5*s.* 4*d.* being Parcels rate 1*d.* per lb. at C.R.	O.R. Rate of ½*d.* per lb.	Charge made was correct, but Company reduced it to the O.R. rate and agreed to refund the difference.
BOX OF BUTTER, 56 lbs.:—			
Pallas to Dublin, ..	5 0	1 4	An error was made in invoicing consignments charged at parcels rate instead of reduced rate in force for butter traffic. Instructions to refund 3*s.* 8*d.* to consignors were given.
EARTHENWARE CROCKS:			
Coalisland to Balla, *via* Cavan.	155 10 at 31 2 per ton, Class 1 rate, S. to S. C.R.	16 0 per ton, Earthenware (loose) in 5 ton loads, S. to S. Owner load and unload. O.R.	Company applied the reduced rate to the consignment complained of, and refunded the difference 75*s.* 10*d.* As there was a rate of 16*s.* 6*d.* in 5 ton loads to Castlebar, a station further than Balla, 16*s.* was arranged for the latter.
POULTRY:—			
Rathkeale to Glasgow,	13 0	10 10	The case of poultry weighed 208 lbs. and was charged passenger train rate of ¾*d.* per lb., but through an error in calculation there was an overcharge of 2*s.* 2*d.*, which was refunded.
POTATOES:—			
Rush to Dublin, ..	11 9 C.R.	6 3 C.R.	Charge on the consignment, which weighed 1 ton 11 cwt. 2 qrs., was based on Class 1 rate (7*s.* 6*d.* per ton) instead of on Class C rate (4*s.* per ton) and Company ordered a refund of overcharge to the consignee.
A CALF:—			
Cloughjordan to Newcastle, Co. Wicklow.	13 8	13 6	The calf was booked from Cloughjordan to Kingsbridge and thence to North Wall, the charges amounting to 11*s.* 6*d.* If booked direct to North Wall charges would be 8*s.* 1*d.*, in consequence 3*s.* 5*d.* was refunded to the Consignor. An overcharge of 1*s.* 9*d.* was made for conveyance from Dublin to Newcastle. This amount was refunded by D.W.W. Railway.

RATES REDUCED—*continued.*

Mar 12, 1907.

Mr. David S. Prentice, Superintendent Travelling Inspector, Department of Agriculture.

List of rates reduced on representations of the Department to the railway companies concerned.

Nature of Traffic and Place Concerned.	Amount. Demanded.	Amount. Reduced to	Observations.
	s. d.	*s. d.*	
BOOTS :— Carlow to Cork, ..	34 5 per ton, Cl. 3, S. to S. C.R.	27 6 per ton Ex. S. to S. C.R.	Consignment of 6 cwt. 0 qrs. 11 lbs. was charged in error at rate of 34*s.* 5*d.* per ton, instead of correct rate of 27*s.* 6*d.* Company refunded difference.
OATS :— Glasgow to Gibbstown,	25 0 per ton, Cl. 1, S. to S. C.R.	13 4 per ton Ex. S. to S. C.R.	Rate was reduced from 25*s.* to 13*s.* 4*d.* per ton, and a refund of 17*s.* 5*d.* was made on the consignments complained of.
BRUSHES :— Dublin to Ballina, ..	2 2	1 1	The sum of 1*s.* 1*d.* was charged on 4 lbs. brushes, which were forwarded with 161 lbs. of hardware, on which a charge of 1*s.* 2*d.* was made—1*s.* 1*d.* refunded.
POTATOES :— 3 ton 18 cwt. 2 qrs. Perth to Cavan, ..	125 11	116 2	Charges per ton :—Perth to Dublin, 17*s.* 1*d.* S. to S., including port dues at Dublin. Dublin to Cavan, 11*s.*, cartage at Dublin 1*s.* 6*d.*, total 116*s.* 2*d.* Overcharge of 9*s.* 9*d.* arranged to be refunded by Company.
BASIC SLAG :— Dublin to Ballintogher,	15 11 per ton.	12 0 per ton.	The consignment weighed one ton and the Company reduced the charge to 12*s.* as a special case.
HORSE :— Wicklow to Dublin, .. (Amiens-street).	29 6	10 6	See rates list for explanation.
BOX OF EGGS :— Adare to Rathkeale, ..	2 0	0 8	Charges reduced from 2*s.* to 8*d.* Box was marked "fragile" and contents not described. Accordingly charged at 50 per cent. over parcels rate (1*s.* 4*d.*).

Nature of Traffic and Place Concerned.	Amount. Demanded.	Amount. Reduced to	Observations.
	s. d.	*s. d.*	
POTATOES (1 ton) :— Cullybackey to Ballywillan.	46 6	12 6 or 13 0	Charges reduced from 46*s.* 6*d.* to about 12*s.* 6*d.* or 13*s.*, owing to an error in carrying to Ballywilliam, Co. Wexford.
A BOX OF OYSTERS (90 lbs.) :— Clifden to Liverpool, ..	4 10	3 6	An overcharge of 1*s.* 4*d.* had been made The Company ordered the amount to be refunded.
EIGHT BOXES OF BUTTER (4 cwt. 2 qrs. 24 lbs.):— Abbeyfeale to London,	13 1	9 6	An overcharge of 3*s.* 7*d.* had been made. The Company ordered the amount to be refunded.
A COW :— Navan to Lingfield, ..	84 10 part truck rate from Dublin to Willesden Junction.	18 1	There was no provision to meet the case of a single animal sent from Dublin to Willesden by Goods train, and the part truck rate was charged. The L. & N.W. R. Co. reduced the charge to 18*s.* 1*d.*, notwithstanding that 18*s.* 1*d.* is only applicable to a minimum of five beasts.
PEAT MOSS LITTER :— Tullamore to Ballsbridge.	Sum of Locals 11 3 per ton.	7 6 per ton.	A consignment of 4 tons was charged at 11*s* 3*d* per ton, but a reduction of 2*s.* 6*d.* per ton was given.
FURNITURE :— Richhill to Balla, ..	52 6	43 4	Refund of 2*s.* 1*d.* ordered. See Rates Return for cause of reduction.
CREAM :— Omagh to Lowrow, ..	5 10 per cwt. O.R.	4 8 per cwt. O.R.	A refund of 1*s.* 2*d.* per cwt. ordered on all items charged at 5*s.* 10*d.* rate. See Rates Return for explanation of reduction.
OYSTERS (about 2½ tons):— Falmouth to Oranmore,	379 2	260 0	£5 19*s.* 2*d.* allowed. No through rate existed, but a special figure of £5 per ton was arranged and charges reduced.

Mar. 12, 1907.

Mr. David S. Prentice, Superintendent Travelling Inspector, Department of Agriculture.

Examined by COLONEL HUTCHESON POË.

12696. In consequence of your representations did you succeed in inducing the railway companies to make appreciable reductions in these different rates?—In some cases, yes.

12697. Did they in some cases refuse to make any reductions?—Yes. There have been instances where the companies would not make reductions, and they put forward reasons that we could not surmount.

12698. Such reasons as were satisfactory to the Department, and they did not wish to pursue the matter any further?—Yes.

12699. And the same applies to the through rates?—Quite so.

Recommendations of the Departmental Committee in 1897, and action taken thereon.

12700. I wish to refer you to the recommendations which were made by the Departmental Committee in 1897. Under Sub-Section 1, Section 2, it was recommended that power shall be given to the local authorities to enable them to acquire fair grounds, collect tolls, remove fairs from the sites of towns and villages, etc. Has any action been taken with regard to these recommendations?—No. That is a matter that would require fresh legislation.

12701. Then with regard to providing better accommodation at railway stations?—That has largely been acted on.

12702. No action was taken with regard to that recommendation?—There was.

12703. There is a recommendation that your Inspectors should have the power to prevent the shipment of animals which in their opinion are unfit to ship. Has that resulted in the improvement of the condition of the animals?—I think that was one of the recommendations of the Committee, but the Department were legally advised that they had no power to enforce it. What however is done in cases of the kind is this—the Veterinary Inspector—when he notices an animal which he considers is unfit—informs the owner that in his opinion the animal is unfit for shipment. The Order of the Department throws the onus on the owner if he ships an unfit animal.

12704. And is the result of that order, when such a request is made by the Inspector, that the owner probably withdraws the animals?—Very frequently they are withdrawn. But in some cases they were not, and the shippers have been prosecuted.

12705. With regard to Sub-section 6, which refers to the speed of cattle trains, what is the speed of these trains?—On the principal railways, in the case of what are known as shipping cattle specials, that is to say, trains which are specially run to catch the steamers, they run at 25 or 30 miles an hour.

12706. And that, in the opinion of the Department, is a sufficiently high rate of speed to ensure that the cattle should not suffer in transit?—Yes.

12707. On page 7 of your evidence you say the request of the Department that attention should be paid to these reports was not complied with in the case of some recommendations. In what instances were your recommendations not complied with?—I will take the carriage of unfit animals. It was one of the recommendations of the Committee that animals should not be carried near their calving time and matters of that kind, but we found that that was still continued, and therefore a provision was put in the Department's order to prevent it.

12708. So that complaint has been remedied?—Yes. Securing of bulls by the heads in railway trucks is another recommendation which to some extent the railway companies voluntarily carried out, but it was found that it was not being carried out with regularity, and a provision dealing with the subject was put into an order.

12709. *Lord Pirrie.*—They have to tie them now?—Yes, to secure them by the head in order that they may not damage other animals.

12710. *Colonel Hutcheson Poë.*—We may take it that in your opinion the conditions under which cattle are now sent across the Channel are very much more favourable than they were a few years ago?—Yes, very much more favourable.

12711. At page 12 you speak of transit of produce and of different matters to which your attention was directed in going round the country—has anything been done by the Department in the shape of offering inducements or assistance to producers—dairy or farm producers—to centralise and localise, so to speak, traffic on certain days of the week in order to get it at lower rates for large consignments?—I don't think anything has been done directly by the Department to do so, and, if I may say it, I think it would be difficult to get it done, because, take the case of butter—the trader seems to have an idea that he ought to send to his customer without the knowledge of his fellow-trader, and very often even with the object of preventing that knowledge, goods are sent under a mark, so that if I or any other person went to look at packages of butter I could not know where they were going—there would be simply a mark on those packages.

12712. *Lord Pirrie.*—London or somewhere?—Yes, I might know they were going in some particular direction, but as to the trader they were going to I would have no means of knowing. One of the reasons for such procedure, no doubt, is that traders don't wish their fellow-traders to know where their custom lies. I am afraid that even this circumstance would to a large extent prevent co-operation between traders in preparing larger consignments.

12713. *Colonel Hutcheson Poë.*—So long as that disinclination exists?—Yes; I think it is dying out, but there is no question that it exists.

12714. So long as it does there is very little hope of getting large consignments at the specially low rates that the railway companies would be glad to give?—Yes; and I might say that another reason is the different channels consignors have for sending to different places, and the number of different routes and frequent occasions by and on which shipments can take place. There are in Ireland about 140 steamers trading between Ireland and Great Britain; there are about twenty ports; a great number of steamers go on the same day; there is never a day that steamers are not going. It is so unlike the Continental system; they have opportunities of forwarding the produce from this country much in excess of those, say, from Denmark.

12715. So that competition is rather a disadvantage than otherwise?—Well, taking that view, yes.

12716. At page 15 of your evidence you refer to visits made by inspectors to different stations; in your opinion is sufficient care exercised by the railway and shipping companies, or rather by their employees in the handling of agricultural and dairy produce consigned to them?—We think there is much improvement in this respect, but we come across instances where the servants of the railway companies have not observed the instructions they have got from their employers.

12717. I think you said, with reference to that, that when you made representation to the railway company they took severe notice?—Yes; in some cases they dismissed those servants.

12718. At page 17 you speak of refrigerator wagons, and state that two Irish railway companies are provided now with such?—If I might be allowed to amend that, I would say that I believe three of the companies have these vehicles.

12719. I think we had evidence of the fact that butter-makers would not take advantage of these wagons in many instances?—Yes; the company which have most refrigerators is the company whose line runs through the principal butter district. The Great Southern and Western—they have a number of refrigerators; the Department were pressed by traders to urge on the carrying companies the propriety of putting on those refrigerators, and they did so. Circulars were issued to all the railway and steamship companies drawing attention to what was represented to the Department by butter-makers and traders, and to some extent I may say the result has been that three of the companies now possess more or less in number refrigerator vans. The Great Southern and Western Railway probably have the most, and at a comparatively small rate for a special icing, would allow those vans to be used. I understand they have left them, with the ice practically near by, to be used when the trader applied. I have made inquiries, and I understand that at Limerick, where those vans lay (it is the centre, it might be said, of the butter district) during 1904, I am told by one of the officials of the Company that during that year, 1904, only on five occasions were those wagons applied for or used; during 1905 they were used on two occasions, and in 1906 they were not used at all.

12720. How do you account for that?—Well, to some extent it may be that the season concerned was not as warm as the traders thought would warrant them in even going to the small expense of paying for the ice; that is the only manner in which I can account for it; or perhaps they were not prepared to pay at the rate of 1s. 6d. a ton for this additional service of having traffic carried in an iced wagon.

12721. And these were the people at whose instance the Department made representations to the company, and put them to the expense of providing wagons?—That is so.

12722. It is rather disappointing to find that. Have your Department made representations to the butter manufacturers as to the false economy they are exercising?—Well, one or two were spoken individually to, but the answer they made was that the season was not sufficiently warm; therefore, they do not use them.

Examined by Lord PIRRIE.

12723. I take the evidence about ice; they use refrigerator cars always for their butter, but they don't pay the additional cost to the company for putting ice into the car?—Insulated vans, and refrigerator vans without ice are used.

12724. Therefore, the refrigerator cars have increased, and are largely used by butter manufacturers?—Yes, they are used by butter manufacturers. Perhaps I may be allowed to explain that the railway companies, in addition to what they call refrigerator vans, have also a number of what are described as insulated vans, the special feature of which is an arrangement to prevent the sun's direct rays of heat coming through so strongly to the contents of the van.

12725. The insulated van is used by butter manufacturers without paying any increased rate for the carriage of the butter?—That I believe to be so.

12726. The railway companies in the same insulated car have arrangements by which they carry ice?—They have insulated cars without ice chambers, and they have insulated cars with iced chambers.

12727. Then all insulated cars are not made with a place for putting in ice?—No.

12728. There is then only a limited number?—Yes, a limited number.

12729. Three of the companies in Ireland have got arrangements for putting ice into the insulated cars?—Yes. I believe that is so; the Great Southern and Western have them, the Great Northern have some, and I understand—I have not seen them, but I believe it to be correct—the Midland Great Western have some.

12730. Have your Board considered the question of getting the railway companies to put up refrigerating chambers at some of the larger stations where a large amount of butter is sent, so that when butter or pork comes to a station it may be separated from the other goods and kept in this cold chamber?—Well, while the Department may not have considered it with the railway companies, the subject has not escaped them.

12731. It has not escaped them: can you tell me any place where you have got it?—No, but I can tell where it exists privately.

12732. Privately?—Yes. In Cork I believe that the carrying companies allow butter, for instance, which arrives late by railway and cannot catch the steamer, notwithstanding the through rate, to be taken to a cold storage and kept there, and subsequently conveyed forward as if the route never was broken.

12733. That cold storage belongs to the Corporation or to a private individual?—Yes, not to the railway company.

12734. Have you, as a Department, never considered it desirable to urge the railway companies at certain main stations to put a cold chamber up, so that the butter could be put in?—The Department have never urged it, and I am not sure it would be used to any extent if provided the object is rapid transit.

12735. Yes, but immediately the farmer's or trader's donkey cart, with a consignment of butter arrives at a station, is the train always ready to start?—Very often we get complaints that the train has not started soon enough.

12736. The butter is not put into the ordinary store in the railway; the wagon is waiting and it goes direct in?—Very often that is so.

12737. Have you any instructions in your Department to see that the butter is not thrown down in the ordinary store?—We have instructions to see that butter is not put where it will be unnecessarily exposed to a warm temperature or to bad treatment.

12738. If you have not a refrigerator car or an insulated car, and the store is not cold, how will you on, say, the 12th August, or any warm day, put it any where except where nature has given you a green field?—It is put in shelter generally though it does not go into cold storage.

12739. Do you not allow any commodity in the store except butter?—I am afraid there are no such regulations as that.

12740. The Department have no regulations that when butter arrives at a station it is not to be allowed to be laid down or to go wherever it happens that a stationmaster or the man in charge places it?—No. The Department's Inspectors, however, have frequently drawn attention to butter and other produce when found at stations exposed to rain or to the heat of the sun.

12741. I am not objecting to that. A station is not arranged specially with a place for butter at all?—I think not. I don't think stations are generally arranged to have a special butter store.

12742. Do the Department urge the railway companies to keep a supply of wagons—would that not meet the case, insulated wagons where butter does come in, so that it will go direct from the car to that insulated wagon?—We have corresponded with the companies on the complaints of people that they had not sufficient wagon accommodation.

12743. You have not taken up the principle of meeting that requirement by urging the railway companies to have wagons?—I think not.

12744. And therefore practically you do allow the farmer to put his butter down anywhere. If you once allow the farmer and traders to put down their butter, and they have got private marks on them, how are you to know whether it lies there for one hour or sixty hours, and how can the other competitor find out where it has to go. It has to go quickly, because they are afraid another trader may find out where it is going. Suppose there is a private mark, how will it be found out whether it lies for an hour or for sixty hours?—Traders know the hour at which trains go, and they take their butter in time to be carried away by a particular train. If one trader came and saw the label showing the destination of a consignment of butter belonging to some one else, he would know where it was going, but as long as it has a mark he would not.

12745. You don't think that the scheme Colonel Poë suggested of a particular day for sending butter would meet the case, because you are afraid traders would be able to see the addresses. I took it from that that the moment a cart arrived with butter it was put into the wagon and closed so that other traders could not see it, but you say it is open to traders to see it, but to avoid that they put a private mark—there is no objection to the suggestion that Colonel Poë makes?—No, I would imagine it would be a useful thing to the traders if they could be got to adopt that view.

12746. I thought you meant that. It would be a great benefit to the traders and to the district generally?—If they could be got to come away from their old customs, but the old customs have lasted longer than I can recollect, and I think it would be a difficult matter to change these ideas.

12747. We all have to change with the times, and I suppose Irishmen would like to get freight cheaper if they could get it?—Certainly.

12748. You spoke about Belfast as the only place, as I took it, that you had no inspection cattle station close to the quay—"At Belfast the inspection yard and cattle station should be in closer proximity to the quay." You say you cannot get it for certain traders, but if you cannot get it, have the cattle to suffer because you cannot get it?—So far as the Department is concerned, it is not their doing. It is not the Department that supply those yards. All through the country at the cattle-exporting ports the yards belong to different parties, sometimes to the Harbour Commissioners and sometimes to shipowners, and in Belfast, although that is more or less an isolated case, the railways own those yards, and provide them.

12749. Yes, but the railways are in some cases a mile or even a mile and a half from the places where you ship cattle?—The Department has had correspondence

Mar. 12, 1907.

Mr. David S. Prentice, Superintendent Travelling Inspector, Department of Agriculture.

Supervision of the handling and transport of butter traffic by the Department's Inspectors.

Necessity for cattle inspection yards at Belfast quay urged.

Mar. 12, 1907.

Mr. David S. Prentice, Superintendent Travelling Inspector, Department of Agriculture.

for years with the Belfast Harbour Board and with the railway companies and shipping companies to endeavour to get them to provide a yard nearer to the quays.

12750. In the meantime are the cattle suffering?—I don't say they are suffering, but I do say that there would be less opportunity for them to suffer and there would be less inconvenience to everybody, if the yards were nearer to the quays.

Necessity for cattle inspection yards at Belfast quay urged.

12751. I am only speaking in this way, now: supposing cattle left the Great Northern Railway Station, which is furthest away from the quay, I take it as an illustration, have those cattle not to be fed or watered before they go on board the steamer?—Not necessarily.

12752. They can stand for hours on the quay and then go on board the steamer. There is no rule on board the steamer, nor any necessity ever to water then there?—There is, provided they are on for a certain period.

12753. But supposing they are four or five hours on the quay and they then go on board the steamer and go across for ten hours or twelve hours to Liverpool, is not it hard on the cattle?—It is hard on them to be standing about.

12754. I thought Belfast was most up-to-date for shipping cattle out of Ireland, but apparently from your statement, and I am sure it is correct, that is not so, from your inspection of the places where cattle have to go. It is most extraordinary that you don't say that if cattle are to be shipped they must have a place to get watered before going on board?—Those recommendations were not so much on the question of want of food, as on the absence of slow driving of the cattle from the inspection yards to the quays.

12755. Slow driving?—Yes, they were driven too quickly. It was a case of galloping.

12756. Yes, that's so. I was nearly run over last night by cattle?—I am sorry to hear it, sir.

12757. They were going in a canter?—The Department were obliged in the case of Belfast to do what they have done in no other port, to require that cattle be in the inspection yard one hour before the advertised time of the vessel's sailing to give them time to be walked properly and slowly towards the quays.

12758. They have to be in it for one hour?—Yes, one hour before the advertised time of sailing. For instance, supposing cattle were going to Fleetwood—the hour for the Fleetwood steamer, I think, is eight o'clock—then they would have to be in the inspection yards at seven, so that when inspected they would have practically an hour to be driven from the Great Northern Station to the quay at Belfast.

12759. You would give them an hour to be driven down?—Yes.

12760. Supposing you take only ten minutes and rush up and get another herd, then the same people could drive ten or twelve different sets down?—Yes, but the cattle are there the hour; they have that time.

12761. If you made it a rule that cattle were to take three-quarters of an hour to walk from the station to the boat; but you allow them to be driven down, we will say at a gallop, they stand at the quay alongside the steamer for an hour, or half an hour: is not that injuring the cattle just as much?—How could you supervise cattle going along the road for a mile and a half; the police certainly have instructions to prevent any cruelty——

12762. From your Department?—Yes, from my Department they have instructions with regard to those special yards, to prevent cattle from being overdriven.

12763. I think it is a matter of great importance?—It is a difficult matter to deal with.

12764. It seems to me extremely sad that Belfast, which is so enlightened, should be the only city or town in Ireland you have to make special regulations for?—That is so.

12765. It is extraordinary, when the Commissioners bought ground many years ago for the very purpose of having a place for the cattle, and I believe that there is a part of the ground yet unoccupied?—I believe they could not come to terms with the owners of the ships and railways, if that ground did exist.

12766. It was opposite the Fleetwood steamer, and one of the companies probably bought portion of it?—It may not have been large enough.

12767. Perhaps. I only wanted to get this about the cattle: they have to make special arrangements for Belfast. Every other town in Ireland is entitled to that same regulation if they want it?—If such were required.

12768. Could not they compel you to give the same regulation; take Dublin, for example; could not they compel you to walk cattle from, say, Broadstone?—They are not inspected there. In Belfast they are inspected in the yards belonging to the railway companies, but in Dublin they are inspected in the yards belonging to the shipping companies, which are adjacent to the quays.

Mr. A. Poole Wilson, Chief Dairying Inspector, Department of Agriculture, examined by the Chairman.

Mr. A. Poole Wilson, Chief Dairying Inspector, Department of Agriculture.

12769. What are you, Mr. Wilson?—I am the Chief Inspector in connection with dairying to the Department of Agriculture and Technical Instruction, and I am responsible for the technical advice in dairy matters afforded by the Department to creameries, condensed milk factories, and butter factories, and so on.

12770. Have you a staff under you?—There is the clerical staff in the office, and I have a staff of four instructors travelling about the country.

12771. Four of what you call dairy instructors?—Yes.

12772. We are only dealing now, I suppose, with the particular traffic, butter, milk, and cream?—Yes.

12773. And I will confine my questions entirely to these particular articles. Of course they are important articles of export from this country?—They are very important.

Action taken by the Department in connection with the export of dairy produce.

12774. Now, can you explain to the Commission the action taken by your Department in connection with the export of these articles?—Since the formation of the Department, when my work was taken over from the Commissioners of National Education——

12795. Give us the date?—1900. I have been employed under the Department in visiting, and my assistants have also been employed in visiting creameries, examining their methods of work, methods of packing, pointing out defects and suggesting remedies for these defects, whether they advise during manufacturing processes, packing, or from any other source whatever.

Scheme for improvement of creameries.

12776. Are those boxes that I see at the end of the room sample boxes of what your Department have made?—Before I go to the boxes I would just like to say that in 1903 the Department brought out a scheme for the improvement of creameries, and in 1904 they made it a condition of registration under the scheme that all creameries in the country should use packages conforming with a certain standard, or up to a certain standard, in order that their produce might arrive in good condition at the other side. I have a copy of this scheme here (*copy handed to Chairman*), and you will see that the butter packages in general use are to be satisfactory. Under this scheme, in 1903 there were 102 creameries, and in 1906 we had altogether under the two separate portions of the scheme 359 creameries; in 1903, twenty-seven were registered, and in 1906 105 were registered.

12777. *Lord Pirrie.*—Creameries?—Yes, registered under this scheme. That is the return (*handed in*). In connection with this scheme we had a series of "Surprise" butter competitions.

12778. *Chairman.*—Tell us what that is, for I do not know what a surprise competition is?—It is a competition where the butter exhibits are called up by telegram, without any previous notice of the date of the competition being given.

12779. A telegram sent from your Department?—Sent from our Department to the creamery. The object is to defeat special preparation for the competition. We wanted to secure at these competitions that the packages of butter sent should be commercial butter, not butter specially prepared, as it usually is for all shows where long notice is given. At the surprise competitions the butter is examined— —

12780. Stop. Let us go by steps. This is quite new to us, and is not in your proof. You, representing the Department, telegraph to the creamery to send up a sample of butter?—Yes.

12781. Where is it sent to?—To a place appointed by us in Dublin. At present to Ballsbridge.

12782. Is the quantity limited?—It must be either a 112 lb. kiel or a 56 lb. box or keg.

12783. That telegram goes out simultaneously to all creameries which are under your inspection?—Yes.

12784. Is the butter sent up at the expense of the creameries?—It is sent up, carriage paid, by passenger train to Dublin to us.

12785. At the expense of the creameries?—Yes, they pay the carriage.

12786. Do they supply the butter free?—No, they do not.

12787. Tell us how that is done?—The butter is valued at the end of the competition by the judges.

12788. Let us assume a sample of butter coming from the creamery and arriving in Dublin, what is the *modus operandi* then?—The samples are staged by the Department and numbered. At the end of a week, or ten days it may be, they are judged by four judges, who are selected by the Department, from different butter markets in England. We keep the butter for about a week.

12789. Markets in England. You bring the men over?—Yes; three of the four judges are from England, and one is representative of the butter merchants on this side. Three are representatives of the markets on the other side of the Channel.

12790. Your Department arranges for the judges from England?—Yes.

12791. And you pay their expenses?—Yes, there are no fees.

12792. We have got the four judges now inspecting the samples after having arrived in Dublin?—Yes. Each judge examines each sample independently.

12793. Is there anything on the packages to indicate where they come from?—Nothing but a number, the key to which is in the possession of someone in the Department. I don't know it as a matter of fact.

12794. Go on?—Each judge is supplied with a card for each exhibit, similar to this one (*card handed to Chairman*), and he scores the butter for flavour, texture, colour, and packing and finish, according to the scale.

(The following is a copy of the card handed in by the witness):—

DEPARTMENT OF AGRICULTURE AND TECHNICAL INSTRUCTION FOR IRELAND.

SURPRISE BUTTER COMPETITIONS—1906.

OBSERVATIONS.

———

———

———

———

Witness continuing.—The judges score the butter according to a commercial valuation. That is, they are asked to deduct marks under the various headings whenever they find that the butter would suffer commercially in the market. For instance, we will say that the price of the choicest butter was 112s. If on examining the exhibit he would say the flavour is such that I can only give 108s. for that butter, he would reduce the score for flavour accordingly.

12795. The maximum marks being printed on the card, and he deducts for faults?—Yes.

12796. There is a column provided for that?—Yes, there is a column provided in which he puts down his marks.

12797. What is the next process?—A number of the creamery managers who are exhibitors are usually invited to meet the judges after the judging is over, and to hear what they have got to say in general about the exhibits, about their flavour, about their texture, about the colour, and about the packing and finish. Next day the same managers, whose expenses are paid by the Department, are taken round the exhibits by one of the Department inspectors, and the faults in connection with their own exhibits, and perhaps the faults in connection with other exhibits, are pointed out to them, and the remedies explained, as far as is possible at the competition. If it is not possible to fully explain the remedy at the competition we advise them to secure the services of one of the dairy instructors, and get him to go into the matter at the creamery.

12798. I want to get at the senders of this butter. How do they get paid for this butter?—At the close of the judging the judges are requested to state what they consider was a fair price for the butter on the day on which it was sent to Dublin, and to take into consideration the fact that it was landed carriage paid into Dublin. The judges fix the price. The Department having nothing whatever to do with the fixing of this price.

12799. Therefore the senders are reimbursed according to the value of the judges?—Yes.

12800. How often does this competition take place?—Up to this year there were not less than five and not more than eight during the year.

12801. Eight during the year 1906?—There were, I think, seven in 1906. I have the results here. That is a summary of the results of six of the competitions (*handed in*).

12802. *Lord Pirrie.*—I see you have taken them in a very busy season?—Yes, we take them over the busy part of the year, and try to take them under different conditions as regards weather and so on.

12803. *Chairman.*—Is any prize given?—Prizes of £2 are awarded to first class butters, and prizes of £1 to second class butters.

12804. On 5th October, 1906, the telegrams were issued for what you call a Surprise Butter Competition?—Yes.

12805. The number of entries there were 109?—Yes.

12806. And out of that 109 four were awarded first class prizes of £2?—Yes.

12807. And thirteen second class prizes of £1?—Yes.

12808. And the remainder had their faults pointed out by the judges?—Yes, and by the Department's staff. The judges, you can quite understand, being very busy men, cannot afford to give more than a day or two to this work, and a good deal of it has to be left over to us. And in some cases judges of butter are not always judges of the causes of bad butter.

12809. When was this system originated?—In 1903.

12810. That was the first?—That was the first.

12811. And of course the object was to improve the quality of the butter exported from this country?—Yes, the quality and the method of packing and marketing.

12812. Quality would cover everything—that is to say, that the butter should find better markets and better prices?—Yes.

12813. Have you told me how many creameries there are altogether?—In Ireland there are about 800 creameries, and under the inspection of the Department's officers there are at present 359. That was under this scheme for last year. There will probably be more entering this year.

12814. You said it commenced in 1903. Now, as an expert, has the condition of the butter improved under this system that has been established?—It has improved in nearly every respect, and in the fear that I should be considered prejudiced in saying so, we have here the reports of the various judges—a summary of the reports of the various judges—from 1903, and in these reports they say there has been a

Mar. 12, 1907.

Mr. A. Poole Wilson, Chief Dairying Inspector, Department of Agriculture.

"Surprise" butter competitions conducted by the Department described.

Improvement observable in the packing and finish of the butter exhibits.

Mar. 12, 1907.

Mr. A. Poole Wilson, Chief Dairying Inspector, Department of Agriculture.

marked improvement. For instance, in the summary of the reports for 1906 the judges say: "The packing and finish of the exhibits generally were considered a marked advance on those of former years." They direct attention to serious faults and recommend such practices as the paraffin waxing of the insides of the boxes, a thing which the Department had been advocating for some time. If I may put in a return here—in 1903, out of 639 samples received at these competitions, 65 of the packages were burst, completely burst.

Improvement in the packing and handling of butter packages in transit.

12815. *Lord Pirrie.*—When you received them?—Yes, in 1903.

12816. *Chairman.*—Have you got the figures for 1906?—I have 1905.

12817. Take last year. Never mind going through each year?—I was going to take 1903 and 1905. In 1903, ninety-four packages showed signs of giving way, that is, the nails had started, or some other portion of the box had shown signs of bursting.

12818. You are speaking of the condition in which they arrived in Dublin?—Yes. In 1905, 559 samples were received from five competitions. Twenty-six packages were burst and thirty-nine showed signs of coming away. To give them in percentages, it works out at 9·86 in 1903, and 4·65 in 1905.

12819. Less than half?—Less than half.

12820. To what do you attribute that?—I attribute it to two things, mainly to one thing, and that is, improved packages and better handling through complaints having been lodged. I have illustrations of some of these broken packages here (*photographs exhibited*).

12821. Now then, first of all, the butter itself has improved; secondly, the packages have improved, and thirdly, the railway transit has improved?—Yes. I think the railway transit has improved, but I still think there is room for improvement in every direction. For instance, in the first year I should think that in the majority of cases broken packages and damaged packages were due to faults of construction as well as to treatment in transit, while last year I should say that the railway company was at fault for the greater number of bad bursts, as the packages had improved so much. The judges, in addition to marking the exhibits at these competitions generally add a number of remarks. I may perhaps read two or three typical remarks: "End and sides too thin."

12822. The railway company have nothing to do with that?—These are what the judges say. These are rather excuses for the railway company. "In this box, nails too short or too few in number or unsuitable, lid projecting over the sides." Then with regard to kiels they say, "hoops too thin or too few in number, staves too thin," and so on—remarks of that kind.

12823. There is no record to show the usage of the railway company?—No. The judges, in examining the packages, made a point of examining a broken package very closely. If they thought it was a badly constructed package they blamed the maker partially and the railway company. If they considered the package was a well-made package, then they blamed the railway company. They do not put that on the score card.

12824. Where do they put it?—In judging, the judge goes round and looks at that package, and sees that it is obviously badly handled.

Leaflet on the subject of packing issued to makers of butter by the Department.

12825. Is it a verbal remark?—He may not say anything. He may simply score the package. In order to further improve packing and finish, the Department issued this leaflet on packing (*handed in*).

12826. The Department issued the leaflet which I have got in my hand giving instructions to the makers of butter as to the packing, and as to the care and materials used in the packing, and shows what kind of package to use, and so on?—Yes.

12827. And they give illustrations of the packages upon which they comment. The casks, firkins, and boxes are all illustrated, I see?—Yes.

12828. Can you say when this was issued?—It was issued in May, 1905.

Foreign sample packages shown exhibitors.

12829. Lord Pirrie asked some questions about this. Do you send your inspectors with sample packages or merely with illustrations?—We had sample packages at these competitions, which were shown to the various managers, and we had not only samples of packages for our own use, as it were, but we had samples of packages used in nearly every other country, some of which we have here. For instance, I have in this room three kiels—one Irish, one Swedish, and one Danish, and I think on examination you will find very little difference between them.

12830. These are made under the instructions of your Department?—If I may go a step further. We called a conference of package manufacturers in December, 1905, in order to have a standard laid down for boxes and kiels.

12831. That was after you issued this circular?—Yes, but the reason we called that conference together was that a number of the creamery managers complained to us that package manufacturers would not supply them with boxes made to the standard we laid down.

12832. The managers of the creameries? Yes, and I may say that the Department ordered boxes and kiels from these various package manufacturers, and in a great many cases we found that they did not comply with the standard, that apparently no notice was paid to some of the details—some of them did comply, but some of them did not. Then we called a conference and asked them why it was they could not comply with the standard, what objection they had to it. I may say the standard was laid down after consulting with a number of makers of boxes and packages and examining packages from all over the world, and seeing how the packages of various types stood the transit in this country. At that conference, in December, 1905, the greater part of a specification was agreed on, and it was practically the same as that embodied in this leaflet. The Department were asked, however, to carry out some experiments as regards the capacity of butter boxes and kiels, and we did that during 1906. As a result a standard specification has been drawn up and agreed to by all the large manufacturers and importers of butter packages in Ireland.

12833. Exporters?—No, importers of packages. There are the conference minutes, and here is the leaflet on the packages.

12834. Are they all Irish firms that make them?—I may say that we published an advertisement in the papers asking all manufacturers or suppliers of butter packages who were willing to make packages complying with the specification to send in their names to the Department, and in the scheme for 1907, which is just now in the press a list is published of all package manufacturers and suppliers in Ireland who have undertaken the supply of standard packages.

12835. I have got it here?—Those were the members of the conference. The list we are publishing now contains a great many more names.

12836. They are all Irish firms?—All in Ireland.

12837. *Lord Pirrie.*—Didn't you get a good many of the butter packages manufactured in other parts?—A good deal of the material may be imported.

12838. *Colonel Hutcheson Poë.*—But the packages are made up here?—They are made up in Ireland.

12839. There are no wholly manufactured boxes imported?—No, I do not know of any boxes imported. The box timber is imported, sawn, and put up in shooks.

12840. *Chairman.*—Are you acquainted with packages made for the export of butter from France and Denmark?—Yes.

12841. Are you satisfied now as far as your Department is concerned, and the steps you have taken, that there is no reason why butter should not be packed in precisely the same manner in Ireland as those countries pack it?—I do not want to see Irish butter packed exactly like foreign butter. I should like something distinct, so that a buyer could know whether it was Irish or other butter, but we are satisfied that the packages complying with the specification laid down are quite as strong as the packages used in any other country.

12842. And quite as easily handled by the railway company?—Yes.

12843. And, therefore, so far as the rates are concerned, the rates should be as favourable for Irish-packed butter as for Danish-packed butter?—Yes.

12844. The service performed by the railway company would be the same in both cases?—It would. It is simply to carry butter in both cases. If the packages comply with our specification they will be equally as strong as those of any other country.

12845. And the same quantity could be loaded in a truck as Danish butter?—There is no reason to the contrary. There are three different packages in this

room. In the hall downstairs you will find packages used in Argentine, Canada, Australia, New Zealand, and so on.

12846. *Lord Pirrie.*—These are the ones downstairs?—Yes.

Examined by Lord PIRRIE.

12847. You speak of the "Surprise" competitions—are the judges allowed to know, actually, where the butter comes from—I mean the districts from which it comes, or are the different consignments numbered, say, 1, 2, 3, and 4?—If any butter is sent in with any mark on the package other than the label issued by the Department it is disqualified.

12848. Yes, that is what I wanted to know—you put a label on it?—Oh, yes, we do.

12849. Therefore, your Department know whether that butter comes from the North, the South, the East, or the West?—Yes; when it comes in, however, that label is taken off by a clerk, and a number put on instead, so that only the clerk knows where it comes from.

12850. Are the judges assisted by a certain number of creamery inspectors?—No, the judges are not assisted at all.

12851. But the creamery inspectors are there?—One of the Department's inspectors is always in charge of the competition, but he does not go round with the judges.

12852. He himself does not go round?—No; I have acted in that capacity myself.

12853. I want to make this matter clear, because your evidence left it in doubt whether the creamery inspector who was present with the judges went round, or whether or not, whether he is aware of where the butter comes from?—No.

12854. I wanted to have it clear. The judges, as I presume from the way you gave your evidence, have nothing whatever to aid them except the card you have given to the Chairman, and that flavour, texture and colour are the only things they judge from?—They also judge packing and finish.

12855. Supposing that butter has come from a very filthy creamery, or a very objectionable district, or has been carried up, as a previous witness said, probably you heard him give his evidence?—No.

12856. Well, have been carried up, or some of it, in wagons that manure has been carried in, do the judges ever go round and inspect these various dairies before they give their award?—No.

12857. Therefore, it is judged exactly like Danish butter coming to the London market?—Just exactly like butter on the market.

12858. As far as your Department goes, you test exactly the way that the English market tests the Danish butter, whether it is made in Russia, in Servia, or in Siberia?—We ask the judges to judge commercially.

12859. You actually treat it, and your object is to treat the Irish butter exactly as the Danish butter is treated in the English market, that is to say, they have nothing to do with where it comes from; it is supposed to come from Denmark, but it may come from Siberia or anywhere else, the judges decide on it according as it tastes like Danish?—We want our butter to be regarded as Irish.

12860. You don't give the judges any information other than that the butter arrives in Dublin; the judges do not know where it comes from?—They know that it is Irish.

12861. But you said that he does not know where it comes from?—There has been a misunderstanding. I understood you had gathered from the scheme I have put in that these competitions were confined to creameries in Ireland. The judges know that perfectly well, but they are not at all aware of what part of Ireland the butter comes from.

12862. They have got that advantage over the English judges, the English judges in judging Danish butter know that it comes from Denmark, but it may be Siberian or Russian butter really: you are aware of that?—I would like to know where that occurs.

12863. It occurs everywhere?—In the markets every cask of Danish butter is labelled as Danish.

12864. But it does not follow that it is Danish because it comes from Denmark?—Butter coming into Denmark from Siberia or Russia is not labelled with the Lur Brand.

12865. How do you prevent that?—We don't prevent it, but the Danish Government do. They take great care to prevent any butter coming from Siberia or Russia being sold as Danish.

Precautions taken by the Danish Government as to sale of Danish butter.

12866. On the London market?—Yes.

12867. Well, I gave Sir Horace Plunkett the papers a few years ago showing him the large number of tons of butter, I forget how many, that went into Denmark, and that butter, I think I might almost say, amounted to about 2,000 tons more than Denmark could produce, leaving nothing at all for the Danes themselves to use. Where did that butter go to?—I have not the figures before me, but, speaking personally from what I have seen of Danish dairies and of the Danish method of working, I don't think that they knowingly allow a pennyworth of butter outside the country to be sold, that is anything but Danish.

12868. Well, let me say that I am delighted to hear that?—And we want on our part to prevent any Irish butter being sold as anything except Irish.

12869. You mentioned Limerick as being a centre in connection with butter?—I think most of the butter goes through Waterford.

12870. But did not you mention Limerick as having a large supply of creameries?—There are a large number of them around Limerick.

Precautions taken by the Department as to the export Irish butter properly so called.

12780a. Do your Department keep any record of the amount of butter that is imported into Ireland?—The Department have great difficulty in obtaining these figures from the authorities at the port of entry.

12871. But does your Department keep a record of all the butter that is imported into Ireland?—It endeavours to get it.

12872. But it does not keep any record?—It cannot keep any record, so far as I know.

12873. Are you not aware that every port has to keep a record of the kind?—I think if you ask Mr. Prentice, of the transit section, who will give evidence, it is more in his line.

12874. But the Butter Department has no clerk or no person to watch these imports?—Mr. Prentice will answer that question.

12875. You don't know it?—I do not know it personally.

12876. Have you any inspector in your Department to see that the butter that does come into the country does not go into a creamery, and come out as Irish butter on the other side?—No, all the creameries are not under our inspection, but we certainly watch to see that no foreign butter goes in and comes out as Irish from the creameries entered under the scheme.

12877. Have you got the circular instructing your inspectors on that point?—No, we have no circular instructing them in that way.

12878. Have you got a copy of the Department's letter to the inspectors drawing attention to that particular matter?—No, because it was not a point that I thought was necessary to send instruction about in that way. The instructions to our inspectors were given verbally at our office.

Output and prices of butter at different seasons of the year.

12879. Then I will come at the same question in another way. What is the best time of the year for the farmer or the creamery to sell butter: what month of the year does he get the best price?—During the autumn and winter months.

12880. December, January, and February?—You might say November and December.

12881. What is the production of your dairies in December, compared with June?—I can give you that, I think, pretty closely. I have here the table giving the percentage reduction of butter for each month during the year.

12882. June to December?—In December it would—

12883. This is the total for Ireland?—I have taken the total as 100, and I am giving the percentage production for each month.

12884. *Colonel Hutcheson Poë.*—Is this from the creameries registered under your scheme?—This is the average of a large number of creameries where I could get the particulars each month.

12885. It includes more than you gave us?—No, it does not include all under the scheme.

12886. Would it give us a fair notion of the amount?—It would give you a fair idea of the amount of butter, and of the proportion of butter produced each month.

12887. From a certain number of creameries?—Yes, but if you take the number of creameries over the country and average and then multiply you are likely to get at the truth.

12888. *Lord Pirrie.*—What figure will you give me?—The percentage production.

Mar. 12, 1907.

Mr. A. Poole Wilson, Chief Dairying Inspector, Department of Agriculture.

12889. Is June the largest month?—Yes; assuming that the output of butter is 100 tons for the year——

12890. Just give me the percentage for June?—15·4 per cent.

12891. 15 per cent. is made in June?—Yes.

12892. And what in December?—3·4.

12893. And yet you told me a minute ago that the price of butter was very much dearer, and that the farmer could sell his butter at a very much higher price, in December than in June?—Yes, that is quite true.

12894. Is that because the people eat less butter in December than in June?—No; it is because less butter is produced in December and more in June.

12895. What steps have you taken, or what regulations have you got to show to the farmers how they can produce more butter in December than they are doing; what have you done in connection with that?—In my own particular line, that is in connection with the creameries and dairy work generally——

Output and prices of butter at different seasons of the year.

12896. Well, but that includes butter?—Yes, we have drawn the attention of the managers of creameries to the necessity for urging on the suppliers to produce more milk, and hence more butter, in the winter season to enable them to produce an equal amount of butter each month the year round, so that we may retain our customers the year round instead of having them dropping off in November and December, and getting them back again in April or March.

12897. You have given us some interesting instructions about packing butter. Can you give us your circulars to the farmer telling him how to feed his cattle and keep his grains?—In dealing with the farmers the work is done through the County Committee of Agriculture and their instructors.

12898. But is not that the same Department?—Yes, but this is work that is performed through the County Committees of Agriculture.

12899. But does not it come under the Department?—I am not directly concerned with it.

12900. Is not that your Department?—Not directly. It is done through the County Instructors in agriculture, and through the County Committees of Agriculture, and they try to encourage tillage and winter dairying in every way.

12901. Of course I am asking if you give instructions or issue publications. You give instructions and issue circulars, and send people around to show how to grow flax, and you occasionally tell them how to sow potatoes; in the same Department don't you show the farmer how practically to produce fifteen per cent. in quantity in the month of December when he gets probably twenty per cent. more for it?—The price is coming down very much now owing to the large winter supply of butter.

12902. I know it is?—I believe leaflets on tillage and on the production of crops for winter feeding are issued.

12903. You have not got them?—I have not got them here.

12904. I suppose we can get them officially?—Yes.

12905. From Sir Horace Plunkett?—Yes. I am sure on application to the Secretary or Sir Horace Plunkett that either will be willing to give them.

12906. When he gives his evidence he will answer these questions?—Yes.

12907. *Colonel Hutcheson Poë.*—The way the matter stands is this. Our attention is drawn to the importance of winter dairying by the Department, and they leave us in the different counties to take such steps as we think best in order to encourage winter dairying. Is not that so?—Yes.

12908. *Lord Pirrie.*—You answered the question as I expected you would with regard to the butter. We were told by one of your colleagues who gave evidence some time ago that a large amount of butter was being imported into Limerick in winter, in December and in January and February: where does that butter go to? Do your inspectors endeavour to trace what becomes of it after arrival?—I think you will have to ask Mr. Prentice.

12909. Perhaps I am unfortunate in my questions. You say you have charge, that you are the inspector of dairying: surely butter belongs to dairying?—Yes. But the Department have not compulsory powers.

12910. I cannot understand why the inspector who has charge of a dairy, and the butter that comes out of the dairy, has not also charge of seeing what becomes of the imported butter. I want to see if this imported butter is sent from Limerick to Belfast or elsewhere. Is not the County Clare one of the best butter making counties you have?—I should say Limerick.

12911. More than Clare?—Limerick and Cork.

12912. Well, take Clare and Limerick; they cannot at times make sufficient butter to supply the inhabitants, and I want to know where does the butter come from to supply Dublin and Belfast?—A great deal of it is imported, as you will see, if you go round the stores; but I have no power to enter into a wholesale merchant's store, and I have no power to enter into a creamery; unless the creamery makes application under the scheme we have no power of entering it.

12913. I thought the Agricultural Board had a right to see that cream and butter were properly made?—Oh, no. We have no statutory powers.

12914. Have you not, for instance, power to see that a cow is not hurt in transit?—I believe Mr. Prentice has certain powers.

12915. Do you think there would be an increased production of butter if your Department had power to see that cleanliness was observed in the dairies?—I think it would do a good deal for the reputation of the Irish creamery butter if the Department had compulsory power to inspect all creameries.

12916. That is the point. You agree with me in saying that it would be a very important advantage if power were given to the Department of Agriculture and Technical Instruction to enable their Inspectors to exercise right of inspecting dairies and creameries?—Yes, all places where butter is produced, manipulated or worked.

12917. You think it would increase the production of butter considerably?—We would be better able to advise, and so on, and to assist in improving the butter that is produced.

12918. You have, I think, proved that there was great reason for the complaints made as to the transit of the packages in 1903, when sixty-five were actually burst and ninety-four otherwise damaged out of 639 altogether. The figures for 1905 showing twenty-six burst and thirty-nine otherwise damaged: you agree with me that the Department has done a great deal of good in that direction, and that the practical information given to the packers has been of advantage to the industry in Ireland?—I certainly do think that.

12919. And the next point is that the Agricultural Board and their Inspectors having done so much, you would strongly urge the railway companies to facilitate and assist the Irish farmer by being more careful how they carry and handle it?—Yes, as to how they carry and handle it.

12920. If we could get the railway companies to see the importance, when the butter arrives at the station, of putting it into a cool chamber so that it might go, say, the next day, with other consignments and be carried at a cheaper rate; do you think that would be an advantage?—I don't know that it would be an advantage to store the butter for a day or two.

12921. In a cool chamber?—One of the assets, one of the important assets of Ireland, is its closeness to England, and one of the important factors of our butter trade is that we are so close to the English market that butter produced to-day can be put on the counter for sale to-morrow.

12922. Well, in that case New Zealand and Australia are at a great disadvantage?—I don't want Irish butter to compete with Australian or New Zealand butter.

12923. But Irish butter, then, has a great advantage?—If we cold-stored Irish butter we would lose some of our advantages.

12924. Would it go down in price if it was cold-stored?—We would lose in price, and our connection would suffer with a high class of trade. A grocer will very often wire over for his butter to the creamery in Ireland, and he wants his butter perhaps next morning, and it is a question of which route to send it by in order that it may arrive in the town early in the morning, and if we cold-stored our butter we might lose that advantage.

12925. Do you think that cold-storing for six hours would do it any harm compared with lying for six hours in an ordinary shed with grain, manure, timber, cement, and coal, probably within ten yards—do you think in such circumstances the cold-storage would do it harm?—No, I do not.

12926. Why do you think that it would lower the

price of the butter?—I think it should be arranged to keep the butter this way while it was shipped.

12927. That is all that I suggested?—I thought you were suggesting that it should be kept in this way for two or three days.

12928. Oh no, for six or twelve hours waiting for the load, so that it could be all loaded together?—I understood you to mean two or three days.

12929. No?—I think, then, if the butter could be put into a cool store or could be protected from heat or dirt it would have a very good effect.

12930. You think it would be very desirable that the butter trade of Ireland should be cold-stored in such a case as I have mentioned?—Yes, that there should be an insulated store.

12931. Separated from the ordinary store?—Yes, I don't mean a cold store with a chilling plant, but I mean an insulated store.

12932. You agree with that?—Yes. I think it would be a good thing.

12933. Have you ever, as one of the heads of the Department recommended that that should be suggested to the railway companies?—No.

12934. After your evidence to-day, I presume you will?—I will think over the matter, and see what can be done.

12935. You say that it is desirable?—Yes.

12936. Don't you think, then, it is your duty to suggest it?—Yes, if possible.

12937. You think it would be an important thing to have an insulation store at each main station—I don't mean at every station—where a large amount of butter could be collected, and sent off, and that the farmers' interests should be looked after in this way—you agree with that?—Yes, I do, but I do not consider it would be an advantage to the Irish butter industry to delay butter in a cool store at a railway station for six or seven hours, as suggested, for the purpose of accumulating sufficient butter to fill a wagon. With regard to the question that insulated stores should be provided by the railway company, what I wish to convey is, that it would be desirable that a suitable place, cool, clean, and well-ventilated should be provided at a railway station for the storage of consignments of milk, cream and butter, that could not be at once forwarded to its destination.

12938. *Lord Pirrie.*—I am much obliged to you for giving your evidence so clearly.

12939. *Chairman.*—Have you any statistics as to the value of butter exported before 1903 and the last year?—I have the figures, I think, for 1905. I think the estimated production of butter in Ireland in 1905 was something like five and a half million pounds sterling in value.

12940. Have you got the figures for 1903?—I have not, unfortunately.

12941. Is the production an increasing quantity?—I think it is increasing.

Mar. 12, 1907.

Mr. A. Poole Wilson, Chief Dairying Inspector, Department of Agriculture.

12942. Surely with all these regulations you can tell us that?—Of course I take the statistics from our statistical branch more or less now, and it is a very difficult matter to get figures from those creameries. We have no compulsory powers.

12943. But surely there is no difficulty in getting the value of the butter exported?

Lord Pirrie.—Or imported either.

12944. *Chairman.*—But of the butter exported from Ireland?—I believe there is. We have the figures for 1904, and I think you will find that in the statistics of exports and imports, the statistician says that there was difficulty in getting these returns from some of the ports, and that some of the ports are actually omitted. I have asked the statistician himself and he has explained it to me.

12945. *Lord Pirrie.*—But we have published them, and we are bound to act on the figures of the goods that come in—I mean into Belfast and Dublin and Cork?—I believe there is a difficulty in getting them.

Mr. Tatlow.—It is quite true that this statistician has had great difficulty.

Lord Pirrie.—But are you not bound to do it?

Mr. Tatlow.—That I cannot tell you.

Lord Pirrie.—Can you bring anything from England to Ireland without passing it through the Custom House?

Mr. Tatlow.—That I could not tell you.

12946. *Chairman.*—I want just this one figure on the notes, namely, that the estimated value of the exports of butter in 1904 was £3,195,115.

Witness.—If you like, I will look through it.

Lord Pirrie.—But what is the figure now?

12947. *Chairman.*—Is that the last issued?—Yes.

Mr. Tatlow.—What I was referring to was this, in the publication of the Department:—

Difficulty of obtaining accurate statistics of Irish imports and exports.

"It was an object of the late Dr. Coyne to ascertain, as far as possible, what was the state of the trade of Ireland, and the foundations of the work of which this is the first report, were laid by him. The carrying out of the inquiry, however, presented great difficulties which have delayed the publication of this report. It was found that in the case of a large number of ports no returns as to imports and exports were available. Even at present there remain gaps which can be only partially filled. But as particulars have now been obtained from forty-six ports, including in all probability over 97 per cent. of the export and import trade of Ireland, the information may in this respect be considered to be representative."

Witness.—There are some further notes qualifying that on the next page.

12948. *Chairman.*—Is that the last report issued?—that is for 1904.

Mr. James Harper, Travelling Inspector, Department of Agriculture, examined by the Chairman.

12949. Now, we have been dealing with butter, and I want to ask you with reference to eggs, fruit and poultry. Those are very important articles of production in this country?—The egg exports in 1904 were £2,188,104; and in 1905 they were £2,422,112.

12950. That is a large increase?—Yes, and we believe it was still greater in 1906. Then poultry in 1904 was £625,870, and in 1905 it was £677,435.

12951. Still showing an increase?—Yes. And fruit, I am quoting this from memory, fruit and fruit pulps and jams and preserved fruits totalled over £80,000 in 1904. That includes fruits, jams, and jellies.

12952. Now you are well acquainted with the steps taken by the Department to ensure this particular traffic being packed properly and carried properly in this country for export? I can speak for the period since the commencement of 1906.

12953. And what is your particular occupation?—My occupation is to visit the English markets, to interview buyers, to see the way in which the produce arrives, to find out what is wrong with the packing and handling, to find out new packages which it might be desirable to recommend, to find out what is the cause of the loss of markets; to endeavour to get back the trade to Ireland by getting these people put into contact with reliable shippers, and by then seeing the shippers on this side and imparting the information obtained from the buyers on the other side, and putting one in connection with the other where in both cases it is deemed advisable.

Mr. James Harper, Travelling Inspector, Department of Agriculture.

12954. In fact you are——?—A commercial traveller, practically. The first report that I made as a result of this is given in the "Marketing of Irish Products" in the Department's publication of last year. I sell nothing and I buy nothing. I have nothing to do with the prices of the article. I have to see that, if possible, what can be done shall be done to improve the handling, grading, and presentment of the whole thing. I have nothing to do with the railway rates or transit.

12955. Now, you say that part of your business is attending the British markets from time to time and getting information from the buyers. Now, how do you impart that information to the senders?—By letters.

Inspectors' duties.

12956 But eggs and fruit and poultry are produced by thousands of people?—But the exports are done by, comparatively speaking, few. It is the shipper that I have to do with, not the producer.

12957. How is the export trade conducted generally—in eggs, for instance?—By shippers.

12958. Where?—The big egg centres, and at the ports.

Mar. 12, 1907.

Mr. James Harper, Travelling Inspector, Department of Agriculture.

Improvement in egg packages. Method of packing and handling of the traffic.

12959. Then a man will collect, say, at Limerick from the neighbouring district, and send them in large quantities for export?—Yes.

12960. And it is that class of people that you have to do with?—Yes, chiefly. But, if a small man desires information, of course I do not limit it to the big ones.

12961. That is the mode of doing it?—Yes.

12962. Then is your attention given to the question of packing as well?—That is one of the main things that I do. The first point in the article I wrote was to point out the question of packing, which I look upon as my particular work—the presentment, the presenting of the thing properly.

12963. Have you noticed an improvement in packing?—In this article I took the view more or less of the people I called upon, 26 of them saying that they had noticed a distinct improvement in recent years. I keep myself in touch with these buyers subsequently, and find out what they think of each year's work.

12964. *Lord Pirrie.*—What year are you referring to?—I am speaking of 1906.

12965. *Chairman.*—I suppose in the course of your inquiries you ascertain and get information with reference to the other countries supplying the English markets?—Yes, the various countries. I examine their packages and take measurements where I think it advisable. For instance, if I am in the south, I take the French packages; on the east the Continental and in the west the Canadian and other packages.

12966. From your general knowledge can you say that Ireland is now in an equally good position as regards packages as these other countries?—It is not.

12967. Are they approaching that position?—Very fast. I have never had any work which I found improving so rapidly as I find the home shippers are improving the packages. But it is not only a question of the packages, but of packing and handling as well.

12968. You heard the evidence given by the previous witness as to butter?—Yes.

12969. And I suppose the same remarks apply with regard to eggs?—I think so; but of course I have not had the means of coming into contact with the shippers so long as he has. I have had only the last year or so, whereas he has had it for a number of years.

12970. With regard to the eggs, from what I saw of the egg case downstairs, they seem identical with the French?—No, the French are narrower or slightly longer.

12971. But they are the same type of case?—Yes. One of the difficulties I find almost insurmountable in some places is that the proper package means, perhaps, a little extra cost; and it is deemed good business on the part of a lot of the shippers to cut the price of the package in the way of the thickness of the timber or the character of the wood. That is one of the difficulties we have to overcome, to show that the saving of a penny or two may mean the loss of a shilling in the end.

Samples of improved egg packages distributed to shippers, and instructions issued at the expense of the Department.

12972. Have you ever in 1906 had occasion to send sample packages to shippers?—Yes.

12973. And these are the samples we see here?—Yes. But we do not send them broadcast indiscriminately, only to where there is shown an intelligent desire to improve. We have sent them to some people who have not removed them from the station. To continue that would be a waste of time and labour.

12974. That is done at the expense of the Department?—Yes.

12975. So that any shipper of any of these three articles—eggs, poultry, and fruit—any sender of these articles can, if he chooses, get excellent packages for sending the goods equal to anything that is imported into England from other countries?—Exactly. And he can go further. If he writes, he can have instruction, and either I or someone else would go from the office and instruct him how to pack on exactly the same lines as the countries with whom he has to compete.

12976. In eggs, for instance?—And fruit and everything else.

12977. And without expense to him?—Absolutely without any.

12978. All done at the expense of the Department?—At the expense of the Department. In addition to that, in order to promote interest in the work we have taken to exhibit at shows approved methods of packing; and I would like to show you here some pictures showing the foreign style of packing which we recommend (*pictures exhibited*).

12979. Do you find in the course of your inquiries in the English markets that the Irish eggs packed in this way arrive in as good condition as the Danish or French?—Well, broadly speaking, yes, but there are specific cases where they are not.

12980. Broadly speaking, they are?—Generally speaking.

12981. The transit in this country and across the Channel and in England does not cause any more breakages than is found in the case of eggs imported from Denmark?—I would say that would be broadly the case.

12982. What do you mean by "specific cases"?—Specific cases where—although I cannot prove it—the eggs are handled too roughly on passenger boats, and may not be treated so carefully then as when sent by cargo boats.

12983. With ordinary care, and these packages that you recommend in Ireland, and the mode of packing you suggest—would that ensure the eggs arriving in good condition?—Yes.

12984. Without any breakages?—Yes.

12985. And generally speaking that is so now?—Yes.

12986. But there are a few cases, I suppose exceptional, where eggs have been roughly treated and a percentage broken?—I would say, too, that I think when the egg case is seen to be a rough case and not turned out creditably, perhaps the railway companies do not take the same pains with that case as if it was turned out well. I think that carelessness in the packing perhaps brings a little more carelessness in the handling.

12987. I don't know that that would make any difference with a railway company?—I don't think that it should, but I believe it does.

12988. Now, what do you mean by "non-returnable cases"?—All the packages that I and the Department recommend in connection with this work are non-returnable.

12989. Broken up?—I don't know that, but they are not returned. They are non-returnable cases.

12990. Not like a beer cask?—No. That ensures a clean case being used every time, a more presentable case; and it saves a lot of trouble to the buyer on the other side in sending back the cases.

12991. How many eggs are packed into a case like that?—Twelve long hundred eggs—being 1440; or six long hundred, being 720; or three long hundred, being 360. The hundred in the egg trade means 120. You get 120 eggs for a hundred. Another point with regard to packing is:—The grading of eggs—which I consider to be of very great importance.

12992. *Lord Pirrie.*—They sell them in Ireland by weight?—Yes, but the Britisher buys them by grade. The man who supplies you would deal in them at 15*s.* or 16*s.*, 17*s.* or 18*s.* per 120. It is very important thing that the large eggs should not be packed with the small ones. That saves breakage. That is why I mention the thing. The Continental, and the French eggs especially, are graded very finely and evenly. Now, as to poultry——

12993. *Chairman.*—I don't think you need refer to that. We want simply your evidence as to the eggs. You pack poultry in non-returnable cases just the same?—Yes.

Examined by Colonel Hutcheson Poë.

12994. I understand you to say that your transactions were between the middleman, so to speak, and the purchaser?—Yes.

12995. Of course, I suppose there are very large quantities of eggs, poultry, and fruit shipped by individuals?—Where that is done we meet them.

12996. You don't deal with them?—Oh, yes, if I am asked to.

12997. Your principal concern is between the middleman who collects from the surrounding districts and the purchaser?—That is in the case of eggs, but in the case of fruit we deal with a single person if required.

12998. Confining yourself to eggs, you deal with the shippers and they are responsible for the packing of the eggs?—Yes. They receive them in small quantities from the surrounding producers and pack them themselves.

12999. You say that twenty-six buyers gave it as their experience that there has been a great improvement in the packing in recent years?—Yes.

13000. Was that buyers from shippers?—Yes; buyers from shippers.

13001. Roughly speaking, what percentage does that represent?—There would be probably thirty or forty buyers out of 250 called on, in respect of eggs.

13002. Out of that forty or fifty twenty-six said there was a great improvement?—Yes.

13003. As a result of your inspection of Continental and other packages are you of opinion that the different packages in which the eggs are now sent from this country are in every respect of as good quality as those of the Continent?—I should say they are not. The eggs generally are not as well packed.

13004. The cases are not of equally good quality?—No; the eggs are not packed in this country as well as in other countries. The quality of the egg is high.

13005. Is that the fault of the packer or of the case?—Of both.

13006. Is it as a result of your reports that these conferences which Mr. Wilson referred to have been held, and specifications entered into with Irish manufacturers as to boxes conforming to a certain standard?—He has to do with butter. I am speaking o eggs. We are now arranging; we are going into the question of trying to get standard boxes for eggs; we are narrowing it down. We cannot move in advance of the trading circle; we must get them to agree, and the great point we have to consider is the question of dimensions and the thickness and quality of the timber.

13007. Are you going into the matter of egg boxes in the same way as has been done by the Department in respect of butter?—The matter is in train; we have boxes made and they will be tested and we will go into the details and the matter of the thickness of the wood. Boxes have been ordered and they are being tested to see how they will turn out.

13008. It is your experience that when damage and loss occurs in the transit of eggs it is partly attributable to bad packing and partly to the bad cases in which the eggs are packed?—Unquestionably.

13009. You agree with the evidence given by Mr. Cantrell—I think that was the pith of his evidence—that a great deal of the fault was due to bad packing?—Undoubtedly, but it is improving.

13010. The railway could hardly be held responsible for packages that are not satisfactory. You would hardly hold them accountable?—That is a matter I do not refer to.

13011. You spoke of grading; is there not a system in France of passing eggs through a mesh?—Yes; but in my opinion there is no better grading system than the human eye and hand when they are trained.

13012 You think the Irish farming man's eye is sufficiently trained to be able to grade eggs of two or three classes?—I have a good deal of experience of these matters and I unhesitatingly say that he is good and quick to learn and can do it as well as anyone I ever saw. All these other things mean an increase of expense. If you can show how to do it by the use of the eye and hand only you can get more done.

13013. The shippers to England have acquired a considerable facility in grading eggs?—Yes, they are taking it up; they find it pays; it must be shown to pay or they won't do it.

13014. As regards poultry, have you anything to say in regard to the cases?—The present system of sending out poultry from Ireland is in what is called a railway skip which is returnable; it is a basket; the Department recommended poultry to be shipped in a flat box holding one dozen ducks or fowl. I have a photograph here which I should like to put in. These photographs were taken and they show the mode of packing fowl.

(*Witness handed photographs to the members of the Commission.*)

13015. *Colonel Hutcheson Poë.*—What is the cost of the box?—The box runs to about a halfpenny per bird, and in the case of turkeys from a penny to three-halfpence.

13016. That is the only cost involved in the purchase of the box?—Yes.

13017. *Lord Pirrie.*—How many birds are there in the box?—In fowl boxes twelve; in turkey crates twelve cock birds, or eighteen hen birds.

Colonel Hutcheson Poë.—That would be sixpence or ninepence.

Witness.—A thousand were used last Christmas for turkeys for the first time, and the shippers were more than recompensed for the cost of the case by the extra price obtained for the birds.

Mar. 12, 1907.

Mr. James Harper, Travelling Inspector, Department of Agriculture.

13018. *Colonel Hutcheson Poë.*—How do the poultry cases compare with those from the Continent?—The crate is a facsimile of the French crate. The box of the American fowl case.

13019. It is satisfactory?—Absolutely.

13020. There is not much to report in the way of suggested improvement as regards the cases?—These cases have not been adopted until last year; they are, however, being adopted; they are found more profitable.

Use of non-returnable standard boxes for fruit traffic for English markets advocated.

13021. Have you anything to say as to fruit?—We issued a pamphlet at the commencement of 1903, and instituted non-returnable packages and also flat boxes for packing the highest class fruit. I should like to mention that the flat box is only used for the very best fruit, and not for inferior fruit. The standard box is to try and arrange that the purchaser shall always be able to know exactly what he is buying. That is one of the failings of the fruit trade. You buy a package containing fruit, and until you see it you don't know what you are getting. We tried to institute a standard. To show what can be done with Irish fruit we have some special apples grown in Ireland, and there was a good crop this year. The leading English fruit paper, referring to the fruit said—"Irish grown Cox's Orange Pippins in single layer non-returnable boxes of two dozen fruits were disposed of at the rate of 4*s.* per dozen fruits in Covent Garden." And it adds that if Irish growers could not put fruit of this character on the English market at this time they would eclipse the finest growers in England.

13022. From what district were those apples?—From the South of Ireland, and the traffic is increasing. The very highest quality of fruit only pays to send to England in this kind of box. There is an increasing demand, and some of the biggest salesmen in Covent Garden can sell an unlimited quantity of the best fruit.

Ireland a good fruit growing country.

13023. But is there an unlimited quantity of ground suitable for the production?—Well, I may say that I have opportunities of knowing as much about the matter as anyone, and I say that no country offers the advantages for fruit-growing that Ireland does. She can grow apples of the best quality.

13024. Is the small fruit from the North of Ireland?—Not necessarily; it is largely cooking fruit from the North.

13025. I refer chiefly to strawberries?—Yes, the bulk comes from the North, but there are some very fine strawberries coming from the South of Ireland.

13025A. Is there a large export trade?—The demand for jam purchased at home is increasing, and there is more demand in the country than for all that will probably be produced for some years.

Value of the fruit crop in year 1904.

13026. In 1904 you say the value of the fruit was £80,000?—Yes, fruit, and what is made from fruit; that is the first year I have seen the return.

13027. Fruit is a very delicate article to handle, and would afford a criterion as to the care exercised by the railway companies?—Yes.

Very little damage to fruit in transit when properly packed.

13027A. What has been your experience of the manner in which it is packed?—Packed in the way we recommend, I have never heard of breakage or anything that way. These are photographs showing the manner of packing fruit that we recommend. (*Photographs shown to the members of the Commission.*)

13028. It reached its destination in a satisfactory condition?—Yes. I would say that although we recommend our packages and send them to the people that we think would be likely to adopt them with advantage, the rate of adoption has not been as rapid as I could wish.

13029. I am referring more to the railway companies?—I believe that properly packed fruit is properly cared for by the railway companies. I should like to say that we are instituting a new chip basket for blackberries, and I think—with only two exceptions—these very slight baskets were carried successfully to different parts of England and Scotland, from Derry to Edinburgh, and from the South to Cardiff, and the blackberries obtained very fine prices.

13030. I saw some boxes in the hall, last time we were here, with handles?—Those are the ones I refer to.

13031. There are no objections raised by the railway

Mar. 12, 1907.

Mr. James Harper, Travelling Inspector, Department of Agriculture.

companies?—No. Of course they have always been sent by passenger train, for they would have been smashed if they had been sent by goods train. Strawberries come here from the South and West of England in the same baskets and why should we not send them from Ireland.

13032. Then your experience of the handling of them by the railway companies is satisfactory?—Satisfactory.

Examined by LORD PIRRIE.

13033. I am very pleased with nearly everything you have stated. You have done very much since October?—Since January twelve months.

13034. Well, even since October you have done a great deal. Your work, I take it, is purely in connection with eggs, and no other produce?—Eggs, poultry and fruit.

Inspector's duties discussed.

13055. Is your object and duty to see how the trade can be increased all the time, and to give such assistance to the producer as will facilitate him in doubling his supply next year?—Yes, but I have nothing to do with production, only with markets, and with such things as packing, the instruction of the shipper and so on.

13036. It is not the shipper that does the growing?

The Chairman.—Oh, no.

Lord Pirrie.—But I want to know where the line is drawn.

Colonel Hutcheson Poë.—He says the shipper collects them.

Lord Pirrie.—That is all right, but I can't see why the Department of Agriculture and Technical Instruction are responsible to the shipper. As to one point in Mr. Harper's evidence that he should make clear—he said he only called on shippers and agents—

Witness.—Shippers; I don't think I said agents.

13037. All right; but the Department of Agriculture and Technical Instruction is to teach and show how things are to be cultivated or produced?—That is being done.

13038. Are you paid by the Agricultural Department?—Certainly, but I cannot do all. I only see to the marketing; I have to find information about marketing, packing, and handling.

13039. You don't find out who is to buy?—Not necessarily.

13040. I don't yet realise what your duty is. If there is a market in China or America, or only in England or Scotland, is it your duty to tell them to what extent they are to deal with the shipper?—The shipper writes to me asking where he can sell certain produce.

13041. In what sense are you using the word "shipper"; do you mean the ship-owner?—No, I am talking of the seller. It would, perhaps, be a better word.

13042. Your evidence to Colonel Poë was that you deal with the shipper?—I said the middleman who collects from the farmers all round.

13043. Then you are not able to show to us how the farmer wanting to produce more may do so—you don't show him that?—No; but if you will allow me to say this, I think my work is quite as important—namely, showing how to present the produce, and put it on the market.

13044. Oh, I am not saying it is not—your evidence was remarkably good and clear. I only want to ascertain what is your position.

13045. You deal with the shipper, or the "middleman"?—Yes, or the "sender."

13045A. Yes, the sender; and if he complains to you that a case of eggs is broken, is it your duty to go and see whether it was on the railway or by the steampacket company, or from a bad box?—My duty is to hand the complaint to the transit department.

13046. You don't see it for yourself?—No.

13046A. In that case, as you only go to the middleman, you don't go to any English customers, large consumers of eggs and poultry, and find out what their complaint is?—Yes, I do that. My duty also is to find out from the retail shopkeepers wherever I go what they think of the eggs and the packing from Ireland.

13047. If a complaint comes from a consumer—a hotel suppose—it is your duty to go and find out exactly what it is, to trace the complaint to its source, and how the mischief is to be avoided?—No. We would not get that information from them. We would get the complaint from the wholesale man. It would be the consumer's complaint.

13048. Leave out the wholesale man for the moment—I suppose there are some people who buy eggs and poultry direct?—Very few.

13049. Taking poultry, five or six hundred turkeys a week?—That would be a big buyer, a wholesale man. In the case of the man who buys a single turkey my duty would not be to interfere with him.

13050. You dont' go to the retail customer?—Unless I find a complaint in the town I go to.

13051. What I am trying to find out is this—in the cases of the large steamship companies, who have had to give up using Irish eggs—you have never gone to them to find out why they have done so?—It is the first time I have ever heard of it. If you give me the name I will see to it at once.

13052. You will find out where the fault was?—I will, certainly.

13053. In this report you have handed me you say some of the largest buyers in Great Britain have been unable to get their eggs packed in a proper manner. That shows it is largely the fault of not having proper cases. In fact, you have stated that that was the fault of not having proper cases, but that in that respect there has been a great improvement last year. If you do as much next year as you have done in the past you won't leave much to complain of?—I hope it will be so.

13054. I think if the same progress goes on it will be most satisfactory, but I want to ask you how many eggs do you give to the pound?—That's hardly the way to put it. It is so many pounds' weight to 120 eggs.

13055. If I offered you twenty eggs to the pound they would be very small?—I should like to see twenty to the pound.

13056. Seven to the pound weight?—That would be a very good average.

13057. A good buyer in England buying Irish eggs always likes to get from seven to seven and a half eggs to the pound. I never saw any Irish contract or any offer of Irish eggs that did not offer to give from seven or seven and a half to nine or nine and a half eggs to the pound?—In the contracts that I am acquainted with it worked out at from fifteen to eighteen lbs. weight of 120 eggs.

13058. Does your Department urge the farmers to cultivate a smaller or a larger egg; which is of the most commercial value to the farmer; have you any standard in your Department showing that the farmer will make £100 a year more out of hens that give nine and a half eggs to the pound or out of hens that will give seven to the pound, for which there is a much better price; have you any information in your Department showing which is the best for the farmer?—Certainly.

13059. What is the result?—The result of all that is that the Department encourage what they call "poultry schemes" in nearly every county in Ireland. These schemes have, as part of their arrangement, poultry instructresses who go round and try to get a better kind of bird produced that produces a larger-sized egg.

13060. Then the larger the egg is you consider it the better for the farmer?—As a rule, yes—other things being equal.

13061. Supposing that he gets £100 for eggs of nine to the pound, how much more would he make with eggs of seven to the pound?—You are putting a series of questions to me that I would have to work out. I cannot answer for everything in the Department; but individually, a bigger price is paid for the larger-sized than for the smaller-sized egg; and instruction is given through the poultry instructresses, through the length and breadth of Ireland to go for the larger egg.

13062. But does your Department keep statistics on the subject?—You can over-do a thing by statistics.

The best thing to show is that they can get a better price for the bigger egg than for the smaller one.

13063. But the better price does not show the nett return. Would you be surprised to know that a poultry firm that produces none or very few save the smaller egg makes a very handsome profit, whilst a high-class poultry firm that produces hardly anything but the larger egg will not make the two ends meet, the reason being that more small eggs are laid, and the hotels and the big consuming companies buy the smaller egg. I think that is one of the most important things your Department could have before it, as it would mean assisting the railway companies by thousands and millions of tons. I am only suggesting to you as I did to the last witness; don't you think it is a matter worth looking into by the Department?—Certainly; but allow me to say that in other countries they are producing the larger eggs, and these are selling better than the smaller eggs, and we have to produce the larger egg in order to compete with them. It may be good policy sometimes to produce the smaller egg.

13064. The object of the Department is to give commercial assistance to Ireland; and apparently that end has not been looked into?—As to matters of policy I cannot speak. As to matters of work I will answer anything I can. I know nothing about policy.

13065. In a private house, for one's own table, the large egg is bought; but if you go round the various hotels you will find that you don't get the large egg, because they have to put two eggs on the table for you, and the smaller eggs are cheaper than the large ones—isn't it their interest to do so?—Certainly, if they are cheaper.

13066. I only suggest that the matter is one that it would pay the Department to look into and advise about. I have no doubt that some one in your Department will have figures of that sort. I am only asking the question in order to give your Vice-President an opportunity of answering it when he comes before us.

Witness.—I can only repeat that the large egg is the one in demand, and that it sells best, and that it is the object of all countries to produce it.

The Commission then adjourned till the following morning at 11 *o'clock.*

TWENTY-THIRD PUBLIC SITTING—WEDNESDAY, MARCH 13TH, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Reception Room, Royal Dublin Society, Leinster House, Dublin.

Commissioners present:—Sir CHARLES SCOTTER (Chairman); Sir HERBERT JEKYLL, K.C.M.G.; and Lieut.-Col. WILLIAM HUTCHESON POË, C.B.;

Mr. GEORGE E. SHANAHAN (Secretary).

Mr. WILLIAM FIELD, M.P., examined by THE CHAIRMAN.

Mar. 13, 1907.

Mr. William Field, M.P., Member of Dublin County Council, Blackrock Urban District Council, and President Irish Cattle Traders' and Stock Owners' Association.

13067. I am sorry to say that Lord Pirrie has been called away on some important business to London, and unfortunately he will not be able to be here to-day. Now, Mr. Field, we all know perfectly well that you are member of Parliament for a division of Dublin?—Yes, sir.

13068. And you appear before us in a representative capacity?—Yes.

13069. Would you tell us in what capacity you appear?—I am a member of the Dublin County Council and of the Blackrock Urban District Council, and I am President, and have been for the last fifteen years, of the Irish Cattle Traders' and Stock Owners' Association, and I have been deputed by these three bodies to give evidence on their behalf. I am also a member of the Dublin Port and Docks Board, and the Vice-President of the National Federation of Meat Traders, and I am Chairman also of the Transit Committee of the Irish Industrial Development Association, and a member of the Agricultural Council of the Department of Agriculture, which on my motion twice passed resolutions in favour of the amendment of the existing railway conditions in Ireland, and I am a member of the General Council of County Councils, which passed a resolution at their last meeting on this subject.

13070. Formerly you were chairman of what is called the Irish Railway Reform Association?—Yes. This association was the first body that publicly demanded a Viceregal Commission, long before it was passed by any other public body, and without being egotistical, I claim to be the primary author of this inquiry.

13071. And we are really here on your suggestion?—I think practically so, sir. The agitation against excessive railway rates and monopoly seems like an epidemic that breaks out at intervals, and after lapsing into a state of coma gradually becomes exhausted. This is what occurred to the Irish Railway Reform Association. I may say that when we held a public meeting the railway men there rather tried to break it up—when we held a meeting at the Mansion House the railway men or some of their agents tried to break up the meeting. I was a member of the Recess Committee.

13072. What is that Recess Committee?—It was a committee that sat in Dublin here just before the Department of Agriculture was formed—in fact the Department of Agriculture was formed as a result of the deliberations of that committee, and it took the subject of transit very seriously into consideration amongst other matters.

13073. Well, now, I gather from what you say that you are a very influential member of this association, but have you had any special knowledge in connection with the railway rates and charges, say before the Railway Reform Association?—I was a member of the Select Committee on Railway and Canal Rates and Charges which sat in the House of Commons when Mr. Mundella was President of the Board of Trade.

13074. Do you remember when that was?—It was a long time ago, just after I entered Parliament.

13075. Do you know about the date?—I think it was twelve or thirteen years ago. Mr. Jackson was chairman of that committee subsequently—first Mr. Shaw Lefevre, and then Mr. Jackson, now Lord Allerton.

13076. You were a member?—The reason why I do not propose to give any evidence respecting what you may call rates and charges is that my experience on that committee was that no matter what statement was put forward by traders it was always contradicted by the railway company, and the railway company had the best of it at the end of the committee—in fact it was six months lost because the railway interest in the house overruled that of the committee.

13077. Now, you were also a member of the Departmental Committee to inquire into the Cross-Channel and land transit of live stock?—I was, and I am at the present moment a member of the London and Mansion House Railway Association—I am a member of the committee, and I attend regularly the committee meetings.

13078. Well, now, you have given a good deal of attention to the subject—I think you read a paper on it?—I wrote a pamphlet in 1898 on "Irish Railway compared with State-owned Lines," a copy of which I sent to you.

13079. I have read it?—I have read several papers at Cork and Limerick Industrial Conferences, and also at Trinity College, and the Town Tenants' Association and the Mansion House; in fact I have been always reading papers and discussing the subject.

13080. Therefore it is not new to you?—Not at all, it is one of my fads—so they call it.

13081. One of your fads—at any rate you seem to have a good deal of knowledge on the subject. Have you taken any action in the House of Commons?—Yes, sir. In 1899 I moved in the House of Commons an amendment to the Queen's Speech.

13082. Would you kindly read that?—"And we humbly represent to your Majesty that the present railway rates and charges in Ireland constitute an intolerable grievance to the Irish people, and that measures should be adopted this session" (mark, that was in 1899), "for the remedy thereof, either by the amalgamation of the management under State control, or by the State purchase of Irish railways so as to reduce the tariffs, and further to increase facility of transit by utilising and developing the waterways and canalising certain rivers in Ireland."

13083. Now, you moved that resolution in the House of Commons as an amendment to the Address. How was the amendment dealt with?—It was accepted without a division after a practical debate, so that the House of Commons eight years ago unanimously endorsed my statement, and the British and Irish press commented on my proposals. Subsequently I published a pamphlet containing my speech and also newspaper articles all favourable to my contention, in the *Times* (wonderful to relate), the *Manchester Guardian*——

13084. I do not think you need read all of them. I will put it in this way, that the public newspaper articles from some of the most influential papers both in England and Ireland approved of the resolution?—I do not want to keep you too long; I have them in the pamphlet.

13085. Now, with regard to the complaints of the Irish management of railways—what have you got to say about that?—I think the policy of the Irish railway director is all wrong. And I will just briefly quote from an article published in the *New Ireland Review* in 1901, after I had attended as a delegate the International Agricultural Congress at Buda Pesth, where representatives from nearly every nation in the world were present.

13086. Now, I think it would be advisable if you would read that resolution?—"All means are to be employed to prevent the home markets being flooded with foreign produce, and to aid the export of all native produce without interfering with the free intercourse of agricultural products, the co-operation of the State would be applicable to the creation of low freights on water and railways."

13087. That was the resolution?—Yes.

13088. How was it received?—It was passed unanimously by that enormous congregation of delegates from every part of the world. My complaint against the railways in Ireland, and the United Kingdom generally, is that the policy is exactly the opposite, but more especially in Ireland the policy is exactly the opposite. The main canals have been grabbed by the railway companies to secure their monopoly.

13089. There are independently-owned canals in Ireland?—They are few, and the ones that are owned by independent companies are practically bossed by the railway companies by agreeing to pool rates, so as to enable the traffic to be carried at what they call a profit.

13090. Just give some further explanation of that resolution. What do you mean by preferential rates?—What I mean is this, "Preferential rates are freely accorded to the foreign importer and high rates are exacted from the native manufacturer and producer."

13091. This is the inland rates in Ireland?—Yes, sir, but I think it is the same thing in England. England is well able to take care of herself, the natives, "who pay rent, rates, taxes, and give employment." In that way I hold that the railway companies of Ireland have been to a certain extent responsible for emigration from this country. I do not put them as the main factor, but they are certainly one of the chief factors.

13092. We will go by steps, if you please, Mr. Field, so as to get sequence. You say that there is no proper tribunal for dealing with a complaint of that kind. That is to say, supposing Irish people wanted to complain of preferential rates from England to Ireland, as compared with rates in Ireland, you say that there is no tribunal at present that can deal properly with that complaint?—Quite so, the Railway Commission is far too expensive.

13093. In that you agree with most of the witnesses that have been before us?—If I might be permitted to say so, I think that the exhibition that has been given in connection with the Railway Commission that has been sitting lately, where we have had an army of highly paid counsel, shows that it is absolutely impossible for an ordinary trader to go to such a tribunal.

13094. On account of the expense?—On account of the expense, certainly.

13095. And a trader not appearing by counsel has no chance?—Has no chance.

13096. Has no chance against the array of counsel that the railway companies have?—Yes, and it is said that they have a fund to meet this expense.

13097. Well, now, of course you are aware that complaints can be made by letter to the Board of Trade in England?—The Board of Trade in England takes very little interest in Irish commerce. I have written to the Board of Trade in England, but until Mr. Lloyd George came in, apparently they were more in favour of the railways, except with regard to the safety of human life, than they were of the trader. That was my experience.

13098. There is no separate department of the Board of Trade in Ireland?—No, sir; the Department of Agriculture has been charged to take a certain portion of its duties.

Department of Agriculture charged with certain portion of duties of Board of Trade.

13099. Yes, we have it in evidence?—They have something to do with regard to Irish imports and exports. Still there is no special railway department of the Board of Trade in Ireland. I believe what Captain Tyler said about the railways in Ireland—"If the State does not manage the railways, the railways will soon manage the State."

13100. That is Sir Henry Tyler?—Yes.

13101. How long is it since he said that?—It is a long time now, but time has only proved the truth of his prophecy.

13102. Of course the Department of Agriculture—you are a member of that body?—I am.

13103. And, therefore, you know exactly with what power they are charged?—I cannot say I know exactly. They have certain functions of inquiry, but they have no mandatory powers, and my experience as President of the Cattle Traders' and Stock Owners' Association is that the Department has been totally unable to control the railway ring. I will prove this by a number of complaints if you like. I can give them now if you like. Here is a volume of complaints—about seventy.

13104. How many?—About seventy. I think I will leave it until we come to that portion in my evidence.

13105. Very well. According to what you believe the companies in this country are not doing all that they can to promote the industries of the country?—On the contrary, I hold that the great carrying corporations are paralysing the productive capacity of agriculture, handicapping industry and penalising the passenger in Ireland.

Present system of Irish railway management and the Companies' policy as regards rates condemned.

13106. That is your view?—Quite so.

13107. Of course it is not much use for agricultural districts to produce various articles for export unless there are proper facilities for getting them away?—No, sir; I will come to that later on. If you cannot get to the market at the same rate as your competitor there is no use in producing at all.

13108. The next point—I suppose everybody will agree that high rates are an impediment for the transit of even agricultural produce in this country, but when you talk about high rates, with what do you compare them?—With preferential through rates. High rates are bad enough, but preferential through rates are more malignant.

13109. Preferential through rates from where?—From outside, from England, Russia, or anywhere else, because they enable the home producer to be displaced and undersold by articles manufactured in England, on the Continent, and even in America. Some of these articles are producible at home. This constitutes a direct obstruction to native manufactures.

13110. Of course a great number of things that are imported at low through rates into this country are a necessity for the country?—Not always; I do not hold that view. I think we could produce nearly everything we want in this country.

13111. They do not now?—I think if we got fair play and a fair field we could produce a great deal of these things ourselves. We could produce woollen manufactures, and leather, and nearly everything that we eat except, perhaps, tea and sugar, and the sugar could be produced if beet-growing was properly conducted. I hold, and hold strongly, that the system of free imports and preferential through rates has made it almost impossible that Ireland could exist as a commercial nation.

13112. That is your view, clearly expressed. Your next point is that the English railway companies exercise an undue amount of control over the Irish railways. That is a mere opinion of yours?—Of course I am not a railway magnate, nor a railway director, and I cannot say from my own personal knowledge, but I know what happens. The English railway companies, of course, can absolutely control the smaller Irish company, and through rates have been arranged by the English companies so as to be lower than the internal rates, so that the Irish manufactures and products are handicapped in the distant markets of their own country. In fact the foreign importer is bounty-fed by means of preferential rates. Instead of protecting inland trade we are protecting the foreigner.

Suggested predominating influence of English Railway Companies over Irish Companies at Rates Conferences.

13113. What do you mean by the English railway companies having control of small Irish railways?—

Mar. 13, 1907.

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

Well, the small Irish railways have to fall in with them. This is all settled in the conference, and the Irish railway companies, as I take it, are precisely in the same position as the Nationalist Party are in the House of Commons—there is always a majority against them, and, of course, the majority rules, and the minority has to suffer.

13114. I am afraid you are not fully acquainted with the *modus operandi* adopted in these conferences?—I think it would be the duty of the railway gentlemen, when they come to give evidence, to disprove what public opinion in this country believes. I have been told by merchants in Galway and in distant parts of Ireland that goods are sent there from Birmingham and Manchester at rates almost as cheaply as they can get them from Dublin, with the result that Dublin is, to a certain extent, cut out. I am not prepared to give the figures. May I point out, Mr. Chairman, and gentlemen of this Commission, that it is not fair to expect an ordinary commercialist like myself to be able to handle millions of rates that are being prepared by experts on the railways. I do not pretend to be a railway expert.

Preferential cross channel through rates complained of.

13115. I quite understand that. I am very glad you made the statement, because, having made the statement, the railway companies will be in a position to answer it if they can?—I think it will be for them to meet the assertions—I won't call them facts—that I have made.

13116. That is fair?—I have no idea of going into the rates, for it would mean an eternity.

System of private railway ownership condemned.

13117. Of course Irish railways themselves, you are aware, have a good deal of struggle to make ends meet in some cases?—I will come to that immediately, I have it here. I quite recognise the difficult position the railway companies of Ireland occupy, with a decreasing population and diminishing products, and few important manufactures except in one corner of the island. I quite recognise that. I quite recognise that they were obliged to charge to capital, expenses that would never have occurred in any country where the system of private railway ownership did not exist. Being trustees of private property, which in my opinion should be a public utility, the railway directors are bound to earn a dividend for the shareholders, and in fixing their scale of charges they have to contend with the over-capitalisation of their lines, mainly owing to extravagant expenditure at their inception, and also when seeking further powers for amalgamations or extensions, such as Parliamentary House and counsels' fees, expenses of witnesses, retention of leading Parliamentary counsel at enormous fees, land owners' opposition, and extravagant prices for land and residential charges.

Allegation that Irish railway policy is tending to extinguish industries and promote emigration.

13118. You recognise that is the case?—Quite so, but I take this opportunity of saying that, in my view, if the Irish railway companies are not able to change their system they will soon have little to do. They won't be able to provide any dividend, because if the present system goes on, undoubtedly, in my opinion, there will be a further diminution in the population, and consequently a diminished produce, and Irish railways will have very little to do. In fact, I hold the view that Ireland would be better without a railway in it. I think we would have been more prosperous if there never had been a railway in it.

13119. I purposely omitted that?—That is my view, and the reason I make that statement is that I have been in nearly every principal town in Ireland, and all the local manufacturers have been disestablished, and I look upon a system of preferential through rates and free imports as reason for the disestablishment of the industries of Ireland.

13120. What do you mean by free imports?—I would put a tax on all manufactured articles in the three Kingdoms. That is outside this Commission. It is too big a question.

13121. When you talked about free imports I did not follow you?—I did not mean that the railways carry free. That is a thing they could not think of doing.

Improvement in means of communication for passengers between the different Dublin railway termini and steamers necessary.

13122. What have you got to say with reference to cross-city communication?—It is rather curious that there is no sort of regular communication between the steamers and the different termini.

13123. Is there railway communication now?—There is the Loop Line, but it does not connect all the stations, and the North Wall is without any public conveyance save that by rail to the London and North-Western Railway. And this compares very badly with the facilities in other cities. For instance, as my friend Mr. Tatlow knows, from the Dublin and South-Eastern there is no direct communication. There ought to be omnibuses, or some sort of communication.

13124. Not railway communication necessarily?—Not necessarily. It would be difficult, and cost too much money, I think, but we want some kind of passenger communication between the termini.

13125. Do you think the railway companies here are doing justice to the passenger traffic, more especially the third-class?—No. I see Mr. Tatlow here, and I think the Midland Great Western have a great many sins to answer for in regard to the third-class passenger, and in fact on all the railway companies the third-class accommodation is very inferior to what it is in England and Scotland.

13126. One minute. Can you tell me what is the difference between the accommodation in Ireland and in England. What is the difference?—Did you ever travel in a third-class carriage in Ireland?

13127. No?—Well, then, go and do it and you will find for yourself. Go on the Midland Great Western Railway down to Ballinasloe or Galway and you will find it out yourself. There is frequently a want of cleanliness and ventilation. There are very few corridor cars, I doubt if there are any on some lines. There are scarcely any cushions in the third-class except on the Great Northern. In the third-class in England there is hardly any difference between them and second——

13128. I only ask information?—I wish you to take a trip round Ireland. It would be a liberal education if you would. There is nothing like actual experience. The Great Northern Railway do not allow third-class passengers on the express mail.

13129. We have it in evidence?—I do not want to repeat it.

13130. Of course, the third-class traffic in Ireland is like the third-class in England, it is the great bulk of the traffic?—Yes, sir. The English and Scotch have discovered long since that it is the third-class passenger who pays the dividend and is worth encouraging. In Ireland the directors apparently seem to cling to the played-out policy of trying to force passengers to pay higher fares.

13131. Their poverty compels them?—To pay the higher fares? I think it is a reason why they should get cheaper travelling.

13132. With regard to fares generally, what have you got to say?—If my information is correct (although some of the gentlemen laughed at my pamphlet, I understand), I made certain statements in that pamphlet which I gathered from official sources, and I circulated it pretty freely, and as far as I am aware none of the railway companies ever tackled me on the question. If I was wrong I think it was their duty to defend themselves and show me up, but apparently they are not able to contradict them. I do not regard laughing at all as an argument.

13133. Mr. Field, I was sitting in the chair, and I saw the statement in the paper, but I saw nobody langhing and heard nobody laughing?—I do not mind it.

13134. I did not notice it?—As far as I am concerned I do not take it seriously, but if the gentlemen thought there was anything to laugh at in my position I think, in their own defence, they ought to be able to contradict me. They never did, as a matter of fact.

13135. Let us go on to the passenger fares. What do you say about the third-class passenger fares. Do you say they are higher than in England?—I understand they are higher, in proportion, than in England or Scotland. The accommodation is worse and the trains fewer, but I do not make a point of that, because we have not so many travelling people. I do not want to give any evidence that has been given.

13136. Am I right in saying that the fare is a penny a mile third-class in Ireland, and it is the same in England?—They give better accommodation in England—the accommodation is very different.

13137. I am on the question of fares?—I think they are much cheaper than ours.

13138. There may be cheaper return tickets?—They are vastly cheaper. I have travelled a great deal in England, and I think they are hardly comparable. I

Mr. William Field, M.P.; Member of Dublin Co. Council and Blackrock Urban District Council, etc.

was reading in Mr. Cunningham's "Railway Nationalization," and he states—I do not know whether it is a fact, but Mr. Acworth will be able to say—"that Mr. Acworth admits that the British fares are the highest in Europe, and goods double the price of the Continent, while the Irish fares, as far as I can learn, are higher than in Great Britain."

13139. I am sorry Mr. Acworth is not here?—I am sorry, too. I always like to face a man. He will be able to take it up.

13140. I do not agree with the statement?—He will be able to take it up. He has written a good many books in the railway interest.

13141. You have quoted Mr. Cunningham, and what Mr. Acworth admits. Do you want to quote any other thing?—Yes. I quote also what Mr. Balfour Browne says, I happen to be acquainted with Mr. Balfour Browne. He stated that the present railway rates do more harm to the trade of the country than all the foreign competition of which so much is heard, and he was speaking of Great Britain, where the rates, on the whole, are lower than in Ireland.

13142. One minute. Do you know where Mr. Balfour Browne made the statement?—Yes, sir. Before a Railway Committee.

13143. Before a Railway Committee?—He will be able to deal with that. He is a tough man to tackle, I know. I know him. Here is a matter that cannot be contradicted, Mr. Balfour Browne, in a paper read before the London Chamber of Commerce on 10th February, 1897, that is ten years ago, said:—"I am not exaggerating when I say that the agricultural question, which is being attempted to be met with an Agricultural Rating Bill, is nothing less than a question of railway rates." That is an extraordinary statement coming from Mr. Balfour Browne. I think I was at that meeting, because I was a member of the Chamber of Commerce in London, I am not quite certain, but I think I was.

13144. That is Mr. Balfour Browne's opinion. You agree with it?—I do.

13145. And you think it is really the crux of the whole question?—To a certain extent. I would not go as far as that. I would agree up to a point. It is applicable just now, for I maintain that unless this railway question is satisfactorily dealt with in Ireland (and when I say satisfactorily I mean by lessening rates), the recent Land Purchase Bill will be useless, for although it enables the ground-owners to sell at exhorbitant prices to the tenants, transportation is a necessary adjunct of production. I will assume some trader has traffic in, I think the majority do not understand what importance cheap transit is. It is one of the phases of production. A supply of the article must be brought to the place of sale, and this carriage to the market constitutes part of the exchange value—that is the value of the farmer's produce with the manufacturer's goods consists not only of the cost of growing the one or making the other, but also of the expense of carrying it to the place of sale. Transport is, therefore, a productive agency, not of the thing carried to the market, but of its exchange value, and when competition exists exchange value determines sale. I think that makes it clear.

13146. That is perfectly plain, and I do not suppose anybody will disagree with it. I think it is very fairly put. Of course, you know the railway companies here, owned by private individuals, shareholders, cannot make any great sacrifice?—No. I do not ask them to do it. I do not come here—I want it to be understood, and I want to make it clear—I do not come here with the idea of asking either the railway companies (and when I say the railway companies I mean the shareholders), the railway servants, the officers, or the directors to suffer in any way.

13147. Exactly?—But I contend that in the existing circumstances they ought to be bought out and the railways should be utilized for the benefit of the nation.

13148. We will come to that in a minute. The more the country develops the more necessary becomes transit?—Yes, sir. The limits of markets are frequently determined by the cost of transit. In fact, the whole history of commerce proves this. Therefore facilities of transit are of equal value with value of production, and products and manufactures are useless, practically useless, unless they can be carried on equal terms with our competitors.

13149. You know, I suppose, from experience and inquiries you have made, that where the railways are owned by the State in other countries, a different system is in operation to what you have been explaining as in operation in Ireland?—Yes, sir, I do.

Policy of State-owned railways in other countries as regards rates for "Imports" and "Export."

13150. Then I believe (we had it in evidence) the State railway encourages the export and penalises the import?—Yes.

13151. Is not that so?—Penalises only to a certain extent.

13152. I withdraw the word "penalises," but have higher rates for imports than for exports?—Certainly.

13153. I think you refer to me here?—Yes, sir. Let me say this first. Our nominal Free Trade is a policy of partial free imports which kills trade, in Ireland, in a double-barrelled fashion, while the country is used, in the guise of free imports, as a market for all kinds of foreign produce and manufactured goods. It is an extraordinary thing that there is no such thing as free trade on railways, although this is a free trade country. We cannot do, as they do in America, build a railway without getting a grant of monopoly.

13154. What would be the price of these goods if there were no imports into Ireland: would not it be double?—Not necessarily at all. We could produce, as I said before, a lot of these things, and even if the price was more it would give employment to the people. We are getting into the Protection business now. Germany has gone ahead under the protection system, so has the United States. The prices of these things may be more, but the people are more prosperous.

13155. Are they better off?—They have not an army of unemployed like what you have in London and we have here, and the land is cultivated, which is not the case in these countries.

Statements by Mr. Cunningham in his book on Railway Nationalisation.

13156. What is this you say about me?—I merely took up Mr. Cunningham's statement, sir. If Mr. Cunningham's statement on "Railway Nationalisation" be correct, the Chairman of the Commission, when goods manager of the Manchester, Sheffield, and Lincolnshire Railway, said, in answer to this question before the Committee of the House of Commons:—"You hold you would not be showing an undue preference if two traders in Liverpool are consigning the one English cheese, and the other American, both lots for London, if you charged a much higher rate for the English than the American? Answer—Certainly not. I say there is nothing to prevent the railway company giving a preference, but it is not an undue preference."

13157. "But it must not be an undue preference"—I suppose that was my answer?—Yes, sir. I know, as a matter of fact, that the London and North Western used to carry foreign or American meat from Liverpool to London for 25*s.* a ton.

13158. They do now?—And they used to charge home meat, that is Irish or Scotch or English meat, 50*s.* a ton for the same journey. I challenge contradiction of that, because I know it. They have changed that now, but the railway companies manage things so dexteriously that they always gain their own end, and now it is for what they call "three ton lots." The difference is that the ordinary English or Irish or Scotch trader has not three tons, so that the foreigner gets the advantage.

13159. Who is Mr. Cunningham?—He is a gentleman from Dunfermline who has studied the question. I will send you a copy of the book.

13160. I have never seen it?—I will give it to you when I have done with it. I think I need not go into the next paragraph, sir. I do not want to detain you.

13161. Your evidence is very interesting, but I will have to pass over some things?—I do not mind that. I do not want to go over the ground that has been travelled before. I think the next paragraph would be interesting, because it deals with us in Ireland.

13162. Tell us what it is?—It is difficult to understand why the rates generally should be higher in Ireland unless it is to secure higher dividends for the shareholders in Ireland than satisfies the English shareholders, for the average dividend companies in Ireland——

Irish dividend paying companies have paid higher dividends than the average of British railways.

13163. Dividend paying companies?—Yes. There should be the word "paying." The dividend paying companies in Ireland have paid a higher dividend than the average dividend paying companies in Great Britain. Even allowing for the fact that the amount of goods and passengers carried are much less in volume, because the cost of construction in England

Mar. 13, 1907.

Mr. William Field, M.P, Member of Dublin County Council and Blackrock Urban District Council, etc.

Cheaper cost of construction of, and lower rates of wages on, Irish railways as compared with Great Britain.

has been variously computed, on an average, from £47,000 to £70,000 a mile, in Scotland from £30,000 to £45,000 a mile, whilst in Ireland the cost has been put at £13,000 to £15,000 a mile. In addition to the lower cost of construction, about one-third of the English or one-half of the Scotch cost, the amount of capital in rolling stock is comparatively much smaller and the rates of wages are lower than in Great Britain, according to the Amalgamated Railway Servants Society. I think that puts a question to the railway companies that they find difficult to answer.

13164. I do not think so?—I hope not.

13165. I think they will be able to answer that?—One-third of cost, cheaper wages. I agree that we have less volume of passenger and goods traffic.

13166. Now, there is something here that I was not aware of, but you will be able to explain it to us, and we will have it on the notes. You say that the Irish railways have received large amounts of free grants?—And loans.

13167. Can you give particulars?—Oh, yes. I will give you the document. I wrote to Mr. Runciman about this (*reads*).

Government grants to Irish railways quoted from return furnished by Financial Secretary of the Treasury.

"Irish Railways.—Statement showing the total amount of Free Grants made by the Government for Railways in Ireland.

"1. For the construction of 16 Railways in pursuance of Railway Acts, 1889, 1893, and 1896	£1,560,042
"2. In relief of the charge thrown on the guaranteeing area in consequence of the Camp accident on the Tralee and Dingle Railway	2,500
"3. Out of Vote for Relief of Distress (Ireland), 1891-2, for preliminary works in connection with new railways under the Act of 1889 ...	38,000
"4. Towards the cost of improvement and repair of the Tralee and Dingle Railway out of the Inland Development Fund	23,500
"5. By way of remissions of principal debt in respect of Loans advanced by the Public Works Loan Commissioners (England)	37,116
"6. By way of remissions of principal debt in respect of Loans advanced by the Commissioners of Public Works (Ireland)	102,536
	£1,763,694."

That is the official document, but in a covering letter from Mr. Runciman he points out that no sum is shown in this statement to represent the capitalized value of the Treasury liability under the Tramways and Public Companies' Act, 1883, in aid of the cost of construction of 22 light railways, estimated at £1,024,066.

13168. That is under the recent Acts of Parliament. I thought you referred to grants of money to some of the older railways. Have you got particulars of that?—Yes. Here is another letter from Mr. Runciman (*reads*):—

"Treasury Chambers,
"Whitehall, S.W.,
"9th March, 1907.

"Dear Mr. Field—

"I sent your letter of the 5th instant to the Board of Works, who have replied that they are not aware of any *grant* having been made to Irish railways beyond those of which I have already informed you.

"Your former letter made reference only to grants, but now you speak also of *advances*, which is a term applying to loans. As to the latter, the following figures will show you the total amount advanced up to date by the Board of Works and the Public Works Loan Commissioners:—

"I. By Commissioners of Public Works (Ireland).—	
"(*a*) Under 1 and 2 Wm. IV., c. 33 ...	£1,265,127
"(*b*) Under 9 and 10 Vic., c. 107	13,508
	£1,278,635
"II. By Public Works Loan Commissioners, England	£3,010,910
"Grand total for loans ...	£4,289,545

"Yours very truly,
"WALTER RUNCIMAN."

13169. "A" is the light railways?—Yes.

13170. You have not got particulars of which company got the £13,508?—No, sir.

13171. I should think, Mr. Field, that the £1,763,000 on the first return that you handed in is included in this £3,000,000?—I do not think so.

13172. Is it separate?—I think it is.

13173 Very well. We will print both documents?—It was for you I got them.

13174. Well, now, I come to something on which you are probably the best expert, and that is in reference to the live stock business and live stock traffic in this country. Now, what have you got to say about the management of the live stock?—Well, we compain—may I say that you will have witnesses who will give you their own actual experience? I am not a live stock dealer, but I have gone through the country a good deal and been to a good many fairs, and I will not say anything but what I know myself. The dealers and feeders complain that the local rates are higher than they are in Great Britain. They also complain of the want of proper loading banks, in many places, and the absence of help, although terminal charges are imposed.

13175. Now, stop a minute. Do you know that?—Yes.

13176. On cattle?—Yes, on cattle and sheep and pigs, and many of these men say that they get no help, or very little help, and they complain of the loads and unloads.

13177. Is not that the regulation in Ireland, that the cattle should be loaded and unloaded? Why are they charged terminal charges. What is it for?

13178. I suppose for the station accommodation. However, you make that statement, and you will find it proved afterwards?—I will give some complaints in regard to delay and damage in transit, and how the recommendatioins of the Departmental Committees have not been fully carried out, of which I was a member. I may say that the Departmental Committee was appointed on account of a question I asked in the House.

13179. We have evidence from that Departmental Committee, of which you were a member, that the railway companies generally faithfully carry out the suggestions that have been made from that Department?—There has been a certain amount of improvement, but there is a great deal to be done yet. I will just give two or three complaints. I do not want to keep the Commission all day. I know that one gentleman who gave evidence—I forget whether it was Mr. Prentice or not—said that there was more row now about a cattle train than if the limited mail was delayed. I quite agree, but the reason I do agree is that the Cattle Traders and Stockowner's Association would immediately tackle the railway company, and of course there would be a row. That is what we are there for.

13180. But, generally speaking, his evidence was to the effect, if I remember rightly, that many complaints were made, they were communicated to the railway companies, and as a rule the railway companies fairly met them?—The railway companies will promise you anything.

13181. And provided the accommodation?—Undoubtedly there has been an improvement. I quite agree, not only in the loading bank accommodation, but in the provision of trucks and in the transit undoubtedly there has been an improvement, but at the same time there is room for more improvement. I don't think I ought to give the complaints. I have 75 of them here. I will leave you these complaints, and you can look into them. The complaints are, generally speaking, of delays, want of sufficient help in the loading of trains, and sometimes cattle being bruised; very often that happens. Now, there are a number of these. I will read one or two.

13182. If you please, typical cases?—Yes, very well. So long ago as 1903 complaint as to conditions of loading bank at Birr. Complaints that a stationmaster——

13183. Give us a more recent one?—I will give you the last one.

13184. Do; the last one?—Yes. I will give you one that occurred the other day. You can get the 70 to look them over. 2nd March. I suppose that is late enough. "Cattle Traders' Association. The Committee had under consideration the complaint of Mr. J. R. Rogerson, from which it appeared that on the 1st of November last cattle bought at Nenagh were loaded at 12.30 and were booked there to Navan for

unloading at Bective, but the stock did not arrive there until 8.20 the following day."

13185. A.M.?—P.M. Arising out of this extraordinary delay the cattle were in bad condition and a claim was made for compensation. The Great Southern and Western Company refused to meet the reasonable demand made. The Committee were strongly of opinion that this was a case for fair treatment, but could not advise legal proceedings as a consignment note had been signed, which held the company free from liability.

13186. That is the old note?—Yes. I will come to that now. Perhaps it won't detain you too long to give you more. A prominent member complained that on the 27th inst., that is last month, cattle left at Greystones at 12 noon did not reach Harcourt-street until after 4 o'clock. Greystones is only just the other side of Bray. You know where Bray is, sir?

13187. Yes?—If you don't, I hope you will go to it on a visit. Although men were waiting for the stock from 3 o'clock, they were not delivered until seven. Similar complaints as to cattle loading at Kerry and Fermoy were received. There is the kind of thing that goes on.

13188. These are typical complaints?—Yes.

13189. You have a note here. You complain of the want of proper connections at junctions between various companies?—Yes.

13190. For the transit of cattle traffic?—Yes, sir.

13191. May I look at that 70 list?—Certainly; you have it, but I will give it to you; I sent a copy of it.

13192. I think that these are probably covered by your general remarks as to your general complaints?—Yes. I think if you will allow me, if it won't take too long, I think I ought to read some portion of this consignment note.

13193. We have not got to that yet?—Yes, it comes immediately after that, sir; it is only here we can touch it.

13194. Very well?—It is nearly too long to read, but as I take it this consignment note practically absolves the railway companies from any liability of any kind whatever. Now, let me read the first owner's condition:—In respect of any animals booked and brought by them or their agents for conveyance partly by rail and partly by sea, or partly by canal or partly by sea. That is, may I explain just as I think of it, that the through rate goes in Ireland according to the maximum rates that are charged in the railway companies as liability. Why I bring it in here is that, because I think dealing with this cattle business, which is 14 per cent. of the total receipts of the Irish railways, they ought to do what they can to mind the transit of live stock.

13195. Quite right?—And the railway companies, of course, are partially in this transaction, because they have to arrange with the shipping companies, if it is a shipping company to such places—Partly by sea or partly by canal or partly by sea the company shall be exempt from liability for any loss, damage, or delay which may arise during the carriage of any such animals by sea from the act of God, the Queen's enemies, fire, accidents from machinery, boilers and steam, and all and every other danger and accident to the seas, rivers, and navigation of whatever nature and kind soever in the same manner as if the company had signed and delivered to the consignor a bill of lading containing such conditions. Now, I have one word more and I have done. No claim in respect of live stock for injury or delay for which the company may be made liable will be allowed unless the same be made in writing in the case of injury or delay within three days after the delivery of the live stock in respect of which the claim is made. Now, I don't want to detain the Commission, but our experience is that wherever a man has signed this consignment note he has no case at law, sir. We had a very remarkable trial by a man named Devitt, and Mr. Justice Johnston tried it very carefully, and he was obliged in face of this consignment note, although the damage was admitted, he was obliged to give the case against us.

13196. Of course you know as a member of the House that a Bill has been introduced?—Yes, sir. That is the point I want to come to. There is an Owner's Risk Rate Bill introduced by——

13197. *Chairman.*—Mr. Hooper?—Yes, Mr. Hooper, that is the man. I was at the meeting at which it was adopted at the London Mansion House Committee in the Westminster Palace Hotel. We had a meeting, we adopted that Bill. Well, now, may I say on that point, because I have taken a great deal of trouble about it and I don't wish to detain you at all, I sent you a copy of the Blue Book of ours—the Irish Cattle Traders' and Stockowners' Association—so long ago as 1899, just after the Railway Reform Association, and if you have no objection, sir, I will read just a few paragraphs—not many. It is calculated that live stock to the value of about 20 millions sterling are annually exported from Ireland to Great Britain. It has been estimated that half-a-million pounds would almost purchase the fleet engaged in carrying the live stock, and several witnesses deposed that an equal or greater amount was lost annually through the depreciation in value caused by imperfect transit, so that if this contention be accurate one year's loss would nearly buy out—I am speaking of the shipping—the carrying companies' interest. Now, sir, in the summary of recommendations about inland transit, I am not going to take anything except what is due to the railways. No. 2 is "Better control and accommodation at railway stations in Ireland (*a*) That a responsible railway official and sufficient staff should attend at the railway station at all large fairs; (b) That the loading accommodation generally should be improved." No. 4. I will take 4 because the other has not much to do with the railways. "Pens and Loading Banks in Great Britain and Ireland—(*a*) That pens or guides should be generally used where cattle are loaded in trains; (*b*) That loading banks should be constructed level with the truck floors." No. 5, "Cattle Trucks (Great Britain and Ireland)—(*a*) That all trucks should admit of inspection and ventilation at floor level." Well, I don't think I need go into that. I don't want to detain you. There is a number of details in regard to that. "That the number of cattle trucks fitted with pipes or vacuum brakes should be increased so that the passenger service may be more generally made use of when goods connections are inferior." May I point out in explanation of that that it might be the greatest possible advantage with regard to live stock where it would catch the fast train—the passenger train.

Mar. 13, 1907.

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

Recommendations of the Irish Cattle Traders' and Stock Owners' Association as to improvements in live stock transit arrangements.

13198. We thoroughly understand it?—You know it, sir. No. 6. "That if practicable the recommendation of the Committee of 1870 as to a minimum rate of speed should be acted upon; that cattle should have precedence as perishable goods." I think they obtain that now. No. 7. "That the Irish railway companies should adopt rules and regulations with regard to cattle traffic similar to those agreed upon by the companies parties to the English Railway Clearing System." There are some other details there with regard to the treatment of cattle on the journey, that I won't go into, there is no necessity. Then a supplementary recommendation comes which will bring me into the question of nationalisation. That I want to get to. "Whilst agreeing with the report personally——"

13199. Is this your own?—This is my own. "I am strongly of opinion that under the existing conditions of Irish railways it will be exceedingly difficult, if not impossible to radically improve the general transit of live stock in Ireland up to the present day requirements. The multiplicity of companies and the poverty of some companies and their rolling stock; the refusal of connecting lines to time co-operation for public convenience; the frequent delays at junctions and sidings; the lack of proper facilities, as pens, V-guides, and even loading banks at many important places; the unwillingness to provide screw couplings, vacuum brakes and pipe wagons, which have been in use on the London and North-Western for the past fifteen years, the large number of various sized and unsuitable trucks; the general refusal (until recently at some important centres) of help to preserve discipline and load stock, although paid for by terminal charges; the arbitrary through consignment note, which practically absolves the carrying companies from almost any liability, and the entire absence of competition constituting a huge monopoly. This combination of circumstances together with my experience as a member of the Select Committee on Railway Rates and Charges, lead me to the inevitable

State ownership and management in witness's opinion the only remedy for existing defects in Irish railway management.

May 13, 1907.

Mr William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

conclusion that the remedy required in Ireland is State ownership and management." That shows my opinion is not one of recent date.

13200. That is ten years ago?—Very nearly.

13201. All these suggestions contained in the report, in your own report, are embodied in a circular issued by the Department of Agriculture here?—Yes, but the Agricultural Department have not the power to compel the railway company to do these things.

13202. But the evidence before us is that the railway companies as a rule do it?—I am sorry that I can't entirely agree with that evidence. I see Mr. Prentice here. I have the utmost reliance on anything Mr. Prentice says, but I think he takes the promise for the deed sometimes. That is not our experience. May I just read a letter with regard to the railway companies giving the desires of the cattle traders in regard to providing loading banks, because this is just the point that comes in?

Action of the Gt. N. Ry. (I.) in the matter of Balbriggan cattle siding referred to.

13203. A recent letter?—Only the other day, sir:—"8th March, Balbriggan."—I will give you the names and all.—"Dear Mr. Field—I see you are giving evidence before the Viceregal Commission on Irish Railways. Please don't forget the action of the G.N. Company at Balbriggan in making the cattle loading bank at the extreme northern end, and doing this in defiance of the protest of the Irish Cattle Traders' Association and of the Balbriggan Town Council and of the cattle traders attending our fairs. The fair green is at the southern end of the town, one mile from the railway bank. Ground was available adjoining the fair green, but the company would not have it, because by grabbing a siding serving our brick yard"—this man is a brick manufacturer—"it saved them £100 in construction." Now, if what Mr. Prentice says is correct, and I don't wish at all to contradict Mr. Prentice, that shows the attitude of the railway companies in Ireland in regard to the cattle trade. I blocked that Bill in Parliament and did my best about it, but the Great Northern Company simply defied us. My experience of the railway companies in Ireland is that unless they are compelled to do anything they won't do it.

13204. Is there a large cattle trade at this station?—Not a very large cattle traffic.

13205. A traffic that would justify the outlay of this particular man, say, £100?—I think it would, if that were to be borne for their own people, the Balbriggan cattle dealers. A petition was signed by the dealers and sellers of cattle at that particular place. I think it was the duty of the railway company to fall in with the idea of these people, who were their customers.

General views of witness on unification or nationalisation of Irish railways.

13206. All right; this will be on the notes. Now, Mr. Field, you have just come to your general views upon the unification or nationalisation of Irish railways?—I think I need not read all these particulars; it is too long.

13207. You are very explicit in your evidence. Could you tell us in a few words?—I would like, if you please, just to refer to the names of the gentlemen who agree with me. I quote, but it would take up too long. Let me say first, one of the first men, I think, who recommended the nationalisation of railways; the reason I do this, I don't want to make a speech.

Drummond Commission report, year 1838 quoted.

13208. I want particularly to have this in the notes?—Well, I want to make my position quite plain. You know it seems we are a peculiar people here in Ireland, and what happens in the rest of the world, and what is common in the rest of the world, if a man makes that proposition in Ireland here he is called a revolutionist. The reason I make that remark is because this treatment has been applied to myself. I know that railway shareholders and the railway companies themselves say this man is a faddist and a fanatic about railways, and as a matter of fact the extraordinary thing is that we are the exception to the world. The railways are nationalised and partly in every other country in the world except Great Britain and America and a portion of the Continent. However, I will come to that after. The first man I will quote is Mr. John Stuart Mill. I am not going to read it. I think there is no necessity to read it all. Well, now, this proposition about buying out the Irish railways is not a new proposition. I think I may read this paragraph, sir. The first Irish railway was opened in 1836. In the same year a Commission, under the presidency of Henry Drummond, sat, which reported in 1838 in favour of the construction of all further lines by the State. Resolutions adopting the report were passed in Parliament in 1839. In 1846 Lord George Bentick proposed that £14,000,000 should be devoted to the purchase of Irish railways. In 1867 a Commission, taking for granted the policy of nationalisation, recommended a reduction of rates by 42 per cent., intimating that the Irish railways would bring in a profit to the State after 11 years.

13209. *Sir Herbert Jekyll.*—Evelyn Ashley's Committee?—I think so.

13210. *Colonel Hutcheson Poë.*—The Duke of Devonshire's?—The Duke of Devonshire's. Yes.

13211. It is 1868?—It should be 1868. You will have 1838 after. In 1888 the Allport Railway Commission in Ireland recommended the purchase of the Irish railways by the State. In 1888 a Committee on Irish Public Works recommended the centralisation of all railways under one company subject to a controlling external authority, to be called the Irish Railway Committee. I find you have had that extract from Mr. Pim before from one of the witnesses. I won't trouble you with that. The Report of the Royal Commission of 1888 on Irish Public Works, presided over by Sir James Allport, Chairman of the Midland Railway Company of England.

13212. *Chairman.*—He was not chairman: he never was chairman?—Was he not; I thought he was.

13213. No. Make it a director?—He was one of them, anyhow. A director.

13214. He was not chairman, that is all?—No sir. Here is the point. They arrived at the following conclusion:—1. Absence of co-operation; 2. want of facilities; 3. high fares and rates, prohibitive of trade; 4. multiplicity of managers; 5. resources undeveloped; 6. traffic driven off the railway, carried by carts—that is done to-day; 7. stock taken by road instead of by rail.

13215. Live stock?—Yes, live stock; done to-day, sir, still. 8. stations too few; 9. termini too many; 10. want of extensions. Now, sir, I am prepared to admit that some improvements have been made, but the great bulk of these complaints still exist. Now, may I briefly quote Lord Kelvin, because he is a great authority, and he is, moreover, Lord Kelvin, ex-President of the Royal Society. At a meeting in Blackpool connected with the electric lighting he said: "The Government ought to take up the whole business of telegraphs and telephones, and that it would not be an improper thing for the Government to take up the whole system of railways connecting different towns as they already existed, and he thought the time would come when the railways would be run by electricity all over the country, and when they could be run for the benefit of the many"—mark this—"when they could be run for the benefit of the many and not for that of the few with conflicting interests."

13216. That is entirely your view?—That is entirely my view. Of course, Lord Kelvin's opinion would have much more weight with the Commission than mine; he is one of the most eminent men.

13217. His point was the electrical view?—Yes; but he agrees with me all the same.

13218. I see?—The evidence of Mr. Challoner Smith, President of the Institute of Civil Engineers in Ireland, I think, that was quoted before. Was it?

13219. I think so?—Well, briefly Mr. Smith stated in 1894 that he believed that a change ought to be made, and that the Government ought to help the railways.

13220. In 1894?—Yes, sir.

13221. That is his opinion, at any rate?—Yes. May I state just one word with regard to that? The question of the State purchase of railways has been always shelved by the Government as involving too great a responsibility.

13222. That is a matter of opinion?—Yes, sir.

13223. There is the fact though. They have always been shelved by the Government?—Yes. I want to point out that when it is compared with the enormous possession of India, thousands of miles distant, where the Army and Civil Service Departments are governed and their pay distributed to the remotest parts of the Dominion, this inability and objection sink into insignificance. Surely of the Government can manage railways in India, on the other side of the Globe, they ought to be able to manage, or someone deputed by them, to manage them in Ireland?

13224. Of course, you know in Australia the railways are?—Certainly, all the Colonies. I will come to that presently. Now, sir, I will come to something

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

late. On the 30th April, 1901, Mr. Hayden moved, and Mr. Murphy seconded, "that the present railway rates and charges in Ireland constitute an intolerable grievance to the Irish people, and that measures should be adopted this session for the remedy thereof, either by amalgamation of the management or by the State purchase of Irish railways so as to reduce the tariffs and further to increase facility of transit by utilising and developing the waterways and canalising certain rivers in Ireland."

13225. That is tantamount, or practically similar, to the amendment you moved, you proposed?—With this difference, that it came two years later, and then there is a couple of things I want very briefly to bring forward in connection with that. That was supported by the late Mr. M'Cann, who was an authority on this subject, Mr. Mooney, and others, and this point I want to bring before you. Mr. Wyndham, in reply, said—"In 1874—that is a long time ago—the present Chancellor of the Exchequer, then Chief Secretary of Ireland, Sir Michael Hicks-Beach"—now Lord St. Aldwyn—"speaking, as I am doing to-night, on a very similar motion"—mark that was before the House thirty-three years ago—"said, Parliament might beneficially lend assistance to promote amalgamation of Irish railways, and possibly facilities might be given by the Government by which it would be rendered easier and cheaper than at present." This is what Sir Michael Hicks-Beach said, so that there we have the fact that our present contention, my present contention, was considered to be feasible and necessary so long ago as thirty-three years. Amongst other remarks, Mr. Wyndham said in 1901—"I am very glad we have had this debate. The subject deserves the consideration of all parties in the House, but I cannot disguise the fact that it is interlocked with other economic questions for Ireland—the land question." Well, now, sir, the land question has been partially settled. Then he alluded to the education question. We are not going to get into that; it is too contentious, but it is under consideration.

13226. Yes, it is under consideration now?—He finished by saying that "although it is not necessary to enter into any argument as to the financial relations of the two countries"—I agree—"in considering this question it still remains that any economic question brought forward such as this deserves, and will obtain, careful and sympathetic consideration from any Unionist Government." Well, they would not think of voting it. We wanted them to do something practical. We numbered ninety, and they 152. The Government voted against it.

13227. 152?—Yes. It appears to me almost childish that such objections should be seriously put forward by sensible men unless they are financially interested in the continuation of the present expensive and inefficient system in Ireland.

13228. Yes, well that gives, at any rate, the views of Sir Michael Hicks-Beach and Mr. George Wyndham upon the particular subject?—The subject they were discussing. I hope you think it is germane to the point.

13229. It is germane to the point?—I don't want to get off the line.

13230. I will try to keep you on it?—I know you will. The nationalisation of the railways is not more socialistic than the post office, parcel post, telegraphs, telephones, tramways, gas, water, or the railway combine itself in the shareholder's interest.

13231. Well, but who said it was. It is the first I have heard about it being socialistic?—Well, I have been called a socialistic man—I don't mind what I am called.

13232. Oh, I mean we have plenty of precedents before us?—Plenty. Well, we have some caustic critics here in Ireland. They are more critical perhaps than they are in England.

13233. I have found that out?—I am glad you have.

13234. Just for information, do you remember or can you tell us what the Government paid for the telegraphs when they took them over?—I could not tell you. I know they paid too much.

13235. You can't tell the figures?—I can't remember just now.

13236. Never mind: they took them all over?—They will take the telephones and will pay too much. The English Government never do anything in time. They are always late with these things.

13237. You think so?—That is my opinion, and they are beginning to think so themselves, too. Well, while they have to pay too much for them.

13238. Yes, quite right?—I just want to say that the three kingdoms are an exception to the world. All the colonies except those in North America, which have lately acquired more control over the iron lines of their own railways. The exceptions are Great Britain, Canada (partially), Spain, Turkey and the United States.

13239. With that exception, practically all the railways of the world are State owned, or State managed?—State managed, or State controlled in some way.

State ownership of railways practically the system in all countries except Great Britain and Ireland and the United States.

13240. State owned, State controlled, and State managed?—Yes, sir, and in America, I need not tell you, there is great trouble about the railways at the present moment. You are on the *qui vive* about all these things. There is to be a meeting of the railway managers to try to get into some system to prevent the fooling and the evils that have arisen from private ownership in America. If my information is correct, 94,000 persons were injured in America in 1905—more than the people injured in the Battle of Mukden—that to a large extent owing to the private management of the railways in America.

Movement in the direction of State ownership in the United States.

13241. Is there a movement to nationalise the railways?—No, I don't think there is. Yes. There is. I will just read you some short note I have got here with regard to America. The British people quite justly criticise the Trusts in the United States of America, but they ignore the fact that the greatest Trust in existence is in their own country possessing £1,200,000,000, of capital with a power of taxing every individual more or less in Great Britain and Ireland. That is the Railway Combine. With regard to America, the trend of events is travelling towards railway nationalisation, and a distinguished writer—James Essis Thompson—recently gave expression to this opinion.

13242. I don't know that it is worth reading the opinion: but a distinguished writer expressed that opinion?—There is only one paragraph.

13243. Then read it?—"The time cannot be far distant when the Government of the States and the nation will take over the property of the railroads."

13244. Go on?—The railroads are public servants. They are not simply private business affairs on a level with cotton factories or iron factories. They have been given a practical monopoly within their own fields of activity, and the State has exercised its sovereignty in securing them the right of way. Corporations thus favoured must keep the public interest in view as well as the interests of their stockholders. They must give such a direction to their business as will protect the community from grave injuries to the extent of their ability. The last point I want to make is that Ireland is peculiarly favourably situated for the nationalisation of her railways. There are only five main lines connecting the principal cities and towns. We have no duplicate stations or parallel opposition lines, and certain extensions and junctions are required, but it cannot be said that Ireland is over-built with railways. I think that Ireland offers the most favourable opportunity at the present time for nationalising the railways.

Ireland favourably situated for the nationalisation of her railways.

13245. Well, now?—Now I think we come to what I think is the most important part of it.

13246. I am going to cut you down there a bit, but still I will just see how far we can go. What is, in your judgment, the best remedy for the state of things that you have been expounding?—We want a unified management created and controlled outside the railways, private railways, necessary in the interests of public utility. My view is that the Government should give a free grant sufficient to purchase out the Irish railway preference, debenture, and ordinary shares. I say a free grant, and I say it advisedly, because I don't want to get into financial subjects, but I maintain, and it has been proved that we have paid hundreds of millions of money in over-taxation, and this would be only the beginning of restitution, they ought to give us the money for nothing. I quite agree that we are not likely to get it, but we should try to get it. The money is more than due to us.

The purchase of Irish railways by a grant from the British Exchequer advocated.

13247. The Financial Relations?—That forty millions is due to us from over-taxation since that Financial Relations Commission sat.

13248. I think we can shorten this. You made a kind of rough estimate as to what it will cost to take over all the Irish railways?—Yes.

Estimated cost of the Irish railways.

Mar. 13, 1907.

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

13249. We will only deal with the big figures. Am I right in suggesting that you estimate that it will be 40 to 45 millions?—Hardly so much as 45. That is a very liberal estimate.

13250. A rough estimate you formed?—Yes.

13251. We know what the invested capital is; we need not go into that?—All right.

13252. Taking your estimate of the value, we will say 45 millions upon that; having considered the subject you have come to the conclusion that the State, if they took the railways at anything like that figure, would be able to work them at a profit and still be in a position to largely reduce the rates?—That is my view, sir.

13253. All this detail of figures, I don't think it is necessary to go into?—All right. Will you allow me to take the economies.

Various heads under which economies might be effected under State ownership indicated.

13254. I am coming to that. I will be glad if you mention in your own words what you consider—the economies you consider—might be effected. Supposing the State owned the railways, and you may take it under different heads if you like?—Economies. The five principal heads of railway expenditure are: 1st.—I hope the railway men are listening to this—1st. Permanent way. 2nd. Locomotive charges. 3rd. Repairs and renewals of carriages, etc. 4th. Traffic expenses. 5th. General charges. The contention of the railway companies is that economy the result of amalgamation can be made only under the head of general charges.

13255. Now, I have not heard the statement that that was the railway companies' contention I have not heard that from the railway companies?—I think you are likely to hear it, sir. We will put it in another way. Put it—it is stated.

13256. Yes. This is the first I have heard of it. Don't blame the railway companies unnecessarily?—I don't want to do it.

13257. Say it has been said or I heard?—Yes, please put it that way—economy can be made only under the head of general charges, in cutting down directors' fees, etc. An example of these returns shows that economies can be effected under each of these heads, which are very much more than the economies under the head of general charges. Now, sir, I have gone into this in Blue Books. I am not going to frighten you with Blue Books. These are the returns for 1905, and I think if you have time and appetite for going into them—I suppose you have them yourself. 1st. Permanent way. This is a separate department, and they have charged under one head office expenditure, superintendence, wages, materials for the permanent way, signalling bridges, stores, etc. If the 26 railway systems were amalgamated the saving would be considerable by the abolition of so many separate departments, separately managed, and the contracts for the supplies, where one system would order the whole quantity, instead of it being divided, would be at least 10 per cent. less than under the existing system, where the supplies are got in dribs and drabs. This won't take a minute. I have got a return from the President of the Board of Trade. I won't take more than a minute to read:—"Railway Companies in Ireland.—It will be seen from the accompanying copy of the railway returns for 1905, pages 82-5, that at the end of that year the number of working railway companies (exclusive of companies working only light railways authorised under the Tramways (Ireland) Acts, etc.) was 16. Of these 10 work lines entirely on the 5.3 gauge." I need not go into that. Since 1905 one of the 16 companies, as referred to above, the Donegal Company, has been dissolved, and its undertaking has been partially vested in the Midland Railway Company and partially in a joint committee of that company and the Great Northern of Ireland. This is the point I want to get in. "On pages 38-45 of the railway returns particulars are given of the capital of 47 railway companies, including 17"—so we have 47 railway companies in Ireland—"including 17 companies given on pages 44-5 as owning light railways. The lines owned by certain of the 47 companies referred to are, as stated in the return, in some cases leased to or worked by other companies, and in other cases are not at present open for traffic. There are also the Midland and the Fishguard and Rosslare Companies, who own railways in Ireland, but whose capital is shown in the English portion of the returns. The Board of Trade have no official statement of the number of directors of Irish railway companies, but the total number shown on the accounts of 34 such companies, some of which are companies owning light railways, furnished to the Board of Trade amounts to 249, including Baronial directors, members of committees of management, etc."

13258. Well, now, you dealt with the permanent way department. The next is the locomotive charges?—They include salaries of officials, the office superintendents, staff, etc., and the cost of the running of engines, including coal and other requisites, and stores, in all of which there would be a considerable saving, and if the supplies were ordered by one contract there would be a considerable reduction.

13259. *Chairman.*—Would not the same remark apply to renewals of carriages and wagons?—Yes, there is more than that important point. One large establishment could repair and carry out renewals of carriages and wagons, one large establishment could do the work more effectively and economically than a number; I would say one or two could do it more effectively and economically than a number of workshops, and a great deal of locomotive power could be saved. This is the point I want to impress. Amalgamation would lead to a great increase of home-made engines, wagons, and carriages, and a really great industry could be built up. A small company is unable to provide for itself sometimes and it must import carriages and wagons because it is not able to build them, and the big companies are not allowed to supply any other work, and consequently most of the vehicles are imported. Under the new system there would be no importations; they would be all made in Ireland and under the most economical conditions.

13260. What about traffic expenses?—In regard to that, the Trades Council discussed it, and I think they ought to have a voice in the matter. "In connection with the resolution proposed by the Coachmakers' representative, Mr. Milner, condemning the action of the Midland Railway Company in importing wagons across the Channel which could be equally well made in their works at Broadstone, and that of the Great Southern Company in importing bogey corridor carriages at a cost of £20,000, a warm discussion arose in consequence of Mr. Richardson's suggested addendum that the only remedy for this complaint is to be found in the nationalisation of the railways of Ireland. In doing so he advanced excellent reasons, one being that whilst as the matter stands no one railway company can work for another, and the different companies throughout the country import this class of rolling stock. If the railways were nationalised or placed under one management all the different workshops could be modernised, developed, and extended in such a way that the Inchicore Works could make all of the engines, and the Broadstone and Great Northern Works could make other parts of the rolling stock for the whole of the railways of Ireland, and in this way he maintained they could keep all the work in Ireland." I don't want to detain you any further. There is a good deal more, but my opinion is that not alone would it give employment here but that the work could be done cheaper here. The very cost of transit from England over here would be saved to begin with, and unless I am wrongly informed engines could be made cheaper at Inchicore than they could be turned out in England. That is a most important point, and undoubtedly there would be great economy in having that labour given at home.

13261. Will you now deal with the traffic expenses?—If they had one big office for the regulation of traffic and the carriages it would be much cheaper. The present system is most wasteful. A single company is now often unable to cope with the necessities of traffic. At a big fair or a great reunion—I suppose they mean a demonstration—I know what that is; I have been at some demonstrations in my time and also big fairs. With one central office arranging the thing, having control of wagons and carriages, there would never be a shortage on any one point, while all the needs of the other traffic could be amply provided for. And now each company sends its carriages or wagons through, and if the carriage is not promptly returned there is a demurrage, and the Railway Clearing House is kept up with a staff of clerks sorting and settling the accounts between all the companies. If there was only one system all that would be done away with; there would be a sufficient supply of carriages and wagons for all emergencies; charges and counter-charges would be avoided, and services would be much more efficient and the expenditure would be considerably less. Saving

and efficiency would be the result. I think there can be no question about that paragraph at all.

Chairman.—No.

Witness.—General charges. The railway companies assert that there would be no reduction except—well, we won't take it in that way.

Chairman.—No, leave that out.

Witness.—General charges. There would be a reduction of directors and clerks' fees although it is said that the whole amounts to only £135,000, or 5 per cent.

13262. *Chairman.*—I don't know where you get that figure. It has been stated in evidence, not by the railway companies, but by the public, that the reduction would be £35,000, not £135,000?—I think the railway companies ought to be able to show that themselves.

13263. Yes, we can easily get that?—Yes. An example of the possibilities under the five heads mentioned show that at least 10 per cent. reduction could be effected all round by amalgamation, or from a quarter of a million to half a million sterling of the £2,500,000.

Chairman.—There is some mistake there.

Witness.—The total expenditure.

Chairman (after referring to documents).—Yes. I think you are right, Mr. Field. I only want to have it right.

Witness.—The present system is incurably wasteful, or rather the absence of system—£2,500,000, which is the total expenditure of the 26 Irish railways in the return—the present system is incurably wasteful, or rather the absence of system. Cattle traffic, slowness and high rates, contrasted with the efficiency and cheapness of systems over which foreign supplies are brought in.

13264. *Chairman.*—Have we not done sufficiently with the cattle traffic?—That is all I want to say.

13265. You have dealt sufficiently with the large savings that could be effected: there are other things you have not mentioned?—There is one other portion. The working expenditure, as I understand it, is 54 per cent.

13266. In Ireland?—Yes.

13267. I thought it was more?—It is a proof of wasteful management.

13268. It is 60 per cent. in England?—They pay better wages in England than here. Coal, it might be said, is cheaper in Scotland, but labour is cheaper in Ireland, and you make the balance in favour of Irish railways.

13269. I don't think you wan't to charge the Irish railway companies with wastefully spending money unnecessarily?—No one will if they can help it; it is more their misfortune than a fault for them.

13270. The intelligent men who are managing railways in Ireland, I am sure they do the best they can?—If they have to go to England to pay high prices for wagons and carriages.

13271. We didn't know that: you say there is a disadvantage there?—One other saving. An enormous saving could be effected in agents, offices, and the abolition of certain staffs of drummers and this kind of thing.

13272. A greater saving there than anywhere else?—I want to make that point.

13273. Yes, you had better make that point—read that paragraph?—A large saving could be effected by the abolition of agents or drummers, canvassers, numerous offices in different centres, various parts of different centres, of duplicate stations and staffs—there are not many duplicate stations in Ireland; there are in England, but not in Ireland—where competition for traffic exists; lower rates increased facilities; there would be an increase of passenger and goods traffic.

13274. I think you have dealt with that point?—One thing more; if a government under popular control obtained the railways, the stations could be utilised as public telegraph and telephone offices, subpost offices, and subsidies for postal services would be saved.

13275. Are they not used now?—Only to a certain extent.

13276. You say for general use?—Yes.

13277. You have formed an opinion as to the policy of English railway companies acquiring property in this country?—I am unalterably opposed to British railway companies having any share or control whatever, direct or indirect, in Irish railway management, as in my view the country would in future be operated as it has been and is at the present time in the interest of the foreign and British importer instead of for the development of home manufacture and the encouragement of native produce. I contend that if the English companies have chosen to spend money in Ireland they should not have been allowed to hinder the development of this country's resources or business.

Unqualified disapproval of British railway companies having any share or control in Irish railway management expressed.

13278. Do you think they do?—Yes. I will point it out.

13279. All right, point it out?—In my opinion, as well as dealing in a broad-minded way with the rates question, the Government should sweep all these combinations away and put the Irish producers, manufacturers, traders, merchants and passengers in a position to get the best possible services and facilities, not only in Ireland, but between Ireland and England, Scotland and Wales, because not only are the rates too high—and I want you to take notice of this yourself as a skilful railway man—but sufficient importance has never been attached to the quick and convenient transit, especially of perishable goods, by the different boards of railway directors. It would probably have paid the Irish and British railway companies better had they adopted a liberal policy and reduced all their charges. Such a course would result in the development of Irish produce generally, possibly by 100 per cent., enabling our products to be moved about from interior places to the large towns and cities of Ireland, also to the English, Scotch, and Welsh markets—I draw attention to this point—all of which are largely supplied from the Continent of Europe, North and South America, Australia, New Zealand, etc. Any observer can see the large supplies of foreign produce that come into the English, Scotch, and Welsh markets, and, generally speaking, Ireland is the best adapted country probably in the world—that is a large order, but I believe it is true—for producing live stock of all descriptions, butter, eggs, poultry, bacon, fruit, vegetables, etc. There is surely something wrong when we are not able to send a larger output to the different markets

13280. How could this be corrected if that is your view?—To correct this, cheaper export rates should be given to the exporters of manufactures and produce and somewhat higher rates charged to importers. I hope this Commission will arrive at a speedy solution of this problem. I want to point this out, if markets had to be made for our produce, there might be a difficulty, but across the Channel the markets already exist, and Ireland only wants to be put on an equal footing to compete for the millions, or for some of the millions, of money that are going to foreign countries; and this would help to give employment and keep the people at home.

Cheaper export and higher import rates advocated.

13281. Of course, you say that could be done if the railways were owned by the State?—Yes I will come to that; it could be helped: I don't think it could be all done. Without an efficient railway service this is impossible, and whatever the result of this inquiry may be the Irish railways should be under popular control, when, with proper management, the trade of the country would be enormously increased. Moreover, the Government need not recognise the combinations which exist between Irish and English railway companies, sometimes to the ruination of the trade of this country. Those combinations provide for high rates—I want you to note this; you will take it in better than most people—and what is worse, the sending of traffic by circuitous routes. Take, for instance, the combination of the Midland of England with the Belfast and Northern Counties line. This forces all the traffic possible by Belfast and Heysham route, whether such route can give the proper service or not. The same system operates between the Great Southern and Western of Ireland and the Great Western Railway of England since the Fishguard and Rosslare route opened.

The forcing of traffic by routes other than its natural channels deprecated.

13282. What you mean is that with a unification of the railways the best and surest route would always be adopted?—Yes; and I think the phrase is, amongst railway men, that the railways "within their sphere of influence"——

13283. That may be in Ireland: I have not heard of that?—It was from an Englishman I had it. The railways within their sphere of influence; they naturally take all their own traffic.

Mar. 13, 1907.

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

Mr. Fitzgibbon, K.C.—That is the very thing the Railway Commission inquired into during last month, That is what they were appointed for. They are investigating this paragraph now about the Fishguard and Great Western. The court of the Railway and Canal Commission were inquiring into this matter that Mr. Field refers to.

Witness.—I have not said anything except what I believe, and I have not given definite evidence; I am within my rights in doing it.

Chairman.—You are quite right.

Quotations from an article published in the "Financial News" as to the adverse effect of the present railway freights on Ireland's prosperity.

Witness.—I always have the courage of my opinions. In this connection may I quote from the *Financial News'* leader written as a comment on my amendment to the Queen's Speech; especially now as Sir Antony MacDonnell holds a most responsible position under the Irish Government. Before reading it I wish to reverse the position in its financial aspect, because I hold that England is our debtor to the extent of hundreds of millions of money wrung from us by over-taxation. I claim some of this as a measure of restitution for the destruction of our industries through legislation and preferential rates, and the emigration of our people, which was the natural result of a natural cause, arising from felonious landlordism, over-taxation, and railway management in the interests of aliens. Sir Antony did not say that: I am saying that. "It is at least worth while to consider whether and how far the case of Ireland"—this is the comment of the *Financial News* on what Sir Antony said—"whether and how far the case of Ireland is on all fours with that of India. India, as Sir Antony MacDonnell points out, is a great debtor nation, and if the interest on her loans made by England is to continue to be paid, everything possible must be done to foster a favourable balance of exports over imports"—that is not our case. "If, said Sir Antony, the balance of our foreign trade is to remain in our favour, if order is to be maintained and famine mitigated"—we have distress in Ireland periodically—"it is on increased railway construction, on cheap fares and cheap freights, that the Indian Government must chiefly rely." Now the *Financial News* said: "We are in complete agreement with the views of Sir Antony MacDonnell. We have no doubt whatever that the general financial prosperity of India during the past quarter of a century"—I don't agree with that statement. There is no financial prosperity in India—"that poverty has been to a certain extent mitigated, owing largely to the extraordinary cheapness of Indian railway rates than to any other single cause, so that while India enjoys probably the cheapest rates in the world, the rates in Ireland, a great debtor nation"——

13284. *Chairman.*—You don't agree with that?—No, Ireland is not indebted to England: it is the other way—"virtually concerned to bring her produce to her ports in order to maintain a favourable balance of trade, are probably, if we except the Transvaal, the very highest in the world."—that is the *Financial News*—Seeing that in spite of repeated warnings from"—not from Mr. Field, but from—"Royal Commissions and Select Committees, the Irish companies, and I may add the English Companies now, by preferential rates, continue to pile fresh burdens upon the luckless Irish producer, we believe the time is ripe for a root and branch reform at the hands of the Legislature." Then he goes on to say: "The extraordinary lethargy of the Irish landed interest in this matter is surprising. The landlords have sold their property because it was held, whether rightly or wrongly, by Parliament that their demands upon their tenants were excessive and were incompatible with the general prosperity. But if we are not mistaken, the rates charged by Irish railways have been raised with every fresh reduction in the rents, and thus the railway companies have been imperceptibly made a buffer for that unpopular class, the Irish landlords, in order to distract attention from their own preposterous tribute—a tribute levied with unctuous impartiality on every form of Irish industry."

13285. *Chairman.*—Is that the *Financial News* of Ireland?

Witness.—No, sir, it is the *Financial News* of England. These are not my remarks; they are those of an English newspaper.

13286. The last paragraph says that the railway rates have been increased?—I do not say whether it is true or false; I am only quoting what they said.

13287. Do you make any comment?—Well, I say that the development of Irish produce, such as live stock, butter, eggs, poultry, bacon, fish, fruit, vegetables, &c., has been greatly retarded by the methods adopted by Irish railways and British railways in Ireland; and I think we ought to have an Irish Council here to look after Irish trade. You want something late, and so I will give you the following paragraph from the *Evening Telegraph* of last Saturday. It is headed "Railways Again," and is as follows:—"Mr. Robert Gibson has just shown up another case in which the Irish butter industry is being completely and conscientiously killed by the railway companies. The Taff Vale Railway Company does not want to be bothered with 'small lots' of 70 lbs., but has no objection to taking big freights on them. But the Great Southern and Western here in Ireland is even a greater sinner. Butter which was sent from Limerick on November the 6th reached Mallow on the 17th—it would have reached Chicago in the same time—and this interval of eleven days is flippantly referred to as an 'alleged delay.' This, as Mr. Gibson says, is adding insult to injury. These cases have cropped up most opportunely just now, when public indignation has been raised to fever heat by the revelations at the sittings of the Railway Commission." Now, sir, I want to say briefly with regard to that, that I have no desire to anticipate a matter which is *sub judice*; but I think I am entitled to point out that the revelations brought forward before the Railway Commission clearly prove that the English railway companies, as a rule, which have obtained control of Irish railways, have endeavoured to obtain traffic and to carry it round any distance on their own lines, and in some instances refuse through rates by a route outside their own, and, as far as they are able, persuade consigners to adopt this route even though it may be inconvenient and unsuitable. They have absolutely killed some trades, as has been proved by the evidence before the Railway Commission. In my view the passenger and the consignor should be at liberty to choose the route from one point to another with equal rates. I don't want to favour any railway, but the passenger has a right to choose his route.

13288. Tell us what your idea is of a new management?—As a feasible remedy all the Irish railways should be bought at their market value. The Irish railway companies should be dissolved, compensating those officials and individuals whose employment would cease, either by annuity or commutation. As to the directors, although I would be inclined personally to give them some compensation, yet when the shareholders' interest in the railways ended the directors would cease to have any functions. They had this advantage, that they were well paid when in employment, and, generally speaking, are in a better financial position than the officials, because frequently the main qualification of a director is the possession of a certain number of shares; (1) a transit master-general over railways and canals should be appointed, with powers similar to those exercised in the Colonies and on the Continent by a Railway Minister. This appointment to be vested in the National Council or other body which is to take charge wholly or partially, of Irish Government. There is a lot of looking before us in this; (2) a National Directory Board to consist of four Commissioners, one from each province, to be elected by the County Councils of Leinster, Ulster, Munster, and Connaught; (3) a provisional Consultative Committee, say of nine gentlemen, three to be elected by the General Council of County Councils, three by the National Council or other body about to be appointed to carry on the Government, wholly or partially, of Ireland, and three to be elected by the Irish Parliamentary Party; (4) one expert railway manager. When the comparative capital, mileage, goods and passenger traffic of Ireland is contrasted with those of the great English lines, one manager ought to be able to do the work easily. The evidence of Sir George Findlay, late general manager of the London and North-Western Railway, who was examined in August, 1895, before a Select Committee of the House of Commons upon Irish Industries, and who suggested a union or amalgamation of the Irish railways under the control of the Government, which he considered would be an advantage, and would effect a reduction of the rates, was, that he could

manage all the railways in Ireland with a couple of clerks, and have two days' fishing every week as a relaxation. But, in addition to the railways, the canals should be nationalised, otherwise the work would be incomplete.

13289. *Chairman.*—I think we had better stop here.

Witness.—Possibly a subsidiary expert manager might be required for the canals. If an up-to-date model is required, it is furnished by a British colony. Mr. Lloyd in his "Wealth against Commonwealth," states the New Zealand system to be as follows:—"The management of railroads is changed from Boards of Commissioners independent of the people to a Minister and Parliament dependent upon the people, and responsive to public needs and public opinion. The railroad policy is changed from the use of the highways as money-makers for the Treasury, relieving the general taxpayer at the expense of the producer to their use as public utilities supplying that necessity of life—transportation—at cost. The new policy is to lower rates, never to raise them, and to keep lowering them as profits increase. New lines are built for the people, not for the great landowners. The methods of construction are changed from private contract to co-operative work, largely by groups of unemployed, with special reference to the settlement of them and other landless people on the land.

13290. *Chairman.*—That's Mr. Lloyd's opinion about the New Zealand railways?

Witness.—Yes. This is my last paragraph, and it is my own opinion:—In Ireland the carrying companies are not simply carriers but monopolists and legislators. The Irish railway companies hold a mortgage on the community, and Government monopoly is their title deed; and the fact is ignored that grants of monopoly by the Crown impose corresponding obligations to the public. But general utility imperatively demands that the means of intercommunication and transportation in Ireland should be used and operated in the interest of the Irish people, to develop the natural, artificial, and potential resources of the country. For public utilities should be owned and controlled by the people. Trade and transit travel together.

On resuming after the luncheon interval,

Mr. Field handed to the Chairman a map showing, he explained, where dining cars have been shut off in some places and put on in others.

Examined by Colonel HUTCHESON POË.

13291. At the conference at Buda Pesth, I suppose the resolution to which you refer was discussed at some length?—It was.

13292. Were any actual suggestions made by any of the delegates as to the direction which State assistance or co-operation might take for giving effect to the objects which you wished to see accomplished, or were any actual steps taken afterwards by bringing the resolution to the notice of different Governments?—Not that I am aware of, but in the main the countries about Buda Pesth, such as Hungary, Servia, Roumania, Germany, that rule exists to a large extent.

13293. As to State assistance?—And as to a lower rate for exports and a comparatively higher rate for imports. They are all Protectionist countries, as you know.

13294. Were delegates present from France, Italy, and Belgium?—Yes—in fact every country was represented there. I think I was the only representative from England, except a couple of gentlemen who were there in the interests of horse-breeding, but they took no part in the discussion.

13295. Naturally such delegates were not very much concerned about British or Irish interests?—No. It was practically passed unanimously.

13296. I suppose the resolution was forwarded by the different representatives to the different Governments?—It was sent to all Governments.

13297. With regard to the preferential rates which you spoke of, do you mean by that that lower rates and increased facilities are given to British or foreign manufactures, or produce, than are accorded under similar conditions to the same class of goods in this country?—My opinion is to that effect, but I could not give you the exact rates or the specific instances, but I do know that men in various country towns have complained to me to that effect.

Mar. 13, 1907.

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

13298. You are aware that so far as England is concerned, at least with regard to agriculture, the Departmental Committee found there was no such proof of preference given in England. Of course, it does not follow there was no such preference in Ireland?—I do not agree with that finding. I have read "The Ruin of Agriculture in England," a work that was written by—I forget the name of the author—and he pointed out a great many cases, but the railway men on the Committee proved with a certain degree of justice that there was not a sufficient amount of co-operation amongst the men sending produce. If my information is correct, you can get hops cheaper across the Continent than you can from Kent, and you can get fruit cheaper

13299. Isn't that largely owing to the different conditions under which the hops are sent?—That may be, but it constitutes a preference.

Mr. Field's parliamentary question of 11th March as to the apportionment of through rates.

13300. Some of the traders went so far as to say that it was absolutely wrong for the railway company to give foreign imported produce any preference, that they were not entitled to give it, even though it was sent in train loads. Would you go so far as that?—I would not go so far as that, but I think facilities ought to be given to the home trader. May I bring under your notice this question in Parliament:—"Mr Field—To ask the President of the Board of Trade, whether he will cause an inquiry to be made through the Railway Department of the Board of Trade, asking the principal railway and shipping companies to furnish detailed information respecting import through rates, and likewise furnish the inland railway charges allowed on those through rates, and at the same time to obtain definite information respecting the charges made to Home traders for the inland carriage of goods the same distance to centres of population." Here is the answer of Mr. Lloyd-George—"I am taking steps to obtain information from railway companies and traders with regard to railway rates and other matters which I hope will throw light on the points referred to in the question." That was on the 11th of March, and it illustrates the fact that it is impossible for an individual like me to be able to get the information. I think the Board of Trade official on that Committee did not quite agree with that, if I read the evidence right.

Sir H. Jekyll.—I signed the Report.

Mr. Field.—But you made some reference to points as to which you did not quite agree.

Sir H. Jekyll.—You are probably referring to the representative of the Board of Agriculture, who made a separate report.

Witness.—I think the reply to that question of mine brings out the facts in a much clearer way than a non-expert like myself could do. I do not wish to make a statement here which I could not verify, which I am not in a position to verify. A witness has no right to occupy that position.

A cheaper tribunal than the Railway and Canal Commission recommended.

13301-2. With regard to the Railway and Canal Commission, if, assuming that the result of this Commission is not to sweep away the whole of the Irish railway companies, and that the present state of things, or something analogous to it, is allowed to continue, have you considered what tribunal you would substitute for the present Railway and Canal Commission?—I think some cheaper tribunal—I think the County Court Judge, or some of the present available legal machinery ought to be utilised for the purpose.

13303. You referred to the Allport Commission several times in your evidence, and probably you are familiar with the recommendations they made?—I am.

A tribunal such as the Allport Commission recommended, approved of.

13304. A witness we had before us the other day said if he could get a tribunal such as the Allport Commission recommended he would be satisfied with it?—I hope there will not be any necessity for it.

13305. Would you be satisfied with that?—Yes. I think there would be mutual advantages both to the carrying companies and the public. So far as I am individually concerned, I do not wish to be at war with the carrying companies. They should try to please their customers as far as they could, and the more facilities they give it is the better for themselves.

Mar. 13, 1907

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

13306. You alluded to the want of facilities and bad accommodation for the third-class passenger traffic?—I did.

13307. You stated that they formed 55 per cent. of the travelling public, and I daresay you are aware that they contribute two-thirds of the total passenger receipts in money—they did last year— a fact which in your opinion justifies the railway companies in catering more liberally for their wants?—Certainly.

Two classes of passenger fares only recommended.

13308. We have had some evidence here as to the desirability of trying to cater for the wants of the second-class passengers by lowering the fares to a scale more nearly approaching the third-class, and thus to attract a good many people who are now obliged to travel third-class on account of the high second-class fares, into the superior class. Have you anything to say to that?—The social customs of Ireland are perhaps different to what they are in England. My own individual opinion is it would be better to have only third and first class, the same as on some of the principal lines in England, but if the second-class is to be continued, a policy which I think is of very doubtful expediency, the second-class fares ought to be lowered.

Reduction in second class fares if retained urged.

13309. If they were lowered to 10 or 15 per cent. above the third-class, would you favour their retention?—Yes, I would do so, but I think we would be better without a second-class. I would like to have the democratic American system; make them all travel together.

13310. No one will dispute the soundness of the argument you adduce as to the cost of transit being necessarily a part of the value of the manufactured or of the agricultural product, but later on in connection with the matter you speak of railway and transit facilities generally developing in proportion as the agricultural and industrial resources of the country develop—in other words, you rather seem to argue that the agricultural and industrial resources ought to be first developed and that then as a matter of course the railway and other carrying bodies would afford increased facilities?—I do not know that that would necessarily follow. It has not been my experience. I think they should co-operate from the beginning. Take, for instance, small parcels—a sack of potatoes from a distant part in Ireland costs as much for transit as the value of the article. Only the other day I had a customer who told me she got a bag of potatoes from Galway, and it cost the whole value of the potatoes to bring them to Monkstown.

13311. That is one individual sack?—Yes, but that is the trouble. Of course, I know it has to come across the city and on by the South Eastern line. That is where the difficulty comes in, of the railways not having connection by a loop line.

Vital necessity for effecting economies and cheapening transit pointed out.

13312. In the condition in which the agricultural industry and limited manufacturing industries at present are, isn't it impossible for any much greater volume of traffic of one sort or the other to be sent forward for export or otherwise?—I rather agree with that view. but I would like to add this, that in my opinion, unless some radical change is made in connection with the transit of manufactured goods and agricultural produce, that really the railways will have less to do by and by than they have to do at the present, and unless some economies are effected that will enable a cheaper transit, a very dangerous state of affairs will arise in the country.

Difficulty of obtaining reductions in rates under present system of ownership of railways indicated.

13313. If you agree with that argument which I put before you, it follows that the railway companies cannot possibly make any appreciable reduction in their present rates without incurring a serious loss?—They cannot make any very serious reductions unless there are economies in the management, and these economies cannot be carried out unless under some kind of unification and control.

13314. They could not be carried out under the present system?—No. The shareholders in England have been obliged to be satisfied with a lesser dividend.

13315. I will come to that in a minute. I only wanted to see if you agreed with me that under the existing conditions of trade in this country it is impossible for the railways to make the reductions which we all think are necessary without incurring a loss which, in the interests of the shareholders, they could not be expected to incur?—To a large extent I agree with that. The expense of management is so great and the volume of traffic is so small that under existing circumstances it would be very difficult.

13316. In connection with that, may I call your attention to a very important case as to imported meat, which was taken before the Railway and Canal Commissioners in England in 1895. A complaint was made on behalf of Salisbury and other towns against the London and South-Western Railway Company, in which it was shown that while the distance between Southampton and London and Salisbury and London was approximately the same, some 75 miles as against 84 miles in the two cases, the South-Western Company, in the one case, for the imported meat coming in through Southampton charged 17*s.*, and in the other case something like 36*s.* When the Railway and Canal Commissioners come to inquire into the question they eliminated the cartage charges at London and the terminal points, which brought the actual rates down to 12*s.* 6*d.* and 25*s.*—in other words the Railway Company were carrying imported meat at 100 per cent. lower rate than they were carrying the home product. That seemed an extraordinary difference?—Well, that was an exceptional case, I think.

13317. And yet it was proved when the Commissioners went into it that the conditions under which the two classes of goods were carried—in the one case in train loads of 37 tons from Southampton, and in the other case in consignments of five and six and seven cwts. from Salisbury—were so different that the Commissioners considered a very slight readjustment of the rates would meet the necessities of the case. My point is that unless you can bring the conditions under which the agricultural products of this country are consigned across the water, into somewhat closer conformity with those under which foreign produce comes into the country, I do not see how you are ever to get anything like the rates which you are advocating?—I would point out there is a very big question depending upon that. The State has advanced money for the purchase of land. The farmers are to pay instalments, and these instalments have to be provided by the produce of the land. If the produce of the land cannot be brought to market cheaply the farmers cannot pay their instalments, and I hold strongly that unless a radical change is made in the whole system of Irish railway rates, charges, and facilities there is no alternative, in my opinion, but absolute ruin both agriculturally and commercially. It is a very strong view, I know, but it is my absolute opinion, after studying this question for the last twenty-five years.

13318. Unless there is an enormous development in the agricultural industry of this country, how do you ever expect that individual farmers, and in most cases small farmers can ever send large consignments? Don't you agree that the only means by which they can compete with the foreigner is by a system of co-operation?—Yes, I agree, but when a man becomes the owner of his own land he will produce a great deal more than if he was a tenant. You are acquainted, I suppose, with the farmers in Belgium, France, and Germany, where land ownership has been the rule, and you will find these men are able to live. They have cheaper rates, they find a market for their produce in their own country, and the result is general prosperity. In my view, owing to the majority of the tenants becoming owners of the land, there will be increased industry and increased produce, and with some small measure of co-operation I look forward to some increase in the produce of the land and greater improvement.

13319. And any steps that may be taken to promote this co-operation and combination amongst the farmers is very much to be encouraged?—I am entirely with you in that. I know that in my own trade men sometimes join together to fill a wagon at a fair so that they may get the wagon rate, and also sometimes to get a special run if they have a certain number of wagons. That is an instance of co-operation that could be very usefully followed in regard to potatoes or other produce.

13320. I think that is the direction towards which all efforts should be concentrated?—I agree.

13321. You refer to railway companies in Ireland paying a higher dividend than in England or Scotland. I think there is a good deal of misconception on that point, and it arises in consequence of this that English and Scotch railways have a very large amount of nominal additions to capital. Since the last sitting of this Commission I took the trouble of deducting the nominal additions to capital in the case of England and Scotland, and also

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

in Ireland, from the total capital value, and if you look at these figures you will see how they come out. (*Return handed to witness.*) Referring to the Board of Trade returns, which, of course, include the nominal additions to capital you will see the dividend for 1905 works out in England at 4·02; in Scotland, 4·24; and in Ireland, 3·78. That is including all classes of capital, after deducting the nominal additions. Then with regard to the ordinary stock, if you deduct from the total English capital the nominal additions, instead of the dividend being 3·46, you will find that the dividend actually paid on the ordinary capital, less the nominal additions, is 4 per cent. for England. In Scotland, in the Board of Trade returns, the dividend shown as being paid on ordinary stock is 2·17, but when you deduct the nominal additions you will find that the dividend works out at 3·98. In Ireland the nominal additions are so small as compared with the capital that they practically make no difference, and it works out at 3·98, whether you include the nominal additions or not. In other words, the actual dividend paid in Ireland is 3·98; in Scotland, 3·98; and in England 4 per cent., showing that England is paying slightly more, and that Scotland and Ireland are paying exactly the same?—They are all practically the same.

13322. It has been argued here that Ireland is earning larger dividends. As a matter of fact she is not. It is a misconception owing to the very large nominal additions in the cases of England and Scotland?—It shows the difficulty of working out these things.

13323. Now with regard to the 70 complaints which have been preferred in respect of live stock traffic, you have given us two or three instances, one of cattle from Nenagh to Navan, another from Fermoy, and another from Greystones. With the exception of these two or three complaints, do the bulk of the complaints which you have mentioned have reference to the last year or two, or do they go further back?—From 1903 to 1906, but these are only special complaints. I may point out the fact that in the Irish Cattle Traders' and Stockowners' Association the principal business we have there is looking after complaints about the railway companies. There is hardly a week goes by that we have not complaints.

13324. Have you ever brought them to the notice of the Agricultural Department?—We have in a great many instances. They have done what they could, but they have no power.

13325. Your experience is rather at variance with the evidence which was given by Mr. Prentice?—I am not contradicting Mr. Prentice. The Department do the best they can, I admit. I have been on a deputation to Sir Horace Plunkett about this matter. The railway companies make promises, but they do not carry them out. As long as the consignment note is in existence they can practically do what they like with the stock.

13326. With reference to the consignment sent from Nenagh to Navan, was the reason assigned by the Great Southern and Western when they refused to consider the charge, that they sheltered themselves under the owner's risk rate?—Our secretary will tell you that.

13327. With regard to the other two complaints, one of the 9th February and the other of the 28th?—We received a reply to the 28th, and the other they refused to consider. They said they were not liable.

13328. On what ground did they base their refusal?—I think on the ground of the consignment note.

13329. You quoted the Allport Commission on several occasions, and you say that in 1888 the Allport Commission recommended the purchase of the Irish railways by the State, and you go on to speak of the Commission on Irish Public Works—these Commissions were practically one and the same?—Practically the same. I took the trouble of reading the Commission through in the House of Commons, where I got the Blue Book that contains it.

13330. But you made a slight error in saying they recommended purchase by the State. That is exactly what they did not do. They recommended amalgamation and unification, but they considered it was not in the interest of the country that the railways should be purchased?—I think unification and amalgamation practically leads to the same thing.

13331. Later on you have referred to the answer given by Mr. Wyndham, who refers to the reply given by Sir Michael Hicks-Beach in 1874. At that time the question of State purchase was brought up in the House of Commons, and the Irish representatives, at any rate 90 of them, signed a memorial undertaking on behalf of this country to make good any loss. I do not know whether you are aware that was the case?—I heard of it. It was before my time.

Sir Michael Hicks-Beach's statement in the House of Commons in 1874 on the subject of State purchase of Irish railways, and Mr. Field's (1899) and Mr. Hayden's (1901) motions referred to.

13332. And it was in reference to that proposal when it came before the Government that the reply of Sir Michael Hicks-Beach was made?—I think we would be in the same position to-day. We would make good any loss; we would be able to make good any loss—provided the management was given to us.

13333. At any rate, in 1871 or 1873 when the proposition was made for State purchase the Government expressed their readiness to contribute financially towards the amalgamation of the then existing system, so that practically, I think, the result of all these different Commissions has been in the direction, if not of State purchase, at any rate of unification and amalgamation. I think that is quite clear?—Yes—unification.

13334. In the amendment which you moved to the Address in 1899, and in the motion made by Mr. Hayden in 1901, in both these resolutions you considered the alternative either of State purchase or amalgamation of the management of the railways?—Yes, that is so, sir.

13335. Am I to understand that, so far as you and the bodies that you represent are concerned, that they would be still prepared to accept one of these alternatives?—Well, I could not say that now; public opinion has ripened in that direction now, but, as far as I am able to judge, I may say that I have not any direct mandate from any of those bodies on that particular point, but as far as I can understand they favour nationalisation; certainly the cattle dealers do, and certainly the Dublin County Council does; but I am not sure as to the attitude of the Urban District Council.

13336. Would they favour State purchase rather than amalgamation?—Nationalisation; public opinion has ripened since then.

Nationalisation of the railways stated to be now the desired object of Irish public opinion.

13337. I agree with you, but I only wish to make it clear as to what views you advance?—Yes.

13338. You referred to the parcel post and telegraphs and other matters to show that the results of management under Government lead you to believe that railways would also benefit in the same way?—Certainly.

The analogy of State working of parcels post, telegraphs, etc.

13339. But as to the parcel post, the post office and telegraphs, you cannot fairly compare them with railway management. You will admit that railway management requires men of great commercial ability and experience to keep in touch with the fluctuating conditions of trade, and in addition that a great deal of the difficult work of railways arises from the constant requirement of an adjustment of rates?—Yes, and that would not interfere with the railways at all. You could have that as a Department to itself, as it is managed in foreign countries, and the unification of railways under popular control would enable things to be done much better and more economically, and, in my opinion, would suit the general public convenience more than at present.

13340. You seem to argue that because the post office and telegraphs were managed economically and efficiently under State control it would therefore follow that the railways could be managed in the same way?—I think they could be managed under our own control; why not?

13341. But it does not follow because the post office lends itself to State control that the railways should?—Does not all the experience of the world show that it is done more cheaply in that way. Take the Prussian railways, for instance, and take what is paid to the managers of the great English railways and compare their salaries with the salaries paid to the Prussian officials, and take the Australian railways, the New Zealand railways, or the railways of Natal, or anywhere you like. Our system is exceptional in the world.

13342. Now, on the point of finance, of course I don't wish to dispute your finance, but at the same time I don't quite accept it, a good deal must be only a matter of conjecture?—Well, I don't put these forward as what may be called positive statements, because it takes a financial expert to go into these things and to actually and definitely determine them. I put that forward as a kind of tentative suggestion

Financial aspect of State purchase discussed.

Mar. 13, 1907.

Mr. William Field, M P., Member of Dublin County Council and Blackrock Urban District Council, etc.

that might be tested by returns by the gentlemen whose business it is to go into these matters, but I think I may say that in a rough way I am near the mark.

13343. Oh, the figures will have to be gone into carefully. I want to know have you considered the possibility in the event of the State purchasing, or even a national authority purchasing, the railways of Ireland, that it might be necessary and it might be fair that they should also purchase at the same time the subsidiary undertakings in connection with railways?—That is hotels, I suppose.

Question of the purchase of the subsidiary undertakings of the Irish railways by the State

13344. Yes, docks and canals, and, in some cases, steamship companies, which belong to the railway companies?—Yes, that has crossed my mind, and I don't think there would be much difficulty about it, except in the case of the hotels. I don't think the State should purchase hotels, although I am a Progressive; but if these hotels were running at a profit it would be easy to get a purchaser for them.

13345. In my opinion if the State took over the railways and hotels, the hotels would probably be one of the most paying parts of the concern, but this only adds to the financial burden that would have to be undertaken by somebody or other, if you agree that a good many of the subsidiary undertakings would have to be purchased?—Some would have to be purchased, and that would add to the money, but not much. There are not a great many of these hotels, some, perhaps, in the West, in Galway and such places, and there are some of the Great Southern hotels, but there is nothing like the same amount of money involved in them as in England, in places like Euston and Lime-street; the cost would not be much.

13346. Not perhaps in the hotels themselves, but in some cases canals and docks, and things of that sort are mixed up with the railways?—In that case I think the purchase should include the canals. I think it is a most extraordinary state of things that the canals should be allowed to be purchased by the railways. I think the railways should not be allowed to grab the canals and shut them up so as to increase the transit rates.

13347. Did you give evidence before the Canal Commission?—Yes.

Working of Irish canals: practically free transit for course traffic not able to bear present transit charges suggested.

13348. It is hardly relevant to ask you, except, indeed, that the two things are so closely bound up, but what was the general effect of your evidence?—That all the canals in Ireland should be bought up by the Government and be worked by the State or by the Irish Government in the future, practically free.

13349. Did your evidence go to show that in your opinion there was sufficient traffic in the country to work the two things side by side?—Certainly, because I think the canals would relieve the railways of a good deal of the heavy traffic, take timber, for instance. In an Irish town—in Athlone some time ago—in fact in two or three inland towns, I am sorry to say, there is very little timber, but in Athlone they told me that the timber did not pay on account of the high rates, and it is the same way with grain, and the same way with granite and marble, and all those heavy articles—they don't want them carried owing to the rates. I think the canals should be utilised for this sort of traffic.

13350. Yes, I agree with you, if they are developed largely, but at the present time this industry as to marble, and stone and quarrying is practically in its infancy?—The reason is that they cannot get them carried on fair terms.

13351. Most of them are in the West of Ireland, and there is no canal communication?—Well, we would have to open or build a canal if necessary; look at the amount of money spent on canals in France.

13352. But in France there are enormous distances to be covered and great quantities of traffic to be carried?—We in Ireland are going backward instead of forward in the matter of transit.

13353. Well, we will leave the canal question now, and I am sorry that I touched on it. On the point of economies, as in the case of finance, it is largely a matter of conjecture, and I don't propose to ask you any question on that point, but I invite your attention to the findings of these different Commissions which sat at various intervals and in whose opinion very little economy could be effected in any of the directions you speak of except in working expenditure, and in the direction of getting more work out of the rolling stock. On the first point if you look at the Board of Trade return again, it gives you the working expenditure for the different Irish railways, and, by the way, there is a slight error, probably a printer's error, in your abstract; you allude to the working expenses as being 54 per cent. of the gross receipts, but that is for Scotland?—Yes, and it was Scotland I think I said.

13354. It is 60 per cent. for Ireland, and 54 per cent. for Scotland?—Yes.

13355. If you look at the expenditure, and the proportion of expenditure, working expenditure to receipts in that table you will find that the only line in this country that at all approaches the proportion of the Scotch lines is the Great Northern, which is 57 per cent. of the gross receipts, but on the other hand the Great Southern and Western is 60 per cent., the Midland 65 per cent., and a number of other lines, raise the average cost up to 70, and one or two, I believe, rise to 98 per cent., and some light railways with baronial guarantees go beyond the gross receipts?—Would not that be caused, Colonel, by the fact of insufficient rolling stock, and that want of unification.

13356. I don't know what the cause of it is, but it goes to show largely, I think, or to establish an argument in the direction of unification, because it shows that the large lines, what may be called the main lines, the Midland, the Great Northern, the Great Southern and Western, and the Northern Counties, that their ratio of working expenses to receipts is 60 to 64 or 65, but the ratio on the small lines shows an average out of all proportion to this?—It is just the same in a railway as in all other businesses; a man with horses can often with a little increase of the number, and the business available, do double the amount of work, though the working expenses are about the same, and therefore I think unification would be productive of a saving on working.

13357. I think that is the point, that the ratio of the smaller lines would be very much reduced. Look at the Scotch lines, and you will find that in the case of the three great principal railways—the Caledonian, the North British, and the Glasgow and South Western—their ratio of working expenses, as compared with gross receipts, is 53 North British, 54 Caledonian, and 59 per cent. in the case of the Glasgow and South Western—that is largely owing to the reduced expenditure?—And the cheaper cost of fuel.

13358. The cheaper cost of fuel has, no doubt, something to say to it, but at the same time I should question very much whether it would not be possible for us to more nearly approach to something like their figures than we do at the present time?—But is not that one of the reasons of the reduced cost, because the principal railway work of Scotland is done by three lines—in fact, by two.

13359. The average for the whole of Scotland is 54, and these three lines reach 54, 53, and 59; and I daresay you remember that in the case of the Allport Commissioners they reported that if the ratio on working expenditure in this country could be brought down to anything like that of Scotland that at once a saving of £140,000 a year would be made?—Yes.

13360. And I think the consideration of these figures would show that if the smaller lines were absorbed there would be a great reduction in working expenses?—Yes, and is not that the policy of the railways of the Three Kingdoms. A great number of little companies have been absorbed by the larger railway companies of England—by the London and North Western and the Great Western and the Midland.

13361. Oh, certainly?—I am not prepared to go into the exact figures, but I have read about the matter, and I know that the larger companies have absorbed a great number of the smaller lines.

13362. A great deal has been done in that direction in this country?—Yes.

13363. There is the case of the Midland and the Northern Counties?—Yes, and of the amalgamation in the case of the Great Southern.

13364. On page 25 of your evidence you lead one to believe that you consider the amalgamation with our Irish railways resulting from the different English companies coming into this country has not been in

the interests of this country?—Certainly not; I believe the English railways come here for the purpose of making money at our expense.

13365. Has the effect of that amlagamation in different parts of the country been rather to concentrate the traffic from the districts that the railways serve into two or three large ports at the expense of the small ports?—Yes, that is my view, and a diversion of traffic from its natural geographical route into whatever particular line these railway companies control. For instance, the Great Southern and Western Railway sends all their stores round now by Rosslare, taking them via Inchicore, instead of bringing them into Dublin. I brought the case under the notice of the Port and Docks Board in Dublin, of which I am a member, about goods being sent this way instead of by the natural route. The natural geographical route for traffic is altered to suit the interests of those English railway companies in order that they may get traffic on their own lines; it is the natural effect of a natural cause.

13366. Would your idea be that where you have as in Ireland a number of ports studded round the coast with railways in most cases leading to them that the natural outlet for the district served for fifty miles—and few railways are more than fifty miles from the port—that the natural channel would be through the nearest port?—Yes; I have always advocated that. I think the railway companies serving a port should do their utmost for it, and also that the consignor should have the liberty of choosing his own route.

13367. That is one reason why you are in favour of amalgamation or nationalisation?—Yes, certainly.

13368. And you think if such a scheme were carried out?—That the jealousy of the railways would disappear.

13369. And that there would be no tendency to divert traffic from its natural port?—No. At present Belfast tries to take the traffic from Dublin, and Dublin tries to take traffic from Belfast, Cork tries to take it from Dublin and Belfast, and Waterford tries to take it too. There is a kind of friction and tension going on to force traffic by particular routes. That policy is all wrong.

13370. And that would, to a large extent, be rectified and obviated under a national system?—Certainly, I think it is quite plain.

13371. I just want to have your views. I suppose when you brought forward the motion which you refer to on pages 25 and 26, on your amendment to the Queen's Speech, I suppose you did not employ quite such vigorous language when addressing the House as you do here in the Minute?—Which is the particular portion?

13372. The amendment to the Queen's Speech—the passage, "England is our debtor to the extent of hundreds of millions wrung from us by over-taxation. I claim this as a measure of restitution for the destruction of our industries through legislation and preferential rates, and the emigration of our people, which was a natural result of a natural cause arising from felonious landlordism, over-taxation, and railway management in the interest of aliens"—I don't suppose you used such strong language as that in the House of Commons?—Well, I think if I did not actually use it that I went very near it. I am just as strong in the House of Commons as I am here. I remember being put out of the House of Commons once, and the only time I ever was, when I was speaking on this question of over-taxation. I think my speech was very nearly as strong. I don't know that that precise paragraph was in it.

13373. The reason I ask is that I should have hardly thought that in the House of Commons you would be commending yourself to your audience, or going the right way about gaining your point by addressing such strong language to the House?—I think I sent you a copy of that document entitled "High Rates and Railway Monopoly in Ireland," and you will see what I said in it.

13374. On pages 29 and 30 you have gone in some detail into the intervening authority which you consider should be placed between the central national authority, so to speak, and the railways?—Yes, sir.

13375. You speak, first of all, of a transit master-general, and then a national directory board of four commissioners, and a provisional consultative committee, and one expert railway manager; would not you rather prefer, assuming some central authority is constituted, would not you rather leave the constitution of any board that they might entrust with the control of the railways to such an authority, instead of allowing the Committee to be elected—some by members of Parliament, some by the County Councils' General Council, and some by the different provinces?—My reason for making that suggestion is this: I would like to get all parties in Ireland together as far as possible, and I don't believe in a policy of centralisation of commercial powers in any particular body. There are so many interests to consider. In the first place, as to the transit master-general, I claim that that is a new phrase. I sometimes do originate a phrase, and I say that that official should occupy pretty much the position of the Postmaster-General.

Mar. 13, 1907.

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

13376. Oh, I was not taking any exception to that?—Well, there is some jealousy about these things in Ireland, just as there is in other places, and I wanted to have the body thoroughly representative.

Constitution of suggested new controlling body.

13377. I agree with you, but I suppose if any central body is set up in Ireland for the administration of local affairs, including the control of the railways, that it will be representative of all interests?—Yes, but this is a special work. This consultative committee that I suggest ought to consist mainly of commercial men who know what they want, and some men acquainted with railway management. If you leave the control altogether to what might be termed a political body I think they would not manage always properly or to the best advantage.

13378. I hope if this body is ever set up it won't be a political body?—Well, I don't know how you can keep politics altogether out.

Question as to religion and politics having an undue influence over an Irish constituted controlling body discussed.

13379. Well, I should look on it then with very grave suspicion?—But is not everything determined on political lines now-a-days.

13380. I am quite aware of that?—Well, how can you make Ireland an exception to the rule that obtains everywhere else.

13381. But if you contemplate a political body being set up here in Ireland, and that to that body should be entrusted the control of the railways, I am afraid the points raised before us here on several occasions as to political and religious considerations influencing that body will be found to have some justification?—I don't share that view.

13382. But assume that it is a political body?—Well, even so; the County Council is a political body, and Colonel Vesey is its vice-chairman and does not hold the same political views. The County Council does not share your views. In Blackrock, which is similarly constituted, we hear very little of politics.

13383. If you got a body representative of the whole country?—Yes, I would approve of that, but I think we have too much politics everywhere.

13384. I quite agree with you, and I think that politics are the curse of this country?—Oh, I would not say that.

13385. We have too much politics?—They are introduced into everything, and they have nothing to do with trade.

13386. I will only ask you one more question, and that is in consequence of the remarks you have made. We had Mr. Ennis giving evidence here representing the Wexford County Council, and the County Councils' General Council, and in reply to my questions he said that assuming that some central authority, such as we have referred to, was set up in this country that he believed, notwithstanding anything that might have occurred in the past, that in future every shade of political and religious thought in this country would find a place on such a body, that he believed the minority were entitled to receive such consideration, and that it was in the interests of the country that they should receive their fair share of representation, I wish to ask you as a man of considerable weight and influence in this country——?—I am glad to hear it.

13387. And certainly I believe, I know I do myself, and I believe the other Commissioners do, attach some value to what you say, and we are certain that whatever you said you would do your very best to see carried out; now, I ask you are you prepared to share in these views of Mr. Ennis?—Yes; certainly.

13388. And to associate yourself with him in the desire he expresses that the minority should receive their proper share of representation in any such body?—I think the majority is bound to rule in Ireland as in all other countries, but I believe, and have

Mar. 18, 1907.

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

said, and have always acted up to it, that minorities have their rights and ought to be represented. I was in a minority myself when I was a Parnellite.

13389. I don't want to go into that?—I merely mention it to show that minorities are sometimes right and convert majorities.

13390. The people you represent are in a majority, and as long as the existing state of affairs prevails must be in a majority, but the minority are at present absolutely unrepresented—you admit that?—No, I don't.

The rights of the minority in Ireland to full representation admitted and recommended.

13391. Pretty nearly so?—I think it would be a very unfortunate thing for this country if the minority were not represented on any such Council, and I hope the time is coming when Irishmen of all creeds and classes and sects will unite for the common good of the common country, even though on some points we may differ.

13392. Certainly, we can all agree to differ?—Yes; we want more toleration. I have often expressed that opinion.

Examined by Sir Herbert Jekyll.

Transference of the existing powers of the Board of Trade re settlement of disputes between traders and railway companies in Ireland to the Board of Agriculture suggested.

13393. You alluded in your evidence to the insufficiency of the powers conferred by Parliament on the Board of Agriculture, and you favour the strengthening of those powers by statute?—I think it would be a useful thing; if there is really a necessity for it why should further time be allowed to elapse before making such amendments.

13394. I am assuming the continuance of something like the present state of things; you are aware of the powers conferred on the Board of Trade for the purpose of affecting amicable settlements between traders?—Yes.

13395. You may also be aware that they are made use of largely in England, although so far they do not appear to have been used much in Ireland. Would you be in favour of the powers now exercised by the Board of Trade being transferred to the Board of Agriculture in respect of Irish complaints?—Yes, temporarily.

13396. You think that that would have a good effect?—Certainly, a temporary effect. I have often brought it up before my Association, but Irishmen, as you can understand, don't want to go before an English body if they can avoid it, but it is a very good suggestion, and I hope, if necessary, it will be carried out.

Cross-examined by Mr. Fitzgibbon, K.C.

Ownership of the Irish canals discussed.

13397. In your proof you say that the canals of Ireland have been purchased by the railway companies to secure their own monopoly?—Most of them.

13398. Will you mention any canal besides the Royal Canal that has been purchased or grabbed?—I don't know.

13399. Do you know how many canals there are in Ireland?—I could not tell you.

13400. There are fifteen canals and the Royal is the only one that has been taken?—How many out of the fifteen are pooled by the railway companies?

13401. You said "purchased to secure a monopoly." The Royal Canal is the only one. You state in your proof that the English companies rule the Irish railway companies in the management of their affairs; are they not governed by two cattle conferences in the South of Ireland?—How can I tell. I am a member of the Transit committee. Surely you don't imagine that I have come here to give you tips as to how things are to be carried on.

13402. We know that you are in communication with the cattle conferences?—I have spoken of the monopoly of the railways. They are all clever men and keep it to themselves.

The proportion of miles of State owned to private owned lines discussed generally.

13403. You have also stated that the United Kingdom, Canada, and the United States are the only places in which the State don't own the railways?—Or control them.

13404. Have you any idea of what their respective mileages are?—I have some. What do you want to know about them?

13405. *Chairman.*—Our practice, Mr. Fitzgibbon, has been for counsel only to ask questions as to particular points against particular railways and not general questions.

Witness.—I have no objection to answer Mr. Fitzgibbon. From my pamphlet, "Irish Railways and Railway Monopolies" I will give you a few figures. In Victoria the State-owned railways have 3,122 miles; of privately owned railways there are none. In New South Wales the State-owned railways have 2,139 miles; the private railways, 84. In New Zealand there are 2,018 miles of State-owned railways, and of private-owned railways 167 miles. In Queensland there are 2,430 miles of State-owned railways, and of private railways none. In India there are 5,095 miles of State-owned railways, and of private railways 1,238 miles, and I understand that since then the Indian Government has acquired the control of more railways. I exclude those that belong to native States. In Cape Colony there are 2,153 miles of railway, State-owned, and 254 miles privately. Now, if you want any more figures I will give them to you for all over the world.

13406. *Mr. Fitzgibbon, K.C.*—I don't think you have met my question. You were not dealing in your proof with the Colonies at all, and you refer to Spain, Turkey, and the United States as the only countries where they are not controlled?—Yes.

13407. You do not include the Argentine Republic with its enormous system of railways, and France with a greater mileage than Great Britain?—France is controlled, to a certain extent.

13408. Then there are 202,000 miles of railway in the United States?—That is the worst example that you could give us. She is in hell over her railway properties at the present time. Surely, if you were a prudent man, you would not mention the United States; when a man like Mr. Harman boasted that he made £3,000,000 in connection with a deal in the United States. And the Mexican people are going to take in their railways now. A gentleman sent me a paper from New York the other day. Mexico with 11,000 miles of railway, of which about 7,000 has been nationalised.

13409. You charge as a subject of extravagance against the railways the number of workshops, and suggest that amalgamation would reduce the number of workshops to one?—One or two certainly.

13410. Large establishments. You are aware that, when the Great Southern and Western Railway Company were carrying out their amalgamation, the representatives of the Irish people insisted on a clause being put in to the effect that all the old workshops were to be carried on notwithstanding the amalgamation?—Yes, that is so. I do not propose to close up any workshop at all, but to keep them going, to do the work at home, and do not be exporting it across the Channel.

13411. Then you could not carry out the suggestion of having one instead of a number?—One or two, but you do not do the work here, a great deal of it, that is the worst of it.

13412. You state that the Great Northern Railway ought to build, at Balbriggan, a cattle bank at the northern end instead of at the south end of the station?—Yes.

13413. Are you aware that, if that suggestion were adopted, it would require the removal of the signal cabin and a change of the whole arrangements at the station?—Yes, certainly; but surely, if it would, the railway companies are bound to a certain extent to meet the wishes of their customers. The railway companies in Ireland are the only bodies that defy their customers. The customers have to please the railways.

13414. You say that they do not comply with the requirements of their customers. Have you any idea of what the amount of the cattle traffic is there at Balbriggan?—It is not a very large station, I quite agree. I know the place very well. I went down and saw it. I blocked the Bill.

13415. *Colonel Hutcheson Poë.*—Can you give us the figures at all?

Mr. Fitzgibbon, K.C.—Yes.

Chairman.—The witness has admitted that the traffic is very small.

Witness.—Certainly.

13416. *Mr. Fitzgibbon, K.C.*—You also state that the raiway companies, as at present managad, have a shortage of wagons in consequence of not having a supply. Do you state that the railway companies do not lend wagons to each other in emergencies?—No, but I do know as a matter of fact, and I will

get our secretary to come here and prove it, that in a good many instances wagons could not be supplied at fairs; and I think, if the Irish railway companies were abolished as at present and put into one unified system, these wagons would be available when wanted. You know that as well as I do.

13417. You also state that a large saving could be effected by the abolition of agents or drummers. As a matter of fact, do the Irish railway companies employ drummers or canvassers at all. Are they not employed by the English railway companies canvassing for the through traffic?—That is so to a large extent, but I am sure that the Irish railway companies must have some hand in it. As a matter of fact, I know some of the men canvassing at Smithfield.

13418. Was not that for the English through traffic?—Certainly, but when they go to the various fairs, it is not for the through traffic.

13419. You also state that you had an objection to the live stock consignment note?—Most decidedly.

13420. Are you aware that there is no owner's risk rate for the locally consigned traffic in Ireland?—I said so. You need not pick me up until I fall down. I explained that to the Chairman.

13421. Also you give a list of a number of free grants to Irish railway companies prior to the recent ones?—I did not give you a list.

13422. You stated the figures?—I did not give you the list. The Secretary of the Treasury gave you the list. The official document is there.

13423. Are you aware that a large quantity of these loans have been repaid?—Possibly, but I did not give you the list. Well now, sir, may I say, as this gentleman has been cross-examining me—and I think that the witness that cannot bear cross-examination is no good—but may I point out that I got this the other day from the Irish County Councils General Council. It is a resolution passed by the County Wexford County Council:—

Mar. 13, 1907.

Mr. William Field, M.P., Member of Dublin County Council and Blackrock Urban District Council, etc.

"That this Council desires to call attention to the intolerable position created for Irish County Councils generally by defects in the Local Government (Ireland) Act, 1898, whereby County Councils, entrusted by that Act with the charge of important interests, now find themselves debarred from giving effective protection to those interests, eminent counsel having advised that neither the Irish County Councils General Council nor any County Councils, or a number of County Councils can apply their funds towards the cost of appearing by counsel before the Viceregal Commission on Irish railways, now sitting, before which Commission the associated railway companies of Ireland have been permitted to appear by counsel.

Resolution of Wexford County Council protesting against being debarred from availing of legal assistance when appearing before the Commission. (See Appendix No. 18–XX, Vol. I.)

"That we consider the fact that the directors of the Irish railway company are assisted by counsel at the expense of the shareholders, whilst the County Councils of Ireland are debarred under the existing law from availing of legal assistance, will not conduce to an impartial consideration of the question of Irish railways.

"That copies of this resolution be forwarded to the Prime Minister, the Chief Secretary for Ireland, the leaders of the Irish Parliamentary Party and Irish Unionist Party, Viceregal Commission on Irish railways, and the General Council of County Councils."

I do not want to shelter myself behind that. I am ready for any cross-examination.

Mr. Fitzgibbon, K.C.—I do not think that a body that is represented by Mr Field requires the assistance of counsel.

Chairman.—The Commission consider that you have prepared your proof with exceedingly great care and the information it contains is very valuable, and we are exceedingly obliged to you.

Witness.—I am very much obliged to you for the courteous manner in which you have treated me.

Mr. J. Dolan examined by The Chairman.

13424. Do you appear before us on behalf of the Ardee Town Commissioners?—Yes.

13425. Are you a Commissioner?—Yes.

13426. You also represent the trading interest of your town?—Yes. I am a shopkeeper there.

13427. And also the farming interest?—Yes, in the neighbourhood.

13428. Where is your district situated?—In the County Louth, midway between Dundalk and Drogheda.

13429. The Great Northern Railway have a branch line to Ardee from the main line?—Yes, three miles long.

13430. Now are you satisfied with the railway facilities and rates offered in your district by the Great Northern Railway?—We have no grievance in the matter of the rates except the general grievance of any other trading community, I mean, as far as our own district is concerned, we are as well provided as they, except where there is a keener competition. Dundalk has a competition, a sea competition, and they get more advantageous terms, but otherwise our rates are the same as any other equi-distant place. But we see how the high rates hamper some local industries.

13431. That is the point to which I wish to direct your attention. Mention any particular small industry in your district that is retarded in consequence of the action of the railway company?—Not in our own county. But my own experience as a shopkeeper is, the proportionately high rate of getting goods from manufacturers in Ireland operates against them. From any place south of Dublin the carriage is considerable, and makes it rather hard to supply those goods in comparison with the rate for goods that come across the Channel.

13432. You, as a trader, would like to have the rates reduced?—Yes.

13433. You make no complaint *per se* that the rates are themselves excessive?—Not in comparison with the general rates in Ireland. I do not say that the rates to our town or from it are higher, but the general rate hampers industries to that extent.

13434. Have you not some complaints?—We have a local complaint.

Mr. J. Dolan, representing the Ardee Town Commissioners.

13435. With reference to the Great Northern Railway Company fostering Belfast as against other ports?—Yes, Dundalk and Drogheda. I have put the thing here in writing:—

Gt. Northern Railway Company charged with favouring Belfast Port as against Dundalk and Drogheda: example.

"The Great Northern Company assist Belfast Shipping Companies and divert all the Louth and Meath traffic they can to Belfast, that might naturally go to Dundalk and Drogheda Steam Shipping Companies."

13436. How is that a grievance to you?—It is a grievance to our county, not to the town.

13437. A grievance to the district?—A grievance to Dundalk and Drogheda, as the companies lose that amount of trade, and these towns lose that much recourse of business.

13438. How many steamers are there in the week from Drogheda?—I think there are three, and from Dundalk there are four services a week between Liverpool and Glasgow.

13439. And in Belfast there is a daily service?—Yes.

13440. Is not that the reason for the preference?—That is a point. But the rates are made so advantageous to Belfast that they come to something under the rates by Drogheda and Dundalk.

13441. Give us an instance of that?—The rate for a wagon of cattle from Ardee to Glasgow by Belfast is 53*s.* 6*d.* With nine beasts to the wagon, that is equal to 6*s.* a head. The rate from Ardee to Glasgow by Drogheda or Dundalk is 6*s.* 9*d.*—by Dundalk certainly. I cannot be accurate as to Drogheda, but I am told that it corresponds generally. Therefore you have the rate by Dundalk 6*s.* 9*d.*, whereas from Ardee to Glasgow by Belfast it is only 6*s.* a head.

Cattle rate Ardee to Glasgow.

13442. But Belfast seems to me the natural route to Glasgow?—There is direct steam service between Dundalk and Glasgow.

13443. Direct?—Yes.

13444. How often are the sailings?—Once a week. It sails for the cattle market, which is generally caught by the dealers in our district.

Steamship sailings, Dundalk and Glasgow, for cattle traffic.

13445. It goes direct from Dundalk to Glasgow?—Yes.

Mar. 13, 1907.

Mr. J. Dolan, representing the Ardee Town Commissioners.

13446. And the whole rate is by sea?—Yes.

13447. What have the railway company got to do with it then?—They make their land rate from Ardee. From Ardee to Belfast the rate is 4*s.* 4*d.* a head, and from Ardee to Dundalk is 1*s.* 5*d.* a head.

Cattle rates, Ardee to Belfast and Ardee to Dundalk, quoted

13448. Give the land rate?—From Ardee to Belfast the land rate is 4*s.* 4*d.* a head by train; from Ardee to Dundalk it is 1*s.* 5*d.* a head.

13449. And why do not the cattle go by Dundalk?—Because although the rate from Ardee to Belfast is 4*s.* 4*d.*, for an extra 1*s.* 8*d.* they can bring them to Glasgow, and the railway company I suppose has the advantage.

13450. But they seem to be laying it on there?—5*s.* 4*d.* is the charge on the other way, and the presumption is that the railway company gets more by Belfast.

13451. I do not think that the Great Northern Company have any interest in the Dundalk steamers to Glasgow?—No; none whatever, but our complaint is that they favour the Belfast steamers to the extent of injuring the Dundalk and Drogheda steamers by cutting their own rates, making their land rates so low that the through rates they are able to arrange with the Belfast boats are so moderate that it diverts that traffic by Belfast instead of letting Drogheda and Dundalk get their share of it.

13452. I do not see the particular grievance you have?—The trade of the town suffers and the local companies suffer.

13453. *Colonel Hutcheson Poë.*—From Ardee to Belfast, what is the distance?—About seventy-two miles. And from Dundalk to Ardee about fifteen miles by rail.

Complaint that privilege of cheap excursion fares from country stations on Gt. N. Ry. to Belfast not extended to Dublin.

13454. *Chairman.*—What is your next point?—This is a small one, that the company assists Belfast trade to the detriment of Dublin by giving cheap excursion fares to Belfast (*reading*)—"The Great Northern Railway Company assists Belfast trade to the detriment of Dublin by giving cheap excursion fares to Belfast by ordinary trains on a specified day of each week from the towns along the line except those south of Dundalk, including towns 100 miles from Belfast, while there is no such equivalent to Dublin except the daily single fares by afternoon trains from stations a distance of fifty miles from Dublin, and an occasional excursion at irregular intervals from the other stations."

13455. Have you represented that to the railway company?—Our town did not because we are concerned directly, but I understand that representations were made from towns that thought they had a grievance in the matter—the towns that border on our county which are nearer to Dublin.

13456. I thought you would be prepared here to show what the railway companies had stated?—No, I can not.

13457. The North-Western Company have a branch line from Greenore to Dundalk?—Yes; that is a purely London and North-Western line.

Pooling agreement between the L. & N.W. Ry. Co. and the L. & Y. Ry. Co. as regards receipts from cross channel traffic *via* Greenore and *via* Drogheda alleged and complained of.

13458. What is the complaint about that?—"It is a matter of common knowledge that this English railway company and the Lancashire and Yorkshire Railway which owns the steampacket service from Drogheda, have pooled their Irish trade, and thus may succeed in getting complete control of the seaport trade of these countries and of strangling local shipping enterprise which is in itself an important industry and by thus killing competition, have the exporters of Drogheda and Dundalk and of the neighbouring county entirely at their mercy.

13459. Was not the Drogheda Steamship Company independent?—Yes, until the Lancashire and Yorkshire Company bought it up.

13460. Compulsorily?—No.

13461. Do you object to that?—I objected to it on national grounds, but the shareholders did it of their own act. But that goes to create a monopoly for these two railway companies.

13462. How do you know that these two have an agreement?—That is public knowledge.

13463. But public knowledge is sometimes wrong?—That is a matter of universal statement. It was stated six months ago.

13464. It was nothing but rumour?—I think the cattle dealers seem to have got some definite information upon it more than mere rumour.

13465. Now, as to this Drogheda business; do you suggest that the Lancashire and Yorkshire Company since they took over the steamers have a less service than before?—They were about curtailing it, and there was a good deal of noise made about it, and I think the question is unsettled still. I am not very clear upon that point. I can only give it as an illustration of traffic becoming a monopoly.

13466. But a monopoly may be good in same cases?—Not to a locality.

13467. What harm has the acquisition of these steamers by the Lancashire and Yorkshire Company done to Drogheda?—If it was the cause of curtailing the shipping at Drogheda it would be an injury to the trade.

13468. But it is there still?—I mean the shipping trade. If they by a combination with the London and North-Western Railway Company at Greenore, by pooling their traffic became thereby indifferent as to which route the traffic went by, they might then be able, with equal profit to themselves, to curtail it.

13469. Do you know that they pool it?—It is a matter of universal report. It is universally known.

13470. What special grievance have the ratepayers in your district against the Great Northern?—I will read what I have here—"The ratepayers of the Ardee district have a special grievance against the Great Northern Railway Company which I am sent to ask attention for. The Ardee branch line was made by the Great Northern Railway Company on receiving a guarantee, on the rates, of the district, of 2½ per cent. on £32,000, or £800 a year. The Ardee branch line is a very important feeder to the main line. It brings to the main line many thousands of cattle from Ardee and from fairs in County Meath—Drumconrath, Nobber, and Kingscourt."

13471. How do they get from these places?—They are driven from these places to Ardee Station, and "from the home sales of cattle feeders in this district, which would be otherwise walked to Dundalk or Drogheda Steamship Companies, or be trained by the Midland Railway line from Nobber and Kingscourt, and on which the Great Northern Railway would thus have no earning. But for all this the Ardee line gets no credit whatever in reckoning its earnings."

13472. Now this is a complaint from the district that the line is not credited with what is brings in by feeding the main line?—Yes, that it is only credited with its own receipts and not with the extra traffic brought to the main line.

13473. Why should it?—Because it has brought that large extra traffic to it and it should get credit for portion of the increased earning of the main line because the main line would not have got any of that but for the Ardee line.

13474. That is an addition?—Yes; that is an established fact, because it is well known that before the line was made the cattle, goods, and passengers traffic went otherwise, and they did not go by the main line.

13575. They might have walked to Drogheda?—Yes, and got the boats there or walked to Dundalk and got the train there for Belfast.

13476. But in that case the railway company got the rate?—If they did, if the cattle went by train to Belfast after being walked to Dundalk, the railway company did not get the journey between the main line junction and Dundalk, but of course that is a small part. But, from the fairs in County Meath, the cattle, previous to the making of the Ardee line, were sent by the Midland Railway and the Great Northern did not get them at all.

13477. I suppose that this is a bargain on the contribution made at the time?—Yes.

13478. And all the terms were set forth?—They are all in the Bill.

Mr. Fitzgibbon, K.C.—They are in the Act of Parliament.

13479. *Chairman.*—You are raising a point now that ought to have been raised before the Committee in the House of Commons?—They did not understand it at the time. The people of Louth and the Boards of Guardians and the Associated Boards all assented to the Act of Parliament.

Mr. Fitzgibbon, K.C.—Section 18, sub-section 3 of the Act of 55 and 56 Victoria, Chap. 102, says—"The Great Northern Railway Company, for the purpose of ascertaining what sums of money."

Chairman.—There is a clause as to the receipts accruing to the short line.

Mr. Fitzgibbon, K.C. (*reading*)—"There shall be credited to the said account the gross earnings of the company from the Ardee Branch."

Mr. J. Dolan, representing the Ardee Town Commissioners.

13480. *Chairman.*—You do not contend that they have not done that?—No, but it should be interpreted to mean a proportion of the profits brought to the main line.

13481. It is the gross earnings of the line that are to be credited to the line, and this witness is contending that the gross earning should mean the profit derived from the Great Northern Railway.

Mr. Fitzgibbon, K.C.—The State appoints an arbitrator if that was their contention, the arbitrator is appointed and they can get him to say what the gross earnings are.

13482. *Chairman.*—Are you aware of that?—The question was raised by the Grand Jury, and since by the County Council. This is an argument for the nationalisation or unification of the lines.

Mr. Fitzgibbon, K.C.—It is an old complaint.

Witness.—It is in reference to this that my evidence chiefly deals. I have tried to set out here what is the increased traffic that is brought to the main line, for instance, coals from Dundalk, which was the natural source, amounted to 6,000 tons a year, and there is the corn traffic to Drogheda. These are all great additions to the traffic of the main line.

13483. *Chairman.*—Now go to the management of the Great Northern Railway. You will state that you have no particular grievance against the management of the railway?—No; not locally. We cannot say that our district is not as well served as others. We complain of the general rates that prevail, but not for Ardee particularly. But there is one head of complaint that we make in reference to the train service; there is no connection with towns north of Dundalk till one o'clock. We asked the railway company about that and they said it was not possible to arrange it; it is a matter of inconvenience to people attending our town from time to time. It is pointed out to them that an alteration of trains could easily be made to remedy that, but they did not see their way to alter it.

13484. Have you anything to say about through rates to English goods?—Yes; we consider that they are one of the things in which the Irish railway systems are deficient, in allowing through rates to be made so as to have a prejudicial influence on Irish industries. We understand that these through rates are fixed at a general conference of the English and Irish railway companies, and as the English predominate in the voting at the conference the through rates are of course made in their interests.

13485. Do you say that they are made too low?—Yes, so as to assist the English.

13486. But surely that is in the interests of the consumer and the public in Ireland?—Yes, it may be in the interests of the consumer, but the consumers' interest would eventually be better served the other way.

13487. Do you suggest that the rate should be advanced?—That the through rates should not be so favourable to English importers and not so unfavourable to the Irish manufacturers.

13488. But nine-tenths of the traffic in manufactured articles is not produced in Ireland at all?—Yes.

13489. And therefore the lower the rate the better?—Except that the allowance of these rates makes it almost impossible to attempt to manufacture at home. It is not an inducement to begin to manufacture here in Ireland.

13490. Have you or the parties you represent considered the question of the nationalisation of the railway?—Yes; they are in favour of the nationalisation.

13491. Is that the opinion of your district?—Yes, on our County Board and on the Town Commissioner's Board.

13492. It would be an advantage to Ireland if the whole of the railways were the property of the State?—Yes, if the State were an Irish authority, not an Imperial authority.

13493. You object to English money?—Not to English money, but to English management and control.

13494. You mean that the control should be in Ireland?—Yes, if there was a National authority established in Ireland.

13495. Have the Council passed any resolutions on the subject in your district?—No; it only gave a general expression of opinion. Our Board is a small one.

13496. Did you hear Mr. Field's statement?—Yes.

Mr. Field's (previous witness) views on nationalisation approved of.

13497. Do you agree with his views?—Yes, generally. I am not so acquainted with the subject as he is and cannot go into the details, but in the general opinion I agree.

Examined by Colonel Hutcheson Poë.

Population of Ardee.

13498. What is the population of Ardee?—2,000—strictly 1.885.

Constitution of the Board of Town Commissioners.

13499. What does your Board of Town Commissioners consist of?—Nine members.

Question of the purchase of the Drogheda Steam Packet Co. by the L. & Y. Ry. Co.

13500. You spoke of the Lancashire and Yorkshire Railway Company buying up the Drogheda Steampacket Company?—A line between Drogheda and Liverpool.

13501. While that line of steamers was running did you have better rates than you have at present?—No, I do not think it affected the rates. As a matter of fact the connection with Drogheda for import trade is not much; the import trade is through Dundalk.

13502. Wasn't there a coasting line of steamers?—There was for a very short time some years ago. It pulled down the Great Northern rates and affected Dundalk and Drogheda more.

Cattle rates from Ardee to Belfast, Dundalk, and Glasgow discussed.

13503. With regard to the rates from Ardee—4*s.* 4*d.* a head for seventy miles to Belfast, which is, roughly speaking, ¾*d.* a mile, and 1*s.* 5*d.* from Ardee to Dundalk, which works out at 1*d.* a mile. When you come to consider the distance 4*s.* 4*d.* is not an unfair proportion to charge?—No, certainly not. I only gave the figures to illustrate that while the carriage to Belfast is 4*s.* 4*d.* the carriage to Glasgow is only 6*s.* There is a large difference between the carriage by ship from Belfast to Glasgow, and that from Dundalk to Glasgow, and that is to the damage of the Dundalk and Drogheda boats.

13504. Unless you can say what proportion of that through rate went to the shipping company you can't argue the point one way or the other?—No.

Ardee Branch guarantors' grievances.

13505. The only other point is as to the guarantee; have you frequently been called on?—We have always been called on to pay up.

13506. When the receipts exceed the expenditure you pay nothing?—No, but it has almost always been called up in full.

13507. You say the full rate is £800 a year?—Yes. In one year it was only £755.

13508. In this last year you say only £470?—Yes, but that is independent of the interest on the capital. It was a deficit of £470 on the working expenditure. We had to pay the £800, and the railroad had only a credit of £1,900 on the three miles of line that are made.

13509. You gave an instance of 6,000 tons of coal, and you say 2*s.* 6*d.* a ton. Of that 2*s.* 6*d.* Ardee gets 6*d.* and the Great Northern gets 2*s.* If you put it into money, the 6,000 tons represents £750. At 6*d.* Ardee gets £150, and at 2*s.* Dundalk gets £600. That stands as, in one case, one-fifth, and in the case of the other the proportion is four-fifths, so you are getting your proper proportion?—We do not deny that we are getting a proper proportion.

13510. *Chairman.*—His point is that this is a new traffic, and that the Great Northern should give them a bonus?—Yes, and another thing that increases the cost of our line is the junction station they made against our wishes and recommendation.

13511. You have just said that the railway company loses £450 a year?—Yes; that is what their last statement was.

13512. Then how can you expect them to give a bonus?—No, but I am sure that they have earned a good deal more than £450. I am sure that account is true, but it does not show the profits of the increased traffic. The profits would be very much more than the £400 they have lost on our line.

Mar. 13, 190 .

Mr. A. Weir, Managing Director Convoy Woollen Company, Limited, Donegal.

Mr. Alexander Weir examined by the Chairman.

13513. Mr. Alexander Weir, you are managing director of the Convoy Woollen Company, Limited, in the county of Donegal?—Yes.

13514. Where is your factory situated?—At Convoy.

13515. Have you a station there?—Not at present. There is a new railway being made from Strabane to Letterkenny

13516. You make what is called Donegal tweed?—We don't make "homespuns." We make powerloom Donegals in order not to palm them off as "handspuns."' We always call them Donegal Tweeds.

13517. What is your nearest station?—Our nearest station on the main line is Strabane.

13518. How far are you from it?—Eight Irish miles—about ten English.

13519. Everything you make at Convoy has to be carted to that railway station if it goes by rail?—Mostly; but we cart through to Londonderry also.

13520. How far is that?—About twenty English miles.

13521. As to wool, coal, and other things, are they all carted from the railway station?—The wool comes from Londonderry mostly, and has to be carted from Londonderry to Convoy at 10*s.* per ton for cartage.

13522. Have you had any particular experience with regard to railway rates, and any particular complaints to make with regard to them?—I have one or two complaints.

13523. So far as they affect your business?—Yes; I have no authority to speak for anyone but ourselves.

13524. Just give us one instance?—Through rates from Strabane, County Tyrone, to southern towns I consider very excessive and detrimental to the development of our trade. In support of this—for woollen goods, Class 3, I give the following examples.

Through rates from Strabane Station to southern towns considered excessive compared with rates from Ireland to English and Scotch stations.

13525. Give us two examples?—From Strabane to Cork the rate is 64*s.* 1*d.* per ton from station to station. From Strabane to Limerick the rate is 50*s.* 11*d.*

13526. What do you say about those rates, do you say they are reasonable?—I say I consider them very excessive. Much cheaper rates can be had to English towns, where goods are carried longer distances—namely, Londonderry to London, 46*s.* 8*d.* per ton; Londonderry to Leicester, 40*s.* 10*d.*; Londonderry to Leeds, 35*s.* 10*d.*; Londonderry to Birmingham, 40*s.* 10*d.*

13527. Very well: now you say these goods going to England are carried at a much cheaper mileage rate than when sent over Irish railways?—Yes, goods going to England and to Scotland.

13528. Can you tell me the distance from Strabane to Cork?—Roughly, 300 miles.

13529. And from Strabane to Limerick?—I don't know that.

Mr. Fitzgibbon, K.C.—It is 242 miles.

13530. *Chairman.*—From Londonderry to Leeds, do you know the distance?—No, I don't.

13531. Do you know which way the traffic goes?—It goes either by Heysham, Fleetwood, or Liverpool.

13532. Through Belfast?—No, by direct steamer from Londonderry to Heysham, Fleetwood, or Liverpool.

Mr. Fitzgibbon, K.C.—There is a service from Derry to Heysham. It is a recent service.

13533. *Chairman.*—Of course to Scotland. I see you have much lower rates; gives us two of these?—From Londonderry to Glasgow 25*s.* per ton.

13534. That is by steamer?—Yes, by steamer direct from Londonderry. Londonderry to Edinburgh 33*s.* 4*d.*; to Dundee 41*s.* 8*d.*

13535. Those are on a much lower basis than the rates to inland towns in Ireland?—That is my complaint.

Suggested placing of obligation of refunding voluntarily all cartage charges when included in rates but service not performed by the railway companies.

13536. And those rates you gave us to Cork and Limerick—do they include collection and delivery?—No, from station to station.

13537. What do you say about delivery and cartage rates?—Perhaps I ought to say that the railway companies have arranged a number of through rates for us, but we think they might do a lot more. About cartage, I say some of the railway rates include an amount for cartage, and some rates are "station to station," and in the latter no cartage is included. In many instances where the rates include cartage the companies don't perform the cartage service at all. In these instances the trouble of claiming the rebate falls on the trader. I consider the company should be called upon to render an account of these overcharges, and not the trader, for the reason that no company should be allowed to charge for a service they do not perform.

13538. Yes; I follow your contention?—We have been fighting to get that for about twenty years and we haven't succeeded yet.

13539. Has the factory been in operation for twenty-years?—Since 1883.

13540. Has it been successful?—Yes, in a small way.

13541. It appears to me you cart your stuff to Londonderry or to Strabane. Do the rates include collection and delivery on the Great Northern, or are they from station to station. We had evidence here that all the class rates on the Great Northern include collection and delivery?—Some of the through rates are station to station and some include cartage and delivery.

13542. Where do you say an account should be rendered for services not performed. Either this is a grievance or it is not?—We do claim it, and we get it refunded every month by the railway companies.

13543. You do get it refunded?—Regularly and constantly.

13544. It is a traffic that comes in from various places to Strabane, and you send your own cart and cart it to your works?—Yes, and also the other way.

13545. You cart your own goods to the station and you claim cartage for that?—Yes.

13546. And you get it?—Yes, but why should they overcharge in the first instance?

13547. Have you asked them to make a station to station rate?—We have, and in a great many instances they have done it, but not in all.

13548. They can't make special arrangements for your firm simply because you do your own cartage?—But when they charge us for what they don't perform, when they make up the rebate they should refund it to us.

13549. You think the company should render an account?—Yes. What happens with the people who don't take the trouble to render an account is, they don't get anything.

13550. *Colonel Hutcheson Poë.*—You get it all right?—Yes, we do.

13551. *Chairman.*—You have a lot of small consignments?—Yes, we have.

13552. Under 3 cwt.?—"Consignments under 3 cwt." A considerable portion of our trade is for consignments under 3 cwt. I submit that the ton rates should be made applicable to all parcels of a cwt. upwards. Under present conditions a piece of tweed is not always ready to be forwarded with the bulk of the order, and the extra rate has to be paid on the balance. The rates for parcels under 3 cwt. are from 20 to 33⅓ per cent. higher than the ton rates.

13553. Do you know what the small parcel scale is in England. Do you know if it is the same as in Ireland?—I don't know. I think perhaps it is. Here is a scale that we have (*document handed in*).

13554. That is the same, but it only says "Scotch and Irish railways." I see it is a London and North-Western scale. Yes, it is the same scale in England, Scotland and Ireland. You don't want preferential rates?—Well, I understand that some railways when they deal with several parcels sent at different dates to the same consignee, do not take them as separate items, but put them together.

13555. That is a trick of the trade I am not acquainted with. In this particular small parcel scale you admit that the rates are the same in England, Scotland and Ireland?—I don't know.

13556. Well, here it is on the list you have handed me?—Then I would like it altered in England, Scotland and Ireland.

13557. You would like to see that "3 cwt." altered to "1 cwt.?—Yes.

13558. What are the rates for short distances?—These I consider far too high. From Londonderry to St. Johnston on the Great Northern, a distance of 7 or 8 English miles, the rates are Class 2, wool, 7*s.* per ton, or about 1*s.* per ton per mile.

13559. Never mind the mile for the minute; give us the woollen goods?—Class 3, woollen goods, 7*s.* 9*d.* per ton.

13560. 7*s.* per ton for 7 or 8 miles. Do these rates include collection and delivery?

Mr. Fitzgibbon, K.C.—It is a collection and delivery rate.

13561. *Chairman (to Witness).*—Take the woollen goods?—Woollen goods, 7*s.* 9*d.*

13562. You talk about a shilling a mile—what do you get for cartage at your end?—We cart right through from Derry; we cannot afford to pay that rate.

13563. Supposing you were taking goods to Derry to send to Limerick, what cartage allowance would you get?—We get 10*d.* per ton.

13564. What cartage do you claim from the Great Northern when your delivery goes out at collection and delivery rate at Londonderry?—We claim 10*d.* a ton.

13565. For everything?—If it comes in at St. Johnston it would have to come across Londonderry, and the Great Northern would perform the cartage at Londonderry, so that we would only get the one 10*d.* at St. Johnston. We take the goods at St. Johnston, and bring them on to Convoy.

13566. If you deduct the cartage and terminal service at each end it would bring the mileage down to 2*d.* to 3*d.*?—That would leave 7*d.* per mile.

Mr. Fitzgibbon, K.C.—The terminals amount to 3*s.*, including 1*s.* 8*d.* for cartage, and that brings it down to 3*d.* a mile.

13567. *Chairman (to Witness).*—You see that when you deduct cartage and terminals it reduces the rate per mile to about 3*d.* instead of a shilling?

Witness.—3*s.* off 7*s.* 9*d.* = 4*s.* 9*d.* or 7*d.* per mile for eight miles. In that connection I will read on what I have down. What we were at was, woollen goods, 7*s.* 9*d.* per ton from Derry to St. Johnston. Add to the railway rate of 7*s.* the cartage from St. Johnston Station to Convoy, which we perform, 7*s.* per ton, and the total is 14*s.* The direct cartage, all the way from Derry to Convoy, as done by ourselves, is 10*s.* a ton. Our firm, therefore, saves 4*s.* per ton by carting right through, instead of having the consignments sent by railway to St. Johnston.

13568. You cart instead of using the railway?—Yes, but it seems an enormous sum for such a short distance.

13569. But it includes the 10*d.* at each end—that is 1*s.* 8*d.*?—Granting all that the balance is still very large.

13570. It comes down to 3*d.* a ton per mile; you can't cart for 3*d.* a mile in Dublin?—It comes down to 7*d.* a ton per mile, not 3*d.* By carting the whole way we save 4*s.* a ton.

13571. I would cart it all the way if I were you?—That is what we are doing.

13572. You don't contend that the railway company should carry it for nothing?—No; but I contend that it is a very serious charge for such a short distance.

13573. Taking into consideration the collection, delivery, and terminal services I don't think it is; if it were a station to station rate it would be excessive. I understand you to admit that the railway company have arranged several through rates for your firm with which you are practically satisfied?—I think they all might be——

13574. All might be reduced—is that it?—Yes.

13575. Now, you are not in favour of the State purchase of railways?—That is such a complex and complicated question that I havn't thought it out.

13576. Very well; I won't ask you about it. Do you think there would be any advantage in the amalgamation of the light or small railways amongst the bigger ones?—Yes, I think it could be arranged—the larger railways taking up the smaller railways. It would facilitate through rates and also tend to make better time table arrangements for the passenger traffic.

13577. That is to say, it would give greater facilities for through rates and better facilities for the passengers?—I think so.

13578. Beyond that you are not prepared to go?—No; I havn't thought it out.

Examined by Colonel Hutcheson Poë.

13579. You consider that the through rates from Strabane to the inland towns of Ireland compare very unfavourably with the through rates to the English towns?—Yes.

13580. Londonderry to London—isn't that altogether a sea route?—*Via* Heysham.

13581. And then the whole way by railway to London?—That is my contention.

13582. Are you sure of that?—There are plenty of gentlemen to contradict me if I am wrong.

13583. And the routes to Birmingham, Huddersfield, and Manchester—they are all by Holyhead and Heysham?—By Heysham from Londonderry.

13584. In the case of the Scotch towns—Glasgow, Perth, Peebles, and Dundee—there is sea competition?—But take the distance to Aberdeen from where we are—51*s.* 8*d.* per ton.

13585. By what route?—Londonderry to Glasgow, and a long railway journey to Aberdeen.

13586. I suppose the Scotch railways carry at lower rates in consequence of the possibility of the traffic going to Glasgow by sea?—Well, I understand that whatever the rates are the one rate applies the reverse way. I understand that the rate from Strabane to Aberdeen is the same as the rate from Aberdeen to Strabane.

13587. You don't get anything back again, and so you are not in a position to say whether the rate back is higher or not?—No, I cannot state. It would give the result that woollen goods from England and Scotland can come in here cheaper than we can send goods to various parts of our own country.

13588. I don't think that follows from anything you have put down in your memorandum. Do I understand you to say that the terminals from Londonderry to St. Johnston are 1*s.* 6*d.* at each end?—At each end.

13589. Isn't that a very high terminal charge?

Chairman.—There is loading and unloading and station accommodation.

Mr. Fitzgibbon, K.C.—The total is 3*s.* 1*s.* 8*d.* for cartage.

13590. *Colonel Hutcheson Poë.*—You say that you take all your traffic by road from Derry to Convoy, and that the railway company don't try to meet you by lowering their rates to induce you to send your traffic by rail?—No. It is merely a commercial question.

13591. It seems extraordinary to me that at present you have to send all your traffic by road?—Yes, except any that goes to Strabane for Belfast, &c.

13592. And that none of it goes by rail over those two points?—Yes, none of it.

13593. *Chairman.*—You cart a considerable amount from Derry to Convoy?—Yes—large quantities.

13594. *Colonel Hutcheson Poë.*—And yet the railway company don't think it worth their while to give you a rate to correspond with your cartage rate?—That is the natural conclusion. That is our complaint.

Cross-examined by Mr. Fitzgibbon, K.C.

13595. Did you ever apply to the railway company for a special rate from Derry to St. Johnston?—Their canvasser comes often to Convoy for traffic, and he has often asked me—"Why do you not use the railway to St. Johnston?" and we always have the same reply, that we save 4*s.* a ton by carting right through.

13596. Have you ever applied to the railway company for a special rate?—Yes, verbally.

13597. Verbally to the canvasser?—Yes.

13598. You never communicated with the railway company themselves?—I could not tell you without looking up the correspondence.

13599. You have given some English towns that have cheaper rates than prevail in Ireland; isn't the substance of your complaint that your tweed is put on the market in English towns at a cheaper rate than it is allowed to compete with the Blarney tweeds in Cork?—I don't object to the low rates in England and Scotland; what I would like would be low rates in Ireland.

13600. To compete with Irish manufactures?—Naturally, we would like to go all over Ireland in the same way that the Cork man would like to come to us. We wish a cheaper rate both ways, and would not object to it. We want a fair field.

The Commission then adjourned till the following morning at 11 *o'clock.*

Mar. 13, 1907.

Mr. A. Weir, Managing Director Convoy Woollen Company, Limited, Donegal.

Question of excessive through rates from Strabane to Southern Irish towns discussed.

Alleged excessive rate for woollens, Londonderry and St. Johnston stations

TWENTY-FOURTH PUBLIC SITTING—THURSDAY, MARCH 14TH, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Reception Room, Royal Dublin Society, Leinster House, Dublin.

Commissioners present:—Sir CHARLES SCOTTER (Chairman); Right Hon. Lord PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; and Lieut.-Col. WILLIAM HUTCHESON POË, C.B.;

Mr. GEORGE E. SHANAHAN (Secretary).

Lord Pirrie.—Will you allow me to say how much I regret my absence yesterday, and especially so because of the important evidence given by Mr. Field. I have read what appeared in the papers to-day with the greatest interest, and it makes me still more feel how much I lost by not being here.

Chairman.—We all regretted your absence, too.

Mr. W. A. CURRIE, Secretary of the Belfast Harbour Board, examined by the CHAIRMAN.

Mar. 14, 1907.

Mr. W. A. Currie, Secretary of the Belfast Harbour Commissioners.

13601-2. Mr. Currie, I think you are the Secretary of the Belfast Harbour Commissioners?—I am.

13603. Have you been in that position for some time?—About twenty-three years.

13604. Of course you are acquainted with the railway systems connected with Belfast?—Yes, generally.

Railway companies serving Belfast.

13605. What are the companies?—The Great Northern, the Midland (that is the old Northern Counties), and the County Down.

13606. The Belfast and County Down Railway?—Yes, the Belfast and County Down Railway.

13607. Well, now, the Harbour Commissioners are directly interested, of course, in the export and import trade of Belfast?—They are.

13608. And are naturally interested also in the proper transit of traffic to and from that place?—That is so.

13609. Have you anything to say with reference to the working of the railways so far as your particular department is concerned—any complaints to make?—We have had complaints from the coal trade.

Insufficient supply of wagons for coal traffic at Belfast complained of, and unsatisfactory result of applications to the railway companies on the subject.

13610. In regard to what?—First, in regard to the insufficient supply of wagons; these complaints have extended over a considerable number of years.

13611. That is coal imported into Belfast?—Coal imported into Belfast by steamer.

13612. And sent into the country by the various railway companies?—Quite so.

13613. And the railway companies supply wagons for the coal?—They do in all cases except one at Belfast. There is one firm, John Milligen and Co., who supply a number of their own.

13614. With that exception the rolling stock for the coal traffic has to be supplied by the railway company?—Yes.

13615. You say complaints have come to you with regard to the insufficient supply of wagons?—They came to the Harbour Commissioners. There have been complaints from time to time, asking the Commissioners to take the matter up with the railway company, and on one occasion the coal merchants asked the Commissioners to take it up with the Railway Commission.

13616. What has been the result of your applications to the railway companies?—After the first eight years or so, off and on, the Great Northern Railway Company (it was chiefly they), supplied, I think it was 100 wagons, and promised to supply more. The coal trade were not quite satisfied, and in the following year we had further complaints, and on this occasion the result was that Messrs. Milligen, of whom I have just spoken, supplied a number of wagons for their own trade. In consequence of that we did not proceed any further. There are still complaints from time to time. Of course the railway companies gave explanations, but the coal trade still urge that there is an insufficient number of wagons supplied by the railway companies for the traffic.

13617. Of course, in consequence of the short supply of wagons at Belfast I presume the steamers are delayed—they cannot be discharged except wagons are there?—They throw the coal out on the quay.

13618. Then the Harbour Commissioners suffer?—Yes, and the coal trade suffers, because they have to pay a very high quayage rate for the use of the quay.

13619. So that the coal traffic is taxed to a certain extent in consequence of the short supply of wagons—that is the point you make?—Yes, and also the coal traders say that the trade is leaving Belfast and going to Newry.

13620. In consequence of the short supply of wagons?—Partly in consequence of the short supply.

13621. And partly in consequence of the dues that you levy?—No, our dues are extremely low, but partly in consequence of the undue preference which they allege is given by the Great Northern Company to Newry, to which I will refer later on.

13622. Well, now, so far with reference to the short supply, or alleged short supply, of wagons at Belfast. Have you anything to say with reference to a preference being given to other ports?—Yes, the coal merchants complain that the Great Northern Railway are charging a rate much above what has been fixed by the Railway Commissioners.

13623. We must get that clearly; have you any figures?—Yes. I will just give the points shortly, if you will allow me.

13624. Give them in your own way, please?—(*Witness reads*): "The coal merchants complain that the Great Northern Railway are charging a rate much above what has been twice fixed by the Railway Commissioners, and much above what would give a reasonable profit on the coal traffic, also that the difference between the rate from Belfast and that from Newry for the traffic to Armagh is much greater than the circumstances justify."

13625. Can you give us, first, the rate for coal from Belfast to Armagh, and from Newry to Armagh?—Yes, from Belfast to Armagh, 3*s.* 9*d.* per ton is the present rate.

13626. Do you know the distance?—Thirty-five miles.

13627. What is it from Newry to Armagh?—The rate is 2*s.* 8*d.*

13628. And the distance?—Twenty-one miles.

13629. That does not seem out of proportion, does it?—From Newry the twenty-one miles is a very stiff gradient.

13630. Have these rates been in operation for some time?—They have. But I understand the coal trade were deterred from taking any steps in the matter by the difficulties and the cumbrous working, as they allege, of the Railway Commission.

13631. I see from 1870 to 1879 you mention in your proof that the rate for coal—perhaps you had better have it put on the notes?—From 1870 to 1879 the rates from Newry or Belfast to Armagh were 3*s.* 6*d.*, the outcome, I believe, of a mutual agreement.

13632. The rates were the same from both places?—Yes.

13633. The figures you gave just now are the present rates?—They are, 2*s.* 8*d.* and 3*s.* 9*d.*

13634. Up to 1879 the rates for coal from Belfast and Newry were the same?—Yes, 3*s.* 6*d.*

13635. And to-day the rates are—what?—2*s.* 8*d.* from Newry to Armagh, and 3*s.* 9*d.* from Belfast to Armagh per ton, a difference of 1*s.* 1*d.*

13636. What comment have you to make on these rates?—In 1879 the company reduced the local rate from Newry to Armagh from 3*s.* 6*d.* to 3*s.* 3*d.*, and they applied to the Railway and Canal Commission——

13637. Who applied?—The Great Northern Railway —to grant a through rate of 4*s.* 3*d.* from Belfast to Armagh. The short railway which was then in existence, the Belfast Central Railway Company, opposed the application. They contended that the difference of 1*s.* between the two railway rates would cause Newry to be preferred at the expense of the coal traffic by the route of which the Belfast Central formed part, and they made a counter application for a through rate of 3*s.* 6*d.* The Railway Commissioners, believing that coal from Belfast to Armagh at a rate of 3*s.* 6*d.*, divided in the proportion of 1*s.* to the Belfast Central Company and 2*s.* 6*d.* to the Great Northern Railway Company, was a fair and reasonable rate, and would pay the Great Northern Railway Company as well at least as the company's general traffic, declined to authorise the 4*s.* 3*d.* rate, and approved of the Central Railway Company's application for 3*s.* 6*d.* per ton. Then in 1882 the Great Northern Railway Company applied to the Railway Commissioners to have this 3*s.* 6*d.* rate increased to 3*s.* 10*d.*

13638. What was the result of that application?—"The Railway Commissioners, feeling satisfied that in the manner in which the Irish coal traffic was worked from Belfast, a through rate to Armagh, paying 2*s.* 6*d.* to the Great Northern Company, was capable of producing a profit not inferior to the average profit earned by that company from its goods traffic in general, declined to make any alteration in the rate."

13639. Are you quoting from a judgment of the Commissioners?—As nearly as possible.

13640. I thought you were reading from the judgment. At any rate, the result was that they declined the application?—They did, and the coal trade now contend that under any circumstances, even at the worst, seeing the Great Northern Railway Company have admitted (I should mention that the Great Northern purchased the Central Railway at a later stage), and they have quite recently admitted to the Belfast Chamber of Commerce that a rate of 7*d.* would pay them for the use of the Central line, that is, as against 1*s.*, which I have mentioned—the coal trade feel that, at the worst, adding the 2*s.* 6*d.* to the 7*d.* which the railway company admit now pays them for the use of the Central line, it would only bring it to 3*s.* 1*d.*, as against the 3*s.* 9*d.* which they are at present charged.

13641. Can you tell us what is the quantity of coal imported into Belfast during any one year—have you got any figures there?—I have.

13642. *Lord Pirrie.*—Are not they in the annual report?—Yes, they are in the report.

13643. *Chairman.*—I want to see whether there is a substantial grievance, or whether it is a small one. The total amount of coal imported into Belfast in 1905 will do?—The total import in 1906 was 1,248,281 tons.

13644. Have you got 1905 there?—In 1905 it was 1,219,056 tons.

13645. The amount in 1906 was a little more —Yes, a little more in 1906. I can also give you the imports for Newry.

13646. Yes, give us the Newry imports as well?—In 1905 they were 251,000 tons, and taking the imports of Belfast and Newry respectively for the year 1900, five years before, the Belfast coal imports were 1,185,001 tons, and in Newry for the year 1900 they were 186,500 tons. Those figures show an increase in the Belfast coal imports in 1905 upon the imports of 1900 of 2·87 per cent., whereas at Newry the coal imports for 1905 show an increase on the imports of 1900 of 34·5 per cent. That shows a considerable and greater proportion of the coal trade is going via Newry of late than from Belfast. Of course it is a much smaller total, but the proportion is much greater.

13647. Am I right in saying that a large proportion of the coal is sent inland?—Yes, a large proportion.

13648. Of course you do not allege that they are charging from Belfast to Armagh a rate that is in excess of their powers?—We do not.

13649. You do not allege that they are charging in excess of their Parliamentary powers?—We do not.

13650. Or even in excess of the amended powers that are fixed by Lord Balfour of Burleigh?—The Athenry rates; no, we do not.

13651. Lord Balfour of Burleigh dealt with the coal rates?

Colonel Plews.—Yes, and fixed the charge for the Belfast Central Railway, a special toll rate for that line.

Chairman.—1*s.* a ton?

Colonel Plews.—I think it is a shilling a ton; no, ninepence is the amount.

Chairman—Lord Balfour's Committee fixed it?

Colonel Plews.—Yes, in the Act itself.

Chairman.—Now, does that rate include the use of the wagons?—It does.

Alleged rebate on coal rate from Larne to Ballyclare by Midland Ry. (Nor. Co.'s Committee).

13653. What is this question about the Midland Railway Company giving a rebate on coal. We have heard a good deal about rebates here?—It is alleged by the coal trade that the Midland Railway Company make a rebate or concession of 6*d.* per ton on coal, in lots of 100 tons, from Larne to Ballyclare; and they refused to grant a similar rebate in respect of coal from Belfast to Ballyclare. The Midland Railway Company also, it is alleged, allow coals to be sent to Ballyclare by the broad gauge railway, that is in broad gauge wagons at 1*s.* 6*d.* a ton—that is a lower rate.

13654. What is the distance?—By broad gauge from Larne to Ballyclare it is twenty-six miles, and from Belfast to Ballyclare fifteen miles; but the Midland also have a narrow gauge line from Larne to Ballyclare, which is only 11½ miles, and the coal trade allege that the company allow coals to be sent to Ballyclare in broad gauge wagons at the 1*s.* 6*d.* rate instead of 2*s.*, which is the rate from Belfast to Ballyclare, and which is their broad gauge rate.

13655. Is that rebate given indiscriminately for any quantity?—I think it is only fair to say that the railway company say that they give no rebate.

13656. That is the Midland Railway?—The Midland Railway. But I have a letter here—I do not care about giving the name——

13657. I understand you to say that the narrow gauge route from Larne to this place is 11½ miles?—11½.

13658. That is the shortest possible route?—Yes.

13659. That fixes the rate, I suppose?—For the broad gauge, would it?

13660. It does not matter; the short route must be the guide. Is it the same rate on both?

13661. *Mr. Fitzgibbon, K.C.*—Equal rates by the two routes, both being in the hands of the same company. The most circuitous is in the hands of the same company, so the short route and the rates are equal.

Chairman.—That is so, the shortest route fixes it.

13662. *Lord Pirrie.*—Is not that what you gave in evidence?—Yes, my lord.

13663. *Chairman.*—Just let me follow that up. Is the rebate given on any quantity, or is it limited to a fixed quantity?—100 tons.

13664. You did not mention that?—I think I did; I intended to.

13665. Then the statement that was made to you, and denied by the Midland Company, is that upon 100 ton lots of coal there is a rebate of 6*d.* a ton?—It is, in other words coal can be sent in lots of 100 tons from Larne to Ballyclare, and are sent, at 1*s.* 6*d.* over a route of twenty-six miles, whereas the charge for a similar quantity of coal from Belfast to Ballyclare, fifteen miles, is 2*s.*

13666. Yes, that I understand, but although they carry coal twenty-six miles they have another route which is only eleven miles?—That is so.

13667. You said you had got a letter. I do not know whether you want me to look at it?—I do not care about giving the name of the writer.

13668. We won't mention names if you do not wish. I will read it. (*The Chairman reads it.*) I will just ask a question on that letter. Am I right in assuming that the coal is only sent by the broad gauge and the long distance when there are not sufficient wagons to carry it by the short route?—I understand that would be the railway company's contention.

13669. But is not that the statement made in that letter?—Yes, when the station-master at Larne certifies that there are no narrow gauge wagons available.

Mar. 14, 1907.

Mr. W. A. Currie, Secretary of the Belfast Harbour Commissioners.

13670. Yes, I do not see anything wrong in that. I think it is a convenience to the public?—No doubt.

13671. Well, of course, as Harbour Commissioners, every ton of coal or anything else diverted from Belfast to a compeitive port is more or less to your injury?—Of course it is.

13672. And therefore it is the object of the Harbour Commissioners in Belfast, as well as in other places, to get as much traffic through the port as they possibly can?—Quite so.

13673. And you would be perfectly satisfied so long as the rates in operation from competitive ports were upon the same basis as the rates from Belfast?—Quite so. I am afraid we could not object.

13674. You do not object?—We do not object.

13675. But you think Newry is unduly favoured with regard to rates for coal in comparison with Belfast?—We do.

13676. And you have given us the figures?—Yes.

13677. Now, your Commissioners, of course, have had under consideration the question of a Railway and Canal Commissioners Court?—They have.

13678. And you think that it would be a satisfactory tribunal to settle a dispute of this kind?—The Commissioners do not, and I myself think it is capable of improvement. I would like to mention that the remaining portion of my evidence is really the opinion—that I am giving the opinion, as far as I give any opinion at all, of the Harbour Commissioners as a body.

13679. I understand that you are representing the Harbour Commissioners, and it is not your personal opinion, but the opinion of your Commissioners?—Yes.

A cheape and more accessible tribunal than the Railway and Canal Commission Court for adjusting disputes advocated.

13680. Well, now, what do the Commissioners suggest with regard to the powers of the Railway Commissioners?—They suggest that the powers of the Railway Commission should be made more effective, its procedure rendered economical, and brought more easily within the reach of all traders who consider themselves aggrieved, and that its visitation to the various centres of the country should be frequent and regular.

13681. Of course that could not be done with the present constitution of the Railway Commissioners Court?—I am afraid not.

13682. It would be a new tribunal established for that purpose in Ireland?—I think the Harbour Commissioners' idea is that—though, of course, it would be a new tribunal—some modification of the present existing body might answer the purpose.

13683. It has been suggested to us on three or four occasions that the County Court Judge would be a competent person to deal with questions of this kind. Have you formed any opinion upon that?—The Harbour Commissioners discussed that point, but they did not form any opinion in favour of it.

13684. They did not think the County Court Judge would, amongst his other duties, be the proper person to deal with complicated questions like this?—They did not.

13685. You would substitute another tribunal of a cheaper character, so that any trader that feels aggrieved could easily and cheaply appear before it to have these cases investigated?—Quite so.

13686. But you have not formulated any particular idea as to what that other tribunal should be?—No, the Commissioners have not, beyond indicating that they think there ought to be a couple of commercial men on it.

13687. Exactly, that has been suggested?—Two or three practical commercial men.

13688. To sit as arbitrators, in fact?—Quite so.

13689. At any rate the Commissioners take the same view as others that the present court is a very expensive court?—They do.

13690. To deal with a little question of this kind?—Yes.

13691. And that the traders have no chance against the railway companies in appearing before it?—None whatever.

13692. That is the view?—That is the view. In regard to the Newry rate that I spoke of just now, they were approached by the coal trade with a view to bringing the matter before the Railway Commissioners, but the expense chiefly deterred them from doing so.

The railway arrangements generally, apart from the coal traffic, considered satisfactory.

13693. Well, now, to come to a larger question, I might ask, independent of this coal traffic, do you consider the railway arrangements generally are satisfactory?—I do; the Commissioners do.

13694. I mean your Commissioners?—They have no general complaint to make.

13695. Except as regards this particular coal traffic?—That is so. I may mention that I called personally on several gentlemen who, from time to time, had complained to me in regard to the railway companies, but none of them would give me any definite complaint for the purposes of this Commission.

13696. Well, now, have the Commissioners had under consideration the question of the nationalisation of the railways in this country?—They have.

13697. Have they formed any conclusion upon the question?—They have.

13698. What conclusion have they arrived at?—They say that "they are of opinion that the competitive element in respect of the three railway systems in the North of Ireland has tended to the development of the trade and commerce of the country, and that it would be extremely undesirable to eliminate such competition. They believe that the suggestions for the acquisition and control of Irish railways, either by the State or by a General Council of County Councils, or any system of State-aided railways, or the amalgamation of all the railways under a single central authority, would be fraught with most disastrous consequences to Ireland, and would result either in a substantial loss to the State or a general advance in rates of freight, detrimental to the industrial and commercial interest of the country."

13699. That is the conclusion they have arrived at on that particular part of the subject?—It is.

13700. Then did they consider the question of whether it would be an advantage to have a certain unification of the railways—say reducing the large number to about three or four principal railway companies—has that question been under consideration?—The Commissioners did not express any definite opinion on that subject, but you will have noticed "the amalgamation of all the railways under a single central authority." Probably they would not object to the amalgamation of some of the small ones.

13701. You do not say a word about it; that is the reason I asked the question. Do they consider that all these twenty-seven companies in Ireland should remain independent as they are to-day?—No, they do not say so. They say they object to the amalgamation of all the railways, but I know since I have been in Belfast there have been one or two amalgamations which I am quite sure have been very advantageous.

13702. Do you think that the acquisition of the Belfast and Northern Counties Railway and the Donegal Railway by the Midland Railway Company of England has been to the advantage of your district or the disadvantage?—I think it is to the advantage. That is my own personal opinion.

13702A. And you think that many of these small railways, not being able to earn a dividend, it would be better for the companies and the districts concerned if they were taken over by a larger railway——

Lord Pirrie.—It was only the Belfast and Northern Counties.

13703. *Chairman.*—The Belfast and Northern Counties was taken over by the Midland?—Yes.

13704. Was not the Donegal line taken over jointly by the Midland and the Great Northern?

Colonel Plews.—Yes.

Lord Pirrie.—Jointly?

Colonel Plews.—The Midland have one half.

Chairman.—You are quite right. I am much obliged. Of course I do not know all about these lines, but I thought I was not far wrong. We have had evidence, as you know, Mr. Currie, to the contrary of what you are now saying, that it has been a great disadvantage to the country for large English companies to come over and take any control over Irish railways?—By the Heysham route the Midland Company have brought thousands upon thousands, I suppose, of English tourists into Ireland who have spent their money here; surely that is an advantage.

13706. Did your Commissioners support the Bill in Parliament?—No.

13707. Did they oppose it?—They did not oppose it.

13708. I thought there was some authority that opposed the transfer of the Donegal line?

Colonel Plews.—The Derry Commissioners, sir. They blocked it the first year. They wanted to keep their own traffic in Derry and not have it coming from Belfast, and the Bill was thrown out the first year on the opposition of Derry.

13709. *Chairman.*—Quite so, it was only blocked for one year. Do you think, from your large commercial experience in Belfast, that it would be an advantage if these various small lines in various parts of the country were absorbed by the larger companies?—I have very little knowledge of the lines in the South, but in the North I think that it would probably be an advantage if one or two small lines were amalgamated.

Examined by Sir HERBERT JEKYLL.

13710. Mr. Currie, you gave us some figures about the imports of coal to Belfast and Newry showing that the import was very much larger in Belfast than Newry, but I suppose in a large manufacturing place like Belfast a considerable proportion of the imported coal is consumed at the place?—No doubt it is.

13711. And that at Newry, which is not such an important manufacturing centre, the portion consumed is relatively small?—That is so.

13712. Therefore, if you take from the total figures which you gave, the amount consumed in each place, the balance would represent what is sent inland?—It would.

13713. And the increase in the amount sent inland from Newry, assuming that the local consumption is practically stationary, would be really larger than is indicated by the percentages you gave. Would not that follow?—Yes.

13714. So that we may take it that the transmission of coal inland from Newry is growing at a rapid rate?—It is growing rapidly.

13715. Whereas the amount sent inland from Belfast is not growing at a rapid rate, if at all?—That is so.

13716. Then, with regard to the Court of the Railway and Canal Commissioners, you mention the great expense of that tribunal. You are, no doubt, aware that the main factor in the expense of the tribunal is the expense of Counsel?—I am.

13717. And that the Court fees are not large—the expenses of the Court itself are not large?—I believe they are not.

13718. And that the great cost is the expense of the fees of counsel?—Yes.

13719. Would not that equally apply to any other tribunal?—Yes.

13720. Would you exclude counsel from appearing before the new tribunal?—I would not.

13721. If disputes took place between traders and Railway Companies would you forbid the employment of counsel?—Personally I do not see very well how you could forbid it, but I am afraid I am travelling a little beyond my authority. I have no authority to say that represents the views of the Harbour Commissioners on the subject.

13722. But if you have counsel will not any other tribunal be just as expensive as the Railway and Canal Commission?—The tribunal, I think, which was in the mind of many of our Harbour Commissioners would be similar to what was suggested by Mr. Alexander Cooke a few days ago. His idea was that there should be no counsel present at this tribunal. He said he would exclude counsel.

13723. *Chairman.*—He said he would exclude counsel, and your Commissioners agree with that?—Some of them do. I want to keep as closely as possible to my minute, which expresses the view of the Board, without a division.

Examined by Colonel HUTCHESON POË.

13724. Can you give me any idea of how the coal, the one and a half million tons, which came into Belfast in 1906—in what period of time that was distributed, so to speak? Does any great quantity come in at one time of the year?—I think the imports are pretty regular throughout the year.

13725. In other words that would be about 100,000 tons a month?—Yes.

13726. Can you give me any idea of the number of wagons that would be required at any one particular time?—I could not.

13727. You spoke of the want of rolling stock?—Yes.

13728. I want to know have you any idea of what your requirements would be—what number of wagons would be required at any one time?—I could not give the totals, but I have here some details. Taking two merchants, for instance—on one day they required 120 wagons.

13729. 120 wagons?—120 wagons; the following day 125; the following day 20; the following day 62; next day 40, next day 41, next day 37, and 50, 116, 112, 96, 88, and so on.

13730. 100 would be the maximum in one day?—Yes, thereabouts.

13731. Would you look at that Board of Trade return? That gives the rolling stock of all descriptions on the Irish railways, and if you look you will find it works out on the Great Northern at nine wagons of all kinds, not including passenger wagons (I am only dealing with goods wagons and wagons for similar purposes), 9 wagons per mile; on the County Down Railway it works out at 9 per mile; and on the Northern Counties (now the Midland) 9½ per mile, and the Midland Great Western 6½ per mile. Against that, on the Scotch railways, on three of the principal lines it works out at 50, 40, and 60 wagons per mile. On the face of it does not that seem to imply that there is a deficiency of rolling stock in this country?—Yes, it does.

Comparison of number of goods wagons per mile available for traffic in Ireland and Scotland.

13732. Of course the conditions in Scotland are quite different. At the same time, when you find that of our three principal lines in this country none of them average 10 wagons to the mile, as against 60 in Scotland—the difference seems altogether out of proportion?—There is certainly a large disproportion.

13733. Can you give me any idea as to what reduction of the rates Mr. Milligen, who provides his own wagons, gets? You say in the case of the other merchants they get the use of the company's wagons, and I presume, as he supplies his own wagons, he does not pay so much?—I cannot say. Perhaps it is about 4*d.*, but I cannot tell you.

13734. I understand you say that you do not object to healthy competition between the small ports, such as Larne and Newry, and a large port like Belfast?—We do not object to competition.

Healthy competition between the smaller ports and Belfast not objected to if rates are reasonable.

13735. And you said you would be satisfied if the rates were proportionate?—Reasonable. We do not object to competition if the rates are reasonable.

13736. If you look at the rates you gave, the rate to Armagh is 3*s.* 9*d.* for 35 miles.

Mr. Fitzgibbon, K.C.—Thirty-eight miles is the actual distance, 35 was the rough figure.

13737. *Colonel Hutcheson Poë.*—It was the rough figure was given, and it works out at 1·3*d.* per mile. Now, the rate from Newry to Armagh is 2*s.* 8*d.* for 21 miles, and that works out at 1·5*d.* per mile. In other words, the Newry people, whom you are complaining about, are paying 1½*d.* per mile, and you are paying 1¼*d.* only?—But that is a very severe gradient, and I believe it is a single line.

Belfast and Newry coal rates considered higher than is necessary to give the railway company a legitimate profit on working.

13738. You are paying a farthing a mile less?—Yes, but the complaint of the coal merchants is that the Railway Commission said that 2*s.* 6*d.* was a reasonable rate, and if you add 7*d.*, which the Great Northern Company admit is sufficient to repay them for the use of the Central line, that only brings it to 3*s.* 1*d.*

13739. I will go into that, but the first figures work out as I stated, 1¼*d.* as against 1½*d.*?—There is not much in the rate.

13740. Then, with regard to this admission that 7*d.* paid the Great Northern for the use of the Central line, may I ask to whom that was admitted?—To the Secretary of the Belfast Chamber of Commerce.

13741. At any rate that was since they acquired the control of the Belfast Central line?—Yes.

13742. When did they acquire control of it?—Many years ago. The admission was that they can work the Central Railway portion of the distance profitably at 7*d.* per ton.

13743. They charge, practically, 1*s.*? The Railway Commissioners say the rate is 1*s.*?—Yes, the assumption is that they are charging 1*s.*

13744. Your contention is that they might knock off the difference of 5*d.*?—Yes.

13745. You spoke about the competition between Larne and other ports as compared with Belfast. I suppose you are not prepared to say that it is in the interests of the whole country that the small ports and the traffic which would naturally go to them should suffer in the interests of one or two large ports?—Certainly not. The Harbour Commissioners do not want that.

13746. I do not know what your idea would be, but is it not only fair that the traffic to these small ports should be encouraged?—Quite so, that they should have the advantage of the geographical position, and Belfast also should have any advantage which is

The small ports entitled to the advantages of their geographical position.

Mar. 14, 1907.

Mr. W. A. Currie, Secretary of the Belfast Harbour Commissioners.

due to it in respect to other matters, such as the severe gradient to which I referred.

13747. It is not in the proof, but in answer to the Chairman you said that you applied for information with regard to complaints made by different traders who had been in the habit of alleging that they had complaints, and you were not able to obtain them?—I was unable to obtain any at all.

Reluctance of some traders to make complaints against the railway companies discussed.

13748. Did they give any reason for not furnishing any information—men whom you knew were in the habit of complaining, did they give any reason why they would not help you?—Except in one case, where I think there was a little reluctance lest the railway companies should penalise them later on, but that was only one case.

13749. But, of course, from your own experience, you do not think such a thing as that would occur?—I am quite sure it would not.

13750. We have been assured that such a thing is impossible, but notwithstanding all that you find there is a disposition on the part of a great many traders in the country to imagine that the railway companies would mulct them hereafter?—I found that idea in one case.

he amalgamation of the small lines in the North of Ireland considered to have een for the eneral good f the country.

13751. You said that you consider the amalgamation which had been carried out in recent years—I suppose you allude more particularly to the acquisition of the small independent lines by the Northern Counties Railway—had been in the interest of the North of Ireland?—Yes, and some of the small lines which were taken over by the Great Northern and the amalgamation of the County Down and the Holywood railways.

13752. Of course, the Midland has also taken up a large number, and as a matter of fact, now that the control of the Donegal line passes into the hands of the Midland and the Great Northern, they will practically control the whole of the North of Ireland, taking a line straight across from Belfast to Bundoran, with the exception of the Lough Swilly Railway?—Yes.

13753. Practically the whole of the northern systems will be in the hands of the Great Northern and the Midland?—Yes.

Question of the amalgamation of the Londonderry and Lough Swilly line.

13754. Have you any idea as to the Londonderry and Lough Swilly Railway whether it would be desirable to amalgamate it with one of these systems I have spoken of?—I have not.

13755. Do you know the Londonderry and Lough Swilly line, I believe we are going to have some evidence later on about it. I do not wish to press you if you do not wish to say anything, but if that line were acquired by these two companies, it would practically mean that the whole northern slice of the island would pass into the hands of these two powerful companies, and judging by the experience of the benefits which resulted from amalgamation in other directions, I only wanted to know whether if we went no further than that—it would not be desirable to recommend the amalgamation of the Lough Swilly line?—I would prefer not to give an opinion on that.

Resolution of the Belfast Harbour Commissioners against amalgamation and centralisation of control discussed.

13756. Oh, very well. Now, you say that any amalgamation under a central authority would be fraught with disastrous consequences, and would result in either a substantial loss to the State or a general advance of rates of freight, detrimental to the industry and commercial interests of the country. I presume you admit that the only possible reason for advocating, or assuming, that this Commission would advocate amalgamation or purchase by the State would be that a reduction of rates would be the natural consequence?—No doubt that is the object of it.

13757. I do not see why you assume that amalgamation would result in a general advance If the State took over the railways the idea would be that the State could afford to reduce rates, knowing that, perhaps, for a few years they might suffer some loss, and could afford it, but that ultimately the traffic would develop and the loss would be recouped. Of course such a reduction and such a loss could not be borne by the present railway companies. They could not afford to experiment?—No; it would not be fair to ask them.

13758. Do you not think that there might be some advantage in getting the State, or some central authority, who would be prepared to experiment and reduce rates and put up with the temporary loss?—The Harbour Commissioners are distinctly of a contrary opinion.

13759. Might I ask were those paragraphs which you read out in the nature of a resolution?—They were. I have got it, and will hand it in if necessary.

13760. We have the resolution, and that is the same one.

Lord Pirrie.—It is not the same resolution as that of the Chamber of Commerce.

13761. *Colonel Hutcheson Poë.*—No. The Harbour Commissioners' resolution?—That resolution was passed without a division by the Commissioners.

13762. How many does that body consist of?—Twenty-one Commissioners. They were not all present.

13763. Was it a full meeting?—An ordinary board meeting.

13764. And was the matter discussed at any length?—It was not discussed at great length, but it was before them on three occasions.

13765. And had State purchase no advocates at all?—When they discussed it at the Harbour Commissioners Chamber we are inclined to ask whether it was unanimous or not?—The resolution was unanimous. It was passed without a division. There was no dissentient.

13766. Whatever difference of opinion there might have been, when it came to a division it was unanimous?—That is so.

Chairman.—He said there was no dissentient.

13767. *Colonel Hutcheson Poë.*—No dissentient. That is a difference?—When it was put it was passed unanimously. It does not follow that they all agreed to it.

13768. Apparently they did not, but they did not wish to carry the difference to a vote. Even if it could be shown to you that amalgamation or nationalisation would result in a material diminution of freights and charges, even under such circumstances, your Harbour Commissioners would not be prepared to entertain the idea?—Of State purchase?

13769. Or amalgamation under some central authority?—They object. They think that it would be disastrous.

13770. I gather from that that you think they object because they assume the rates would go up. I ask the question, if one of the alternatives were accompanied by conditions that reductions must follow, no matter who bore the loss, that reduction must be given, would not that modify the views you hold?—I do not think it is altogether a question of rates that operates in the minds of the Harbour Commissioners.

13771. May I ask what it is that operates in their minds?—Well, I do not know whether I am really authorised to attempt to explain what was in their minds, but I think now—it has been stated here, that in the nature of things a political body, controlling railways, is almost bound to act from political reasons, and, putting it very shortly, I think that that also operates in the minds of the Harbour Commissioners.

13772. I think it is very desirable that we should have the opinions of such an important body as the Harbour Commissioners of Belfast on this point. The evidence we have had from other witnesses in the South of Ireland has been in favour of the unification or nationalisation of the railways, at any rate in that direction, and reasons have been given why they did favour such a course, and I think this Commission would like to have something beyond a mere pious expression of opinion, as to why your Chamber hold a different opinion?—The Harbour Commissioners have not definitely stated their reasons, and I do not think I am authorised to give my personal views as representing the Commissioners.

13773. I understood you were deputed to represent them?—I was deputed, as that resolution says, to do certain things. I was instructed to represent the Board before the Commissioners and offer evidence on the points I have referred to. On the general question of the constitution and working of the railways in Ireland. "We are of opinion"—they give their opinion definitely.

13774. And you think your mouth is closed as to the reasons why they give that opinion?—I do.

13775. I don't wish to press the point any further if that is the case. I think it is a pity that when an important body like that takes up a strong attitude on the subject they should not give their reasons for taking up that attitude. But, of course, if you

say that you do not feel at liberty to express their reasons I don't wish to pursue the matter any further?—Beyond what I have said.

Examined by LORD PIRRIE.

13776. Just one question with regard to your answer to Colonel Poë. I read this in a different way to what you seem to imagine your instructions. "The Secretary is instructed to represent the Board before the Commissioners and offer evidence on the undermentioned points." Then come the points that you are to give evidence on, and surely you do not mean to convey that they were appointing the Secretary of the Board rather than one or two members of the Board in order that he could say: "I can't go further than the resolution of the Board." You are here to represent the Commissioners, and from your knowledge of the Commissioners can you not answer, or would you rather not answer. I don't want to go further than that. I want to point out to the public that I dont' think that a broad-minded lot of business men, in what we in the North look upon as the capital of Ireland, certainly the commercial capital of Ireland, to come and say, "We are going to say nothing, except repeat the bald resolution, without a single explanation,"—it is a strange thing to my mind, and I think the Commissioners sitting here are right in asking why you do it, why you don't feel justified in going further?—I am afraid, my lord, what you said at the commencement of your remarks is very nearly the truth. At the last meeting of the Board words very similar were used there as to the reason why the Commissioners did not appear here, and why the Secretary was sent.

13777. Then I may take from your answer that you have really been sent so as not to be in a position to give the reasons why they arrived at this resolution?—Well, I don't know the reasons of the twenty-one gentlemen.

13778. I know, but that is really the position that you have placed the Harbour Authority in to-day, and I don't say you are wrong in doing it. If I were an official in your position I might do exactly the same; but I can hardly think that was the intention of a great progressive Board like that which you represent?—Of course that would only apply to the latter part of the resolution.

13779. *Lord Pirrie.*—May I go further? You said that the Commissioners had had this matter before them on three occasions. Do you mean that it was before the Commissioners, that they referred it to a Committee, that then the Committee met and drew up a report, and then the whole Board met to receive the report?—No, the idea in my mind was that it was before a Committee, who spent the best part of a day and afternoon discussing it.

13780. How many of that Committee would be there—were there four?—More than that; the Committee met, and adjourned and met again on the same afternoon.

13781. On the same afternoon?—Yes, in order to sketch that resolution; that was what the adjournment was for.

13782. That was quite right?—Yes; that was once it came before the Committee; then it came before the Board—and then it was further considered at a second Board meeting.

13783. Well, now at which of the Board meetings was there a discussion when one member of the Board?—That was the last meeting.

13784. And he did not agree with the statement in the report of the Committee?—You are referring to Mr. Stevenson, I presume.

13785. Yes?—He asked certain questions to which he did not then receive direct answers; but he stated that he would not divide the Board upon the confirmation of the report.

13786. As appeared in the Press, and was read out to us by a witness before the words were—"I do not at all agree with Mr. Heyn in his remarks."

Chairman.—Resolution.

13787. *Lord Pirrie.*—Resolution?—I have some recollection of those identical words, but subsequent to those words he was a party to the adoption of that resolution.

13788. It is not the custom at the Harbour Board never to divide unless there is a great broad question of principle involved?—Any member may dissent from a resolution, and his dissent would be recorded.

13789. I know he might?—Any member might object, and his objection or dissent would be recorded if he wished it.

13790. Yes; but is not putting the question to a vote a very exceptional thing?—Well, it doesn't take place very frequently, but Mr. Stevenson on that occasion said he would not divide the Board.

13791. Well, now, I take it from your general evidence, and the interest you take in other parts of Ireland, as well as Belfast, as regards traffic, that the object of your Commissioners is to facilitate the traders all you can for the benefit of getting dues on the goods coming into Belfast?—No doubt, their interest lies mainly in Belfast.

13792. And that is the object mainly that the Harbour Commissioners have in view—to try to get all the goods they can to Belfast for the sake of their own revenue?—No, hardly that. Their idea is to increase and improve the trade and commerce of Ireland through the port of Belfast, but not necessarily to get higher rates or dues.

13793. To get no dues, to get the trade into Belfast, and therefore your object is to assist the traders in getting as low rates as you possibly can to all inland towns, so that you may make Belfast the distributing centre?—Quite so.

13794. That being the case, how often have the Harbour Commissioners as a body appealed to any of the railway companies to get reduced rates from Belfast to any inland town?—The Belfast Harbour Commissioners do not consider that there are any very grievous complaints in that respect. They have never had any very grievous complaints to make against the railway companies in regard to rates. Occasionally in such matters as those I have referred to a case comes up, but speaking generally, they consider that the railway companies are giving a very satisfactory service from Belfast.

13795. That was not the question I asked you. Have the Harbour Commissioners during the three-and-twenty years, you said it was, that you have been secretary, ever as a body applied to the railway companies to make reductions on any particular goods from Belfast to any inland town?—Certainly not more than once or twice, I think, during the twenty-three years; but I do not think they have considered it necessary in regard to dues.

13796. I am not speaking of dues now, but of the railway rates. Have they ever asked the companies to reduce the rates for the sake of assisting the traders to bring their goods through Belfast?—No; I do not think we have, generally speaking, but we have reduced our own rates more than once.

13797. I am coming to that in one moment. You say they have not done it as a body?—No.

13798. I take it that the gentlemen sitting on the Harbour Board are all members of the Chamber of Commerce?—Well, I am not aware whether that is so or not. I am not a member myself.

13799. You are not a member?—No.

13800. Looking over the list of them as they appear here, I can't see personally anyone that is not a member of the Chamber of Commerce?—I feel sure that the bulk of them are—at any rate, the majority.

13801. To me it is very interesting to see that although the Chamber of Commerce were apparently unanimously of the opinion that there were really no complaints as regards the railway companies, yet the Harbour Commissioners through you, as you say the evidence you are giving is purely the Harbour Commissioners' evidence, give us very important complaints. It is extraordinary to find that two bodies in Belfast have taken such different views as they have done, judging by the evidence of yourself and the representatives of the Chamber of Commerce?—You notice, my lord, that the complaints all come from the one trade—the coal trade.

13802. Well, is it a wonder that the coal trade complain when Mr. Heyn, representing the Chamber of Commerce, told us that he is able to get a rate for grain at 3*s.* a ton from Belfast to Derry, a distance, I think, of ninety-five miles—speaking from memory, ninety-five miles?—By railway.

13803. Yes; and the rate for carrying coal, which, I suppose, you look upon as a less valuable material, and less likely to get either injured or stolen, is more than double the rate for grain. Are you aware of

Mar. 14, 1907.

Mr. W. A. Currie, Secretary of the Belfast Harbour Commissioners.

Apparent apathy of the Harbour Commissioners with regard to the question of rates from Belfast to inland towns discussed.

Mar. 14, 1907.

Mr. W. A. Currie., Secretary of the Belfast Harbour Commissioners.

that, Mr. Currie?—I think I read something like that in his evidence.

13804. But are you aware of it?—I do not know of my own knowledge.

13805. As Secretary of the Harbour Board I ask you is it not the duty of a great trust like that, who are supposed to be looking after the interests of the traders, as you told us, that is one of the chief matters they have in view, is it not the duty of the Board when they have one of their own members giving it in evidence that he has no difficulty in getting grain carried at 3*s.* a ton for ninety-five miles to actively interest themselves in these matters—do you not agree with me that it would be very desirable to get the coal rates down to the same level, would it not, as grain?—It probably would be for Belfast, but sea competition comes in there, I presume.

Apparent apathy on the part of the Belfast Harbour Board with regard to the question of the rates from Belfast to inland towns discussed.

13806. Sea competition?—Yes, I expect so.

13807. Take another competition. You have mentioned the case of Larne, and you say that from Larne to Ballyclare is a distance of, we will say, twenty-five miles, 1*s.* 6*d.*, they only charge 1*s.* 6*d.* a ton, but they charge 2*s.* from Belfast?—Yes.

13808. Well, if they are bound to charge only 1*s.* 6*d.* because of the distance being so short between Larne and Ballyclare, I ask you, Mr. Currie, if they charge coal 2*s.* a ton from Belfast to Ballyclare, which is only 15 miles—is not that a very exorbitant rate when they take grain 95 miles for 3*s.*?—I feel sure, my lord, that sea competition must come in there.

13809. Does coal not come to Belfast—you have already read out that 1,200,000 tons come into Belfast?—I admit at once that having regard to the distance the one rate is out of all proportion to the other.

13810. *Chairman.*—There is the same sea competition for coal as grain?—Not to Ballyclare. Ballyclare is inland.

13811. You say it is sea competition which makes 3*s.* the low rate?—Yes.

13812. There is the same competition as regard coal?—I am speaking of Ballyclare.

13813. *Lord Pirrie.*—I was right. There is sea competition, and where there is sea competition grain comes down to 3*s.* Why should not coal go at the very same rate or lower?—I could not explain the reason, my lord; it is an extraordinary thing, I admit.

13814. Would it not be the interest of Belfast to get all the coal that is taken to Derry, Limavady, and all these places through Belfast, would it not be better for the Harbour Commissioners?—Yes; I suppose it would.

13815. Let us be sure of that—would it not be in the interests of Belfast?—Yes.

13816. On what grounds do the Commissioners not assist in connection with that. They have no time, I suppose, Mr. Currie. Would you not consider that they would be neglecting their duty if they failed to look after this matter as a Harbour Trust?—I am quite satisfied that the Harbour Commissioners give a great deal of attention and time to all these questions.

13817. But you say they have not done it at all—that in the twenty-three years they have only moved in the matter once or twice. Now, if they had gone into these rates, and if they had known as a body, do you not think they might have come to a different conclusion as regards State Purchase, or State control, or the control of the railways under some body which would be bound to look into the justice of one man getting lower rates than another?—You ask the question, my lord, and I must say I don't.

13818. You don't?—I do not consider that the Harbour Commissioners would have come to any different conclusion.

13819. Even if they knew of those facts?—Yes; taking a comprehensive view of the whole question.

13820. You don't think the knowledge that I have given you, the information I have given you, would have changed their minds in the least?—No.

Question of the charge per head made by the Belfast Harbour Board on outwards cattle and the services rendered for the payment.

13820A. Now, I suppose you have read, as you take such an interest in the welfare of Belfast, the evidence given by a most intellectual gentleman, the strong evidence, to my mind, given by a representative of the Department of Agriculture, when he stated that the only port in Ireland for shipping cattle that had not special accommodation for it was the port of Belfast, and that the port of Belfast was not carrying out the regulations of the Agricultural Board. Is he correct in that statement, do you think, or do you know anything about it?—Well, I inquired yesterday, and I was told that we have had no information in regard to any ill-treatment of cattle, or anything of that sort, and that the Society for the Prevention of Cruelty to Animals have their officers along the quays continually. I could get no information whatever as to any cases of cruelty.

13821. You say you made inquiries yesterday?—I did, yesterday afternoon. It arose out of your remark, which I saw in the papers.

13822. The evidence came on me as a surprise, as I had a false idea, apparently, that Belfast was most up-to-date in all its arrangements for transport and shipping for cattle because such a large number of cattle are shipped there. Then you say it is not correct as far as you know?—The Harbour Board is in no way responsible for not giving accommodation close to where the steam-boats sail, if it is a question of accommodation for the lairage of cattle before they are shipped.

13823. Well?—That question has been discussed on several occasions by the Board, but with the exception of one piece of ground, which was not considered quite suitable, we have no ground in the immediate vicinity of the cross-Channel boats which would be suitable for the purpose. The Commissioners, at one time when it was discussed, thought it was the duty of the railway companies to provide the lairage accommodation for the cattle which they bring in before they are driven down, that they should be examined at the railway station. In fact, I think that is the arrangement now.

13824. Do you charge any dues on cattle going out?—We do, of course.

13825. What do you charge on cattle?—We charge about half the inward rates. It is about a penny or something of that sort—that we fixed many years ago.

13826. You had better give us the actual figure in because I want to speak of it in a minute, if you can give it?—Cattle outwards are charged twopence.

13827. Sheep—there is a difference as regards sheep?—Yes, I think there is. For sheep it is a penny.

13828. I suppose you can give us the number of cattle shipped in the year, can you not?—Do you mean the number of head of cattle exported?

13829. Yes?—For the year 1906 it was 136,158.

13830. That includes all?—No; that is cattle alone. There were 21,000 odd pigs and 29,000 sheep.

13831. What do you do for that—130,000 twopences—what do you do for that?—The cattle have the use of the harbour.

13832. They have. Can you point to any part of the harbour that the cattle have belonging to the Harbour Commissioners?—They pass over the quays.

13833. Over the main roads. They are not allowed inside the sheds?—Well, I have seen the shed overrun by them, but, of course, that we object to.

13834. They are kept outside on the road—that belongs to the Corporation, I think?—No doubt.

13835. They are kept outside on the quay till the gangway is put up—do you supply the gangway for them to walk on board to the ship?—No, that belongs to the ship.

13836. Do you supply water and arrangements for them to get drink or food; have they any place to feed or drink?—No, there is no lairage accommodation whatever.

13837. Therefore you charge the senders a sum of money and you provide no accommodation whatever, except that you allow the cattle to walk from the quay on board the steamer?—This twopence is paid by the ship to us, and the steamship owner is supposed to charge it again to the merchant, but it is not for lairage charges at all; it is really a due or rate.

13838. Then, as regards the cattle, for which twopence per head is charged, the Harbour Commissioners supply no accommodation whatever except allowing them to walk over their quay to their steamer, that is all they do for the twopence. But am I correct in stating that a few years ago the Harbour Trust offered to the Department of Agriculture, and probably before the Department of Agriculture was properly started,

ground for lairages, so that all the steamers would just call at this loading berth, but that the Department of Agriculture themselves did not think that position a good place for cattle?—I don't recollect, my lord, quite in that form. On two occasions, at least on several occasions, two different sites have been discussed for lairage purposes by the Belfast Harbour Commissioners, but on neither of them was any arrangement come to, as they were not suitable. One of these sites, I think, was subsequently bought by the Midland Railway Company—the Northern Counties. It belongs to them now, I believe, and the other is still there.

13839. Your evidence is that the Department of Agriculture have never insisted on this point, and that you are not aware that you are breaking the regulations every night?—Certainly. I don't recollect the Department of Agriculture ever having applied for or asked for anything of the sort, and certainly I was not aware we were breaking any regulations.

13840. You have some one in the Harbour Trust who is responsible for reporting to you or the Board on these regulations?—If we broke the regulations I ought to have known, and some one else has been neglectful in not reporting it.

13841. Just one other thing as regards facilities. Mr. Cooke gave evidence about flax. He said he could bring flax from Antwerp at about 1*s.* 6*d.* a ton more than he could bring it from the Co. Antrim or from Strabane. Now what facilities do you give for taking it. He also said that the production of flax was being reduced year by year because of these high local inland rates. Now, suppose you have got certain mills and factories in Co. Down—state what facilities do you give for the flax coming from Ballycastle or Larne or Derry destined for Co. Down. Can it pass over your lines?—As it comes to or from the ships?

13842. No; to inland towns, coming from Ballyclare—the town you named yourself. From Ballyclare does it come into Belfast and then over the Central line to Comber?—No; we could not get through railway traffic over the tramways. It would put a stop to business probably.

13843. Am I not right in saying that on one or two occasions you authorised and allowed this through traffic to go from Larne to Newtownards when Lord Londonderry was Lord Lieutenant his Household party and servants being the travellers?—I did, as a personal matter, on one or two occasions, but the Board expressed their strong disapproval of it and I have not done it since.

13844. Have you ever observed at Southampton great passenger trains taking passengers from London direct to the steamer lying at the quay for the Cape, America, and various places, and going over the main street?—At Southampton it is a railway company who do that.

13845. No, it is a Corporation with a mayor?—The traffic you are speaking of is done by the South-Western Railway, and those lines are railway lines; our lines are tramway lines.

13846. Then you think that because it is a railway company they can manage it better than a separate department. I mean having two departments would make a difficulty?—The circumstances are different—geographically different.

13847. Yes, but the railway company taking these carriages through to the dock at Southampton is better than if on reaching Southampton they had to pass them over to the Harbour Trust, who would take them down to their quay. That would be objectionable?—If the tramways at Donegall-quay in Belfast were in the hands of the railway companies themselves they would not work through railway traffic over these tramways at any rate during the daytime. They might during the night.

13848 As well as you do?—We don't do it.

13849. But your answer to me was that the reason why the Southampton traffic was worked so well, free of accidents and to the convenience of the passenger was that it was conducted by the railway companies. That was your answer, and do you want to modify it. You know Southampton, and you have, no doubt, seen that through the main street they run traffic, excursion trains, and not only over the main street but along to the quay and out at another part of the town along the main road?—My knowledge of Southampton is not sufficient to enable me to say if that is correct.

Mar. 14, 1907

Mr. W. A. Currie, Secretary of the Belfast Harbour Commissioners.

13850. You know it takes place, and why should it not take place in Belfast. What I want to gather from you is a clear expression of your opinion which I take to be that if the railway companies were under one management those lines on the quay would facilitate traffic?—I am afraid I cannot agree with that in the case of Belfast.

Inconvenience to through Irish traffic owing to the quay tramways in Belfast, controlled by Harbour Board, not being used to link up the different railway termini discussed.

13851. Then how do you expect trade to be carried on successfully if you have to take goods into one station and cart them across town to another station?—It might be they could not work the traffic—I think the railway companies would bear me out in that—if you had through railway traffic from one company's station to another continually going during the daytime.

13852. But you have seen in Belfast from sixteen to twenty wagons going down the Queen's Road?—That is on the other side of the Harbour.

13853. Yes, on the other side from the Northern Counties Midland line, twelve, fourteen, or twenty wagons going down at the busiest time of the day. Now, what would take place at night on the railways. Is there a single individual on the quays there between 12 o'clock at night and say, six o'clock in the morning. Is there any traffic there, or a single individual, and what is to prevent this traffic being carried on if the lines belonged to the railway company. Are you aware that the railway companies send their goods frequently at night?—I have no idea whether the railway companies would work it during the night or not.

13854. But if it existed, if there was a short junction between their lines to enable this to be done, would you not wish to assist farmers or traders in County Down or County Antrim?—It is not my wish to offer through railway traffic.

13855. To assist farmers in County Down or County Antrim. There is no way in which it could be better done. If you don't allow provision for the traffic it is completely lost?—They could go round by Antrim.

13856. But you objected to certain routes because they happened to be longer. You think the short route would be of advantage to the trader. You have said so, and you improve that by saying that whatever is the shortest distance would be right. Then why not send it by that?—The tramways in Belfast Harbour are constructed for traffic going to and from the ships, and it would be absolutely impossible to work the through traffic on these tramways, in my opinion, during the time the cross-Channel vessels are there.

13857. We will agree with that; but there is no reason why the traffic should not go at night if the railway companies wish?—There is; though it would probably be possible to work it at night.

13858. And you would not object?—Well, we have been advised that it would be a very risky proceeding to allow the railway companies to work through traffic over the line even during the night.

13859. Was the object of preventing it not to keep the traffic from going direct from the County Down to Larne?—No, nothing of the sort. I never heard of any such thing before.

Suggested cause of the objection of the Board to the use of the tram lines for through traffic.

13860. Then there is no objection so far as the Harbour Trust in concerned. They want to facilitate traffic if it can be worked and the railway people consider it advisable?—They will allow it during the night if it has not the effect of technically turning their tramways into a railway. I am sure I can give that promise on behalf of the Commissioners.

13961. Into railway lines?—Turning us into a railway company.

13862. That is very satisfactory. Then you practically will agree to run traffic through, carried at night. You say the Commissioners will agree?—If the Commissioners agree.

13863. Then the remark that the Harbour Commissioners thought at one time to buy Larne Harbour is not true?—I never heard of it.

13864. You never heard the Commissioners thought of buying Larne Harbour?—I did, but not for the reason you gave.

Former proposal of Belfast Harbour Commissioners to buy Larne Harbour.

13865. Was not that the occasion when they had a division or a poll on it?—I am not quite sure.

Mar. 14, 1907.

Mr. W. A. Currie, Secretary of the Belfast Harbour Commissioners.

Cross-examined by Mr. GERALD FITZGIBBON, K.C.

Practice of keeping loaded wagons standing on the quay an undue time alleged against the merchants.

13866. The Board have brought forward two main complaints: first, the shortage of wagons and that the coal merchants had complained frequently of this shortage. To your own knowledge is it not a very extensive practice on the part of Belfast coal merchants to use railway wagons as warehouses. They load their coal from the ships on them and keep the wagons for sometimes several days loaded at the quay?—Yes.

The rates for coal, Belfast to Armagh and Newry to Armagh, discussed.

13867. As to the Newry preference rate, you said that in the rates from Newry and Belfast to Armagh there seemed to be certain differences. The Newry Commissioners applied to the Court of the Railway and Canal Commission in 1889, and the order is dated 30th December, 1889, restraining the Great Northern Railway Company from giving an undue preference to Belfast, by giving it the same rate as Newry. The Great Northern Railway then raised the rate to Newry in order to put Newry on an equality. The Newry Commissioners appealed against that on the ground that the rate from Newry was still too high, and on 29th July, 1901, the Railway and Canal Commission, the parties coming to an agreement affirmed the present rate. But the present rate being on the mileage basis ought to be lower than it is, but they gave a higher rate on the ground that mileage between Newry and Armagh was eight miles more on account of the heavy gradients?—That I think, was the reason why they should not give undue preference, and if the Railway Commissioners fixed 2*s.* 6*d.* as being a reasonable rate surely they are——

13868. It was fixed at 3*s.* 6*d.* because the central rate, in the judgment of Sir Frederick Peel, was 3*s.* 6*d.*?—Yes, divided into the proportions of 1*s.* and 2*s.* 6*d.*

13869. Your Commissioners are all, with one possible exception, great traders?—Yes.

13870. Traders and business men?—Yes.

Explanation of the low grain rate from Belfast to Derry.

13871. With reference to the consignment of grain at a low rate to Derry, I think it is question No. 11433 in the evidence of Mr. Cooke. Grain comes into your port in very large vessels?—It does.

13872. In great big ocean-going steamers and sailing vessels carrying several thousand tons?—Yes.

13873. Coal in similar quantities goes to Derry?—By steamer; yes. Coal boats are smaller.

13874. This particular consignment of grain to Derry was a very large quantity at a special rate?—I have no knowledge of any particular consignment.

Mr. Fitzgibbon, K.C.—It was 1,500 tons to go to Derry out of a cargo of 4,000 tons.

13875. *Colonel Hutcheson Poë.*—Do I understand you to say that 2*d.* a head charged for cattle is rather a due paid for accommodation alongside the quay?—The Harbour Commissioners charge these dues.

13876. Then the 2*d.* is the vessels' due?—No, we charge dues on the ship and dues on the cargo she carries.

13877. *Lord Pirrie.*—But you only pay them on the ship. You cannot assess the cattle?—We have power to charge both to the ship. In some ports the tonnage due would be on the ship and the dock rate on the goods.

13878. *Colonel Hutcheson Poë.*—But after providing lairage accommodation?—Then that would be a different matter.

13879. The point is, are cattle dealers being called upon to pay for something they are not getting?—No. In regard to accommodation for the inspection of cattle for which 2*d.* was to be charged, the Harbour Commissioners agreed to contribute one penny, and I think the railway company also contributed one halfpenny, so that it leaves a very small sum behind to be paid by the cattle dealers.

13880. *Lord Pirrie.*—But you generally pay them one penny of the 2*d.* back again?—That is after inspection. There is an extra charge of 2*d.* to which cattle were subject on passing through Belfast, but three half-pence of that has been, and is now being, abolished, one half-penny by the railway company, and one penny by the Harbour Commissioners, and that leaves one half-penny charge to cattle dealers. I am not speaking by the book, but I think I am correct.

13881. *Colonel Hutcheson Poë.*—If you provided extra accommodation you would charge for it?—Yes; we would have to charge for it.

13882. But at first sight it would appear that cattle dealers were paying for something they did not get?—The first charge of 2*d.* per head for cattle shipped is a due for the upkeep of the harbour.

Mar. 14, 1907.

Mr. Robert H. Todd, LL.D., Solicitor, representing the Londonderry Chamber of Commerce.

Mr. ROBERT H. TODD, LL.D., Solicitor, examined by the CHAIRMAN

13883. I think you are a solicitor practising at Londonderry?—I am.

13884. You appear before us on behalf of the Londonderry Chamber of Commerce?—Yes.

13885. You are a member of the Chamber?—Yes.

The promotion of light railways and tramways.

13886. As a practising solicitor at Londonderry I believe you have been interested for many years in the promotion of, light railways and tramways?—Yes. I have got light tramways and light railways constructed to Donegal and elsewhere.

13887. What is the earliest date on which you began to take an interest in that question?—I think in 1882. In that year the Government scheme which found expression in the Act of 1883 was before Parliament as far as I recollect. A Committee was formed of Donegal landowners and traders and Derry merchants. The Duke of Abercorn was Chairman, and I was Secretary of the Committee that was formed for the purpose of supplying the Government with information as to the necessities of the district, and taking such steps as might be thought desirable to promote railway construction in Donegal.

Action taken in connection with the Tramways (Ireland) Act, 1883.

13888. In connection with that Committee you held an interview with members of the Government with reference to what is known as the 1883 Bill?—The Bill as brought in contemplated road tramways only, but the Committee I speak of was of opinion that tramways would be impossible in Donegal owing to the fact that the country was hilly and the roads so light they could not bear tramways.

13889. Did you represent that to the Committee?—I was sent to London and I saw Sir George Trevelyan, Chief Secretary, and Sir Andrew Porter, then Attorney-General, and afterwards Master of the Rolls. He drafted some clauses to carry out the recommendations of my Committee, and those clauses were embodied in the Act.

13890. Did you give evidence before Sir James Allport's Commission?—I did.

13891. Was your evidence in connection with a system of light railways for Donegal, Derry, and Tyrone?—Yes. I suggested a number of light railways, having Derry as a centre, being the port of the district and the natural distributing centre. The scheme I suggested was to have the whole of this light railway system converging on Derry.

13892. Were many of your suggestions adopted?—Practically all—most of them have been carried out. The Donegal schemes have been carried out.

13893. As to these Donegal schemes, do you think they have done any great benefit to the district?—Enormous benefit. I have been going to Donegal for the last thirty years, practically every year, and the hovels that appeared to be a disgrace to the whole country side have so far as the seaboard is concerned practically disappeared.

13894. Then not only the industries of the place, and the agricultural products, but the condition of the people has improved?—The life of the people has enormously improved; the condition of the people is vastly improved; fisheries are developing to a very great extent, I think they will be still more developed, but they have already been very largely developed; agricultural industry has also been developed and improved; the housing of the people and the condition of the people altogether has been changed. The effect of these light railways has been of enormous advantage.

13895. You say deliberately that the construction of these light railways has practically revolutionised the whole district?—It has.

13896. And improved the condition of the people?—Immensely. In connection with that I may say that that portion of the country is the only part of Ireland in which the population has not decreased. Since these light railways were constructed there is a slight increase in the population, in addition to an improvement in the condition of the people.

13897. This is the first time we have had any evidence of an increase in the population?—I think it is the only part of Ireland where there is an increase, and it is largely owing, in my opinion, to the construction of these lines of railway.

13898. May I take it the districts you have mentioned are practically now well served with these light railways or sufficiently served?—I think fairly well served—I won't say the system is absolutely perfect, but fairly well served. The lines were not always constructed exactly as they should have been in my opinion, but on the whole they are fairly well served.

13899. There are some inland districts that you refer to as being still without railway accommodation?—I think there are a great many inland districts.

13900. I suppose you are confining your remarks to this particular district—the counties you mention?—I had an interview with Mr. Bryce when he was Chief Secretary on the subject, and I professed myself to be very desirous of pointing out the country which required railway systems. He said when I explained that to him that I need not say a word, because I was preaching to the converted. He was fully convinced of the beneficial effect of the light railway system, but what he wanted was a scheme that would put before him the circumstances of each particular scheme, so that he could consider them. I prepared a report, and I mentioned in that report twenty-four railways all over Ireland. However, I confine my evidence to you to the three I know more particularly.

13901. We shall have quite enough to deal with in considering these three railways. Please mention them?—There is the Londonderry to Park, or on to Draperstown if possible. There is, however, a difficulty getting from Draperstown to Park—there is an immense hill, and the gradient would be so steep as to make that part of the line impracticable.

13902. Then, what is the second railway?—It is from Donemana to Cookstown.

13903. And what is the third?—From Castlederg to Pettigo.

13904. Do you consider that there is a great need for those three lines that you have suggested?—A very great need indeed. All those districts are capable of great development, but it is impossible to establish successful industries in them until railway accomodation is provided. In fact, it is impossible to develop the districts at all until those railways are constructed. Most of the districts as they stand at present are too poor to induce existing railway companies or individuals to take them up as a commercial speculation, and therefore Government assistance is absolutely necessary.

13905. Do you think similar beneficial results would follow from those three railways as from the other light railways to which you have referred?—I am satisfied of it. I may mention particularly the Donemana and Cookstown line. Along at least two-thirds of that line there is a valuable coal bed.

13906. Is it worked now in any way?—At the Cookstown end a shaft has been quite recently constructed, and a lease given.

13907. And has the coal been proved?—Yes. I am informed there are seams of coal found of from two to nine feet deep.

13908. Nine feet?—Yes; I am informed that the seam in places is nine feet in depth of extremely valuable coal.

13909. Are those districts that you have mentioned congested districts?—They would not all come strictly within the definition of congested districts. A large portion of them would come within the definition, but running into these poor and wretched districts there are comparatively rich districts which would just take them out of the definition.

13910. With regard to the portions that are congested districts, would they be greatly benefited by the construction of those railways?—Yes, enormously.

13911. Can you give us any idea of what population would be affected by those railways?—By the Donemana and Cookstown I would put it at about 20,000, directly or indirectly. The area that would be benefited by the other railways is smaller. By the Londonderry to Park it would be about 15,000, and the other is something smaller. I cannot tell you exactly what the population is.

13912. Are there any other minerals in those districts besides coal?—There are, I believe, but I cannot give you the particulars of them.

13913. Is it a grazing country?—Yes, grazing and petty tillage up to the present, but at the Cookstown end there are a certain number of mills as well as coal.

13914. Mills?—Yes, spinning mills.

13915. Are they small mills?—Not all small mills; some of them are very considerable mills; there are three or four large ones at Cookstown.

13916. How do you get to Cookstown?—There is a railway in connection with Belfast, but I may mention as regards Cookstown that the railway system is such that you have to travel four hours to cover a distance which ought to be done in an hour. That is by one company, and by another, the Northern Counties line, it would take seven hours by some trains.

13917. You have to travel across country?—Yes; the lines are made to serve other districts.

13918. As regards rates have you anything to say?—I do not know much about that.

13919. I suppose you agree with the other witnesses that it would be of advantage to the country that the rates should be low?—Yes; I may mention that I think the inland rates are excessive, as compared with the through rates.

13920. We have had a mass of evidence upon that point?—Yes; I think it is a matter that special attention should be called to. The inland rates are not satisfactory, and the through cross-Channel rates are so fixed that they benefit some particular ports and injure others, and the general opinion is that those rates have had the effect of ruining the inland county towns and preventing the development of the inland district. Belfast, in this respect, has great advantages over Derry and Newry, owing to the policy of the large English railways and of the Irish railways. Of course the directors of those companies endeavour to make dividends for their shareholders. That is natural, but the effect of the rates, as fixed, has been, as far as I can discover, to penalise the inland towns and villages, and the healthy prosperous life of the inland towns and villages has absolutely ceased owing to the operation of the railway rates. This brings me to a very important point, which has been mentioned by a previous witness—that the effect of the acquisition of Irish railways by the English railway companies has been in some respects, extremely injurious to many parts of the North of Ireland.

13921. You think so?—I do not "think" so—I am sure of it.

13922. That is directly opposed to some of the evidence we have heard?—Well, the result of that acquisition and amalgamation has been to kill any healthy competition in the North of Ireland. In the first place, the Midland Company of England acquired the Northern Counties Railway. It is true that the cross-Channel service since that acquisition has been somewhat improved, but the local service has certainly not improved—on the contrary, I am informed it has been distinctly worse. The policy of the Midland Company has, very naturally, been to carry all the goods they can get over the Northern Counties section by their own cross-Channel steamers, and thence over their own line. The result is that the Midland Company carries a good deal of the traffic that was formerly carried by Derry. The County Council, the Harbour Commissioners, and the Corporation of Derry opposed the acquisition of the Northern Counties line by the Midland Company, but the matter was ultimately compromised by the Harbour Commissioners—I think unwisely—agreeing that a differential rate should be given from a certain point to Derry in favour of Derry. But that point was only thirty miles from the city of Derry, leaving the railway company free to operate as they liked upon other portions of the line.

13923. Was that inserted in the Act?—It was; I was doubtful of the legality of it myself, but it was inserted.

13924. It is in the Act?—Yes; it is in the Act, and the result is that cattle are taken from Limavady, which is only seventeen miles from Derry, and instead of being sent by Derry, as formerly, they are sent to Dungiven and thence booked through by Larne and Belfast, thus avoiding the differential rate from Limavady.

13925. Of course, Derry has suffered from that?—Yes, distinctly. Now the Midland Company have also acquired the Donegal line.

Mar. 14, 1907

Mr. Robert H. Todd, LL.D., Solicitor, representing the Londonderry Chamber of Commerce.

Existing railway communication with Cookstown not satisfactory.

Injurious effect of preferential cross channel through rates on the prosperity of inland towns.

Alleged injurious effect to parts of Ireland by the acquisition of Irish railways by the English companies.

Allegation that the acquisition of the Northern Counties Railway by the Midland of England led to diversion of traffic from Derry to Larne and Belfast.

Mar. 14, 1907.

Mr. Robert H. Todd, LL.D., Solicitor, representing the Londonderry Chamber of Commerce.

13926. In conjunction with the Great Northern Company?—I think that was a subsequent arrangement. I believe it was the Midland Company got the Act to acquire the Donegal line.

13927. Well, at all events, the Midland Company have got a section of it?—Yes, and with regard to the remainder of the line, the Great Northern and the Midland became good partners, and since then the Midland Company promoted a line from Strabane to Letterkenny. Now, on the acquisition of the Donegal line, and the construction of the Strabane and Letterkenny line, an agreement between the two companies was incorporated in the Act, under which the traffic coming from the Donegal line was to be pooled between the two companies, and there was to be no competition.

Suggestions that the partnership in railways in the North of Ireland between the Gt. N. (I.) Ry. and Midland of England destroys competition.

13928. Is the agreement scheduled to the Act?—Yes.

13929. Then we cannot alter that?—No; but what I say is that the result of this policy is to kill competition, and that the carrying power of the whole North-West of Ireland is in the hands of those two companies; and it is in the power of those two companies to starve out the port of Derry. Now, when the acquisition of the Northern Counties line by the Midland Company of England was before Parliament I suggested that the rates should be so fixed that the through rate should be the sea and English railway rates, plus the mileage rate in Ireland, the result of which would be that each port would have the advantage arising from the cheaper rate for a shorter distance.

Actual mileage basis for all cross channel through rates recommended.

13930. I am afraid we have not got to that yet?—Well, that is what should be done if you want to develop the country, and to give every district the advantage to which it is entitled by its proximity to the various ports.

13931. Under the existing arrangements, Derry has evidently got a grievance?—Yes, sir; I have no complaint against the railway companies, except that.

Preferential treatment of Belfast as against Derry alleged.

13932. Do you think any advantage is given to Belfast over Derry?—Yes, I think so. I am informed that, in the way of excursions to Belfast, and cheaper rates for goods, Belfast has a distinct advantage. For instance, take the 3s. per ton rate for grain; we cannot get the 3s. rate from Derry to Belfast, but Belfast can, from Belfast to Derry. Suppose you had a ship coming into Derry with the same load of grain as one coming into Belfast, I think the rates should be the same both ways between Derry and Belfast.

Cost of appeal to Railway and Canal Commission Court prohibitory.

13933. The Railway Commissioners could make an order compelling the companies to do that?—Yes; but if a Derry merchant applied to the railway company for that rate, and the railway company refused, and the merchant applied to the Railway Commission, the costs of the application would be more than the whole value of the cargo.

Cross channel steamer services from Derry.

13934. Is there a daily cross-channel service from Derry?—There is a daily service to Glasgow; a bi-weekly service between Derry and Fleetwood, a bi-weekly service between Derry and Heysham, and a bi-weekly service between Derry and Liverpool.

13935. I suppose that any improvement in the trade of Londonderry not only affects the prosperity of Londonderry itself, but also that of the district around it?—Certainly. The progress and improvement of Derry reflects on the whole district; and anything that injures Derry injures the whole district, and should be stopped, if possible.

13936. Have you considered what would be the best remedy for the grievances to which you have referred?—The best remedy would be to fix the through rates in the way I have stated, but which I understand you object to.

Unification of the Irish railways recommended.

13937. I don't object; I only tell you that there are great difficulties in doing it. Do you think Ireland and your district in particular, would be benefited if there was a unification of the railways, or a State purchase of the railways? Have you considered that subject?—Yes, I have considered it. I may say that I started on the consideration with a strong prejudice against it; but I have considered it carefully; and as the railway companies either will not, or are not able to, develop the resources of the country, I am of opinion that there should be a unification of the railways, either by amalgamation, or putting the whole of them in the hands of a Board, so that the whole may be managed as one line.

13938. Taking those three railways that you have mentioned as necessary; you say the districts are too poor for any private parties to find the capital to construct them?—Yes.

13939. Then, who is to do it?—It must be done by the State.

13940. You think that, taking all the circumstances into consideration, a benefit would accrue to the country by the State owning the railways?—I am not at all sure that State ownership would be the best.

13941. I want to get your opinion, as a solicitor in long practice, and representing Londonderry?—Well, what occurs to me is this: there is no reason why the whole of the railways should not be unified.

13942. You are in favour of unification of the railways?—Yes.

13943. How would you do it?—By taking the dividends of each company, on the average of the last three or five years, and issuing unified stock to the shareholders of each line on that basis.

13944. What about those lines that do not pay any dividends?—I think they should be excepted.

13945. Would you expect the State to find the money in those cases?—They would have to find no money. All that the State would have to do would be to issue stock bearing interest at the rates of the present dividends.

13496. Would you compel the railway companies to enter into the unification?—Undoubtedly. For the benefit of the country, I would have no hesitation in doing so, provided that there should be no confiscation. I do not see why, when a railway company has been given by the State compulsory powers for the purchase of land, for their own purposes, they should not be compelled to sell that property, if the benefit of the country requires it. Whatever is desirable for the welfare of the country should be done. Under the existing system the wealth of the country is not advancing as it should do; and I would say to the railway companies, "If you cannot, or will not, carry on the railways in such a way as to confer the benefit on the country you should, we must do it"—taking the railways from them, of course, on as just and reasonable terms as possible.

13947. You would be in favour of appointing a Board to manage the railways?—Yes; a Board of expert Irishmen who understood the business. It is right that I should state that this matter has not been considered by the Chamber of Commerce of Londonderry, as far as I am aware; and that in what I have said I am not expressing the opinion of the Chamber of Commerce, but my own individual opinion.

13948. I quite understand that. I wanted to have your individual opinion on the matter?—Yes, sir. I don't know that my opinion is of much value.

13949. Now we come to the subject of the Letterkenny and the Burtonport railways; tell the story as to that in your own words?—Yes, sir. In the first place, with regard to the Letterkenny railway, it is 18½ miles long and connects Letterkenny with the Lough Swilly railway at Tooban Junction, and thereby with Londonderry. It was promoted many years ago by some of the County Donegal landowners, who agreed to endeavour to raise a sum of £50,000 for the purpose.

13950. How long ago was that?—About forty years ago. The money was not sufficient to complete the line; it was a broad gauge line. The contractor, I believe, failed after a portion of the railway had been constructed—the embankments and the cuttings were completed, with the exception of a small section of the line, when the contractor disappeared, and the line was left derelict for a number of years. Then, in 1875, the Directors of the Lough Swilly Railway Company suggested to their shareholders to form a company, and induced a number of the Londonderry merchants to assist them in completing the unfinished Letterkenny Railway. They found, however, that they could not raise the money, and they applied to the Treasury, and, through the Board of Works, they negotiated two loans; one, a loan of £50,000, at four per cent., charged as a first mortgage on the undertaking, and the other a loan of £35,000 charged as a second mortgage, and repayable by instalments at five per cent., four per cent. being for interest, and one per cent. as a sinking fund to pay off the loan. The annual instalments on that second mortgage, amounting to £1,750 a year, were charged not only on the railway, but also on the rates of the City of Londonderry and on portions of Donegal, and the ratepayers of the City of Londonderry and of those portions of

Mr. Robert H. Todd, LL.D., Solicitor, representing the Londonderry Chamber of Commerce.

Donegal have had to pay those instalments from the opening of the line up to the present date.

13951. Have they had to pay the whole of it?—Yes; the whole of it. The annual rate for it has latterly been slightly reduced in Londonderry, because there has been an increase in the valuation. It was four pence in the pound originally, but the poundage, owing to the increase in the valuation, has been slightly decreased, but the entire instalment of £1,750 a year, still continues to be paid by the ratepayers.

13952. We have not yet got to the point upon which I was anxious to get information from you, with regard to the Burtonport line?—I am coming to that. I wished to point out that the two railway companies, the Midland and the Great Northern, have promoted a new line, by which the traffic that would have come from the Burtonport railway, and passed over the line to Letterkenny, will be, in part, diverted.

13953. Has that line been made yet?—Not yet, sir.

Colonel Plews.—It is in course of construction.

13954. *Dr. Todd.*—It is expected to be opened some time this year. I think I had better leave that part of the case to Mr. Hanna, who represents the County Council of Donegal, and will be able to explain it to you better than I can. I will come now to the Burtonport railway. I think I know all about that railway, as I acted for the promoters. The Burtonport railway was constructed under the Balfour Act of 1896, by a Treasury grant. The Lough Swilly Railway Company were the promoters, and they entered into an agreement with the Treasury to promote and construct the line, and work it in perpetuity. The Treasury Agreement is scheduled to the Order in Council, which was made on 18th May, 1898, and in that agreement there is the following provision:—

> "If from any cause no contract for the execution "of the works has been entered into within six "months from the Order in Council being recommended to be passed, the Board of Works may, if "they think fit, and with the sanction of the "Treasury, by themselves or their contractors, construct the railway and equip it, and for these "purposes may use all the powers vested in the "company by Order in Council."

Differences of opinion arose between the promoting company and the Board of Works, and in consequence there was considerable delay in getting the plans and specifications completed, and the six months mentioned in the clause I have read passed without any reference being made to it by either the company or the Board; but when the differences of opinion became more acute, the Board of Works said they would act on that clause, and construct the railway themselves, which they did, and the line was opened for traffic.

13955. On the 9th of March, 1903?—Yes. Now, at that time the line was not completed, admittedly. It was sufficiently advanced to be opened for traffic, but it was not completed, and the contractors had a year within which to complete it, and it was arranged by the contractors that any defect which turned up should be made good within the year.

13956. That is the usual thing, is it not?—It is, sir. On those terms the company took the railway over, and commenced to work the traffic. Now, sir, the company allege that the line was not constructed in accordance with the contract and specifications, that a good deal of work was scamped——

13957. That is, the Lough Swilly Company allege that?—Yes, sir. They say that the masonry was not proper masonry, and that the line, as handed over to them, was distinctly inferior to the line they contracted for. The company prepared a schedule of the works which they say should be executed for the purpose of completing the contract. The estimated cost of those works was about £70,000.

13958. What was the total cost of the line?—£318,000. Now, sir, at the opening, or before the opening of the line, differences of opinion arose between the Board of Works and the company as to the type of engines which should be supplied.

13959. Did the Board of Works equip the line with rolling stock?—Yes, under the Treasury agreement. I should mention that before the rolling stock was provided, the railway company sent a requisition to the Board of Works stating what kind of rolling stock and what type of engines, and what number of engines, they were advised should be provided. No substantial difference of opinion arose between the company and the Board of Works with regard to the type of rolling stock; but there was a very distinct difference of opinion with regard to the engines. As regarded the engines, the Board of Works paid no attention to the stipulations of the railway company; and whether for that reason or not, I cannot say, but the engines that were provided were wholly unsatisfactory, and quite unsuitable for the traffic.

Tank-engines supplied by the Board of Works for Burtonport line in opposition to the wishes of the Lough Swilly Company.

13960. Were they too heavy?—No; they were too light to carry the loads, and were wholly unsuitable. What the company wanted was "tender engines;" but the Board of Works chose "tank engines;" and the tank engines provided were not at all satisfactory. There was no adequate means of getting water. The railway company also said that there should be a continuous system from Derry to Burtonport, a run of seventy-five miles, and that if the line were to be worked economically it should be worked without change of engines. However, the Board of Works would not give way to the recommendations of the company, and the result is that from the opening of the line to the present moment those engines have failed to do the work and though the line was to be equipped by the Board of Works, the railway company, in order to carry on the traffic, have had to purchase two powerful engines of their own, and put them on the line. I may mention that I travelled one morning on a fair day from Burtonport to Letterkenny, and the train was delayed three times to get steam up to carry the traffic, owing, as the driver stated, to the engine not being sufficient.

The number of engines supplied alleged to be insufficient for the line.

13961. Was that one of the Board of Works' engines?—Yes; it did not work satisfactorily; and the people were all late for the fair, and were very greatly inconvenienced. The people told me also that the delay on that day was nothing special, but was quite the usual thing, for that every day, practically for months, those delays had gone on, because the engines had failed to do their work. Further, I should mention that the Board of Works supplied only four engines for the whole line; and I am informed that other lines, for a similar distance require eight engines; and that four is a wholly insufficient number for a line of that length.

13962. Has all this been brought under the attention of the Board of Works?—Oh, yes, sir.

Controversy with the Board of Works as to the alleged defects in construction and equipment of the line.

13963. Both as to the alleged defects in the construction of the Board of Works?—Oh, yes, sir. There has been a long controversy about it. I, myself, at the request of the company, called the attention of the Secretary to the Treasury, and the Secretary of the Board of Trade to the matter. There are two sections applicable to the case of such a railway. One is the 24th Section of the Order, and the other is the 7th Section of the Light Railways Act of 1896. The latter section is as follows:—

Powers of the Board of Works under sec. 7 of the Railways Act, 1896.

> "Where any railway constructed under the Principal Acts or this Act has been aided out of monies provided by Parliament, the Board of Works may at any time (whether the undertaking has become the property of a Grand Jury or not), appoint an engineer or other fit person to report upon the condition of the undertaking, and the working, maintenance, and development of the same."

Mr. Tatlow, Manager of M.G.W. Railway, sent by the Board of Works to report on the condition and working of the line.

Now, while all this controversy was going on, the Board sent down Mr. Tatlow, Manager of the Midland Great Western Railway of Ireland to inspect the line. You will observe that this section does not appear to contemplate construction at all; and when Mr. Tatlow came down I pointed that out to him. However, he went and inspected the line, and the rolling stock and the engines. I do not know what report Mr. Tatlow made as the result of his inspection; but at all events there was nothing done.

Lease in perpetuity held by Lough Swilly Company for working of line if done satisfactorily.

13964. I suppose there is some clause dealing with the construction of a line. First of all, let me ask you, is this line leased in perpetuity by the Lough Swilly Company?—Yes; they have a lease in perpetuity under the Treasury agreement. I should state that there is a clause providing that if, on inquiry by the Lord Lieutenant in Council, it is found that a working Company does not work the line satisfactorily, an Order may be made giving them a certain time to amend, and failing amendment, to take over the line and work it. It is provided by the 21st Clause of the Treasury agreement that in case a difference shall arise between the company and the Board of

Clause in Act of 1896 empowering the Lord Lieutenant to make an order for the line to be taken over and worked if the company are not working the line satisfactorily.

Mar, 14, 1907.

Mr. Robert H. Todd, LL.D., Solicitor, representing the Londonderry Chamber of Commerce.

Works as to the construction of the line, it may be settled by an appeal to the Board of Trade, on the application of either party, in which case the decision of the Board of Trade thereon shall be final. Now, when this difficulty arose between the Lough Swilly company and the Board of Works a correspondence took place, in the course of which the Board of Works said an arbitrator should be appointed by the Board of Trade under the provision which I have mentioned. Some delay occurred, owing to the illness of the Chairman of the railway company, but he directed that a claim should be prepared, giving the particulars of the works which were unexecuted or were defective, and estimating the cost of them, and that was done, and when the claim was put in, it amounted to upwards of £70,000. When the Board of Works found that the claim was so large, they said, "You are not entitled to an arbitration under the 21st Section of the Treasury agreement or at all." They had previously suggested that there should be an arbitration, but when they found that the claim was so large they refuse to arbitrate; and what they said was this: "We are prepared to give you additional rolling stock, if you waive all your other claims." The railway company said "No; the line is not properly constructed, and is not complete; we want a public inquiry, to see who is right, and who is wrong; and if the railway is found to be defectively constructed we ask to have it set right, in accordance with the plans and specifications." The Board of Trade was appealed to, and the law officers' opinion was taken; but their opinion was that the clause did not apply; that the Board of Works having taken over the construction of the line itself, the railway company had nothing to do with it until they took up the working, and they could not inquire into the construction at all. The company thought that was unfair. Appeal after appeal was made; and I myself saw the Secretary to the Treasury, and pointed out to him that even if, technically, the inquiry could not be held under the 21st Clause of the Treasury agreement, there was no reason why there should not be some expert appointed by the Treasury itself, and have the matter inquired into. I thought the Treasury would have acted on my suggestion, but the inquiry has not been held, owing to the opposition of the Board of Works. On the 7th March, 1907, the following question was put to the Secretary to the Board of Trade:

Arbitration clause in Treasury agreement.

Alleged conditional offer by Board of Works of additional rolling stock.

The railway company refuse the Board's offer and press for a public inquiry.

> "Mr. Charles M'Veigh asked the Secretary to the Board of Trade if he could state whether an inspection had been made, and, if so, when, of the Letterkenny and Burtonport Extension Railway line, County Donegal; whether complaints had been made by the working company as to defective construction and insufficient equipment; whether he was aware that many passengers travelling by the line were in a state of trepidation until they got off it, and would he say when he would cause an inspection and report to be made that would allay those fears or cause the defects to be made good?"

> "Mr. Kearley wrote—The railway referred to was inspected on behalf of the Board of Trade in February, 1903, before it was opened for passenger traffic. The Board of Trade are aware that complaints have been made by the working company respecting alleged defects in the construction and equipment of the line by the Commissioners of Public Works in Ireland, but we have no knowledge of any special risk to passengers on this railway. The Board has no power to inquire into the condition of the line, except upon representations made to them by the County Council or by twenty or more ratepayers of the guaranteeing area, as provided by section 24 of the Authorising Order in Council of 1898. No application under this section is at present before the Department."

The Board of Trade had no powers of inquiry except a provided for in Sec. 24 of the Authorising Order in Council of 1898.

Resolutions were passed by the Corporation of Derry, and, I think, by the Harbour Commissioners and by the County Council of Derry, protesting against the condition of the line, and asking for an inquiry. Two or three resolutions on the subject were also passed by the Donegal County Council. Those applications were not, technically, within the 24th Section of the Order in Council of 1898 referred to by Mr. Kearley, but contemplated an inquiry under the 21st clause of the Order. Now, the 24th section is as follows:—

Sec. 24 quoted and the effect of an application under it explained.

> "In any case in which it is represented in writing to the Board of Trade by the Grand Jury or by twenty ratepayers of the guaranteeing area, which is or which may become liable to any payments on account of any baronial guarantee given in respect of the railway, that the promoters have made any default in the completion, working, or maintaining of the line, the Board of Trade may, if they think fit, direct an inquiry by an officer to be appointed by the said Board, such inquiry to be conducted in such manner as the Board of Trade may order, and if the Board of Trade certify that the default mentioned in such representation has been proved to the satisfaction of the said Board, the promoters shall make good such default in the manner and within the time specified in such certificate."

As you will observe, the effect of an application under that section would be that, if the inquiry were held, and it was found that the Board of Works or the Treasury had not satisfactorily constructed and completed the line an Order might be made, not against the Board of Works or the Treasury, but against the Lough Swilly Company, the promoters, to expend a sum of £70,000, and make good the default.

13965. How can we remedy that?—Well, sir, in my opinion, if you make a representation to the Treasury it could be dealt with. If you get evidence from Mr. Tatlow as to the condition of the line, showing that it has not been properly completed and equipped and represent that state of things to the Treasury, it could be remedied.

13966. Your contention is that the district suffers in consequence of the state of things at present?—Yes, sir, undoubtedly. As regards the insufficiency of the engines, the effect is that people travelling by the railway have been kept waiting and delayed in the middle of their journey, because the engines are wholly unfit for the traffic.

(At this stage the Commissioners adjourned for a short time, and on resuming, the examination of Dr. Todd was proceeded with.)

13967. Just another word. Do you know anything about the Carndonagh line?—A little.

13968. That is part and parcel of the Lough Swilly system?—Yes, it was made under the same Act as the Burtonport line.

13969. Was it made by the Board of Works?—It was made by a grant under a Treasury agreement similar to the Burtonport line.

13970. And who did the work?—The railway company itself carried out the work in that case.

13971. And is the construction and equipment of that portion of the line satisfactory?—There have been no complaints about that.

13972. The complaints deal with the Burtonport Railway?—Yes, with that railway.

13973. And your contention is that the inefficient way in which it was built and the inadequate rolling stock that was supplied has materially retarded the interesting district through which the line runs?—It seems to me that that is so. I am so informed, and I believe that information is correct.

13974. Both the public and the working company suffer?—Suffer, and suffer seriously.

Examined by Colonel Hutcheson Poë.

13975. You say that the extension of these light railways through Donegal has been of great importance to the districts?—They are great improvements; they are beneficial.

13976. Even though, as I believe is the fact, that few of them have been remunerative?—Some of them have paid more than their working expenses.

13977. The Letterkenny line?—That is different. It was built under the Light Railways Acts.

13978. You alluded to the Burtonport Extension and to the Carndonagh railways?—Yes, and to the Killybegs railway.

13979. Even assuming that the light railways generally, such as you refer to, or which may be made hereafter, and which pass through a poor district even if they should not be as remunerative as some of the others, you think the expense would be justifiable by reason of the opening up of the country, the improved conditions of the people amongst whom they pass, and the better prices which farmers and traders in the districts would be able to get by putting their goods on the market, and that these advantages

would more than compensate for any loss the Board of Works or the Treasury might suffer?—It would more than compensate. And the lines I specially refer to as lines that should be made, would, in my opinion, not only pay their working expenses, but when the traffic is fully developed would pay a reasonable dividend.

13980. I notice you refer to three lines—one from Derry to Park and preferably on to Draperstown?—Yes.

13981. I had the advantage lately of reading your detailed evidence in the Appendix of the Allport Commission, at which time I see you were strongly in favour of through connection from Draperstown *via* Portglenone and on to Ballymena. That was the scheme of Mr. Chaine, and at different times has been advocated by the County Councils and other bodies interested?—There is some misapprehension. The line to Draperstown and the line to Portglenone was the same line up to a certain point, but at a certain point one would diverge to Portglenone and the other to Draperstown. One terminus was not the same in both cases.

13982. The scheme I refer to was from Derry to Portglenone, but touching at Draperstown?—No.

13983. And the only difficulty was that it involved a very heavy expenditure in connection with a tunnel costing £250,000?—That is so. An Act of Parliament was obtained to run a line to Draperstown.

13984. Is it the same line as you now advocate from Londonderry to Draperstown and Park?—One of the tunnels is avoided by the new conditions. The line from Derry to Strabane can be utilised and the new line to Draperstown and Park can be run off it so as to avoid one of the tunnels, but if the line is continued beyond Park I fear very much it cannot be constructed without having a tunnel through the mountains.

13985. At any rate it would put the centre of the County Derry into touch with the other parts. At present, if I may judge by the map and by the evidence which I see you gave before the Allport Commission, the conditions have not been materially altered as regards railways in Derry, seeing that the whole centre of the County is still practically cut off?—That is so. In point of fact Londonderry itself has practically no railway access to the far side of the county.

13986. The trader or farmer wishing to go from Draperstown to Derry, whither he may have to go in the course of business, or other work, would have to travel at present 75 miles by rail?—That is right.

13987. Whereas the distance from Draperstown to Derry is 30 miles?—Yes.

13988. In the same way, from Magherafelt he would have to go 67 miles by rail, whereas if he had direct through connection to Derry the journey would be 35 miles?—Yes.

13989. Previous to the amalgamation and acquisition by the Northern Counties of all the different little branch lines of which that system has been made up, viz., the Derry Central from Magherafelt to Coleraine, the Draperstown line, the Limavady and Dungiven and other systems—previous to the acquisition by the Midland of these lines, did more traffic go to Derry than has done since—did the lines in their independent position bring more trade and traffic to Derry than they have done since they were taken over by the Midland Company?—I cannot say that myself definitely. I have heard that the cattle traffic that formerly came from Kilrea and went through Derry now goes through Belfast and Larne, but I know nothing of it of my own knowledge.

13990. In your evidence you spoke of the trade between Derry and Cookstown, that formerly used to go to Derry?—Before the Northern Counties line was constructed, all the traffic from the Belfast side of the County Derry came to Derry, but all of that is now carried by the Northern Counties line by Belfast.

13991. That is a bigger question. In your opinion the construction of the railway on its present lines was not calculated to develop the whole of the south of the county; it was calculated to draw all the traffic to Belfast which, if it had been constructed on different lines, might have gone by its natural channel, Londonderry. That is your contention, I suppose?—Yes, and that will continue so long as there is no line through the centre of the County Derry.

13992. The second line which you propose, Donemana to Cookstown, does not that seem to run on almost parallel lines with the Derry to Park and Draperstown line?—Yes, but there is a range of hills between. I think between the two lines there would be a distance of ten or twelve miles, and all the intervening space is hilly country, and one is absolutely shut off from the other.

13993. Can you give me any idea of the fares that a traveller has to pay now from Draperstown to Derry *via* Magherafelt?—I am afraid I cannot, but if you wish I will hand you in a time-table. I have not travelled there for a long time.

13994. I suppose they are not so high as they were 20 years ago?—I think they are.

13995. At that time the fares were 20*s.* first-class fare, whereas of course the distance is only 30 miles, and if there had been through connection the traveller could have gone for very much less?—I recollect the first-class fare to Belfast used to be 20*s.*, and it has been reduced very substantially within the last few years, and probably the company has reduced the other fares.

13996. In your experience the consolidation of all these small lines into the large Midland system has not been in the interests of the port of Derry?—Certainly not in the interests of Derry.

13997. You think it has diverted traffic which should have gone to Derry, being much the shortest route, for the longer distance to Belfast?—That is admitted by the Midland Railway Company. Mr. Beale, the solicitor, and one of the most influential men in the company, when I proposed to fix the through rates, as I suggested, said if Parliament fixed the through rates on that basis they would not take over the line at all, as it would prevent them carrying the traffic over the Northern Counties Railway to Belfast.

13998. If that is your experience would you be in favour, in the event of a further amalgamation of the present existing Irish railways, that the Londonderry and Lough Swilly Railway should be taken over by the Great Northern, for example—at present, as you know, they have acquired the Donegal line?—Yes.

13999. And if they had control of the Lough Swilly line they would practically control the whole system over the North-West of Ireland. From your experience would that be advantageous to the interests you represent?—I do not think that would affect matters much, for this reason, that the Lough Swilly has its terminus in Derry, and it would be rather difficult to land the traffic in Derry, and then take it across the city to the Great Northern. On the whole, I think it would be better to leave matters as they are.

14000. I understood one of your objections to this small line between Strabane, Convoy, and Letterkenny to be that traffic which would go *via* Letterkenny into Derry would be diverted from Letterkenny *via* Strabane and then away south?—South and east.

14001. Not north?—Not north. That would not be so to the same extent in the case of the Lough Swilly line, because the terminus is in Derry.

14002. I think you said the portion of the Donegal line between Strabane and Derry is now the joint property of the two companies?—I believe it is the property of the Midland Railway Company of England, and that the two companies, the Midland and the Great Northern, are joint owners of the remaining portion.

14003. In the absence of any statistics, which you say you could not give us, as to the increase or decrease of trade through Derry, the only thing we have before us is the sailings of the steamships. I think you said there were six in the week?—That is to England, and a sailing each night to Scotland.

14004. Two to Heysham, two to Liverpool, and two to Glasgow?—No, two to Heysham, two to Liverpool, and two to Fleetwood, and daily to Glasgow.

14005. Does that compare favourably with the state of things which existed ten years ago?—Before I had any connection with Derry at all, I believe there was a better service to England and better to Scotland.

14006. Was it as frequent?—Yes, I believe it was a daily service to England, but I cannot speak of my own knowledge, and it is attributed to the action of the railways that the daily service was done away with.

14007. I should have thought that where you had such a service of steamers as you have at present it

Mar. 14, 1907

Mr. Robert H. Todd, LL.D., Solicitor, representing the Londonderry Chamber of Commerce.

Passenger fares Draperstown and Derry.

Probable effect on flow of traffic if the Lough Swilly system were absorbed by the Gt. Northern Railway.

Steamship sailings from Derry.

Mar. 14, 1907.

Mr. Robert H Todd, LL D, Solicitor, representing the Londonderry Chamber of Commerce

must indicate there is a good deal of trade?—There is a good deal of trade undoubtedly.

14008. With regard to the Letterkenny line, that, I think, as a matter of fact, was originally projected in 1864?—I think so.

14009. And I believe it then lay idle until 1880?—Yes.

14010. It was in December, 1880, that, I believe, they approached the Board of Works and borrowed £85,000?—That is right.

Promotion, date of construction, and method of financing the Letterkenny line.

14011. I see that in the Board of Trade returns the capital is put down at £57,155 ordinary stock paying nothing. That, I presume, represents the original capital of the old company?—Yes.

14012. Then there are charges of £50,000, £35,000, and there is a sum of £2,750?—That was money owing to the engineer.

14013. He had a mortgage of £3,000?—Yes, he got part of it, and that remains.

14014. Is that a first charge or a second charge?—Third charge. It comes after both the Board of Works charges.

The line a financial failure.

14015. In other words, he has had nothing for a good many years?—And is not likely to get anything. The highest estimate of the value of the line is £70,000. Probably the real value is between £50,000 and £70,000.

14016. I think you said the receipts on that Letterkenny line have been sufficient to bear the interest on the first charge?—I said on the first mortgage £50,000 has gone in arrear.

14017. So that practically the whole of the interest on the second mortgage of £35,000 has had to be borne by the City of Derry and parts of the County Donegal?—Yes.

Scheme to afford relief to the ratepayers by sale to the Lough Swilly Railway, as submitted to Treasury and Board of Works

14018. £1,750 a year, roughly speaking?—Yes. May I mention a fact that there was a proposal that that line, the Letterkenny line, should be amalgamated with the other Donegal lines, the Lough Swilly, and the Carndonagh and the Burtonport Railways, and that the ratepayers should be relieved of any taxation, that the Letterkenny line should be improved and a proper rail substituted for the present light rail, and of the same weight as the other portions of the line, so as to make them uniform. That in my opinion, is an extremely important thing for Donegal and Derry. It can be done without any loss either to the Treasury, the ratepayers, or the shareholders, and with a very distinct advantage to the trade of the country. A scheme to that effect,* particulars of which I shall send in, was put by a very important deputation before Mr. Hanbury, Secretary to the Treasury, and he seemed to be favourably impressed with it, and I believe he told the Duke of Abercorn, who introduced the deputation, that he was favourably impressed with the scheme.

14019. You proposed that the Letterkenny to Tooban portion should be taken over practically by the Board of Works?—No, that the Board of Works should sell it to the Lough Swilly Company, and that they should hand over the other two lines, the Burtonport and the Carndonagh, absolutely, and that the ratepayers should be relieved of all guarantees. The proposal was that it should be left to the Board of Trade to fix the price, if they could not agree, that a wholly independent authority should fix the actual value. The Lough Swilly Company agreed to raise on the whole undertaking sufficient to pay them off, and undertook to relieve the ratepayers of all liability under the guarantees, and to enter into terms under an Act of Parliament to provide a service of trains that would be satisfactory.

14020. Was any proposition of that kind made to the Board of Works?—I made a similar proposition myself.

Proposals declined by both Departments.

14021. And what was the reply received?—I was disposed to think that the Board of Works were prepared to accept it, but it turned out that they did not; and I was under the impression Mr. Hanbury would agree on behalf of the Treasury, but after communicating with the Board of Works he refused.

14022. The agreement with the Lough Swilly Railway for working the Letterkenny branch expires in 1917, in about 11 years' time?—Yes.

14023. And the balance outstanding at the present moment is £50,000 on the first mortgage and £22,000 on the second mortgage?—Yes.

Increase in receipts of Letterkenny line for last quinquennial period.

14024. For the last five years there has been a steady rise in the receipts of the Letterkenny line?—I should rather say there was a rise during the time the Burtonport Railway was being constructed, due largely to the material being carried over the line, but last year there was not so much earned.

14025. I believe in 1903-04 the receipts were £3,632, showing an increase of £1,200 over the previous year?—It was.

14026. In 1904-05 they were £3,234, and in 1905-06 they were £3,078, whereas some years before that it was only £1,700 or £1,800?—That is quite correct, sir. The ratepayers fear now that the Strabane and Letterkenny line will take away that additional traffic and leave them where they were.

14027. Assuming that increase is continuous, it does not leave a great deal to go towards the reduction of the interest on the second mortgage?—It does not. The railway company and the ratepayers are of opinion that the Treasury should not charge such a high interest on that loan.

14028. And your fear is, and the fear of the guaranteeing areas with regard to the Letterkenny line, is that when the new branch is opened from Strabane to Letterkenny, a good deal of the traffic will be cut off at Letterkenny, and will not go over the Letterkenny line at all?—Quite so.

14029. I believe the Board of Works are prepared, as far as they can, to provide safeguards which would protect them from the contingencies which might otherwise occur?—I do not agree with that.

14030. You do not believe they have done so?—I would rather not speak of that. There is another witness who can tell you the why and the wherefore, and who has a strong opinion on that.

14031. I suppose at the time the Bill was before Parliament the Board of Works had to consider not only the Letterkenny line but the interests of the people who would be served by that new connection. The Treasury were the people who would suffer?—No. The ratepayers suffer first. The Treasury is absolutely protected.

14032. You are aware the Board of Works had to get the security of the ratepayers for these lines?—Yes, the Treasury have that security. They have the ratepayers to fall back upon. It is a gilt-edge security. It is the ratepayers, therefore, that must suffer, and I am prepared to show clearly there is not a shadow of probability that the Treasury will lose a penny if they choose to insist upon payment.

14033. *Colonel Hutcheson Poë.*—They need not have lost on other lines if they had chosen to insist on their pound of flesh—but they have lost money in some cases, have they not?—Yes, but in those cases they had only the security of the undertaking, whereas in this case they have not only the security of the undertaking, but they have also that of the rates. I am prepared to give you the figures that will show clearly there is not the slightest chance of the Treasury losing a penny.

14034. I agree: they need not have lost on the other lines, but I think I am correct in saying that there are other instances where they had a guarantee and did not claim the money?—That is so, and what we think is that they should be satisfied with the security of the undertaking, and run the risk of any loss, if there is any such risk, and relieve the ratepayers of this burden. Suppose the line is worth £60,000 they should relieve the ratepayers of the guarantee, and put the line in good order. I think—if you will allow me to state this—that it is within the lines of your inquiry. I think the scheme is a thoroughly good one, and that in the interests of the country the Treasury should support it.

14035. I agree it comes within this inquiry. In the evidence you gave before the Allport Commission, you gave it as your view, and I believe the Commission subsequently recommended, that the line should go to Kilmacrenan and thence *via* Milford to Dunfanaghy?—Yes, and we pointed out that it would be a considerable saving to take the line in that direction rather than going to Creeslough, and they advocated that—I don't know why it was not carried out—but their recommendation certainly was that the line should go in that direction and subsequently through to Creeslough?—There was a pitched battle in the Grand Jury over that very subject, and ultimately the scheme was rejected and the line run as now.

14036. The cost of this line is given as £6,400 a mile; but you spoke of this line having been badly constructed and equipped. As a matter of fact, I think the Buncrana and Carndonagh line worked out at

*See Appendix No. 7.

£5,600?—Yes, but the works are distinctly heavier on the Burtonport line, cuttings through the rock, viaducts, and other heavy expenses, which were not necessary on the other.

14037. We discussed this question in London when we had the Engineer of the Board of Works before us. While admitting that the works were heavier he said the cost of construction of both lines was unnecessarily heavy, because the Lough Swilly line took good care that as the work was being done at the expense of a public department they should not spare expense in any way. In the face of that evidence it seems rather curious you should now come forward and say the lines were very inefficiently made?—I take leave to differ with the engineer. The Carndonagh line is very well built, I agree; the stations are very well made, but I believe the stations were built by the Lough Swilly line at their own expense. As to the Burtonport line, the permanent way is soundly built, with some slight exceptions; but not being an expert, not having the training of an engineer, I cannot tell all the works that are deficient, but I know that some are.

14038. I suppose I am correct in assuming that before the Lough Swilly Company took over these works they satisfied themselves that the line was, in their opinion, one that they could take over with every prospect of working it efficiently and to their own benefit?—I think you are not right in that. So far as regards the Burtonport line the company tell me they took it over on the distinct statement and arrangement that during the year of maintenance the works would be finished satisfactorily. They had no time to inspect, because they were not allowed in the works till the last moment.

14039. They took it over, and had no idea of what would equip the line in a satisfactory manner?—No; they protested from the beginning, but I understood that the Board of Works said that if the traffic showed that more rolling stock was necessary they would provide it.

14040. I should have thought the Londonderry and Lough Swilly Company would have been asked to see that everything was efficient before they took it over?—No, they were under a contract with the Treasury. The contractors have a year of maintenance, and the usual custom is that several things in lines that are not completed at the time of opening are made good during the year of maintenance. In this case it was undertaken that they should be made good during the year of maintenance, but the engineer had no chance of checking the works except during the time of inspection by the Board of Trade engineer, and they then called attention to various defects, and the deficiencies they then pointed out and others since observed are said to total up to £70,000.

14041. A quarter of the total cost! That seems extravagant. £6,000 a mile compares unfavourably with the construction cost of other lines; and then to be told that it needs another £70,000 before it is in a satisfactory condition sounds extraordinary. These are business men of experience who have worked the Lough Swilly line successfully; I should hardly have thought they would buy a pig in a poke. The only evidence we had was from the engineer of the Board of Works, who gave it as his opinion that it was a very well equipped line?—I believe it was badly constructed and insufficiently equipped, and in consequence could not be properly worked.

14042. Then, I am afraid you are not prepared to modify the opinion which you expressed before the Allport Commission as to the generally unsatisfactory manner in which the Board of Works carried out their duties. Surely the Board of Works officials are thoroughly capable?—So far as the Board of Works officials are concerned they are courteous and efficient, but it is notorious that the works carried out under their supervision are not satisfactory. I hope under the regime of my friend Mr. Batchen, they will improve.

14043. Since the Burtonport extension things have been pretty satisfactory?—Yes, it has made a profit of about £2,000 a year, which is divided between the Treasury and the working company, and has been sufficient to pay a portion of the interest on the original capital.

14044. That is an unusual experience, I am afraid, with the railways constructed under Treasury grants?—Yes, I think it is chiefly owing to the good management that resulted, in the case of the Lough Swilly Railway, in a continuous dividend of 7 per cent.

14045. But you find that there is a volume of traffic running over it, and after discharging working expenses there is a profit of £2,000 a year?—The claim of the company is——

Mr. Robert H. Todd, LL.D., Solicitor, representing the Londonderry Chamber of Commerce.

The question of arbitration between Board of Works and Lough Swilly Co. discussed.

14046. You are authorised to speak on behalf of the company?—No, I am not speaking on behalf of the company, but I know, as a matter of common knowledge, that the Company has claimed to have an impartial inquiry held by an officer appointed by the Board of Trade, and that has been refused. That would lead one to suppose on the face of it that there was something to justify the claim. A petition was sent from Londonderry to the Board of Trade on the matter.

14047. With reference to that petition, was not the action of the Board of Trade suspended to see what effect the remonstrances of the Board of Works would have on the Company?—No, the Board of Trade consulted the Board of Works from first to last, and the Board of Works protested against such an inquiry.

Mr. Tatlow's inquiry.

14048. I remember them calling attention to the fact that complaints had been received as to the unsatisfactory working of the line. Some defects were remedied, and in 1906 there was no mention of faults, and Mr. Stevenson said things were very much improved, and they did not propose taking any action for the present?—They refused to allow any action to be taken. They sent down Mr. Tatlow, but no action was taken on his report. But the complaint was as to construction and engines, not as to working and maintenance. Mr. Tatlow could not deal with construction and equipment, and therefore the inquiry was abortive. The inquiry that is asked for is as to whether the line is properly constructed, and that inquiry has been persistently refused. The only redress proposed was an inquiry under the 24th Section of the Order in Council, the result of which would be that an order would be made against the working company to make good the defects in the line, and to expend the money which the Treasury contracted to expend.

14049. Of course there is no doubt, looking at the Board of Trade returns, that the rolling stock of that line is lower than on other lines of the same length?—That is so.

14050. It works out as one locomotive to six miles of line?—So far as regards the parent line that would be only two engines to the line.

14051. *Chairman.*—He is taking the whole line?—The Lough Swilly line is 12 miles long.

Question of the sufficiency of rolling stock on Burtonport line.

14052. *Colonel Hutcheson Poë.*—I am taking the whole system, 99 miles. I presume that the Chairman of the Company took very good care to satisfy himself that the line was properly supplied?—The Treasury refused to supply what was required. That is admitted by the Treasury and the Board of Works. In effect they say, "We admit you have not the proper rolling stock, but if you waive all your other claims, and undertake to do all the necessary improvements at your own expense we will give you proper rolling stock." I shall send in copies of their letters. (See Appendix No. 7).

14053. You say the traffic is seriously crippled by the bad construction of that line, but in spite of it they are paying £2,000 a year?—Yes, by good management; but if the line were properly constructed it would develop the country, the traffic would increase, and the Company would put up stations that are required, and which the people are clamouring for.

Improvements by Board of Works on Letterkenny line.

14054. Have not the Board of Works made several improvements to that line by making a crossing and providing telegraphic communication?—That is on the Letterkenny line. The Letterkenny line belongs to the Board of Works. They are making improvements to their own line but they make no improvements on the Burtonport line, for the contract is that the Lough Swilly Company shall work it in perpetuity.

14055. But is it not rather a misrepresentation to say that one line is owned by the Board of Works and the other is not, and to say that having advanced the money for the making of the Burtonport line, that because it is leased to the Lough Swilly Company, the Board of Works and Treasury do not care how the line is worked?—It was built by public money.

14056. And by a free grant from the Treasury?—Yes, and the Company has a contract to work it in perpetuity. There is a provision in the Treasury agreement according to which profits under £2,000 a year can be applied to development. The Company

Mar. 14, 1907.

Mr. Robert H. Todd, LL.D., Solicitor, representing the Londonderry Chamber of Commerce.

want to apply that in development and the Treasury refuse.

14057. I suppose they are not satisfied that the equipment is wanted?—They have admitted it is wanted. They practically say, "If you waive the claim as to construction we will supply additional rolling stock." The rolling stock is wanted.

14058. Do you say a Board which is willing to spend money on that (Letterkenny) line, and to throw good money after bad, will do nothing for the Burtonport line?—The Letterkenny line is their own.

14059. Yes, but according to you they refuse to allow money to be spent on a line which you say requires £70,000, and yet they are content to spend those various sums on the other line?—Undoubtedly, I can prove it.

Board of Works treatment of the Letterkenny and the Burtonport lines contrasted.

14060. Does it not strike you as strange that where you find a public body throwing good money after bad—doing that with their eyes open—as they have done in the case of the Letterkenny line, you should find them grudging of assistance to a good line like the Burtonport. I don't suppose a public body is so indifferent to the way in which money is spent, and it seems to me inconceivable why they should not be as liberal with the one line as they are with the other?—It is complained on every hand that the Burtonport line is not completed as contemplated. I can speak by comparing the equipments on other lines.

14061. You don't give us figures to show what is the rolling stock compared with the parent line?—If you want them I can get them.

14062. You have nothing to say as regards that point?—I think it is desirable that the Burtonport Railway should have a public inquiry to ascertain whether the line is properly completed, and no company should be called upon to spend some thousands for the purpose of completing the work that the Treasury undertook.

Source from which cost of further extensions should be derived.

14063. In the event of any further railway extensions, do you think they would have to be done by free grants or that the barony should be prepared to guarantee anything?—I think in some cases there should be a contribution from the localities. In my opinion there should be a public inquiry before money is spent to settle that the best line be built in the most economical manner and to see what the localities can give.

14064. Do you think the procedure under the Act of 1896 is better than the procedure under the 1889 Act?—It is better, but not satisfactory. The railway company sends an engineer to prepare a scheme, and the plans are lodged——

14065. But the Lord Lieutenant chooses terminals and practically decides the course of the railway?—Yes.

Suggestion that full inquiry should be made before the routes, termini, etc., of new lines should be decided.

14066. I understood that the principal complaint with regard to the railways that have been constructed under the early Acts was that they did not follow the routes that were most required?—In the case of the Burtonport Railway the general feeling was that it should go by Dunfanaghy and Falcarragh. The Board of Works objected, and they chose a route avoiding those places. Everybody was in favour of the route through them, both the working company and the people of the district. I myself offered on behalf of the company to spend £10,000 and extend the line to Dunfanaghy and Falcarragh, but for some reason or other the Board of Works refused to agree to that suggestion. It turned out afterwards that the line through Dunfanaghy and Falcarragh could have been done more cheaply, and it certainly would have conferred more benefit on the country, than the line that was actually made. What I complain of is that, without due inquiry, the details of the line were settled before the public authorities and the districts interested were allowed an opportunity of putting forward their views on the subject; they ought to have an opportunity of doing so. A full inquiry should have been held before any other expenses were gone to, and the route of the line should be definitely fixed, upon full information and after careful inquiry, by the best experts, and when it was so settled it should have been promoted.

14067. That would in your opinion be an improvement, but you would still leave the determination with the Lord Lieutenant?—Yes, after a full inquiry.

14068. Supposing any railways are constructed in future under local guarantees, the guarantees may run for two or three years before the ratepayers get any recoupment from the traffic?—I think the guarantee should only run from the time of the opening of the line for traffic.

14069. Don't you think it would be a desirable amendment if the Treasury were to guarantee the whole sum, and recover the proper proportions from the baronies? At present the latter get the Treasury recoupments after the line begins to run, but in the meantime they have to collect the full guarantee in the first instance. Would you be in favour of trying to get the Treasury to see their way to guarantee the full interest and to recover from the baronies. It would be a saving both to the Treasury and the baronies, as in such an event, money could be raised on more favourable terms than at present?—I quite agree with that suggestion, and it should be adopted. There is another suggestion, too, that I would make. Provision could be made that the guarantee of the barony should not run until a time had been allowed for development. If they got a line open for traffic for five or seven years, they might then be in a position to pay the minimum rate upon lines where there would be no prospect of development until five or six years after their construction. The people of the district might be willing to guarantee to aid in the construction of those lines, and it could be settled as to what liability the ratepayers should incur and for what period; this should be determined upon an inquiry to be held before the scheme was promoted.

14070. You are opposed to the control of Irish lines being placed under any British railway?—I am. The interest of English railways is not always that of the people of the locality. The policy would be dictated by the majority, and that policy would naturally be to favour English railway companies at the expense of the Irish.

14071. Would you be opposed to putting them under the control of a central authority, such as may be created in the near future?—I have not considered that subject.

14072. You do not contemplate that any shareholders would object to the purchase of the lines, provided they got fair terms?—No.

Cross-examined by Mr. Gerald Fitzgibbon, K.C.

14073. You said that the effect of amalgamation in the North of Ireland was practically to starve the port of Derry? I think "starve" is the word you used. As a matter of fact, since the amalgamation, have not the London and North-Western Railway and the Lancashire and Yorkshire Company combined to give you a service to Fleetwood that you had not before?—The Act establishing the service was a year before the amalgamation.

14074. But the amalgamation was going on. Previous to that you had not the service?—No, but we had other services in its place. We had the following services:—Derry to Fleetwood, Derry to Morecambe, and Derry to Liverpool. The Morecambe then became the Heysham service.

14075. That old service to Fleetwood you told us about, you heard of—it was before your own personal knowledge?—No; it was going on a few years ago.

14076. Did it stop for many years, at any rate before the Lancashire and Yorkshire amalgamation took place?—I don't know.

14077. You stated that it took seven hours to get from Cookstown to Londonderry. Do not the Northern Counties Company give you three trains a day that run in four hours?—That is so, I believe.

14078. It took you four hours by the Northern and seven by the Northern Counties?—Yes.

14079. But there are three services a day which do the journey in four hours?—I believe so.

Mr. Robert Watson examined by the Chairman.

Mr. Robert Watson, representing the Londonderry Chamber of Commerce.

14080. You appear on behalf of the Londonderry Chamber of Commerce?—Yes, sir.

14081. Are you a member of that Chamber?—Yes, sir.

14082. Are you a merchant in the city of Londonderry?—Yes.

14083. And you also appear on behalf of a number of merchants interested in the prosperity of Derry and its neighbourhood?—I do.

14084. What particular business are you in?—Our chief business is the grain trade, flour, and corn grinding, and we are also engaged in the herring business, herring curing on the coast of Donegal at the different stations, Burtonport, Downing's Bay, and Buncrana.

14085. I suppose you have a general knowledge of the Co Donegal?—I have. I have travelled for 25 years regularly, chiefly through the Co. Donegal. Our business lies there very largely, and I have an intimate knowledge of the whole of the county, and of the history of the promotion of narrow gauge railways, and the history of the Co. Donegal generally during that time.

14086. Will you tell me what you have to say with reference to the question of through rates?—With regard to through rates we feel that they are unfair to Irish manufacturers, like ourselves for instance, in Londonderry. As an example I would say that flour, which we manufacture, and which is an industry that is reviving very much of late in Ireland, we consider it unfair that the railway companies should get more—take a town like Londonderry to Enniskillen on the Great Northern line—we feel that it is an injury in the case of millers sending their stuff from Liverpool to Enniskillen that we should have to pay more for our flour from Londonderry to Enniskillen than the proportion that the railway company would get from the English miller for the same stuff in similar circumstances, and we think that through rates are unfair, in some cases at least, to the Irish manufacturers like ourselves engaged in the manufacture of flour.

14087. Do you import wheat?—We do, sir.

14088. Do you want a through rate for that?—Londonderry is a port, and it comes in there largely.

14089. Do you get any from Belfast?—Rarely. I would like very much to have an opportunity of referring to the evidence of the secretary of the Belfast Harbour Board in regard to that, because I would like to correct what would seem to me to be the false impression created regarding the grain trade to Londonderry; the 3*s.* rate was referred to him as being low from Belfast to Londonderry, and it was suggested that the grain trade of Londonderry was done largely through the port of Belfast. Such is absolutely untrue. On the contrary, the grain trade is one of the particular trades that has maintained direct importation almost entirely.

14090. I think the Commissioners are aware of that, and they understand that the 3*s.* rate applied to a special cargo under special circumstances?—It was not a special cargo, though the circumstances were special. Occasionally Indian corn comes from Belfast to Londonderry, but under special circumstances. A special cargo would come direct, but they might bring a small lot from Belfast by rail. As a general rule the grain coming to Londonderry comes by direct importation from the United States, the River Plate, or Russia, as the case may be—I should say that nineteen-twentieths of it come that way.

14091. As to the question of through rates you have explained to us what your objection is?—Might I also refer to the point made that if the Belfast Harbour Commissioners would make an effort they might do the coal trade through Belfast to Londonderry.

14092. No, I think you need not go into that?—The matter seemed so absurd to me that I just wanted to refer to it, but it would probably be unnecessary.

14093. Are you of opinion that the rates, speaking generally, from Londonderry are reasonable?—Well, we have no general complaint to make of the rates, but we think there are special cases where a lower rate might be given by the railway companies in respect of particular articles. Of course, I can only speak of what largely concerns ourselves. We do a considerable business in Indian corn, grinding it and making it into what we call Indian meal in this country, and it is used largely for cattle feeding, and in some parts for human food, and the rate on the railways for it is practically the same rate as for flour, which is almost double the value in money, and which requires very much more care and attention in transmission. This Indian meal is very largely used in Donegal, and we have frequently thought that there might be a reduction in Indian meal for the benefit of our part of the country.

14094. What benefit would there be in that to your part of the country?—I don't mean to say that a reduction would benefit the traders or millers very much. Of course the millers would get the reduction, and that would be given by them to their customers, and again it would be given by the customers to the consumers.

14095. Why should the railway company charge less for Indian meal if it is precisely the same bulk?—It is not exactly the same bulk, and it is more easily handled and requires less care.

14096. Why?—It is not in the same kind of sack. It is in jute, whereas flour is in small bags of four, seven, to eight or ten stone, and requires more care in handling, and the wagons require to be cleaner for flour. There is some difference, some slight difference made occasionally in the rates between the two, but generally speaking they are the same.

14097. Generally speaking you have no complaint to make of the railways?—No, generally speaking we have no complaint to make of the railways in Londonderry. We do five or six thousand tons a year with the Great Northern Railway Company, and my experience is that those who have the least use for railway companies, and who have the least business are the loudest and soonest to complain, and those who have most business say very little about the matter.

No general complaint to make of the railways.

14098. What do you suggest about obtaining better rates from the railway companies?—It occurred to me—this is not an opinion of our Chamber of Commerce, because the matter was not before them, but I have myself thought that if an inspector was appointed even by the railway companies themselves who would be available for any trader, or if, say, even the goods manager, or whoever they appointed, would come to the smaller places, if he would come to Londonderry or Omagh or the smaller centres at stated times, and his coming would be announced, he could hold a sort of court of inquiry there, and traders could come before him at a certain time with their grievances, and in that way they might have them redressed. At present it is exceedingly difficult for a provincial trader who has to go to Belfast or Dublin to have matters looked into. If you write about these things it takes a considerable time to have them put before the proper authority, the manager of the railway company, and perhaps if you want some special thing to be done in a given time the period has passed in which it is of any use before you get an answer. I think if the goods manager would come to the small places, and hold a court, and advertise his intention of doing so, for the purpose of giving traders an opportunity of going there and stating their grievances, it would be a good thing for the small places.

Conferences between the railway managers and the traders at certain places and at stated times suggested.

14099. Have you heard the evidence of Dr. Todd?—I did, sir.

14100. Did you hear the questions put to him as to the unification of railways?—I did, sir.

14101. Do you agree with what he said?—Not quite, sir. It was not, as he told you, before the Chamber of Commerce the question of nationalisation or unification of railways. But I may say that the general feeling in Derry, in the Chamber of Commerce, and the Harbour Board, of which I am a member, would be against State ownership of railways It was not before them, and no resolution was passed on the subject, but from my own observations and from discussing it with the members at different times I don't think a resolution to that effect could be passed in either of those Boards suggesting either State ownership or unification of railways.

Question of unification or nationalisation of Irish railways.

14102. You mean that there would be a difference of opinion?—I don't think there would be a serious difference of opinion about State ownership. I think the opinion would be almost entirely against it.

14103. You heard what Dr. Todd said about the unification of railways?—Well, I don't exactly know where the difference comes in.

14104. Well, I will put it this way, do you think the present system of a large number of railways is the best system for Ireland?—I think, generally speaking, that the Great Northern and the Northern Counties lines, of which I have the best knowledge, serve the district well. There have been grievances, and drawbacks, and complaints, but I think, generally speaking, they are well managed and serve the district well. There has been an extraordinary improvement in the Great Northern Railway during the

Mar 14, 1907.

Mr. Robert Watson, representing the Londonderry Chamber of Commerce.

last 25 years both in the system of travelling and the comfort provided for the passengers.

14105. Is the Great Northern in existence all that time?—Yes.

14106. I mean has there been amalgamation for 25 years?—Yes.

Colonel Plews.—For 32 years.

Chairman.—There were previously three or four lines in the system?

Colonel Plews.—Yes, three companies between Dublin and Belfast, and four companies from Dublin to Derry.

14107. *Chairman.*—You are perfectly satisfied, Mr. Watson?

Witness.—I don't say that I am perfectly satisfied. I say at times there have been complaints made, and of course we receive them occasionally, and we ask for certain changes to be made one way and another, but speaking generally I think that the larger traders who do most business with the lines are fairly well satisfied both with the way their traffic is carried, and with their comforts for travelling, and with the management generally.

Absorption of the Donegal system by the Midland and Great Northern Companies disapproved of.

14108. Then you agree that the action of the Great Northern and of the Midland Companies in buying all these railways in the North has been to the advantage of your country?—That is another matter altogether. I was not speaking of that. I was one of the strongest opponents of the buying up of them, and I went to London to give evidence against it, and I feel it strongly that the Donegal Railway should pass into other hands, perhaps partly on sentimental grounds, and perhaps because I took a great deal of interest in the extension from Strabane to Derry—I was certainly opposed to the amalgamation of the Donegal system.

14109. I was speaking generally of the railways in your district?—I was speaking of how the country was served by the two railways, the Midland and the Great Northern, and as to the extension from Strabane to Londonderry—

The acquisition of Irish railways by English railway companies regarded as disadvantageous.

14110. Well, just tell me, do you or do you not agree that the advent of the Midland Railway, an English Company, into this country has been an advantage or a disadvantage?—I think it has been a disadvantage. That is a matter that I did not think you thought I was discussing when I spoke of these railways. I think that hardly any of the promises that were made by the Midland Railway of England to the Irish shareholders when they proposed to purchase the Northern Counties Railway have been carried out, and that is why I would be against powerful English Companies coming here and buying up or being amalgamated with Irish railways at all. I travel regularly on the Midland Railway—

14111. Of England or Ireland?—The Midland Railway of Ireland, or the Northern Counties Committee, and it was a most popular line, the officials were popular, and the management is popular, and I think that but for them there would have been a great many more complaints about the management of the old Northern Counties Railway by the Midland of England since it has been taken over. No one who travels on it and uses it and knows it would say for a moment that there has been the slightest improvement in it since it was taken over by the Midland, and that is putting the matter very mildly.

14112. What have you to say with reference to a railway partly owned and controlled by the Government?—I think that that also is a great drawback.

14113. What railway do you refer to?—The Londonderry and Burtonport Extension, which, when I put it that way, I mean is not owned by any particular railway company. It is under the supervision of some public body, I suppose the Board of Works.

14114. Well, we have heard enough about it?—You don't want to hear any more about it, perhaps, and I have no desire to say any more.

14115. That is all I want to ask you?—Very well, sir.

Examined by Lord Pirrie.

14116. Mr. Watson, am I right in assuming that you just send your five to six thousand tons at the ordinary rate in accordance with the rate quoted and hung up at the Derry station?—You are right in assuming that.

14117. You don't get a special rate as Mr. Heyn told us he did, a special rate quoted to him on his ringing up the railway companies by telephone?—No, we send five or six thousand tons over the Great Northern line every year, and the farmer or trader sending five tons would get it at the same rate.

14118. I want to have it clear. It is the first time I ever heard of a railway company giving these rates, and sending such large quantities as you do you should know. I think, however, you are very wide awake in Derry, more than we are?—No, I think you are wide awake when you wanted to get the coal trade of Derry through Belfast.

14119. Well, there is no advantage to the large trader?—I am speaking for myself, and I believe others are in the same position.

Examined by Colonel Hutcheson Poë.

14120. Are you well acquainted with the trade of Derry?—I am.

14121. Is it an increasing or diminishing trade?—I believe it is an increasing trade. Derry is a prosperous town, and is holding its own well.

14122. You heard Dr. Todd say that it had largely been diverted to Belfast, that a great deal of traffic from the centre of Londonderry that should go by Derry goes by Belfast?—That is a fact, but it involves a question that it would take a long time to explain. There is a certain amount of traffic going by Belfast that I would like to see going through Derry. But our export traffic from Derry has been getting on very well. I would, of course, like to see it larger.

14123. You don't think there has been any decline or decay?—Not lately.

Mr. R. L. Yeates examined by The Chairman.

Mr. R. L. Yeates, representing the Londonderry Chamber of Commerce.

14124. You are also from the Londonderry Chamber of Commerce?—Yes.

14125. Are you a member of that body?—Yes.

14126. Of the Chamber?—Yes.

14127. Are you in business in Londonderry?—Four miles out of it.

14128. What particular business?—Bleaching.

14129. Where does your traffic go to or come from?—Ireland, Lancashire principally, London, and the West of England.

14130. Do you get the yarns and scutch them?—In cotton piece goods.

14131. They come from Lancashire?—They do.

14132. How?—As a rule, by the Midland Railway and Heysham and direct boat to Derry, or the Lancashire and Yorkshire and direct from Fleetwood to Derry.

14133. They go through the bleaching process at your place?—Yes.

14134. Do they go back to Lancashire?—Some goods to Lancashire, Derry, Dublin, London, and the West of England.

Complaints as rates for cotton goods.

14135. Do you find the rates satisfactory?—Not at all in some cases.

14136. Give us one instance?—Compared with the through rates for cross-Channel traffic.

14137. Are you dealing with the rates in Ireland?—When compared with through rates for cross-Channel traffic, the rate of 12*s.* 6*d.* per ton for cotton piece goods from Derry to Belfast as against 22*s.* 6*d.* from Derry to Manchester direct, is unreasonable, as this sum leaves only 10*s.* for the voyage from Belfast to, say, Heysham, and thence rail and haulage to Manchester.

14138. You think the proportion you pay locally is out of proportion to the through rate?—Exactly. Then there is another point about it. They make no difference here between the raw material and the bleached material which is the finished article. The rate is identically the same for the two, though a few years ago there was a difference of 5*s.* There was formerly a difference made between greys and whites, but now whether greys or whites are sent the charge is the same really. They have kept the same nominal rates, 27*s.* 6*d.* and 22*s.* 6*d.*, but for the bleached they direct a rebate of 5*s.*

14139. Who?—The Railway Companies Commission, I presume.

14140. On which railway?—On both the Midland and the Lancashire and Yorkshire.

14141. Is that in the rate book?—I think so.

14142. It is applicable to everybody?—It is applicable to everybody, but there is only one bleach works there owned by me, and consequently it is only applicable to me.

14143. *Lord Pirrie.*—The rate for bleached goods is 27*s.* 6*d.*?—Yes, but they give a 5*s.* rebate.

14144. Why don't they alter the rate book?—That is their own business. I don't know.

14145. *Chairman.*—You get the rebate?—No; the other people get it.

14146. What other people?—The merchant in Derry can import white goods as cheaply as I import grey. Then the white goods are at the company's risk, and the grey goods are at the owner's risk. The rate is the same, don't you see.

14147. Explain?—I pay 22*s.* 6*d.* for grey goods, and they come at my own risk, but the manufacturer of shirts in Derry imports his white goods at 27*s.* 6*d.*, with a 5*s.* rebate, and at the company's risk, and there is this difference that white goods can easily be damaged, and in the case of grey goods it is difficult to damage them with dirt, and the material is only coming in at the same rate as the finished article. That is my complaint. Then the Derry to Cork through rates are 66*s.* 5*d.* a ton, whereas the Derry to Dublin rate is 20*s.*; Dublin to Cork, 27*s.*, amounting to 47*s.* The through booking is 47*s.* as against 66*s.* 5*d.*

14148. *Lord Pirrie.*—That is where you lose on it?—Yes.

14149. *Chairman.*—Have you ever represented that to the Railway Company?—No, but I represented the other matter until I am tired. Then there is a through rate from Derry to Limerick of 53*s.* 6*d.* a ton, while the rate from Derry to Dublin is 20*s.*, and the rate from Dublin to Limerick 22*s.*, making 42*s.* as compared with 53*s.* 6*d.* for through bookings.

14150. As a matter of fact, Mr. Yeates, do you send the traffic that way?—There is a considerable amount sent that way.

14151. And you save the difference of rate?—Yes.

14152. You have not represented that to the Railway Company?—I have not, because it does not directly concern me. I am giving evidence on the part of the Chamber of Commerce from the shirt manufacturers.

14153. You have heard the evidence of Dr. Todd and the last witness, Mr. Watson, as to what they call the disadvantage of English railway companies being connected with the Irish companies; so far as Derry is concerned, do you agree with what they said?—Yes, I think it does away with competition to a large extent. I don't think it has been for the benefit of Derry, except for the advantage of the Lancashire and Yorkshire and the London and North-Western boat; that is the only advantage.

14154. It is a distinct advantage to Derry?—Yes.

Mr. Fitzgibbon, K.C.—The witness has given evidence of the through rate that is in excess of the local rates from Derry to Limerick, but we wish to say in answer to that that the Dublin rate is a temporary rate, because of temporary competition by sea.

Colonel Plews.—The rates were disturbed.

Mr. Fitzgibbon, K.C.—I won't go into it further now; this is more a question of evidence for my own witnesses.

Lord Pirrie.—That is the opposite of what Mr. Knox told us a few days ago. He said it was a mistake on the part of the railway companies, and that they proposed to alter it.

Mr. Fitzgibbon, K.C.—Thank you very much. I was not here then. I have only come in lately, and that is the explanation given to me.

Chairman.—There is a trading steamer going round the coast from Derry to Dublin, and that has reduced the local rate of the railway company; in order to get some of that traffic they had to reduce their rates?

Mr. Fitzgibbon, K.C.—Yes.

Chairman.—Mr. Yeates found that it reduced his rates also. You had no reason to draw the attention of the railway company to it?

Witness.—Not the slightest. I am glad the boat started.

Mr. Fitzgibbon, K.C.—The lowering of the rate or the rebate from 27*s.* 6*d.* to 22*s.* 6*d.* is caused by independent steamship competition from Belfast to Manchester.

Chairman.—That does not affect the question of the grey goods as compared with white goods.

Colonel Plews.—The allowance is not made by the railway company, but by the steamboat company.

Chairman.—But that does not touch the question of grey and white goods.

Colonel Plews.—The nominal rate for white would be 27*s.* 6*d.*, and this steamboat company, to equalise it, are making a rebate that we know nothing about.

Mr. Fitzgibbon, K.C.—We will explain that later on.

The Commission then adjourned till the following morning at 11 *o'clock.*

TWENTY-FIFTH PUBLIC SITTING, FRIDAY, MARCH 15TH, 1907.

At the Reception Room, Royal Dublin Society, Leinster House, Dublin.

Commissioners present:—Sir CHARLES SCOTTER (Chairman); Right Hon. LORD PIRRIE, P.C.; and Lieut.-Col. WILLIAM HUTCHESON POË, C.B.;

Mr. GEORGE E. SHANAHAN (Secretary).

Mar. 15, 1907.

Chairman.—I have to announce, for the information of the railway companies, that we do not propose to sit to-morrow, and that the next meeting of the Commission will be on Monday, the 22nd April, and the following meeting on Tuesday, the 7th of May. I thought perhaps it would be advantageous to the railway companies to know what we had decided. We have already a very large number of applications to give evidence, and we think it is necessary to announce that no further applications will be received after to-day, also that at the next meeting we shall hope to be able to announce when it will be advisable for the railway companies to prepare to give evidence. We will give ample notice of the date which would suit the convenience of the Commission to hear the Railway Companies.

Dr. Todd (Solicitor, Londonderry).—I was about to ask you, if you will permit me to send you some documents substantiating the statements that I made to you yesterday. I have documental evidence that substantiates every statement that I made. I got notice last night that Mr. Batchen, the Engineer of the Board of Works, proposed giving evidence correcting some portion of my evidence. I would like to ask you to postpone taking his evidence until counsel is here to cross-examine him, who will be supplied with the necessary documents. I would ask to appear personally, but I think it would be better, as Mr. Vesey Knox is acquainted with this particular matter, to wait until he is here. He will be here at the next sitting.

Chairman.—If you will kindly send the documents* to the Secretary we will look at them.

Dr. Todd.—Thank you.

Mr. W. J. HANNA, J.P., examined by the CHAIRMAN.

Mr. W. J. Hanna, J.P., representing the Donegal County Council.

14155. Mr. Hanna, I think you are a County Councillor for County Donegal?—I am.

14156. And also a member of the Londonderry No. 2 District Council?—I am.

14157. Are you also connected with the Derry Chamber of Commerce?—I am a member.

14158. And you are familiar with the trade and commerce of that particular district?—Yes; I represent the local bodies in my neighbourhood—Guardians.

14159. I think you wish to refer to the Letterkenny narrow guage railway?—I do.

14160. But do not you think we have heard sufficient evidence upon that?—Well, I merely want to put forward what my District Council, Derry No. 2, think is a particular grievance which they have. They are to a considerable extent guarantors for the Letterkenny railway.

14161. Very well, we will not go into the details with reference to what has been done in the past, if you will kindly refer to the special grievances which you wish to bring before us?—This guarantee which we gave was surrounded by certain conditions and circumstances when the loan was made, and I have typed off a short statement if you will allow me to read it.

History of the promotion and financing of the Letterkenny railway.

14162. Certainly?—About the year 1850 a considerable movement of commercial activity took place in Derry. Two excellent cross-Channel steamboat services were established—one to Liverpool and one to Glasgow. The old Ballast Board that had charge of the Harbour was abolished, and replaced by the present Harbour Board. The Harbour Board borrowed a large amount of money from small capitalists in and around Derry, and gradually improved the wharves, and deepened the channel all the way down the river. These services brought a large amount of goods into Derry, but a difficulty arose in distributing them through the surrounding country, as there were no means except by the slow and expensive method of using horses and carts, and the cattle for English and Scotch markets had to be driven long distances on foot. The Londonderry and Enniskillen line commenced to run a few years prior to this period, and was an object lesson, showing the people what valuable assistance a railway was both in feeding the port and distributing merchandise through the districts in which it ran. This caused the people of Donegal, who depended upon the port of Derry chiefly as their market town and for their supplies, to ardently desire a railway between Derry and Letterkenny. They thereupon promoted a Bill, about the year 1860 for a broad gauge railway, connecting Letterkenny with the Lough Swilly Railway at Tooban Junction, a distance of about eighteen miles.

14163. That is from Derry to Letterkenny?—From Tooban junction to Letterkenny. The Letterkenny Railway is a junction with the Lough Swilly main line at Tooban. The Londonderry and Lough Swilly line ran originally only from Derry to Buncrana, and the new line was to form a junction with the Lough Swilly line at Tooban junction and run into Letterkenny. The people of Donegal, land-owners, small private investors, and the citizens of Derry, subscribed to the capital of this railway to the amount of £57,155. This money was, every shilling, expended in blocking out the railway, but the promoters failed to get any more money subscribed, and the line had to be abandoned. About 1876 they got Parliamentary sanction to change the gauge of this railway from broad gauge to narrow gauge, and they borrowed from the Board of Works to finish the line a sum of £85,000, of which £50,000 was secured by a first mortgage upon the entire line, which meant that the £57,155 already expended on the line and the outcome of this £50,000, made a security of £107,000 for the £50,000 lent, and I think this was good security. The £35,000 was a second mortgage secured by the rates of a large part of the County of Donegal, within the district of Londonderry No. 2, and the entire rates of the City of Londonderry, amounting in all to about £150,000 to £160,000 valuation. Now I think, in all reason, that the Board of Works had absolute security for the monies advanced.

14164. *Chairman.*—Board of Works?—The Board of Works. Yet a great public Department like the Board of Works, exacted on their first mortgage of £50,000, 4 per cent. flat as interest, and on the second mortgage secured by the ratepayers' guarantee they also exacted 5 per cent., *i.e.*, 4 per cent. as interest and 1 per cent. towards sinking fund, the tax amounting to £630 on Donegal and £1,120 on Londonderry, making £1,750 per annum for guarantee. I think these were very hard and illiberal terms for a Government Department to lend money on, to people who established a claim to Government aid in the development of their districts by subscribing the large amount of private capital of £57,155, which sum they absolutely lost.

* See Appendix No. 10.

14165. Your contention then is that the rate of interest is too high?—Yes.

14166. What do you suggest? I suppose it was a bargain entered into at the time?—The Board of Works laid down their terms, and the railway could not be finished unless they accepted them, but I do not think that it lay within the province of a great developing Department of the Government to exact terms which a private investor could scarcely get, especially as they had gilt-edged security for their mortgage. In 1883 the narrow gauge railway opened, and under these mortgages, in default of the payment of the interest, the Board of Works took the railway into their own hands, and entered into a working contract with the Londonderry and Lough Swilly Railway on a sliding scale of 60 per cent. to 67 per cent of the gross revenue as working expenses. From that date up to the year 1900 the net earnings of the railway was never sufficient to pay the £2,000 per annum interest on the first mortgage of £50,000, there being an average deficit of about £500 a year, showing that the real net earnings of the road for seventeen years after the working company took charge of it were never more than 3 per cent.

14167. What had the district to pay?—£1,750 a year.

14168. It was reduced by the surplus?—No.

14169. *Colonel Hutcheson Poë.*—There was a deficit?—A deficit. The net earnings were never above £1,500.

14170. Not sufficient to pay the interest on the first mortgage?—No. In the year 1900 the Corporation of Derry and the County Council of Donegal appointed delegates to interview Mr. Hanbury, the Secretary of the Treasury, and urge him to induce the Board of Works to sell the Letterkenny Railway as it then stood to the Londonderry and Lough Swilly Railway Company, at a sum to be ascertained by an arbitration of railway engineer experts, or at a lump sum of £70,000, the sale to be made subject to the condition that the Londonderry and Lough Swilly Railway Company should remove the 40 lb. rails then in use, and which were entirely insufficient to either give safety or to put weighty enough engines on, and re-lay the railway with at least 60 lb. steel rails, and otherwise strengthen and re-make the railway and give a service to Letterkenny equal in all respects to that given by the Lough Swilly Railway on their main line between Londonderry and Buncrana. The Londonderry and Lough Swilly Railway Company offered to take powers to issue bonds based on their entire undertakings to effect these purposes, and to relieve the ratepayers of Londonderry and Donegal from all claims under the guarantee, the Corporation of Londonderry and the County Council of Donegal at the same time agreeing that they would renounce all claims to recoupment on the £30,000 odd which the ratepayers had already paid. They would renounce that in order to get clear of the future liability. The Board of Works absolutely refused to entertain the question at all, and thus matters remained until the opening of the Burtonport Extension Railway in March, 1903. As soon as the freight brought forward on the Burtonport line began to be carried over the Letterkenny Railway the earnings of the line gradually increased until they were not only able to discharge the full interest on the first mortgage of £50,000, but to liquidate the accumulated arrears of interest at the rate of £600 to £700 per annum. In 1903 the accumulation of arrears amounted to between £8,000 and £9,000, and the ratepayers fully looked forward to the increased earnings paying off the arrears of interest in a few years, when they would be then applied in relief of the interest paid by the ratepayers on the second mortgage. In 1903 a company of private gentlemen promoted a competing railway to run between Letterkenny and Strabane. This railway ran parallel with the Letterkenny line for about three miles out of Letterkenny, and then turned off at an angle through a mountainous country for three or four miles further. The ratepayers and the Letterkenny Company strenuously opposed this line before the Committee of the House of Lords. They showed that there was no natural traffic for this proposed new railway between Convoy and Letterkenny except by competition with the already existing Letterkenny, for the Burtonport freight at Letterkenny.

14171. *Chairman.*—Yes, of course, as a matter of history that is all right, but the Act was passed and the line has been made, and therefore I do not see how we can alter that?—That is just the very point of the grievance of the Londonderry No. 2 District Council. They say that they got very illiberal terms in regard to interest.

14172. That is another point?—And then, at the very time when they had a prospect of being——

14173. Being relieved from further payment. A new line is made which you think will rob the old line of part of its traffic?—I will just finish in two or three sentences. They showed that there was no natural traffic for the new line except by competition with the already existing line for the Burtonport freight at Letterkenny. The Lords' Committee considered the reasons for the opposition of the ratepayers of the Letterkenny Railway Company so strong that they refused to give Parliamentary sanction to the proposed new line beyond Convoy. They stopped it there. The following year the promoters made an arrangement with the Great Northern Railway Company of Ireland and the Midland Railway Company of England whereby these two great railway companies were to subscribe £70,000 to the capital and work the line. They then applied to Parliament again to extend the line from Convoy (where the Lords stopped it) to Letterkenny, thereby bringing these two great companies into acute competition with the comparatively small railway company, for the very limited freight at Letterkenny, and the ratepayers clearly saw that this competition would entirely destroy any chance of their ever being relieved of the £1,750 a year interest which they had guaranteed on the second mortgage of the Letterkenny railway. Now the complaint of these ratepayers is that the Board of Works from the very beginning charged an exorbitant rate of interest for the money which they borrowed in their efforts to develop their district, and that at all times they refused to make the slightest concessions for their relief, but even when the competing railway was before the Parliamentary Committees the *ex-officio* Chairman of the Board of Works (Mr. Wyndham), who held these mortgages against the Letterkenny line appeared both before the Committee of the House of Commons and the House of Lords and used all the influence of his great personality and his great public position in advocacy of this new line. The Committees authorised the making of the line from Convoy into Letterkenny, and it has been alleged that it was largely through the influence brought to bear upon them, that it had little or no merits of its own beyond Convoy, where the Lords stopped it the year before, thus making it impossible for the Letterkenny line, when the new competition set in, to earn the interest upon the mortgage which his department held against the Letterkenny Company. I now wish, on behalf of the County Council of Donegal, to bring before your honourable Commission a matter in which they feel aggrieved. The line from Letterkenny to Burtonport was built, as a free gift, by Parliament for the development of a part of the County of Donegal which was very poor and largely congested, money was provided for makng the line and adequately equipping it. Shortly after the line was opened in 1903, great complaints were made by the people of the County of Donegal and from the districts which were guaranteeing £5,000 of capital, as to the irregularity and frequent interruptions in the running of the trains. Complaints were forwarded to the working company and they replied that they were doing their best, but that the Board of Works had taken the supervision of the entire construction of the line into their own hands and had not given them more than half the equipment which any similar narrow gauge line in Ireland was entitled to. They stated that the Board of Works, after having agreed with the working company on plans and specifications, had allowed the contractors to depart from the plans and specifications, and, in fact, had allowed scamping to take place in the entire construction of the line and that they furnished to the Board of Works an itemised statement showing defective construction to the amount of £78,000, that in regard to equipment they had refused to give them suitable engines such as their own engineer demanded and approved of, but furnished them with four unsuitable tank engines instead of eight, and that the same proportion of insufficient equipment attached to

Anticipated effect of the railway extension from Strabane to Letterkenny on the Letterkenny railway's receipts.

Burtonport State Railway. Unsatisfactory working since opening in 1903.

Alleged defective construction and equipment.

Mar. 15, 1907.

Mr. W. J. Hanna, J.P., representing the Donegal County Council.

Necessity for arbitration between the Board of Works and the Lough Swilly Railway on the subject of the Burtonport line urged.

Failures of engines and collapse of bridge mentioned.

their wagons and railway carriages. The County Council of Donegal, in view of the serious latent responsibilities which rested upon themselves in the event of any default of the present working company, and not wishing to take any partisan stand between the two parties, passed three resolutions, copies of which I forward to you, and copies of which were lodged with the Chief Secretary, the Board of Works, and the Treasury, begging them to give effect to the 21st section of the Burtonport Railway Extension Act which says:—"That if any difficulties should arise between the working company and the Board of Works that the Board of Trade might appoint an expert arbitrator, and decide who was right and who was wrong." The Board of Works absolutely refused the Board of Trade arbitration, and so the matter has been allowed to drift along since, each party accusing the other as being the cause of the default in the proper working of the line. I myself, was personally on the line in the autumn of 1903, and in going up the grade at Gweedore there was an ordinary passenger train on the engine—five or six carriages of people going to a fair in Letterkenny, and there was only one freight wagon. The engine stopped three times, and I came into Letterkenny an hour and three-quarters late, disappointing the people who were on that train in the business they were going to transact. That is an experience of my own in regard to the engines. I do not think the engines are at all of sufficient power to do the work. The next private experience I had was on 3rd August, 1904. I left Letterkenny at 8 o'clock in the morning to transact business at Falcarragh. The country was dry in the morning when going down, but about 12 o'clock it commenced to rain, gradually increasing till near 4 o'clock. I was judging at a cattle show and I was out in it all the time, so that I know exactly the character of the rain. At a quarter past four I got into the train to go home. At a place near Foxhall, three or four miles from Letterkenny, the country people were out shouting and throwing up their hats, and the train stopped at the brink of a one-span bridge. I got out of the train. I had to walk into Letterkenny to catch the train home, and I examined that debris as much as I could.

14174. Was there a collision?—No, no. It was a new bridge, built to carry the railway train only the year before.

14175. The bridge gave way?—It was completely swept away.

14176. By the rain?—By three hours of summer rain. I examined the debris as much as I could. Of course with the heavy turbulence of the water I could not see exactly through, but as far as I could see the abutments were mainly built with dry stones and plastered with mortar on the outside. I say that that was not a sufficient work to carry a railway train, and if it had been after night our train would have been wrecked. As it was, I got four months' suffering from it, for I had neuritus, and suffered martyrdom for four months. There was certainly a great danger to life travelling on that road. Nobody could have expected, from a casual investigation, that the bridge was defective in any way, and yet, I daresay that any reasonable man will say that a three or four hours' rain ought not to be able to wash a bridge away.

14177. It depends on the rain?—It was pretty heavy rain.

14178. *Colonel Hutcheson Poë.*—The Board of Works built it?—The Board of Works superintended the building of the road.

14179. *Chairman.*—All that you read goes to confirm what we heard yesterday?—Mainly. Dr. Todd was in the same train when the engine stopped.

14180. And Dr. Todd's evidence was precisely similar to the statements you have read?—I think it was, but you see our guarantee——

14181. What have your Council to pay now?—£1,750 a year.

14182. They are paying that now?—They are paying the full amount and must pay it unless it is remitted.

14183. Of course you will admit that there are two sides to this question?—That is exactly the point that we want to have brought up. Whatever one of the parties alleges the other denies, and it is not easy getting them to agree on any statement as to anything done in the last two or three years. We do not want, as a Council that has an ulterior responsibility, we do not want to say which side is right, for we do not know, but we do say that if the Board of Trade had any power——

14184. The Board of Works?—No. The Board of Trade has the appointing power, that they should use it and have this miserable dispute settled, because if it is not settled, and the County Council have ultimately to take over a lot of scamped work and rebuild it and maintain it, there will be certainly a row.

14185. Is that a contingency likely to arise?—Yes.

14186. I thought the agreement was in perpetuity?—It is, but the Lough Swilly Company is comparatively a small company, and have only about £80,000 capital, and if there is £78,000 of defective work and that they have got to make that good, their capital would not be of much account.

14187. Very well. I think you have explained very clearly the grievance of your Council, and we thoroughly understand it, especially after the evidence given by Dr. Todd, and I think we must leave it there now until we hear what the Board of Works have got to say about it. Is it your opinion that these defects of construction, and defects—alleged defects—of working, retard the progress of the district through which the railway runs?—I am perfectly satisfied of that. I understand that, over and above the allowance for working expenses, that the Burtonport, railway on the average of the last two years and a-half or two years and nine months, has been making £1,300 a year. I really think that if the equipment was sufficient, and that there were no grounds for complaint and improper work, that the income of that road would gradually increase and it would be four or five times that amount.

14188. You have no complaint about the number of trains?—No, it is more in regard to interruptions and breakdowns and all that.

14189. That I understand is inefficient working. That is the complaint?—It is fifty miles of a single track railway, and the engine is not able to carry enough coal and water to carry her that distance, and I believe the water supply is very deficient—very bad.

Examined by Colonel Hutcheson Poë.

14190. At the time that your County Council proposed that the line should be sold to the Lough Swilly Railway Company you said if it were sold you would be prepared to forego any portion of the recoupment money which you had paid in respect of the guarantee?—Quite so.

14191. Surely you do not contend that you are entitled to any recoupment?—Yes, according to the Act, as soon as the railway becomes supporting and earns a surplus, we would be entitled to recoupment.

14192. There was no probability of the line paying. It had not done so for seventeen years?—I confess there was very little, but still you will recollect that the only claim of the Board of Works was £86,000, and nearly £9,000 of that was for interest.

14193. I think the claim that you put forward would not have had much weight with the Board of Works—the fact that you waived the claim?—No, but it made a clean transaction and rid the line in future of all complications.

14194. With regard to the petition which I believe the ratepayers presented to the Board of Trade asking for an inquiry, what reply was received with regard to that matter in 1904 or 1905?—None.

14195. There was one later than that?—No.

14196. That was the last?—The County Council of Donegal appointed delegates, of which I was one, who interviewed Mr. Hanbury in London, and the proposition that we put before him was that the Board of Works would take for their £86,000, which the railway owed them, a sum to be ascertained by an expert engineer valuation of the road at that time. (You will recollect it was a road laid with 40-lb. rails and had been in use for seventeen years), or a lump sum of £70,000, and the Lough Swilly Railway Company agreed to enter into a binding contract that they would issue bonds on their own undertaking (of course the Letterkenny railway would form part of their line if they bought it), they would issue bonds to pay off the £70,000, the agreed amount, or whatever other sum it would be, to relay the line with at least 60lb. steel rails and to give as good a service as was given

on the main line. That would have fully satisfied the whole of the community in regard to the service and have got rid of the guarantees that we were paying and had been paying for eighteen or nineteen years.

14197. After the loan had been obtained from the Treasury in 1880, was the line relaid by the Board of Works or was it done by the promoting company?—I really could not tell you.

Dr Todd (*Solicitor, Londonderry*).—It was the promoting company.

14197A. *Colonel Hutcheson Poë.*—How was it they came to lay the line with 40 lb. rails instead of 50 lb.?

Dr. Todd (*Solicitor, Londonderry*).—Dearth of money, I believe. They built it as cheaply as they possibly could.

14198. *Colonel Hutcheson Poë.*—They had not plenty of money then apparently. You consider that you are subjected to a very high rate of interest?—Yes.

14199. You are aware that the interest that the Board of Works are empowered to charge is under a very old Act of William IV., which lays down that for railways the Board of Works shall not be allowed to charge a lower rate of interest than 4 per cent.?—I was not aware of that, but I thought that a developing Government department had discretionary power——

14200. I was coming to that You are aware also that under a much later Act, under the Act of the 3rd March, 1904, the Board of Works are empowered to make loans or advances for local works, any other works except railways, at rates of interest calculated on a sliding scale according to the number of years in which the loan is repayable, that is from 3½ per cent., I think, for a twenty year loan, to 3¾ per cent. for thirty years, and so on?—We have had no remission yet.

14201. You think that considering that a change has been made to a lower rate of interest (that the Treasury has been given power to charge a very much lower rate than 4 per cent. on the security of local rates), that they ought to be given the same power to reduce their rates in respect of railway loans?—They ought to consider the circumstances. For instance, if they had been lending the £85,000, and lent it solely on the security of the railway, I would think that then they were taking a considerable element of chance for their security, but when they only lent £50,000 on an actual expenditure of £107,000, and they got the ratepayers to guarantee the interest, on the second moiety of £35,000, they were getting two gilt-edged securities.

14202. Exactly. For the sake of argument if they had been able to give the loan at the rate of interest on the sliding scale under the Act of 1904, you would have been relieved of a considerable portion of the sum which you have had to pay?—We would not have had any arrears if it was 3 per cent.

14203. Then you think it would be a good thing if this Commission were to try and bring it before the Treasury and the Government that some remission should be made in the hard and fast rule in regard to railway loans?—I certainly think so, because Parliamentary sanction has been given to a new competing railway which would make it impossible to earn the present charges.

14204. That is the Convoy railway?—The Letterkenny and Strabane railway. It is owned by two of the richest companies in Great Britain, and when a small company has to compete with them for a limited quantity of freight we all know which will go to the wall.

14205. But I believe the Board of Works, and I suppose the Harbour Commissioners, have something to say as to safeguards being introduced into the Act protecting the route for traffic which had been going to Londonderry and which it is possible might now be diverted to Strabane—I mean you have some safeguards introduced?—Really I did not see the Bill. I only knew that these Bills were promoted and sanction was given for the making of the railway, but what the terms of the Bill were I could not tell you.

14206. Of course it is too soon to say whether you will be affected or not, but you have a dread that you may be affected?—Yes. The main thing in regard to that Burtonport line is that we do say there ought to be some inquiry to stop these continual bickerings between the working company and the Government department. We do think that there ought to be some way of ascertaining who is liable for the defaults.

14207. Now, with regard to the Burtonport railway, you said that the profits on the line now amounted to £2,000 a year, over and above the working expenses, and that it was capable of great development?—That takes in the first year, in which there was no maintenance. I believe the actual profit is some £1,800, but that includes the first year, which, I think, ought not to be included in an average, but, taking the remaining two years and nine months, in which the company maintained the line themselves, the average is £1,300.

Profit on the working of the Burtonport line.

14208. It is more than that. I think you misunderstood me. The profit, over and above all the working expenses, has been at the rate of £2,000 a year?—£1,800.

14209. It is really more, but we need not split straws?—But that takes in the first year, in which there was no cost of maintenance.

14210. The point I want to bring out is this. You said you thought if the line were properly maintained and equipped with the proper amount of rolling stock, that the profit might rise to four or five times its present figure?—I do.

14211. What industries are capable of development to give such an increase of traffic?—With all its defects and with all its difficulties the Burtonport line has greatly promoted the interests and industries along that whole north-west coast.

14212. What are the industries?—Fishing, largely, and the Congested Districts Board have been very useful in introducing newer methods of agriculture. Their cattle are very much better, and the social conditions of the people are immensely improved since the opening of the line. The value of property has largely increased.

Industries developed and capable of being developed in the district served by the Burtonport Railway.

14213. What I want to get at is, are there any latent possibilities—I am not talking from an agricultural point of view—but from what I read I was rather inclined to believe—(I do not know your district personally)—to believe that there was a large marble and granite industry which, with a certain amount of expenditure, was capable of large extension?—If you begin at Dungloe and go all along the country bounded by Kedue Strand, round by Kincashlagh and round by Crolley Bridge and Gweedore, the whole country is rough granite fit for kerbing and the like of that—more than would kerb a city as big as Liverpool.

14214. And there are a large amount of flagstones also?—There are. Muckish is all marble, and Errisle and all that country is simply full of granite, and I am told by experts that when you sink in the quarries that the grain of the granite becomes very good and takes an excellent polish. I was told by the foreman (a Scotch gentleman, the name of Mr. M'Bean, I think, who had bees working the quarries of Donegal)—I was told that they would take a polish quite equal to Aberdeen granite.

14215. *Chairman.*—How far away are the quarries from the railway station?—The railway runs in the neighbourhood of them all, more or less. The whole country is full of marble cropping out—you would think you were going through a cemetery full of monuments.

14216. *Colonel Hutcheson Poë.*—I think it was very largely those considerations of industrial development that led to the construction of the line—I have no doubt of it.

14217. And has anything been done in the twenty years that elapsed since the line was first recommended towards developing these particular industries?—Under the Marine Works Act they have built at Gortnasate through the Board of Works—I think it was superintended by Mr. Batchen here—they have made an admirable pier there that will allow vessels of large tonnage to come in, and will give a first-rate waterway to take away these heavy goods. That is in the neighbourhood of the quarries.

New pier at Gortnasate built by Board of Works recently.

14218. That won't help the railway?—In this way, that there were other points and other quarries that for finished stones I think would give a very large traffic for the railways if they were worked.

14219. At any rate you consider that in the present state of the line, even if these quarries were opened, the rolling stock could not carry their output?—I am perfectly sure the present rolling stock could not.

14220. So that even if the industries were developed the output could not be carried over the line?—The reason I mentioned that pier was that there have been private companies, I believe, trying to form limited liability companies to start these quarries. They

Mar. 15, 1907.

Mr. W. J. Hanna, representing the Donegal County Council.

never had an opportunity before, because they had no way of getting off the rough material such as kerb and paving sets. I think if these private companies had begun to work the quarries they would develop that industry so largely that the railway will come in and do its part with the finished traffic that now could not be done.

14221. Even though the output of that quarry may go by sea, it is possible that there are others that could not go by sea and would have to go by rail?—A large district of country is full of granite and marble, and the railroad could carry to the ships.

14222. The only other point is that I think the ratepayers petitioned the Board of Trade to hold an inquiry?—They did, three times.

14223. What was the reply that they received from the Board of Trade—not the Board of Works, but the Board of Trade?—Just an acknowledgment.

Action taken by Board of Trade on the petition of the Donegal County Council for an inquiry into the construction and working of the Burtonport Railway.

14224. When you approached them the second time or the third time, probably bringing to their notice that you had only received an acknowledgment, and that nothing had been done to remedy these defects, surely they gave something more than an acknowledgment in reply?—I think that the Board of Works sent down a representative with a written reply, but the session of the Donegal County Council that was to be held that day—(it was rather stormy, and the distances are very long in Donegal, and facilities for travelling are not good)—there was no quorum, and as far as I can recollect, the reply of the Board of Works was never before the County Council.

14225. I am talking about the Board of Trade. I do not wish to mix them up?—The Board of Trade never replied at all, except to acknowledge the receipt of the letter.

14226. Of course we must take that as your answer, but it seems extraordinary that they should not take notice of your repeated applications.

Examined by Lord Pirrie.

14227. You have given, on behalf of Derry No. 2 District Council, very clearly and distinctly, the complaints that you have in regard to the construction and equipment by the Board of Works of that line, but have your Council, or you, any views as regards railways generally in Ireland, whether nationalisation or amalgamation would be to the benefit of the industries of the country?—Do you mean an opinion about this railway?

14228. I mean a general opinion on the question of nationalisation or amalgamation. I merely ask you, as an Irishman and a gentleman evidently who takes a great interest in the welfare and industries of Ireland, have you any views, or have you considered it? Have you any recommendation to make?—Not from the County Council.

14229. Have you any views of your own in connection with what would assist and develop the industries of Ireland, or your own district, if you like?—Except just as a thinking member of the community that takes an interest in public matters. I have the opinion that I think it would be good for the interests—the general commercial interests of Ireland—if the main railroads—the broad gauge railways of Ireland—if they were capitalised at their ascertained value, and the State issued stock, and let them be managed from some central power or policy, that policy to be an Irish policy, that is, taking into consideration Irish interests. One of the great complaints has, heretofore, been in regard to through rates—that English goods came cheaply at through rates into Ireland, but Irish goods were charged a higher rate into England. Of course I am not a trader, and I cannot give evidence on that point.

14230. I only wanted to know what your own personal feeling was in connection with that. You think that a railway company, managed by a central body, would cheapen transit and be beneficial to the country?—I think it would cheapen administration to begin with, and I think in the working of the line that there would be less interruption in travelling, good connections, and all that.

14231. I think you have given your evidence on that fact just as clearly as you did the other.

Cross-examined by Mr. Gerald Fitzgibbon, K.C.

14232. Mr. Hanna, do you know that the Donegal County Council passed a resolution in favour of the construction of the Strabane to Letterkenny Railway?—I do, but I know that all the eastern members of the Donegal County Council voted against it. The members from Letterkenny voted in their own interest. So would I.

14233. I just wanted to get it that the majority of the County Council passed a resolution in favour of it?—They did.

Mr. W. K. Fayle, J.P., examined by the Chairman.

Mr. W. K. Fayle, J.P., representing the Birr Urban District Council.

14234. Now, Mr. Fayle, you appear on behalf of the Birr Urban District Council?—Yes, sir, I do. It is in King's County, very close to the borders of Tipperary.

14235. What particular railway serves you district?—The Great Southern and Western Railway. It surrounds it in all directions.

14236. Does the railway at Birr belong to the Great Southern and Western Railway Company?—Yes.

Method of charging "mixed" consignments under "smalls" scale condemned.

14237. I will just take you briefly through your proof. The first point that you raise is the question of what you call mixed consignments. What do you mean by mixed consignments?—I mean a consignment of goods coming from, say, a wholesale merchant or from a manufacturer that will manufacture two or three commodities in the railway classification—not two or three different classes coming all together. What I complain of is that they split it up into the small component parts—where the whole consignment would weigh so as to be above the minimum it is split up into small components so that each portion of it is brought below the minimum.

14238. Supposing you are getting your mixed consignment from a store in Dublin, if you had furniture and iron ware and groceries, do you say you should be charged the lowest or the highest rate?—What I say is that things that could be carried practically with as little risk—one set of items as the other—I do not think there ought to be any difference.

14239. Are you aware of the Clearing House classification?—Yes.

14240. You know there is a statutory classification?—Yes; there are five classes besides the A, B, and C, and the modifications of them, the X, Y, and Z.

14241. Your complaint is that these mixed consignments are separated and charged separately?—Charged separately and brought under "smalls." That is what I object to.

14242. Under the small parcels scale?—Yes.

14243. The Great Southern and Western Railway Company, I suppose, are not exceptional in that. that is done by every railway company in the country?—What I say is that it is a great hardship.

14244. It is done on every railway in England?—I do not find it quite so minutely entered into by any other railway as by the Great Southern and Western Railway.

14245. Can you just give me any figures to illustrate what you mean?—Yes. I have a consignment note before me in which the total weight came to 7 cwt. 2 qrs. 21 lbs., and that being split up into the various items made smalls, and the cost of carriage was 9*s.* 2*d.* for the lot, whereas if you take it at a reasonable rate, I would say that the cost would only be about 5*s.* 10*d.*, taking it at a rate of, say, all round 15*s.*, instead of being from 15*s.* to 30*s.* The things that are carried at the lowest rates are the things that I consider, if it were possible, that could be most easily damaged. It is very difficult to decipher them.

14246. *Chairman.*—I can't decipher this document. It seems to me you have got some sponges.

Witness.—It is not included a case of sponges.

14247. *Chairman.*—What is not included. I can't make it out, I am afraid.

Witness.—I may interpret it as well as I can. One pump, two flanges, a pipe, two churns, and stands, one crate, a box and a cask of hardware. The pump charged at 15*s.*, and the churns 30*s.* 2*d.*

14248. They are all charged as smalls?—That is it.

14249. What you suggest is, you think as a trader that all these should have been lumped and charged together. I suppose you will admit that the metal

Mr. W. K. Fayle, J.P., representing the Birr Urban District Council

should be charged separately, say at the lowest—or the highest rate. Is that your suggestion?—The reason I suggest 15*s.* is that we have had all goods, including 5th class goods, carried from Dublin at that rate into Birr. There is fully fifty per cent. of an advance made there. That is constantly occurring.

14250. Yes, it is constantly occurring because that is the practice of all companies?—I know it is: I complain of it. I think it is anomalous. I think it ought to be remedied. I have other cases, but I think that will suffice.

14251. I think that is sufficient on that point. Just go on and tell us what you have got to complain of in the through rate from London to Tralee. First of all, tell us what class of goods are they?—Fourth class.

14252. All 4th class goods?—Yes. This is dealing with 4th, probably, or 5th class.

14253. What is the rate from London to Tralee?—It is 125*s.*

14254. *Via* Dublin?—Yes, *via* North Wall. I think it is by the L.N.W.R. Company. Possibly it may be. Yes, the L.N.W.R.

14255. Through Dublin?—Yes, it is by the L.N.W.R.

14256. Give me the rate from London to Dublin, fourth class goods?—100*s.* 10*d.*

14257. Then, I suppose there is cartage in Dublin?—There is cartage, but they generally bring it over the North Wall tunnel line, the loop line.

14258. It is equivalent to cartage?—Yes, it is; they charge cartage rates on it.

14259. What do they allow for that?—2*s.* 6*d.* a ton for fourth class.

14260. What is the Dublin to Tralee rate?—62*s.* 11*d.*

14261. The total rate?—The total rate I make it out to be 166*s.* 3*d.*

14262. 166*s.* 3*d.*?—Yes, 166*s.* 3*d.* Yes, it is a typographical error.

14263. What is the difference between the sum of the locals and the through rate?—41*s.* 3*d.* Apparently the G.S.W.R. would get for their proportion 21*s.* 8*d.*

14264. Well, I don't think either you or I know what they get?—No, we don't know what they get, but apparently their proportion would be 21*s.* 8*d.* It is on mileage.

14265. Surely the through rate there is a great advantage to you?—That is what I say. If you are a manufacturer here in Dublin you have got to pay 62*s.* 11*d.* for what the German or any other manufacturer sending it in over the same railway from Dublin to Tralee will only pay 21*s.* 8*d.* If you manufacture the thing in Ireland you have got to pay 62*s.* 11*d.* to send it to Tralee. If you send it from Germany coming through London you get it for 21*s.* 8d.

14266. Your explanation would be valuable if you could tell us what particular articles you refer to?—Fourth class goods.

14267. That is a very wide term?—Wood is a thing you have very largely grown in Ireland.

14268. Wood?—Timber.

14269. That is not fourth class?—No, but if you manufacture it up into furniture it will be fourth.

14270. Fifth?—Probably fifth. That is worse still, sir, so that practically I say if you grow timber in Ireland, and make it up into chairs, as is done in many places, and send it to Tralee from Dublin you will pay 62*s.* 11*d.*; if you make mattresses—fourth class probably, whatever you call it—they will carry it for you.

14271. If we are discussing actual traffic sent it would be an easy matter if you could tell us the particular articles, because then we could judge whether these articles could be made in Ireland?—This is furniture, which can be made in Ireland.

14272. Furniture—you are dealing with furniture?—I am, which is made in Ireland.

14273. Why get it from London?—Because you can get furniture from abroad; a good deal of it is made in Belgium, a good deal in Holland and Germany.

14274. Furniture?—Yes.

14275. This is all news to me?—Well, I understand you can get furniture in parts made up.

14276. Are you dealing with traffic that you yourself deal in at Birr?—We deal in beds and mattresses, and they come under the head of furniture.

14277. Well?—We deal in chairs; they come under the head of furniture, which as far as——

14278. You don't complain that the rate in itself from Dublin to Tralee is too high, but you complain that it is too high proportionately?—I do say it is too high; that is what I do say—I say it is too high.

14279. You argue because there is a low through rate from London to Tralee, therefore the G.S.W. Company should accept as their rate from Dublin to Tralee something in proportion to that through rate?—My point is that if it pays the G.S.W. to carry for the apparent proportion of the through rate from Dublin to Tralee for 21*s.* 8*d.* that I think—for foreign goods—that, I think, we ought to be entitled to expect that any goods we get from home ought to be carried at the same rate. If it pays them to carry the one it ought to pay them to carry the other. The probability is they would remedy the thing by raising the through rate up to the 62*s.* 11*d.*

Complaint as to cross-channel through preferential rates London and Tralee.

14280. The figure you mention as accruing to the G.S.W. being an assumption on your part. You don't know it—the 21*s.* 8*d.*?—Yes, of course it is an assumption in this way. Probably it is a mileage rate that they get, but I mean the through rates are split up at the Clearing House and they get their proportion of it. Apparently, if you take these figures, if it is 30*s.*, my point is the same thing—if it pays them to carry at the proportion they get out of the through rate it ought to pay them to carry timber at the same rate. I argue from that that the rates are too high.

14281. Of course, there are illustrations you give altogether on the same basis?—The same basis.

14282. From beginning to end?—I could give plenty of them.

(See Appendix No. 12).

14283. We need not deal with these now?—I consider that that forms a subsidy.

14284. Oh, we quite understand your point?—Yes. I think it is a monstrous state of affairs.

14285. When did the G.S.W. acquire the Waterford and Limerick Railway?—I think the amalgamation took place in 1900 or 1899.

14286. 1900?—1900. I happened to be giving evidence with regard to that.

14287. You say that the G.S.W. gave some undertaking there when they took over that railway?—The undertaking that was given was——

14288. First of all, tell me what sort of an undertaking was it?—I was examined as a witness for the amalgamation by the Committee.

14289. In London?—In London by the Parliamentary Committee, and I heard it stated there that there were safeguards. I wanted to get safeguards put in, as they were getting a monopoly of a whole country.

14290. Who did you give evidence for?—I opposed.

14291. You opposed the amalgamation?—I opposed the amalgamation for several reasons.

14292. We need not go into that. You heard the statement?—I heard it stated that the rates which were then in existence on their line and on the amalgamated line—that they were not to be raised above the figure that they stood at then, except by notice and with the consent of the Railway Commissioners, I suppose it was, or a Railway Commissioner of the Board of Trade.

Action of the G. S. & W. Ry. Co. in attempting to raise certain rates which the Railway and Canal Commission declined to approve.

14293. The Railway and Canal Commission?—I am a bit hazy about the authority. It was the Commissioners, because they afterwards gave notice to raise certain rates, and the case came before the Railway Commissioners. I went up to oppose the application, and nothing ever came of it, because there were certain inequalities. An application was made to raise certain rates to certain places, and the Railway brought the matter before the Railway Commissioners, the G.S.W. and their plea was thrown out. Well, this is, sir, what I say. The classification I deal with——

14294. Let us go on to this Waterford and Limerick amalgamation. You say that in spite of the promise that was given certain rates have been raised?—Well, I think that is further on than the other matter.

14295. I am getting further on?—They raised the rate 2*s.* 6*d.* a ton without notice and without consent. It is only one, but still it is just as I state it.

14296. You mentioned it, but you don't say from where or to where?—From Glasgow to Birr.

Alleged increase of rates by the company between Glasgow and Birr.

14297. Let us get the rate the railway companies will have to deal with it?—This rate was raised from Glasgow to Birr.

Mar. 15, 1907.

Mr. W. K. Fayle, J.P., representing the Birr Urban District Council.

14298. Glasgow to Birr—the rate 28*s.* 4*d.* to 30*s.* 10*d.*, and 32*s.* 6*d.* to 35*s.*?—Without notice I think that might be especially second or third class rate—X and Y or Y and Z.

14299. Without notice?—Without notice, that is my contention, or, as far as I know, without consent.

14300. Were you personally interested in these rates?—Yes, I was.

14301. Did you pay?—Yes, I paid—I protested.

14302. You protested to the company, and did you get any reply from the company?—No, except that I would have to pay them—nothing more than that. It was to the local stationmaster. I didn't go further than that. It was to the local stationmaster that I protested against paying an advance in the rate without receiving what I thought I had a right to receive, that is the notice and consent.

Complaint that local rates are not carted and delivered while cross-channel rates are.

14303. Well, proceed?—There is another thing I want to bring under your notice that invariably these through rates, although they are so low, as I have shown, in the proportion, they are carted and delivered rates. Now invariably first, second, third, fourth, and fifth rates in Ireland are neither carted nor delivered. They are practically station-to-station rates for haulage. It is simply for haulage. They keep so few men to do their business in the country places that we have got to do it ourselves; if we want our goods we have to unload.

14304. Do they allow cartage?—No, they don't allow cartage.

14305. Though you cart yourselves?—Yes.

14306. Yet the articles are carried on collected and delivered rates?—I don't know; they admit it is. They allow the cartage for the cross-Channel.

14307. That is what I want?—They allow that.

14308. Do you know what they allow?—I could not tell you.

14309. 1*s.* 6*d.*?—I would only be guessing. There is no use—I don't know.

14310. Well, we had better not, you say?—I don't know.

14311. Have you anything further to say on this point?—What I say is that the cross-Channel rates, of which I say the Irish proportion is so low, are carted and delivered, and that the Irish rates, the local rates charged by the G.S.W., are not carted and delivered, although greatly higher, and small traders—it is a great hardship to them.

14312. That is quite clear. Is there any company in Ireland that collect and deliver class goods?—I believe the G.N.R., but I am not sure.

14313. Not the G.S.W.?—The G.S.W. don't at Birr, certainly; they won't if they can help it.

14314. Let us have it perfectly clear about collected and delivered rates, and the cross-Channel through rates from England; class rates are collected and delivered, and if they don't deliver they allow a delivery charge—is that what you say?—Yes. Well, no, I can't say that they allow a delivery charge, because I have never applied for it. I have sometimes been obliged, as I could not get delivery quick enough—I have sometimes been obliged to take delivery myself, but I have never applied for the refund afterwards.

14315. Why?—Well, it is a hopeless thing dealing with them; you can't get anything out of them.

14316. Indeed?—No. I am absolutely hopeless.

14317. Well, if you never asked?—I have not asked it, so therefore I don't charge them with that, but I took it that it was a matter absolutely hopeless.

The G. S. & W. R. Company's management condemned, *e.g.*: alleged insufficiency of staff and inconvenient hours of arrival of goods trains.

14318. I gather from these next two or three pages of your proof that you are not very favourably impressed with the way the G.S.W. do their work in Ireland?—I am not.

14319. Need you go into all this detail?—I thought it well if I stated that. I thought it ought to be made public.

14320. Well, do so very shortly?—Yes, I will state it very shortly.

14321. Summarise first of all?—What I say first——

14322. One minute, you say that the staff is insufficient for dealing with the traffic?—I do.

14323. Leave that—what next?—Next point. That the goods train arrives at such an hour that it is impossible to do your business. It comes to Roscrea, ten miles away, at five o'clock in the morning. We don't get it in until practically eleven—it comes in about 10.30. It is supposed to come much earlier.

14324. Your complaint is about the first goods train?—It is there at five o'clock in the morning.

14325. At Roscrea?—Yes. We don't get it into Birr, till eleven, and very often the goods are not checked until three o'clock on account of the paucity of the staff.

14326. That is a substantial grievance if correct?—That, I said, is my experience of it.

14327. Your experience?—Yes.

14328. You need not enlarge on that?—They charge demurrage after forty-eight hours.

14329. Isn't that fair?—They charge it from the time it ought to be there, though it is not there at all. They have charged me for demurrage for goods, for wagons for goods that were supposed to be there, and were not there at all. If you do your business you have got to begin at it in the morning, and if you have things coming in, in the afternoon.

14330. You are going back to the other subject?—To the demurrage.

14331. Deal with the demurrage. Forty-eight hours after the arrival of a truck if it is not unloaded they charge you demurrage?—Yes.

14332. Isn't that reasonable?—It is not reasonable, taking the facilities, first of all, the very late delivery; secondly, the facilities they give you.

14333. The late delivery has nothing to do with it. I understand the charge is only made forty-eight hours after the arrival of the truck at the station, and notice given to you that the truck is there?—If you get notice of things in the afternoon, and after you have laid out all your work you are thrown out. It is useless to begin it. You have forty-eight hours notice; twelve or fourteen of them are gone from you before you can do anything.

14334. You have a large margin left?—The facilities given are bad, and if it is wet weather they have no cover.

14335. Deal separately with them. There is no covering?—The goods store is not open until eight o'clock in the morning, so you cannot begin your work until eight o'clock in the morning.

14336. That seems pretty early, but what do you suggest?—I suggest that the goods train should be in earlier, and that the premises ought to be open a bit earlier, so as to let me get to work at seven.

14337. Next point?—There are no facilities at the station for weighing goods—no weigh bridge.

14338. What is the population of Birr?—Birr itself would be under 5,000, but then there is a very large district to be served.

14339. Under 5,000. Is it 1,000?—Oh, yes; it is very nearly 5,000.

14340. That is what I mean. Is there a goods warehouse or shed?—Yes, there is.

14341. And the yard, like every other yard, is open?—Yes.

14342. Well, what do you complain of in that respect?—I have to complain of that. Men loading timber have no way of knowing—or coal—of knowing whether you get your own coal or not.

14343. Stick to the one thing?—Well, it is the weigh bridge.

14344. You say there is no weigh bridge?—No weigh bridge.

14345. I suppose there is an ordinary weigh bridge for light goods?—Yes.

14346. What you want is a cart weigh bridge, so that the timber and coals may be weighed?—Yes.

14347. Well, do you know that three-fourths of the stations in England have no cart weigh bridge?—Well, I suppose they settle claims reasonably, or they dispute them to an extent that——

14348. You want to cart away and weigh your coal?—Or timber.

14349. But the railway company don't want to weigh either coal or timber?—If they ask me to pay so much per ton for goods, and if they charge me for two tons more than I get, and I find it outside, and they say it has been lost on the way, then, sir, they plead they are not responsible for anything that occurs outside their premises.

14350. Very well, Birr is not provided with a cart weigh machine, and you think that it would be a great advantage to the place?—To timber men sending——

14351. Timber is carried by measurement?—Yes, and by weight, too.

14352. Is it?—Yes.

14353. Round timber?—I think so. After it is squared it is cut at saw-mills.

14354. Saw-mills?—Yes.

14355. Round timber is carried by measurement?—Yes, and the other is carried by weight. There are no facilities for loading or unloading traffic in wet weather. You have got the goods chucked on the line anyway.

14356. What about the warehouse?—They won't allow you to put such things as cement, or flour in—they won't allow you. You have got to take that out of the wagons, and you are charged demurrage after forty-eight hours. You have got to take them out, no matter whether it is raining cats and dogs. You have got to take them out, and it is open to the elements.

14357. Supposing you are stopped by the elements, do you say they allow for that?—No. As a matter of fact, they brought me to court. I refused to pay. They brought me to court for being stopped by the elements.

14358. And had you to pay?—I had to pay some of it. Really the only thing that saved me was there happened to be a holiday—St. Patrick's Day came in, and the judge said he would not ask me to cart on a holiday, that he would not ask business to be done on a holiday, but so far as the weather was concerned I had to do it.

14359. Now, have you any more complaints?—What I claim is that there is very gross neglect in the handling of goods at owner's risk rate and that the company shelter themselves—destroy your goods and shelter themselves behind the owner's risk rate to repudiate any claims.

14360. You know the owner's risk conditions are now under discussion by Parliament—do you know that?—I have heard that.

14361. It is so?—Yes. Well, of course——

14361A. In fact there is a Bill before Parliament now.

Colonel Hutcheson Poë.—The second reading is to-day.

14362. *Chairman.*—So I don't think we need discuss that. That will be altered probably, the conditions of the risk will be altered?—It is time that they were. When goods are lost in transit the Company refused to pay except at their own valuation. I will give you an instance. A gentleman said his cooking apparatus was out of order, and I found, sending a man out, he reported that the boiler was broken, and that they were very anxious to have the range as soon as possible. I took the dimensions and sent away to the makers to get it. The makers sent me wrong ones; they could not understand. They sent wrong ones, and finally I could not get it without sending away the old boiler as a pattern. I sent it away, and from that day to this I have never seen it. The gentleman complained to me and said you will have to put in a new range. I said I am very sorry, but the railway company have lost the pattern, and they are responsible for that. I asked the railway company to pay me for the expense of putting in a new range. They say no, we will pay you the cost of old metal for the part you sent away. That is the way they treat me in practically everything.

14363. You have given that instance. When was it?—I have the date.

14364. Is it within the last 20 years?—Oh, within the last 12 months.

14365. That will do?—About 12 months. I have the claims book here, and will give you the whole of the details if you want them. It may be 15 months, but I think it is within that.

14366. Within 2 years?—Oh, yes, it is.

14367. But it is quite an exceptional case?—I don't think it is exceptional. I find it is an every day occurrence.

14368. Every day these boilers go wrong?—Oh, no. But cases on the same lines that are occurring.

14369. I am afraid your relations with the Company are not very friendly?—They are; they were very friendly, but I find it very difficult to get on with them. As to your suggestion that I should ask for the payment of cartage I would pay more in stamps in applying for that than when I would get the thing it would be worth.

14370. Have you written to the manager of the Company?—I have, but he repudiated everything.

14371. Repudiated everything?—Absolutely it comes to that.

Mr. W. K. Fayle, J.P., representing the Birr Urban District Council.

14372. We will go on now?—I say the supply of wagons is very insufficient.

Insufficient supply of wagons for goods traffic alleged; also unsatisfactory condition of passenger coaches on branch lines.

14373. Goods wagons?—Yes, very insufficient. I don't think there are more than 4,000 odd miles of railway in Ireland, and there are only about 23,000 vehicles, wagons in the whole of the railway companies in Ireland. Now one company in England would have over 123,000 or 124,000. The result is that in Ireland, during the busy season, traffic is very greatly delayed on account of the difficulty of getting wagons.

14374. That is what we want to get at. Now have you brought that matter under the notice of the company, or the agent at Birr?—It was brought under the notice of the company and they apologised and said they would do their best. But the same thing occurred again and the same excuse was made; the thing is recurrent and there is the same excuse.

14375. Well, what about the passenger stock, what have you to say about the passenger coaches?—They are very bad.

14376. I mean the working of the passenger traffic. I suppose that is satisfactory?—No, sir, it is not at all satisfactory. They keep the carriages very dirty indeed; they are very antiquated on the branch lines. They had those old cushionless carriages until I called attention to them. I was coming from Cork, some little time ago, and I got to Roscrea fairly comfortably, but when I went to get into the carriage at Roscrea for Birr—it was a third-class—and after I had put my things into it I felt rather ill. I found a very bad smell in the place and I got out and I made four attempts to get my luggage out, but I was unable to approach it on account of the horrible smell. They are cleaned only very slightly and they are cleaned very roughly, but they are never disinfected.

14377. You are only referring to passenger vehicles on the branch line?—Yes.

14378. Not on the main line?—No, but they should be disinfected too.

14379. Did you call the attention of the station-master at Birr to that?—Yes.

14380. What did he say?—I believe that carriage was taken off, that is, the cushionless carriage was taken off and there has been some improvement made in the cleansing of these carriages, but they have never been disinfected. I believe the Great Northern disinfect their carriages, and when there is influenza or other ills going about I think it would be a great matter, and I trust the railway company will take note of it and have their vehicles disinfected at least once a month.

14381. Have you thought over what is the best remedy?—Pardon me, may I deal with the Portumna railway now, I wish to speak of it now.

14382. Where have you brought that in?—It is on page six. What I say is——

14383. You are speaking about Portumna?—Yes. I think the present arrangement under private management is unsatisfactory, inasmuch as it will prevent railway extension or retard it. Portumna is a case where they have deliberately destroyed railway extension. It is just on the Shannon, at the head of Lough Derg.

System of private ownership of railways alleged to retard further extension.

14384. It runs from Birr to the north-western point of Lough Derg.

Witness.—That line was constructed thirty-eight years ago. It runs from the Great Southern at Birr on a branch line to Portumna.

14385. There is no railway marked on the map?—There is a railway in existence, but it is derelict. It was made thirty-eight years ago, and it ran twelve miles, from Birr to Portumna. It cost the country actually to make it from £98,000 to £106,000.

Birr to Portumna derelict railway.

14386. What do you mean by "cost the country"?—It was subscribed locally.

14387. Private subscriptions?—Yes, from the district; practically nearly three-fourths of it was contributed locally. The Great Southern and Western Railway Company subscribed £15,000, the Loan Commissioners of Public Works, I suppose the Local Government Board, the Loan Commissioners advanced £12,500. This latter body became the mortgagees of the line and leased it to the Great Southern for ten years, but that company worked it in a manner that made it a bye-word in the district. The train left Portumna at 6 o'clock in the morning and reached

Original cost and how subscribed; line leased to G. S. & W. R. Co., but badly worked by latter.

Mar. 15, 1907.

Mr. W. K. Fayle. J.P., representing the Birr Urban District Council.

Train service on the Portumna line when worked by G. S. & W. R. Co.

Birr at 6.30; left Birr at 12.29, reached Portumna 12.59; left Portumna 1.20, reached Birr 1.50. Finally left Birr at 8.34 in the evening and reached Portumna 9.4. There were only two ordinary trains each way, and one went at 6 o'clock in the morning. Thus, if a passenger wanted to go from Birr to Portumna he would have only twenty minutes in Portumna to do his business, or he must stay all night there. With regard to that you see——

14388. I want to see what deduction you draw from that?—The deduction I draw is that they deliberately set themselves to prevent this line from being developed. You see the time table is most erratic. You could not get from Birr to Portumna and do anything there in one day. You had only twenty minutes and it would take you that time to walk from the station to the town.

14389. I understand you meant going to Portumna. You left Portumna at 6 o'clock in the morning?—But if you could tell me how I could go from Birr to Portumna and back again to Birr, and stay more than twenty minutes in Portumna——

14390. You left Birr at 12.29 and arrived in Portumna at?

14391. *Colonel Hutcheson Poë.*—You got to Portumna at 12.59 and left again at 1.20—that is you had twenty-one minutes there?—Yes.

14392. That was the sole facilities in that direction?—Yes.

14393. But the other way it was all right?—Yes.

Line offered to G. S. & W. R for £10,000, but declined. Railway now derelict and dismantled.

14394. *Chairman.*—I want to see what deduction you draw from it?—The deduction I draw is this—that the line was worked for ten years, but at the expiry of the lease the Great Southern said, "We won't work this any more," and the Loan Commissioners offered the whole thing for £10,000 to the Great Southern. After bleeding the line to death the Great Southern wanted to buy the carcass at knacker's prices.

14395. Did they buy?—No, the Great Southern and Western Railway wanted it for nothing—the shareholders would not agree to it. The railway company would not pay £10,000 and the shareholders would not take less. I don't know exactly what they wanted, but I do know the Great Southern and Western Railway would not pay £10,000 for what had cost £106,000.

14396. I suggest to you that neither the Great Southern nor any other company could work it at a profit?—That is not so. I think I can show that it could be worked at a profit, but the railway company thought they would get it for nothing and they did not see why they should pay £10,000 for it.

14397. What has become of it now?—It is derelict.

Failure of a second proposal for the G. S. & W. Ry. Co. to take over and work the line owing to the grant asked for by the company not being forthcoming.

14398. It is derelict?—Yes, and robbed—all the material is stolen. In 1890, owing to local effort, the Great Southern and Western Company were approached and the Chairman consented to take over the line accompanied by a grant of £12,000 of public money. The money being forthcoming they refused to ratify the undertaking given and declined to take less than £24,000, with a guarantee of any further sum that might be found necessary to equip it to the satisfaction of the engineer of the Board of Trade. And to make the terms still more onerous to the satisfaction of their own engineers' requirements over and above, and that they should also be guaranteed to be recouped for any loss that might accrue in the work of the line. I have no doubt, if reasonably worked, the line would have paid and made a most excellent "feeder," and proved a great public utility and convenience. But it was wrecked by the Great Southern Company. Again, I have unimpeachable authority that the line could pay and would pay well. I think if it was taken in comparison with the narrow gauge lines in Ireland the thing would have paid remarkably well. The ordinary gauge works out at a profit of about £1,240 per mile, that is the average, taking the branches and everything else, it is the average earnings for Ireland per annum per mile. In light railways the average earning is £259 per mile. The only two exceptions to that are two short lengths which earn about £150 per mile. Now, what I say is the Great Southern and Western Railway would have got a very good bargain if they had taken the line even if it cost them £12,000. They said they would take £24,000 with a further guarantee. They practically wanted to be recouped for any loss they might have sustained after getting their own terms without their giving any guarantee for proper working.

14399. I understand they merely wanted to be reimbursed any loss in the working?—Yes, but what undertaking did they give or what guarantee that they would work is sanely, or reasonably. When the Great Southern and Western Railway worked it in 1869 they only gave credit for earnings over the twelve miles, and piled on all charges of both stations. They gave no credit for the great feeder for traffic which it brought to their main line.

14400. If the company got no profit they wanted to be reinburesd?—Anyone reasonably approaching the matter would be struck with the large district that is around Portumna.

14401. What is the population about?—The population of the town is not large—about 2,000 or 3,000.

14402. It is 961?—Yes, but there is a large district; it is a smallish town. There is rather a good district on this side, and on the other side, and you will notice there is no railway connection practically in the whole of that district. There is a very large back country to it.

14403. Now, have you considered what is the remedy for all this?—May I say my idea is that I would like to see the railway company rising to the situation, but I am afraid it would be impossible to expect them to do so. I do not see any other way, considering that Ireland is situated in a position that she cannot afford competitive traffic—there would not be sufficient traffic in the whole country to support competition, which would be a good paying traffic and which could be worked for the benefit of the country—but failing competition, I do not see that there is any other reasonable way I can suggest except that the Government should take over the line by State purchase.

14404. To put it shortly, you are strongly in favour of State purchase of Irish railways?—I advocate State purchase, and nothing else, under Parliamentary control. I assume that under a single management carefully exercised on business lines there would be an enormous saving in the dead charges for management, fixed charges for management.

14405. Let us confine ourselves to the principle?—The principle I go on is this. You have 300 directors and 26 Boards of Directors and general managers for managing 4,000 miles of Irish railways. A single line of that mileage in England is managed by a single Board of Directors. The cost of the management of Irish railways is excessive, and would, if modified and managed under one control, if unified under one control there would be a very great saving and a very great benefit to the country; the rates would be considerably less. I estimate it would save about £300,000 per annum.

14406. That is only your own idea. You are strongly of opinion that the nationalisation of railways that we have heard so much about would be an advantage generally to the whole of Ireland?—What I say is this——

14407. Please answer yes or no to that?—It is difficult to answer a question yes or no sometimes.

14408. Is it?—Because you may fall into a fallacy. My idea is that the railways as managed at present are very unsatisfactory. I do not think it could be worse, State purchase would modify that if it was properly worked. I think it would be the only remedy that I can see that would be reasonable to them.

14409. One word about the passengers: you are in favour of a large reduction in the second-class fares?—I am.

14410. Making a small percentage over the third-class fares?—A friend gave me that paper. He paid that excess fare from Banagher to Belmont. The fare was 5*d.*, and the excess was 5*d.* for travelling second-class. What I say is that it costs you fully 60 per cent., and sometimes 70 or 80 per cent difference between the third and the second-class fares, whereas in England I have travelled from Holyhead to London for a couple of shillings additional in the second-class.

14411. Some of the second-class fares in England are about 10 per cent. over the third?—Yes—most of them.

14412. No—don't run away with that idea; some of them are?—Any of them that I have had to deal with are not much more than that.

14413. You may take it from me that a small portion of the second-class fares in England are 10 per cent. above the third; your idea is that something of that sort should be done in Ireland?—Yes; I think the second-class carriages are very little used, and that

they would be used by respectable people if they had that facility. I will give you an instance. 12*s.* 3*d.* is the third-class return fare from Birr to Dublin, and 20*s.* 6*d.* is the second-class.

14414. Nearly double?—It is the same thing all over the country.

14415. Do you know the first-class charge?—Somewhere about 30*s.*

14416. Your point is that 10 per cent. above the third-class fares for second-class would be a great advantage to the travelling public of Ireland?—A great advantage.

14417. *Lord Pirrie.*—The first-class is 100 per cent. higher.

Witness.—Might I also say that I object to the special rates and the rebates that are given to traders. I am unfortunately in a position where the Great Southern have a monopoly absolutely; and they are giving special rates and rebates outside. This was sworn by two traffic managers—the Great Southern and Western and the Dublin and South Eastern Railways.

Mr. Fitzgibbon, K.C.—This question of rebates over the Limerick Junction to Waterford line is actually at present the subject matter of a judgment which has been reserved by the Railway and Canal Commission. The Dublin and South Eastern Company having got running powers from Waterford to Limerick began granting rebates within the last twelve or eighteen months. The Great Southern and Western did the same. Each applied for an injunction to restrain the other from doing so; the applications were heard about a fortnight ago, and the judgment is to be given.

14418. *Chairman.*—The thing is *sub judice* and besides the proceedings have been printed and we have got them. (*To Witness*).—Where did you get your information?

14419. *Lord Pirrie.*—Do you want to say that you object to it?

Witness.—I want to say that it hits me very hard, and the thing being *sub judice* should not prevent me from saying so.

14420. *Mr. Fitzgibbon, K.C.*—Both the railway companies are objecting to it.

Witness.—They denied it here in evidence given before you in November last that such was given. It was denied here by the Great Southern; and it was afterwards admitted and sworn to in evidence; and I say that it is one of the worst forms of bribery and corruption. These rebates are not put in the rate book; they are secret and illegal.

14421. Did you get any rebates?—No, they would not give me any rebates. I never looked for them.

Examined by Colonel HUTCHESON POË.

14422. In support of your argument that mixed consignments should be charged at the rate applicable to the larger scale of gross weight, you gave some figures: what was the total weight of your consignment?—7 cwt. 2 qrs. 21 lbs.

14423. What would your idea be as to the charge?—Of course I can understand that in England it is necessary where very large quantities of these things are carried, but in Ireland, where you have only small quantities, and there is no difference in the risk, I maintain that these classifications are antiquated and out of date, and should not apply to Ireland.

14424. Would your contention be that where a mixed consignment is sent by one consignor amounting to, say, 8 cwt. the charge should be not under 3 cwt. scale, but according to the scale applicable for the whole consignment?—Yes—that practically would be a fair thing. When the total consignment is above the scale rate the component parts of it should be above the scale rate, and should be charged at the rate applicable to the gross weight of the consignment.

14425. That is what it comes to. Then, as to the through rate affecting you in the instance of furniture, your contention is based on the assumption that the proportion of the rate that the Irish railway people receive is 21*s.*?—No, not at all. My assumption is based on the fact that the proportion that the Great Southern would get—which may be over that—would be very considerably less than the amount that they charge for local rate.

14426. The local rate is 47*s.*?—62*s.* 11*d.*

14427. You are penalised to the extent of 42*s.*?—No; I don't live in Tralee. I say I mean that the Irish manufacturer is penalized to the extent of the difference between 21*s.* 8*d.* and 62*s.* 11*d.*

14428. What you say is based on the assumption that the Irish railways get a very small margin; would your idea be that their proportion of the through rate should be levelled up, or that the other company's proportion should be levelled down?—I say that if it pays them to carry at the low through rate it should pay them to carry at a low local rate. The local trader is entitled to have carriage on the same basis.

Mar. 15, 190

Mr. W. K. Fayle, J.P., representing the Birr Urban District Council.

14429. It is very difficult to say anything until one knows what the proportion of the through rate that the company gets?—It is of course; and what I believe the Clearing House principally act on is the mileage.

14430. Your contention is that it prejudices the home manufacturer?—Yes.

Preferential cross-channel through rates prejudicial to home manufacturers

14431. In page 3 of your statement you say that the companies raised the owners' risk rate from Glasgow to Birr by 2*s.* 6*d.*—is not that so?—Yes.

14432. That is the owners' risk rate?—That is the owners' risk rate, but I should say that the company's risk rate would also be raised.

Railway company's explanation of the increased rates between Glasgow and Birr.

14433. *Mr. Fitzgibbon, K.C.*—There is a perfect explanation of that. They are prohibited from raising any rate without the consent of the Railway and Canal Commissioners. But the rate did not include the dues that were payable in the Clyde and in Dublin. The steamship company withdrew the rate, and then the dues were added in order that the through rate might be put in force again, and the actual money paid under the 30*s.* 10*d.* rate is 2*d.* less than the old rate plus the dues. The steamship company withdrew the rate because they found a difficulty in collecting the dues. Then almost the entire dues were put on the rate. That is the explanation.

Witness.—How is one to know that?

14434. *Chairman.*—Well, of course, you have got it now.

Witness.—Their undertaking was to give notice. I say that if that occurred they ought to have given notice, and to have applied for it.

14435. But their contention is that instead of the rate being advanced it is actually reduced by 2*d.*?—Well, it might be the other way and a great deal more.

14436. At any rate you could not know it?—I could not know it.

14437. You know it now?—But I say they ought to do what they undertook to do, namely, give notice or apply for leave to make the rate.

14438. *Colonel Hutcheson Poë.*—You say that they did not tell you why the extra rate was actually put on, and that in their explanation they have not done so?—The 28*s.* 4*d.* rate was, to my knowledge, actually in force for ten or fifteen years.

Chairman.—Plus the 2*s.* 6*d.* for dues.

Lord Pirrie.—You had to pay the dues then.

14439. *Mr. Fitzgibbon, K.C.*—The dues were paid by somebody

Witness.—They were not paid by the consignee.

14440. *Lord Pirrie.*—I don't think the railway company's answer meets your argument.

Witness.—They gave a promise and did not keep it.

14441. *Lord Pirrie.*—His contention is that he paid 28*s.* 4*d.*, and that by a new regulation the railway company raised it to 30*s.* 10*d.*

Witness.—They can do anything they like on the same authority. Supposing it was an arbitrary rate, how are we to know it?

14442. *Chairman.*—But an arbitrary rate would be illegal.

Witness.—Well, when you come to deal with the conscience of a railway company you have to be very careful. I say that they have not carried out what they undertook, and I look on it as a very serious matter.

Necessity for a cheaper and simpler court than the Railway and Canal Commission to adjust disputes urged.

14443. *Colonel Hutcheson Poë.*—Your next point is that the illegalities of which you complain, or that you allege, cannot be satisfactorily inquired into under the present system by the Railway and Canal Commissioners?—Yes.

14444. I suppose you probably agree with the evidence given by other witnesses that a simpler and cheaper tribunal of some kind would be better adapted to the requirements of the country?—Quite so.

14445. Without expressing any opinion as to the composition of it?—The cheaper and the more easily reached the better.

14446. As to the accommodation at Birr—do you mean to convey that there is absolutely no store of any kind at the station?—No.

Mar. 15, 1907.

Mr. W. K. Fayle, J.P., representing the Birr Urban District Council.

14447. You say that there is no store where cement and flour and other things that would suffer by exposure can be placed?—Well, it is not that. I don't think it would be reasonable to suppose that station to station goods should be taken out and stored; but what I do complain of is that if the railway company charge demurrage they ought to give facilities for the trader to take delivery in weather that is unsuitable for the open air.

Inadequate facilities at Birr Station discussed.

14448. I understand you to say that you have actually to unload flour and certain other articles from the wagons into your carts?—That's so.

14449. But that if the wagons came alongside of the store the goods could be lifted into the wagons?—There is an expense in lifting out of the wagons and into the store.

14450. In the way of unloading?—Yes.

14451. You pay for that in the way of a terminal charge?—Well, I suppose I do.

14452. As regards the demurrage, you complain that it is very often for goods that are actually not at the station?—One case that I have here did occur.

14453. Probably, there will be some explanation of it. It may be an isolated case?—In one case they applied for demurrage, and the second time that they applied for it it was their own fault.

14454. You refer to the German railways?—I don't think these figures can be relied on.

German railway rates and methods not admitted to be analagous.

14455. In Germany there are only station to station rates; there is no collection or delivery; there are no warehouses; in some cases demurrage is charged after six hours' delay, and there is great shortness of wagons, so that there are not so many advantages in the German system as you seem to imagine.

Witness.—Yes.

The history of the Portumna derelict railway discussed.

14456. And if you want quick despatch you must send by either an express or a passenger train at very much higher rates?—It was only just the difference in the cost that struck me as being considerable; but I dare say there may be other inequalities, and it would be necessary to account for some of them. I don't for a moment take it that all the disadvantages are confined to this country; but I am quite open to the opinion that under the present system of management you cannot get anything settled right. But under Government you could bring pressure on them. There have been concessions on the part of the Government of late years. They were quite willing to contribute money for the Portumna line, but the country was not willing to penalise the ratepayers to an expense beyond what was right and fair.

14457. After the Great Southern Company had thrown away £15,000 on it, as you have said, would it not have been a very good "deal" if the Board of Works had contributed £12,000 and the Great Southern Railway Company £10,000—would it not have been a very profitable one for the Company? I believe the permanent way has been taken up?—No; it was working at the time that they were offered it for £10,000. The equipment, staff, and everything were on the line when they refused to take it over for £10,000.

14458. You say there is great scope for the development of traffic. Does not a great deal of traffic go down by Lough Derg to the Shannon?—The railway practically controls the canals, so that there is no advantage to anyone in getting things by canal.

14459. How does the traffic at present go from that district which you say would go along the Birr and Portumna line if it were made—does it not go down by Lough Derg, to a large extent?—Any that is; but there are many disabilities connected with it. In fact, you would not send anything good by it.

14460. By steamer service?—Yes.

14461. And you think that the Great Southern Company, knowing, as I suppose they did, that they might develop a big traffic by the line, refused to buy it at this very low price?—My belief is—and I had it from the late traffic manager of the Great Southern and Western Company—that the line would have paid well; but there was some dispute or unfortunate matter of temper between the parties that were concerned in the re-opening of the line and the Chairman for the time being, and I think that was unfortunate for the country.

14462. When you say that the Chairman in 1890 consented to take the line, I presume that that was a mere personal consent; he had to put it before the shareholders and the directors?—I cannot answer that.

14463. On the face of it, it looks as if the Company agreed to take over the line and subsequently receded from their agreement?—I cannot say that; but I say that a man in the position of Chairman of a great company ought to have known what he was doing.

14464. With regard to passenger accommodation, several witnesses have given evidence that the second-class accommodation might be improved with advantage, so as to attract a considerable number of third-class passengers; whilst others have urged that it would be better to do away with the second-class altogether, and confine the train to first and third class; what is your opinion about that?—My opinion is that perhaps a first and a third class would be satisfactory, too, but with a second class that might be used. At present they are running empty.

14465. I suppose in any case you would not do away with the second class, unless the third class could be considerably improved?—Certainly not.

14466. If you had first and third classes with better accommodation it might meet the requirements of the travelling public?—Well, of course, where ladies are concerned it is rather difficult to say.

14467. With regard to State purchase, have your Council considered what form the controlling power should take?—Well, there is a mixed Council in Birr, and many of them are Home Rulers. Personally I am not; and I don't think it is a thing that I could well enter on.

*14468. Did they pass any resolution in favour of State purchase?—Oh, yes.

14469. Were you deputed to represent them on that point?—I was deputed to represent that my Council are in favour of State purchase or unification.

14470. You say under the Imperial Parliament's control?—That was my idea.

14471. They did not demur to it?—They gave me a very free hand.

14472. By "mixed Council" you mean that it includes a considerable number of Protestants or Unionists—is that what you mean by "mixed Council"?—Yes. They say that we have no right to be there, but they have taken us in.

14473. Did you submit this draft of your evidence to them?—Oh, yes. I submitted it to them and they approved of it.

14474. You say, "Imperial Parliamentary control"; does that negative their being in favour of what I call Nationalist or Irish control?—Well, I think they are in favour of State purchase; but I do not think they have considered the matter very carefully with regard to all the details; and I thought that as the Post Office is managed exceedingly well, if the railways were managed on the same principle as the Post Office I would be very well satisfied.

14475. You are not prepared to give any opinion as to the particular body which should take over the control of the Irish railways?—The Council did not go into any details, but they are in favour of the National movement.

14476. Did the Unionists in the Council express any opinion that while they might be in favour of State purchase, or the control of the railways by a Government Department—did they go so far as to say that they were not in favour of the control of the railways by an Irish Department?—Well, what they said was that the matter was not before them. There was nothing definite before them, so that they did not discuss it.

Examined by Lord Pirrie.

14477. Only one question. I take it—and I want to have it clearly in the evidence—that what you object to is the railway companies giving special rebates or special rates to large traders and to others, and that you want everyone to be treated alike, even to the extent of carrying Irish goods at the same rate as foreign goods?—Those are my opinions. I also wish to say that the Great Southern and Western Railway carry goods from Sligo *via* Limerick to Dublin, 334 miles, at the same rate that the Midland Great Western Railway Company carry between the same places *via* Mullingar, a distance of about 134 miles.

Cross-examined by Mr. Gerald Fitzgibbon, K.C.

14478. You quoted a through rate from London to Tralee, and you object to it as letting goods be carried from London to Tralee at a proportionately cheaper rate than Irish goods can be brought down from Dublin?—That is only one. I can take you to other points.

*See Appendix No. 39–VI.

14479 You gave a rate of 125*s.* a ton from London to Tralee, and say that the rate is considerably more if the goods are carried by Dublin?—As a matter of fact, I may state that on the same class of goods coming into the town I live in, which is a hundred miles or so nearer to Dublin, we are paying 140*s.*

14480. Do you know that the London to Tralee rate is ruled by the long sea rate?—My point is that if it pays the Great Southern and Western Company to carry this through traffic to Tralee for a proportion of the rate, it should pay them to carry our traffic through the country at the same rate; and what I also state is, that I consider it a matter of very great hardship that other places on the line, which are not competitive, should be penalised in order to pay for the concessions given to other places.

14481. Do you know that the rate from London to Tralee is ruled by the long sea journey from London to Cork?—What I state is, that if the Great Southern Company carry the traffic—and I have heard it sworn to by the railway manager—if they cannot accept the traffic at through equal rates, they can stand down; but if they do accept these rates it should pay them all round. Representing the Birr Council, I do not say that I have had to complain myself; but there have been complaints.

14482. Have you had to complain?—I have not been in a position to do so.

14483. You gave us a list of times and trains between Birr and Portumna?—Yes.

14484. Surely your object ought to be to let the Portumna people into your town; what do you want to go to Portumna for?—Well, people would like to go to Portumna, too; and there is Lough Derg, which the Shannon steamer serves.

14485. Then they don't want to go back in twenty minutes?—Nor does anybody that wants to go from Portumna to Birr want to go back in twenty minutes.

(The Commission then adjourned for an hour.)

On resuming after the luncheon interval,

Mar. 15, 1907.

Mr. W. K. Fayle, J.P., representing the Birr Urban District Council.

14486. *Chairman* said.—Mr. Fayle, I think I omitted to ask you whether any resolution had been passed by your Council?—Yes, sir, there was a resolution passed by the Council.

14487. Have you got a copy of it?—I have a copy. It has been sent to me this morning, if I may place it before the Commission.

14488. We will have it printed on the notes. What is the date do you know?—The 14th of March, yesterday. I received it this morning.

14489. *Mr. Fitzgibbon, K.C.*—Is it a general resolution?

Chairman.—It is generally in confirmation of the evidence that has been given.

The following is the resolution:—

Resolution of the Birr Urban District Council *re* working of Nenagh and Limerick Branch.

"Resolved.—That we, the Birr Urban District Council, hereby unanimously direct public attention to the gross and needless waste of time on the Nenagh and Limerick branch of the Great Southern and Western Railway, and to the unnecessary time allowed for the journeys of most of the trains, particularly as regards the portion of the line from Birr to Ballybrophy. Also to the fact that owing to the late hour of starting and the slowness of the first train from Birr the people of the town and neighbourhood are seriously prejudiced. That notwithstanding repeated promises of improvement the Railway Company has failed to effect any reforms."

Mr Edward Sclater, J.P., examined by the Chairman.

Mr. Edward Sclater, J.P., representing the Irish Cattle Traders' and Stock Owners' Association.

14490. I think, Mr. Sclater, you appear before us on behalf of the Irish Cattle Traders and Stock Owners' Association?—Yes.

14491. You have been deputed to appear?—I have.

14492. I need not ask you whether you have had any experience of the Irish cattle traffic?—I have been connected with it for the past 24 years, and I farm a large area in the County Meath.

14493. Are you in the habit of buying cattle in the county?—Yes. I buy cattle myself and rail them up from the West.

14494. And do you then export them?—No, I feed them.

14495. Then your business is really internal?—Yes, except in so far as large numbers of the cattle go across to England.

14496. After you have sold them?—No, I sell them in Wakefield, Manchester and Liverpool.

14497. During the long period which you have been connected with the cattle traffic in the country have you noticed any tangible improvements in the matter of transit by the Irish railways?—I gave evidence ten years ago before the Committee that inquired into the inland transit of cattle. I think some of those recommendations have been acted upon. There is a certain amount of improvement, but still our Association considers that the condition of affairs is not at all satisfactory.

14498. But still you admit that during the last nine or ten years there has been some improvement?—Yes, a considerable improvement in many ways.

14499. Of course the cattle traffic is a very important item in connection with the prosperity of this country?—I should say one of the most important, if not quite the most important.

14500. Is there any particular railway which you are acquainted with that you wish to refer to as not having brought up their improvements to the standard that exists in other countries?—I have principally dealings with the Midland Great Western Railway, and as far as our Association is concerned we have a very large number of complaints. I can give evidence on two cases which happened last November to myself, and I have evidence of two others belonging to members of the Association to put before the Commission.

14501. Then let us deal with the one company first. What do you consider is necessary that they should do that they have not yet arranged for?—Well, the speed of trains is a matter that requires great improvement. If I may quote this particular case in point. There were 180 bullocks that I bought at Ballinasloe on October 5th, that is the large Ballinasloe Fair. The roads were so blocked that I did not get them to the railway till ten o'clock in the morning.

Instances of faulty arrangements for dealing with traffic from fairs on M.G.W. Railway system.

14502. You mean the country road?—The road from the fair to the station.

14503. That had nothing to do with the railway?—So far it had not, but they were on the loading bank at 10 o'clock in the morning. They were boxed at 2 o'clock, but the cattle did not arrive at the Hill of Down till 11 p.m., a distance of 56 miles, so that they were from 10 o'clock in the morning until 11 o'clock at night on the company's premises.

14504. Of course there must be at a fair like the Ballinasloe fair a great pressure on traffic?—There is.

14505. And you cannot expect, and do not expect, I am sure, that the transit could be carried on the same as under ordinary conditions?—Certainly not.

14506. Did you expect some delay on these occasions?—Certainly.

14507. But, speaking generally, on the whole is the traffic worked from the fairs in what I may call a reasonable and fair manner?—I do not think it is thought so by our Association.

14508. That is what I want, the views of your Association?—Our experience is that the first lot of specials are got away in good time, but towards the end there is either an absence of wagons or of engines, and so forth, and we are often left, as in this particular case, a very long time; they were kept hours waiting there in the wagons, and that injures any cattle. There is a similar case from Loughrea a month afterwards. I had 100 cattle. They were put in the wagons at 1.30 and when I left at 3.30 the cattle were still there, and they did not arrive at the Hill of Down till two o'clock in the morning, so that they were for twelve hours in the trucks. That I believe was caused by there not being an engine.

14509. Was that a large fair?—A large fair.

14510. They had sent away several specials before that?—They had, and I must say I was shown every courtesy by the company individually, but it is a very serious loss to have cattle left all that time in a wagon.

Mar. 15, 1907.

Mr. Edward Sclater, J.P., representing the Irish Cattle Traders' and Stock Owners' Association.

14511. I suppose the Midland Great Western at these places have a foreman or a man superintending the cattle traffic in addition to the ordinary staff?—I think they have for the large fairs, but what always strikes me—and I have heard a great many complaints about it—is that the man who is in charge of the arrangements is out on the tracks, and it is very hard to see or communicate with him. I have always boxed my own cattle and sheep. I see it all done myself, and I find a difficulty in getting anybody who has any authority. The head man is outside on the track.

14512. I suppose he is arranging for the special trains?—Yes, and what occurs to me is, if I had anything to say to it, that I would like to see somebody in charge of the loading banks.

14513. Would you rather see a man superintending the loading than superintending the marshalling of trains?—So far as our Association is concerned, yes.

Recommendation that a responsible Railway official should be placed in charge of loading banks at all big fairs.

14514. You think it would be a great advantage to your Association, to the cattle dealers in general, if in these special cases of fairs, where there is a large cattle traffic to deal with, that there should be a special man appointed to look after the loading, in addition to the man who looks after the marshalling of trains?—That is what I would suggest. I have two other cases that I have been asked to bring forward. One is the case of a Mr. Goodman, of Laracor. I have a copy of his letter here.

14515. You need not read it all. State its import?—The facts are that he bought 20 bullocks in the fair at Roscommon on November 6th, and he sent them to Nobber station. He saw them into wagons at 11 o'clock in the morning, and they did not arrive until seven o'clock the next morning, the distance being 132¾ miles from Roscommon to Nobber. The cattle in that case were 20 hours in the train, and one bullock was killed and two very much injured.

Alleged faulty arrangements for the conveyance of fat cattle traffic to the Dublin weekly market.

14516. Now, of course there are other places where fairs are held—have you any complaints in regard to what I may call the general arrangements for the carrying of cattle to Dublin markets?—Well, we do not find the arrangements for the fat cattle are satisfactory. The cattle are kept too long in the wagons, and I have had personal experience in that respect during the whole of this year. Through the whole of last summer I found that the cattle going about 30 miles from Kells had to leave by the 11 o'clock train in the morning and they are not here in Dublin, as a rule, until 5 o'clock in the evening, so that there is a whole day in the train.

14517. What is the distance do you say?—About 30 miles, I think.

14518. Is that general, or is it exceptional?—It is general over all that district.

14519. *Lord Pirrie.*—From 11 o'clock till when?—Till nearly 5 o'clock. I have had a good deal of correspondence with my friend, Mr. Tatlow, about it, and occasionally the train is expedited, but I find that after one or two weeks it went back again and was as bad as before.

14520. *Chairman.*—What you are referring to now is the regular traffic every week?—Every week for the market.

14521. When is the market?—On Thursdays.

14522. The cattle are sent away on a Wednesday?—On Wednesday. There is a special train for the market.

14523. What time is it due—is it in the ordinary time-table?—It is a regular goods train.

14524. What time is it due to arrive, do you know?—I do not know. It is generally late, because extra wagons have to be taken up. To some extent efforts were made to deal with the matter.

14525. It is not a special cattle train?—It is not. Later in the season the manager gave us an extra engine and ran them up specially, and once they get to Kilmessan, two stations from Navan, they ran up to Dublin in good time. There is a great advantage in favour of a person living in Dublin, who has only got to take his cattle from a field into the market, as compared with the man who has to train them a considerable distance, as keeping them in wagons all day causes a very serious loss.

14526. Is the deterioration perceptible?—Far more so with fat cattle than with stores.

14527. And the price is reduced accordingly?—Yes, the cattle look shrunk up. I think that is a very serious loss to our people, and that applies equally on the other line, the line from Mullingar. I have cattle from there too.

14528. Are the trains arranged at convenient times for the cattle traffic as a rule?—Well of course for the large fairs there are special trains from the fairs, but the ordinary goods trains are run at night principally. On a large number of the Irish railways the goods trains run at night, and that is very inconvenient to the members of the cattle trade. In the first place they have to be boxed late at night, which is a very serious expense to the man. He has to pay for their keep and extra men to look after them, and cattle are more apt to fall in a wagon at night than in the day time, and they are not so easily looked after by the company's servants. If it could be managed that the cattle traffic could be worked in the day time it would be much better. The dealers and shippers, and soforth, at a small fair have to box their cattle very late at night or very early in the morning.

14529. That applies to odd wagons of cattle?—Yes, but the inconvenience it causes often prevents people buying odd lots.

14530. The natural time for a goods train traffic is at night?—For goods, but not for boxed cattle.

14531. What do you suggest in regard to telegraphic communications at the Irish railway stations?—I should suggest there should be an opportunity of sending a telegram at all the company's stations. It is so, I believe, in England on a great many of the railways. I know it is on the London, Brighton, and South-Coast Railway. At any station there you can hand in a message to the company's servants who transmit it to the post office. That would be a great thing for the trade of Ireland if that could be arranged, so that the companies' servants would take post office messages, not to deliver them of course, but to forward them. That is at work on the London, Brighton, and South-Coast Railway now, and it is a great boon to everyone.

14532. Don't the Brighton Company act for the Post Office?—If they have no postal telegraph office at the station they transmit the message to one.

14533. You suggest that a similar arrangement should be made in Irelanl?—I would suggest that any station-master should be allowed to receive messages from the public and transmit them on the company's wire to postal telegraphs.

14534. *Colonel Hutcheson Poë.*—At a good many stations we have these facilities now?—We have some, but there are a great many places from which you cannot communicate. You go to the office and there is the company's instrument and you cannot use it.

14535. At only the smaller stations?—Only the smaller stations.

14536. *Chairman.*—I think at the smaller stations in England you will find there is no communication like that?—I know it is at every station on the London, Brighton and South Coast Railway. In Ireland I have had a difficulty myself in going to small fairs and not being able to send a telegram to my men to meet the cattle.

14537. *Lord Pirrie.*—Won't the company send it for you?—I have been refused the use of the company's wire.

14538. Though you want it for the sake of the company's benefit to get the wagons for the cattle. Surely at any station where there is a market the company will send a telegram to their main office to say so many wagons must be here for that—is that not done regularly for the market?

Chairman.—That is not what Mr. Sclater means.

Witness.—I want to communicate with my men to meet the cattle, and I cannot do it in some small stations.

14538A. *Lord Pirrie.*—If you telegraph that you have bought some many cattle and to meet the cattle, won't they do it?—I have been refused that. I know they won't.

Mr. Tatlow.—We have no right under the arrangement with the Postmaster-General to send telegrams except on railway business. I may just say at a great number of stations on the line there is a postal telegraph office, but that is a matter that depends

more upon the Postmaster-General than on us, because he is at the expense of paying for it.

Witness.—I throw it out as a suggestion. I threw it out, also ten years ago.

14539. *Chairman.*—I think we should like to hear from you, if you can give us briefly, any suggestions which you are disposed to make in the interests of the cattle trade in this country. Take first the matter of the construction of trucks?—Yes, I would like to suggest that all new trucks that have to be built should have a boarded roof, and a footboard that would let down.

14540. A loading board?—Instead of having to carry the loading board along. There is very often a danger of cattle getting down between the wagon and the platform. The other plan is the best.

14541. The same as the flap, or fall, for horses?—Yes.

14542. And that all the cattle trucks should be covered?—That is what I suggest.

14543. What is your second suggestion?—That there should be a standard truck of specified dimensions, which should be adopted generally.

14544. I think it is done now, isn't it, on all the new vehicles?

Colonel Plews.—All new wagons are built to a standard.

14545. *Chairman.*—You do not suggest alterations in the existing vehicles, but that all new vehicles should be built upon a certain standard?—Yes, and that screw couplings should be introduced.

14546. The same as on passenger rolling stock?—Yes.

14547. *Lord Pirrie.*—Have the Agricultural Board not put that into one of their conditions?

Mr. Fitzgibbon, K.C.—We will prove that all new trucks are built to standard dimensions, and according to the requirements of the Board of Agriculture. They have approved of a cereain sort of truck, and they are built to that standard now.

Lord Pirrie.—With screw couplings on them?

Mr. Tatlow.—The screw coupling is not of much advantage. It is not required by the Board of Agriculture.

Chairman.—There are no cattle trucks with dead buffers?

Mr. Tatlow.—No; they are all spring buffers.

14548. *Chairman (to Witness).*—I do not see any great advantage in the screw coupling?—I would not like to argue with you, sir, on that.

14549. You have practical experience?—I would say screw-coupled cattle trucks would go much easier.

14550. At any rate, we will take that as your suggestion?—That is one suggestion.

14551. What is your fourth suggestion?—That the power conferred upon the Department of Agriculture by the Act of 1899 has been no practical use in the matter of grievances to those engaged in the cattle trade, and that some less expensive facilities of a practical nature should be given to traders to bring reasonable complaints before the Railway and Canal Commissioners.

14552. Are you enamoured of the Railway and Canal Commissioners' Court?—No, I do not think we, any of us, are. What we mean is that we should have facilities before some tribunal——

14553. And that the tribunal should be cheap and easy of access for traders?—That is what is required.

14554. No matter what it is called?—Not the slightest difference.

14555. I think you said just now that the communications with the managers of the railways are always of a friendly character?—Certainly.

14556. In fact, I gather that you really have no serious complaint to make except that at these particular fairs where congestion of traffic may cause some delay. Of course, it would be infinitely better for you if the cattle could all be sent away in a reasonable time, but the pressure at fairs causes delay, and, I gather from you that the delays are exceptional and not chronic?—What we complain of principally is the speed of goods trains.

14557. Too fast or too slow?—Too slow. We consider there should be a limit to the speed of cattle trains.

14558. In which direction?—That the company should be bound to run them at a certain speed.

14559. At a minimum of, say, what?—I was going to suggest 16 miles an hour.

14560. That should be the minimum?—Yes.

14561. What would you fix as the maximum?—Well, if I may quote Mr. Tatlow, who stated ten years ago he made inquiries in this matter and he found his average speed was 16 miles an hour, and that the running speed was up to 23 miles.

14562. We have had evidence before us that the special cattle trains in Ireland run at from 20 to 25 miles an hour?—They certainly did not run at that speed in these two cases I have spoken of.

14563. Were those special trains?—Yes.

14564. You did not tell us whether that delay was in the running or at the stations?—I cannot say. I think in the second case the delay was in the station, because there was no engine.

14565. And the train, when travelling, might have been running at 30 miles an hour for all you know?—It might.

14566. But odd wagons of cattle carried in a pick-up goods train are necessarily slow?—Yes.

14567. They stop at every station?—Yes.

14568. Your suggestion with reference to the speed refers only to the special trains of cattle traffic?—I should like it to apply generally to all trains where you carry cattle.

14569. It is a very important thing that goods traffic should not be left at intermediate stations in the same manner—I mean one wagon of cattle going from any point you like to another point with ten wagons of goods on a pick-up train, it is just as important at these intermediate stations that that traffic should be set down and picked up so that your particular wagon of cattle should be carried?—It is.

14570. I should have thought your recommendations would be confined primarily to the special trains for the cattle traffic?—To ordinary market trains it ought also to be extended. We only get special trains at special times of the year. My cattle have to go by the ordinary goods trains. They often have to stand two hours at Navan—where the change is from the Great Northern—while the shunting is going on. Where there are no special trains at the fair at Navan, if I buy cattle at it, if I send them by the ordinary goods train they will not be delivered at the Hill of Down, 56 miles away, until the middle of the night. If I want to send the cattle by what they call a "P" wagon and get the cattle away on passenger trains, of course, I have to pay extra for that, and that is the only way we can get cattle taken in a satisfactory manner.

14571. Is there much difference between the "P" wagon and the ordinary rate?—Something like 33 per cent.

Mr. Tatlow.—Twenty-five per cent.

Witness.—It greatly adds to the value of the cattle.

14572. What have you got to say in reference to cattle sold in England—in Wakefield or Manchester—what do you want to say about that?—Well, as to the cost of selling a beast in Wakefield or Manchester without going into the actual details of the freight and soforth is, roughly speaking, for a £20 beast 22*s.* or 23*s.* a head. That is including everything.

14573. *Chairman.*—5 or 6 per cent.

Witness.—And to Manchester it would be about 12*s.* 6*d.*

14574. *Lord Pirrie.*—Or more than third-class fare?—Yes. And then we have to compete with the Americans, of course, in Liverpool or Manchester

14574A. Surely there are no American cattle in the cattle markets?—No; in the trade we have the competition.

14575. Of course, we have nothing to do with that?—No.

14576. What is the point you wish to raise then?—I only wanted to show the difficulties the trade has, the freight is so high, but others will go into this matter.

14577. *Chairman.*—Now, do you think things would be improved with reference to the cattle traffic if there was any radical change in regard to the ownership of the railways in this country—supposing there was an amalgamation of the various railways, and that there were two or three or four great systems instead of the twenty-seven we have heard of—do you think that would be of any advantage to the cattle industry?—Personally speaking I think it would. I am not speaking on behalf of the association; I am giving you my own views as a business man.

Mar. 15, 1907.

Mr. Edward Sclater, J.P., representing the Irish Cattle Traders' and Stock Owners' Association.

Recommendation that a minimum rate of speed for cattle trains should be fixed.

Extra cost for conveyance of cattle on Passenger trains

Amalgamation of the smaller systems with the larger railways recommended.

Mar. 15, 1907.

Mr. Edward Sclater, J.P., representing the Irish Cattle Traders' and Stock Owners' Association.

14578. You favour the amalgamation of the small lines with the larger, is that so?—Yes, that would be my own idea.

14579. Under one or more systems?—I would not like to go any further than four systems.

14580. More than one?—I have not thought out the matter sufficiently as to how that should be carried out.

14581. At any rate may I take it that you with your large experience in this important trade in the country are on the whole satisfied with the arrangements that exist?—I would not like to commit myself.

14582. How far can I carry you?—I think we have a great many complaints.

More consideration to suggestions from the cattle trade by the Railway Companies suggested.

14583. Then what remedy do you suggest?—Well, I have one remedy—I would suggest that the railway managers should give more consideration to the suggestions of the cattle traders, and I think that would tend to increase the volume of traffic.

14584. Yes. But have not you access to the managers of the railways?—Oh, decidedly.

14585. I mean that they are approachable?—Yes.

14586. And you can see Mr. Tatlow?—Yes; I very often see him.

14587. And others?—Yes.

14588. And you have not found them unreasonable?—I did not find Mr. Tatlow, certainly, unreasonable. He is most courteous to me in every way.

14589. With that exception shall I take it you have no general complaint?—I don't think the railway system is satisfactory, so far as the cattle trade is concerned.

14590. Then, I ask you again what do you suggest as a remedy?—Well, I have suggested one remedy.

State ownership of the Irish railways not endorsed.

14591. You have—is that the only one; do you think it would be improved if the State owned the railways?—No, I do not, personally. I have experience of the working of State railways in other countries—at least I have seen the working of the system, and I think people in this country who have seen it would never be in favour of it—I do not think they would be very much in favour of it.

14592. *Chairman.*—I think that is all I have to ask you.

Examined by Lord Pirrie.

14593. What countries do you refer to in your last answer?

Witness.—I have no knowledge of any countries but Germany and Belgium.

14594. No experience of Australia or New Zealand—the Colonies?—No.

Condition in which cattle arrive after long sea passages.

14595. You have given very clear evidence in regard to the cattle traffic and the great loss you suffer by the cattle being injured on the journey, by these delays at stations, and the delay on the journey from the various towns to the particular port to which you are sending them—would you be surprised to know that in sending cattle by steamer, say, 4,000 miles across the Atlantic they are improved from the day they are shipped until the day they are landed owing to the care taken of them, and that in fact greater care is taken of them on the cattle steamers than what is actually taken of them on large passenger steamers. In other words, that when a little gale or storm arises the captain is bound by his instructions from the managers to so guide his steamer, or put the steamer, that there may be the least motion, the least annoyance to the cattle, so as to prevent their injury. What I take your intention or desire to be is that the railway companies should try to carry the cattle without injury so that they should be landed at their destination in the same condition as after a long voyage on a steamer?

Witness.—That is my idea.

14596-7. You would think that what can be done on board a steamer that has to run all the chances of storms and fogs and fearful wintry weather could be done much more easily on land where every possible convenience is obtainable?—Well, I have no experience of the sea; I may say that.

14598. But from your knowledge of what occurs on the land would not you think it would be much easier to carry cattle with less risk on land than on sea with all these inconveniences?—I think certainly there might be a very large improvement.

14599. That brings me to the question of screw couplings. Do you not think that if the steamship companies make every effort and adopt every mechanical invention for the purpose of carrying cattle safely it would pay the railway companies to put in screw couplings and prevent what you complain of—is not that the way the case stands?—Yes.

14600. Don't you think the Department of Agriculture, if they in any way considered the interests of the farmers, should make that one of their first considerations?—I think it is a most important matter.

14601. I agree with you so thoroughly that I was perfectly amazed when Mr. Tatlow said it was not one of the conditions in carrying cattle, because I personally have often felt that I would not allow cattle to be carried on a train unless there were screw couplings. Do you go quite as far as I do?—Quite, my lord. I am not able to carry it out in detail, but generally I agree with what your Lordship says. I would like to see it carried out if possible.

14602. You would, and probably as a large shipper would not object to pay something extra for this convenience?—Quite so.

14602A. Therefore it should be the duty of the Department to do something in this direction. Another of the complaints you make is that there is no one of importance at the fairs to see that the cattle trains are sent away in time. Have you never observed a local director with the general manager to see that these things were attended to. Don't you think that is one of the duties of a railway company, and that the local director if he were there could notice things which could be considered at the next Board meeting?—I have often seen them present.

14603. Do you think they would earn their fees a great deal better if they did that sort of thing?—Yes.

14604. I understood you to say that the cost of sending cattle to Manchester was 23*s.* a head. Was that merely the commission?—Oh, no; the total cost of sending the beast there and landing and selling him there. I was putting it as against foreign competition.

14605. You say that is what it costs you—does that include the cost of carriage?—It does. It is included in that sum. It is the total of selling the beast.

14606. It includes the cost of carriage and commission in selling the beast?—Yes.

Examined by Colonel Hutcheson Poë.

14607. I think you said your business is chiefly in the West of Ireland?—Yes.

14608. And principally with the Midland Great Western Railway?—All complaints have been so.

14609. Are you in a position to speak in regard to the Great Southern and Western Railway?—No; there are other witnesses from the association.

14610. I take it that in your opinion, at those fairs, the difficulty of getting the cattle away arises from a deficiency of rolling stock?—Well, certainly in the last few years it has not been so often as formerly.

14611. You have heard the evidence from Mr. Prentice that at last October fair at Ballinasloe there were 21 special trains with 700 wagons despatched, starting at half-past eight o'clock in the morning—in other words, one-fourth of the available wagons on that line—you could hardly expect the company to provide more than that?—I had 182 cattle at that fair.

14612. They were there, you said, at ten o'clock at night and were not boxed until two in the afternoon?—I can't answer for the delay, but the delay took place.

14613. Seven hundred wagons means 5,000 or 6,000 cattle?—Ballinasloe is a very large fair.

14614 The complaints are not so much with regard to special cattle traffic trains as in regard to small quantities of cattle bought at these small local fairs—it is with regard to them that damage ensues?—There has been damage throughout all the cattle fairs.

14615. Even by the special trains?—Yes the cases I have mentioned have been special cattle trains.

14616. They have precedence of goods trains?—They do, and they should have.

14617. But they would hardly have precedence of passenger trains?—I would not like to ask that.

14618. Don't you think that in regard to the small fairs something might be done by the cattle dealers combining together and sending off the cattle in larger quantities?—I think something might be done in that way.

14619. The railway companies are always very glad to make up ten or twelve wagons, that only means 80

Mr. Edward Sclater, J.P., representing the Irish Cattle Traders' and Stock Owners' Association.

or 90 cattle, and if they can be sure of getting the traffic they will go to the trouble and expense of providing a special train; where it does not come up to that the wagons are attached to a goods train?—I know that specials have been offered for ten or twelve wagons, but whether it has been carried out I am not in a position to say.

14620. The point I want to put to you is this. If the cattle dealers would try and co-operate and combine a little bit instead of each man sending off his little lot of cattle—combine together and arrange with the railway company—would not that be better than each one sending off on a particular day nine or ten cattle?—I think it is not very easy to carry that out. I think there is a great difficulty in that being carried out practically, because dealers buy certain cattle at certain fairs and they want to get them away because they have to pay for the keep of them, and in small fairs they only get a certain number of cattle.

14621. But at small monthly fairs is it not your experience that cattle to the extent of 200 or 300 are bought and sent away by train?—If there was that number I think the railway companies would make provision for them.

14622. But my point is this: there is a great want of co-operation amongst the cattle dealers in not trying to act together and getting the advantages the railway companies would offer them?—I cannot follow you quite as far as that. I don't think you could carry out the idea quite as far as you go.

14623. But still they might do something?—Yes. But I think the fact that you have not railway facilities detracts from the size of the fairs. People go to fairs because there are railway facilities, but the man who goes to small fairs is principally the small dealer. These people buy in small lots, and they want to get their cattle away.

14624. And then it would not pay them to keep them for perhaps a day or two until two or three of their friends came in?—It could be done occasionally, but I don't think it would be of any practical value what you suggest.

14625. With regard to any injury that has occurred, have you found any difficulty in recovering compensation from the railway companies; you gave an instance of that at Roscommon?—Yes. Well, that, I believe, was the subject of considerable correspondence between the man and the railway company. I think I am right—they arranged that.

14626. Have you any experience yourself?—I had a beast killed two years ago, and I was met very fairly by Mr. Tatlow.

14627. That is a point I wish to bring out—it is your experience that the companies have met you when there has been a fair case?—Yes, in my case, but I believe my association have had very considerable difficulties with the railway companies.

14628. Have you any instances to bring before us?—No, I have not.

14629. You say that cattle suffer great loss through shunting by tumbling down in wagons; have you any idea of the loss in actual weight that would result to a beast?—Of course it depends on the size of the beast. I find that they lose from ¾ to 1 cwt. I weigh every beast myself I send out.

14630. You would say they lose ½ cwt. at any rate?—Yes. Of course, a great deal depends on the condition of the cattle. You must weigh the cattle and see them yourself. If fat they won't weigh so much. It is very difficult, however, to arrive at any statistics with regard to that.

14631. With regard to the recommendations of the Department of Agriculture, I see in Mr. Prentice's evidence that the falling doors to the wagons, screw couplings, and vacuum brakes are part of the recommendations of the Transit Committee, and that the Committee advised the Board that the vacuum brakes should be increased.

14632. *Chairman.*—Mr. Tatlow has denied that.

Witness.—It was part of the recommendations of the Transit Committee of ten years ago, but it has never been carried out.

14633. *Colonel Hutcheson Poë.*—And you remember most of these recommendations were subsequently acted on in accordance with a minute prepared by the Department of Agriculture?—Some were not.

14634. But Mr. Prentice gave evidence to show they had been—that effect was given to the Board's recommendations in an order issued by the Department—the order of 1904 with regard to railway delays and the carriage of animals. So that at any rate the points to which you have directed our attention, so far as the Department is concerned, have been brought to the notice of the railway companies, and, in the view of the Department's Inspectors, have been carried out?—I don't think that is the opinion of the Association.

Lord Pirrie.—Keep yourself right.

14635. *Colonel Hutcheson Poë.*—You are totally opposed to State purchase or the buying up of the Irish railways, and you state in connection with that opinion that your conclusions were formed in consequence of your experience of the railways in Germany and Belgium. In what way was your experience derived?—Only through travelling in these countries. My reason is that I think there would be a great want of competition, and we have not great competition at present. We would have none then.

Reasons for objection to State ownership.

14636. You don't complain of the fares?—I am thinking of the speed of the trains and the general accommodation.

14637. Well, I believe, it is generally recognised that the accommodation on the English railways and to a less extent in Ireland is far superior to that on the Continental railways?—Decidedly.

14638. But I don't think that good accommodation is everything. Don't you think that any disadvantages in that respect would be more than compensated by the very much lower passenger fares and goods' rates that are charged in those countries as compared with the high rates charged in this country. You can't have everything, you know?—No; I see your point. But my opinion is that if the State had charge of the railways there would be a complete absence of competition.

14639. Would you require competition. There would be no object in trying to draw traffic in different directions, and it would go to the nearest centre. You would not be drawing traffic from the West of Ireland right away to the east. It would probably go to some nearer port?—In my opinion, when the small lines were under State control traffic would be much worse served than at present.

14640. But that couldn't be—they would be under one management—under one system of State management?—They might, but that would be my opinion.

14641. If you are opposed to State purchase you would be still more opposed to nationalisation?—Yes.

14642. You have no doubt at all on that point?—No, no doubt at all.

14643. *Lord Pirrie.*—You say you are in favour of the competition of one railway against another. You were speaking some time ago of Navan. They have two railways from Navan to Dublin?—They have.

Limited competition between Irish Railway Companies under existing conditions.

14644. If you send cattle, do you get any advantage—can you send cattle from Navan by the Great Northern and by the Midland at the same price exactly?—Yes. I am very glad you have reminded me of this point. At the present time there is very little competition, but there would be none then.

14645. At present there is little competition, because the railway companies have an agreement among themselves, therefore nationalisation or amalgamation without competition—you don't gain or lose anything at that point?—Not at that point.

14646. There is no better example than Navan—you can send cattle direct through to Dublin—yet there is no competition between the railway companies—they have started the same rate and they have stuck to it?—Yes.

14647. Therefore you lose nothing by it?—Nothing actually there.

14648. What about this Central Organisation, with a small body—assuming even amalgamation—elected 15 directors, say, and one great able manager, that would cost less than the 300 odd directors, 26 managers and 26 engineers at present?—That would cost less certainly. That is my view.

14649. It would save £350,000 or half a million of money—that would go to the reduction of rates?—Yes, I think so.

14650. It would be a benefit to you. Then, on the whole, you are rather in favour of amalgamation?—Yes, I said so before.

Amalgamation of the smaller lines advocated.

14651. *Lord Pirrie.*—I don't think you did. I think you meant it, but it was not quite clear.

Witness.—I said the small lines should be amalgamated.

Mar. 15, 1907.

Mr. Edward Sclater, J.P. representing, the Irish Cattle Traders and Stock Owners' Association.

Reduction in rates through amalgamation anticipated.

14652. *Lord Pirrie.*—You are in favour of amalgamation so as to get if not a saving of rates a reduction of rates?—I don't see—perhaps a reduction of rates.

14653. Well, I want you to state what benefit you would gain by it?—You are assuming that the State is purchasing.

14654. Not at all—I am speaking of amalgamation—I am taking your own answer, so that it would——?—I beg your pardon. Now I understand.

14655. A reduction in the railway rates—so that the saving would go towards the reduction of rates?—Yes, I agree with you. I was afraid when you were speaking of rates you meant——

14656. *Lord Pirrie.*—I mean the rates on traffic.

Witness.—Quite so; it is my mistake.

Cross-examined by Mr. Gerald Fitzgibbon, K.C.

14657. You quoted instances from Ballinasloe fair last year and Loughrea fair of last year—was not Ballinasloe fair unusually large?—Yes.

14658. A very large increase on the year before?—Yes.

14659. And your own cattle were amongst the lots sent off?—Yes.

14660. There were over twenty specials sent off?—Yes.

Delays to live stock from M G.W. Rly. fairs, and arrangements for transit,

14661. Was not the Loughrea Fair also very exceptional?—It was a particularly large fair, too.

14662. Your cattle are carried on the line from Meath—isn't that a single track?—Yes.

14663. What is the commission on beasts sold in the Dublin market?—The ordinary commission is 4*d.* in the £1 on the beasts sold.

14664. How much would that be a beast?—That depends.

14665. That would work out in the case of these beasts to practically the same as the carriage for 90 miles. The fair from Ballinasloe for eight beasts would be £2 5*s.* 8*d.* and the commission at the rate you say would be considerably more?—I don't quite follow you. I don't raise the question of the expense of the rates.

14666. I don't know, but I thought you quoted some figures. The railway companies do to a great extent give you specials from Meath fairs—Kilmessan and Navan?—Yes, at Navan they do.

14667. And they also carry cattle by passenger trains at goods rates?—That I am not aware of.

14668. When the goods service does not suit they will put on a wagon or two of cattle?—But not at goods rates.

Chairman.—Perhaps they will promise to do it.

14669. *Mr. Fitzgibbon, K.C.*—I think the railway companies recognise the great courtesy with which you have given your evidence. Don't they give from the West special trains for six wagons—from Ballinrobe and Claremorris on the branch lines?—That I cannot answer.

14670. You have not known the existence of that?—I have not.

14671. The sixteen miles an hour you asked when you were giving your evidence as to speed of cattle trains—you were referring to from the time of loading to the time of delivery—you give no evidence as to running speed?—I have not given any evidence except that that should be the rule—that is sixteen miles an hour.

14672. But you stated that they book so many miles an hour to run a given distance—from Loughrea to the Hill of Down and Ballinasloe to the Hill of Down—you have not actual knowledge of the running of the train?—No.

14673. *Chairman.*—He said so.

Witness.—I took those two cases. We have many more complaints. If we take the Irish cattle trade generally we can make a very large number of complaints.

14674. *Mr. Fitzgibbon, K.C.*—There are some unreasonable people in your association.

Witness.—I have only given you my complaints—two in a month.

14675. As to the question of screw couplings on the cattle wagons I wish to say that it will be gone into by the railway companies specially. They have a special witness to deal with that.

Lord Pirrie.—I was going to ask the Chairman to get the gentleman representing the Department of Agriculture to go into the question again. The evidence given by him and the statement on the subject by Mr. Tatlow have been contradicted.

Mr. Tatlow.—What I said, sir, was that the Department had made no order on the companies about screw couplings.

Lord Pirrie.—Yes.

Mr. Tatlow.—I don't know that he said that they had made any such order.

Colonel Hutcheson Poë.—That was not proved, but merely that he gave the recommendations of the Transit Committee.

Mr. Tatlow.—I would like to mention that the Secretary of the Departmental Committee on Inland Transit of cattle wrote a letter to the railway companies before issuing their report asking what the railway companies were doing with regard to those matters, and with reference to the particular point of the screw couplings. I wrote the Committee on 15th January, 1898, stating my company directed me to say that none of the trucks for the conveyance of live stock on goods trains are fitted with screw couplings, and that evidence before the Committee dealt fully with this question. I also stated that we had 49 specially constructed vehicles for the conveyance of live stock by passenger trains, all of which were fitted with screw couplings.

Chairman.—That is the "F" wagons.

Mr. Tatlow.—I will see that the whole thing is put before you when we come up.

Lord Pirrie.—I think, personally, it is a great misfortune that the Department of Agriculture gave no information that lead us to believe that these were the orders, and we were told that these orders were not heard of in Belfast, and that Belfast was specially exempt from orders which were in existence in every other part of Ireland. Again this morning we heard it, but you have fortunately corrected the statement that all railway companies had to put screw couplings on wagons for cattle. That is a misfortune, and should be cleared up.

Colonel Hutcheson Poë.—I think Mr. Prentice's evidence was to the effect that a number of recommendations were brought forward by the Transit Committee, and had been acted on in pursuance of the Department's Order of 1904, and that special attention was devoted to the construction of wagons. I don't think he actually said the screw couplings had been fitted.

Chairman.—No.

Mr. Tatlow.—That is so.

Mr John M. Cox examined by the Chairman.

Mr. John M. Cox., Seed merchant, Dundalk.

14676. I think you are a seed merchant in Dundalk?—Yes.

14677. In a large way of business?—Yes.

14678. How long have your firm being in business?—Over fifty years.

14679. Well, now, I suppose you buy grass seeds and other seeds in various parts of Ireland?—Yes.

14680. And they are taken into Dundalk?—Yes.

14681. Do they go through any process at your firm?—They are cleaned of impurities—the impurities are all taken out of them.

14682. And they are re-sold?—Yes, re-sold.

14683. Do you sell again to the people in Ireland or export from Ireland?—Both.

14684. When I speak of export from Ireland I assume that you send to England?—Yes.

14685. Do you send any beyond England?—Oh, yes.

14686. To the Continent?—Oh, yes.

14687. Is that sent by direct steamer or from Liverpool, or Fleetwood, or some of those places?—Principally by two routes, Liverpool and Leith.

14688. From Dundalk?—Yes

14689. How does it go from Dundalk to Leith?—By steamer to Ardrossan and rail to Leith.

14690. And then shipped from Leith to the Continent?—Yes.

14691. Do you find that the rates that you have to pay are any serious impediment to the development of your trade?—The cross-Channel rates are reasonable, and the Continental rates are reasonable, but the rates to the South of Ireland are prohibitive.

14692. You have no complaint to make as to the rates for traffic that you send out of the country?—No.

14693. And the only complaint is that Dundalk rates to various stations in Ireland are, in your language, excessive, and operate against the development of your business?—Undoubtedly.

14694. Are there similar seed establishments down in the South of Ireland?—No, it is only a North of Ireland industry. Rye grass is only grown for seed in the North of Ireland, and the North of Ireland practically supplies the United Kingdom.

14695. You do send from Dundalk to the different parts of Ireland?—Yes, I paid £450 in freight to the Great Northern Railway last year.

14696. For the year?—Yes.

14697. That does not seem a large sum?—I think it is a good deal.

14698. I suppose the stuff was sent out in small parcels?—It is not a constant trade the year round, but a season trade.

14699. Perhaps, looking at it in that light, it is a big thing; have you represented to the railway companies that the rates in operation are a drawback to your extending the trade?—I have.

14700. Have they met you?—No, not at all; at least the Great Northern Company have met me fairly, and I can't say they did not give me everything I could expect, but from the attitude of the Great Southern and Western you would imagine that they did not want the traffic at all.

14701. How do you get to the Great Southern and Western?—Through Dublin. —

Colonel Plews.—Through the Great Northern.

Chairman.—On a through rate from Dundalk?

Colonel Plews.—Yes.

Chairman.—I thought you would have arranged a through rate?

Colonel Plews.—So he says.

14702. *Chairman.*—Your account is that the Great Northern Company, when you had made a complaint——?

Witness.—Yes, about four or five years ago I applied for wagon load rates from Dundalk to the South of Ireland, and the Midland and the Great Northern gave wagon rates, but the Great Southern refused. I asked them for through rates for a long time, and they refused to give them, but they did give through rates eventually, and the rates they gave were the two rates added together, and in some cases these rates were in excess of the local rates. I can give you the figures.

14703. We don't want all the figures; just give us an instance?—I wanted this year to do business in Tralee, and there is nobody in a better position to do the business in Tralee if I were put on proper terms as regards the railway rates. I asked the rate to Tralee, and the Great Southern and Western quoted a rate from Dundalk to Tralee of 41*s.* 2*d.* per ton ordinary rate, and 35*s.* per ton exceptional rate. I found out when in Belfast that the rate from Belfast to Tralee by rail was 25*s.*, whereas for fifty miles less the rate was 10*s.* more. I think they might as well have written to me to say, "You are not at liberty to do business in your own country, because the rate is prohibitive." That rate is on the rate book, and its effect is to stop traffic.

14704. *Lord Pirrie.*—How is the rate to Belfast fifty miles less?

Chairman.—Dundalk is fifty miles less distance from Tralee than Belfast.

14705. *Colonel Hutcheson Poë.*—The rate from Belfast was 10*s.* lower than the rate that they quoted you from Dundalk.

Witness.—Yes.

14706. *Chairman.*—Is not the explanation this, is not there a steamer direct between Belfast and Cork?

Witness.—There is such a steamer.

14707. And is not Tralee not far from Cork?

Lord Pirrie.—The opposite side of the country.

14708. *Chairman.*—Is not that the explanation.

Witness.—Yes.

14709. Have not you a steamer now from Dundalk to Cork?—We have now.

14710. But it was not in operation then?—No.

14711. Now, you have a steamer from Dundalk to Cork, and you can send the traffic that way?—It is not direct.

14712. Is the Belfast to Cork steamer a direct service?—I am not sure.

Colonel Plews.—Yes it is.

Witness.—It only goes to Cork, and the stuff would require to be transhipped.

Colonel Plews.—It calls at Waterford and Cork.

Lord Pirrie.—Dublin, Waterford, and Cork?

Colonel Plews.—Not at Dublin; it does not call there.

14173. *Chairman.*—With that through rate in operation you found you could pay the local rate and save money—the through rate from Dundalk to Tralee?

Witness.—The local rates are about as bad.

14714. But dealing with the local rates you save money?—No; Kingsbridge to Tralee is 25*s.*, and there is 8*s.* from Dundalk to Dublin, and 2*s.* cartage, that is 33*s.* and 2*s.*

14715. The rate that was quoted to you from Dundalk to Tralee, was then of such a character that it was impossible for you to do any business?—Quite so.

14716. You don't do any business?—Quite so.

14717. With the same rate in operation as is in operation from Belfast to Tralee you could have done business?—Yes.

14718. And Belfast is fifty miles further than Dundalk?—Yes

14719. About fifty miles?—Yes. I then wrote asking them, when I found out that the rate from Belfast was 25*s.* a ton, to give that rate to me with a fifty mile less carriage. The Great Northern wrote and proposed to make this rate from Dundalk, and I received a letter from the manager of the Great Northern saying that he proposed to the Great Southern and Western Company to make a rate from Dundalk at 25*s.* per ton, station to station, owner's risk, but that they could not agree to this.

14720. We understand that. There is a very large number of cases here which I do not think it necessary to go into; just give us another case dealing with cross-Channel rates?—The cross-Channel rate from Dundalk to Hull is 15*s.* 5*d.*, that is steamer to Liverpool, thence rail.

14721. What is the 15*s.* 5*d.* for?—Per ton.

14722. Is it for grass seed?—Oh, it is grass seed that I am talking of.

14723. At owner's risk?—At owner's risk.

14724. Dundalk to Hull, 15*s.* 5*d.*?—Yes.

14725. What comparison do you want to make?—Compare it with the Tralee rate of 35*s.*

14726. Give us another instance, can you?—I can.

14727. Take Clonmel?—Clonmel, I think, is 26*s.*

14728. 26*s.* 5*d.*?—Yes.

14729. Are the conditions the same in each case, Dundalk to Clonmel and the others?—They are both at owner's risk rates.

14730. And both in the same quantities?—Yes.

14731. From Dundalk to Clonmel, it is 26*s.* 5*d.* a ton, whereas from Dundalk to Hull, that is from Dundalk to Liverpool, and to Hull from Liverpool by rail, it is 15*s.* 5*d.*?—Yes.

14732. The conditions being the same?—Yes.

14733. We need not go into any of the other figures here?—I can give you any amount of similar cases.

14734. Give us a rate to the Continent, from, say, Dundalk to Antwerp?—22*s.* 1*d.*

14735. Still on grass seeds?—All on grass seeds.

14736. Is there any traffic sent?—Oh, yes.

14737. Give us now a typical case of the stations in Ireland?—Take Mallow.

14738. Yes?—29*s.* 7*d.* from Dundalk.

14739. Now, how does the traffic go from Dundalk to Antwerp?—Via Liverpool.

14740. And across the country?—No, two steamers, one to Liverpool and one to Antwerp, wholly sea.

14741. Have you got a Continental port where the transit is across the country in England?—Take seed shipped *via* Leith, steamer to Scotland, thence rail, or take Hamburg, Dundalk to Hamburg *via* the Caledonian Railway, the rate is 22*s.* 6*d.*

14742. But first of all there is a steamer from Dundalk to what port in Scotland?—To Ardrossan.

14743. Then it is transhipped there and brought by the Caledonian Railway to Leith?—Yes.

14744. And shipped then from Leith to Hamburg?—Yes.

14745. And that is the exact rate which you have given us?—Yes.

14746. You guarantee that?—Yes, I know it.

14747. Give us another case in Ireland; take Fermoy?—Yes. Fermoy is 32*s.* 1*d.*, from Dundalk to Fermoy via the Great Northern Railway.

Mar. 15, 1907.

Mr. John M. Cox., Seed merchant, Dundalk.

Steamer service from Dundalk to Southern ports.

Instances of rates from Dundalk to English and Continental towns comparatively lower than inland Irish rates.

Mar. 15, 1907.

Mr. John M. Cox., Seed merchant, Dundalk.

14748. To sum up what you have got to say, you think that if the local rates were based somewhat proportionately to these throughout rates that your particular business in Ireland would largely increase?—Yes; what I complain of is that there is no inclination whatever to meet me as a trader. I don't know whether that is other people's experience or not, but it certainly is mine. There is no concession whatever, and these rates are prohibitive, and if the company consulted their own interests they would try to carry traffic by land instead of allowing it to go round by sea. I will just take the case of Youghal in County Cork. I had to send it by sailing vessel from Drogheda.

Alleged disinclination on the part of the Irish Companies to meet Traders requirements.

Rate for grass seeds, Dundalk and Youghal, higher than the sum of the locals.

14749. Sailing vessel from Drogheda?—Yes. I sent it to Drogheda by rail, and from Drogheda to Youghal by the sailing boat, because the rate from Dundalk to Youghal is 37*s.* 6*d.*; the rate from Dundalk to Cork is 22*s.* 6*d.*, and the local rate from Cork to Youghal is 7*s.*, making 29*s.* 6*d.* The through rate is 37*s.* 6*d.*, and the other rate, 29*s.* 6*d.* I sent by the through rate at 37*s.* 6*d.* and they refused to refund the money over the local rate.

14750. Have you the correspondence?—Oh, yes.

14751. Let me look at it?—Here it is.

14752. *Colonel Hutcheson Poë.*—What is the seed rate from Drogheda to Youghal?—The rate by sailing vessel from Drogheda to Youghal, worked out at about 14*s.* a ton. The rate from Dundalk to Youghal, sailing from Drogheda is about 20*s.*

14753. *Chairman.*—I think that correspondence is not complete, so I won't refer to it?—It is going on since last March.

14754. Well, it is not complete, and we won't deal with it at all—they speak about writing further?—All right.

14755. You may have a satisfactory reply when you get back?—I hope so. I am twelve months at it now.

Complaint as to passenger service: night mail from Belfast to Dublin.

14756. Now, what have you got to say as regards passenger traffic?—My experience of passenger traffic is particularly on the Great Northern, and I think the trains are all that could be desired, with some exceptions. We have a very good service from Dundalk to Dublin, and Dundalk to Belfast. There is an exception; the night mail train from Belfast is an awful train.

14757. A what?—An awful train, it is a bad train.

14758. Why?

Colonel Plews.—There is a great delay at Portadown for postal purposes.

Witness.—It is a worse service for passengers than the cattle get. This train leaves Belfast at 10.30 p.m. and arrives in Dublin at 5.0 a.m. next morning.

14759. *Chairman.*—I am afraid you did not hear the previous witness?—I did, but this is worse.

14760. You are not stuck in a wagon all the night?—I was there one night, and I would not relish it again. I would like to point out about the North Wall connection. The Great Northern run a connection for morning trains that leaves Dundalk sometime about 9 o'clock, and they run it to form a connection with the North Wall boat, which sails about 11 a.m., and it is a very good service, but coming back again it is a very bad service. The North Wall boat is due to arrive about 8 o'clock at night, and the train from Amiens Street leaves at 8.20. If the boat happens to be 10 minutes late you yourself, and perhaps your family, are stranded in Dublin for the night. There is no other train, and if it is Saturday night you cannot get down to Dundalk, certainly you cannot get to Belfast, until late on Sunday evening. You can't get to Dundalk until 12 on Sunday.

Better train connection to Dundalk with steamer service Holyhead and North Wall, urged.

14761. What do you suggest, as a practical man, should be done?—Put that train back half an hour. It leaves at 8.20, and does not get into Belfast until 12.

14762. But suppose 50 people were going from Dublin to Belfast, and it was important that they should get there as soon as possible, and that five people were coming from this boat, which would you suit in the matter of the train service?—The train stops at every station and they have to fill up time, talking and singing at the stations. It should do the journey in an hour less.

Colonel Plews.—This is, again, a Post Office train, a scheduled train, and we have no control whatever over it. The Post Office fix the time for every station.

Witness.—I think the public ought to be considered in some way.

Lord Pirrie.—Are you, Colonel Plews, prepared to alter the time if the Post Office give their permission?

Colonel Plews.—Yes.

Lord Pirrie.—I think that I can undertake to get that done.

Witness.—That is satisfactory. You will admit, Colonel Plews, that the present arrangement is a bad one.

Colonel Plews.—It is very good for the public generally, and there are very few passengers by the North Wall boat.

14763. *Chairman.*—You have got something to say about the third-class passengers not being allowed to travel by the mail trains?—I consider it most unfair.

14764. Tell Colonel Plews that?—I have told him that. The Great Northern Railway is living on local traffic, and residents on the main line are not allowed to travel third-class, although occasional passengers from cross-Channel are allowed to do so. Even if you have a second-class ticket you cannot travel by the mail except you pay excess fare. The other day an English cattle dealer travelled North from Dublin on third-class ticket without excess, but a Dublin man with a second-class ticket had to pay excess fare.

14765. We had all that explained before. You have something to say with reference to a cheap tribunal for traders to appeal to, in cases where they think they are unfairly treated?—Quite so.

14766. Do you think the present Railway and Canal Commission Court is not a proper tribunal?—Well, I have been, myself, before that several times, and I have never seen very much good come of it.

14767. Not being in your favour?—They never decided anything. They passed copies of letters between me and the railway company.

14768. Just stop a minute. You don't follow my question. I am dealing with the Railway and Canal Commissioners, not the Board of Trade?—I don't know about this other thing.

14769. Do you know that you can communicate with the Board of Trade?—Yes.

14770. You have communicated with them?—Yes.

14771. Do you suggest any tribunal in this country to which you could appeal?—I think an independent tribunal of say one railway man, and one trader, with either an independent man, or a man up in law points could decide a great many grievances.

14772. Do you know that that is the exact constitution of the present Railway Commissioners Court?—I am glad to hear it, but it is hard to get near that court.

14773. It is a disadvantage having the court in England?—I think so.

14774. But still they come over here when there is any case to be heard?—I have always been told that it is very expensive. You cannot appear in person.

14775. It is the litigants themselves who make it expensive?—Perhaps it is.

Examined by Colonel Hutcheson Poë.

14776. Can you give us the rate for grass seed from Dublin to Tralee, for instance?—Yes, 25*s.* from Kingsbridge to Tralee, and from North Wall to Tralee, 25*s.* 5*d.*

14777. Have you any knowledge or any evidence to show that there is any importation of grass seed from Scotland to Dublin, which finds its way thence down to the South of Ireland by the Great Southern?—No. I should think that that would go through Cork.

14778. By sea?—Yes, sea to Cork.

14779. The Great Northern, you said, proposed a through rate from Dundalk to Tralee at 25*s.*?—Yes.

14780. If the Great Southern and Western Company could get any traffic of the same kind in grass seed on their own system, and could carry it to Tralee for, say 25*s.* they would naturally not be inclined to accept merely a portion of 25*s.* for the carriage from Dundalk to Tralee?—Quite so.

14781. You think they don't carry grass seed from Dublin?—I don't say that. I say they don't carry it at the 35*s.* rate for us.

14782. Do they carry any grass seed on the Great

Southern and Western Railway?—Oh, I think they do. I think you asked me if grass seed came in by Dublin. I think not, I think it is mainly by Cork.

14783. Where do they get it. I thought that that business was particularly confined in this country to Antrim and Down?—It goes by the Great Northern Railway and comes in by steamer.

14784. From other firms than your own?—Yes, there are other large firms in the North of Ireland.

14785. Do you suppose that these other large firms in the North have the same difficulties?—Not to the same extent. Belfast has great facilities in getting stuff sent by steamer.

14786. *Chairman.*—That is by rail all the way?—25*s.* by rail all the way.

Examined by Lord PIRRIE.

14787. I understand you to say that a great deal of grass seed goes down the Great Northern cheaper to Dublin on account of the sea competition than you get it?—It is as much for half the journey as they pay for the whole. The rate from Belfast to Dublin is about 8*s.*, and my rate was 8*s.* until the new competition steamer was put on.

14789. I suppose the Belfast grass merchant wants to send beyond Dublin?—They have a rate of 25*s.* from Belfast to Tralee.

14790. What do you pay from Dundalk?—They wanted to charge me 35*s.*

14791. I should have thought that the Great Southern Company would have been delighted to get your traffic or anyone else's if they were not getting it in another direction. Naturally if they get the whole they don't care to take the share of a through rate?—Yes.

14792. I presume your contention is that they do that?—I am sure the railway company act in their own interest; we all do that.

14793. You say that you were driven out, and could not do any trade in Tralee?—Quite so.

14794. Who got the benefit?—Belfast.

14795. At any rate, it remained in the country?—Oh, it did.

14796. You said that the grass seed trade has been driven into the hands of Scotch merchants?—To a certain extent.

14797. But to any appreciable extent?—The rate from Glasgow to Youghal is 29*s.* 2*d.*

14798. Is there any great quantity of grass seed coming from Scotland?—Oh, there is.

14799. By this sea route?—Yes, a large quantity.

14800. Of course, the very low rates that you admit you have to the Continent and England are very largely in your favour—you don't complain of that?—I do not.

14801. They enable you to do a very big trade?—I think so; but I ought to be put in a position to do business in my own country.

14802. Other people in your country get it?—They have greater facilities.

14803. Because they have the sea under their lee?—That's our crime—that we have no steamer.

14804. Other people have, and you can't help it. Your evidence is very clear.

Cross-examined by Mr. GERALD FITZGIBBON, K.C.

14805. One question, Mr. Cox. You said you applied to the Great Northern Company for a rate to Tralee. Was there any application for rates to Clonmel, Fermoy, and Youghal?—I made application some time ago for those rates.

14806. To the Great Northern?—Yes.

14807. Have you any idea of what the time was—we want to have it looked into?—I think you will find it was about 1904.

(*Witness handed counsel a list of rates*).

Mar. 15, 1907.

Mr. John M. Cox, Seed merchant, Dundalk.

Suggestion that excessive inland local rates helps foreign competition.

See Appendix No. 13.

Mr. JOHN SWEENEY, Burtonport, examined by the CHAIRMAN.

14808. You appear before us on behalf of the Donegal County Council?—Yes.

14809. You are a member of that Council?—Yes.

14810. What particular rates do you wish to bring under our notice?—The rates I want to bring under your notice are with reference to what interests us, namely—our district fish trade. We have large quantities of herrings, salmon and other fish, and shell fish; and we consider that we are not fairly treated by the Irish railways in getting through rates by sea to London.

14811. Is there a trade now to London?—Oh, yes.

14812. And you think it would be developed and increased if more favourable rates were put into operation?—Yes.

14813. Have you made any comparison with the rates from Scotland?—Yes.

14814. For the same articles?—For the same articles.

14815. Let us have first of all the rate for fish from Wick to London?—The rate from Wick to London, which is a distance twice greater than from Burtonport to London, is less 3*d.* per cwt. for small lots, and it is less by 6*d.* per cwt. for lots over three tons.

14816. Have you made any inquiry as to the rates from other Scotch ports?—They offer a similar comparison.

14817. What is the rate for salmon to London?—1*s.* 1*d.* per cwt. cheaper from Wick to London than from Burtonport to London.

14818. We need not go into the other fish except the shellfish—lobsters and crabs—there is some difference in the rates?—The same thing applies. The distance from Wick to London is about twice greater than from Burtonport to London—and it is all rail—and part of the route by Burtonport is by sea, which should make the rate cheaper.

14819. Are the empties carried back—what is the difference of rate?—It is the railway rate from Wick to Glasgow and from Derry to Burtonport.

14820. What is the distance from Wick to Glasgow?—I would say about 400 miles.

14821. Is there a traffic of empty herring barrels between these points?—Yes; between Wick and Glasgow.

14822. There are also barrels made in Derry which are sent from Derry to Burtonport?—These same barrels are taken by steamer from Derry and by the railway that runs between Derry and Burtonport; and their rate for seventy-three miles is 13*s.* 4*d.* a ton for a distance of nearly six times less.

14823. Do you tell me that the herring barrels are sent all the way from Wick to Burtonport?—They are. I don't mean to say that all of them are used. There is a cooperage in the congested district, but it is not able to supply us with barrels.

14824. Of course this district is a poor district and the fish workers I suppose are a poor class of men?—The fish workers are a poor class of people. The principal people who migrate are the female population who become experts in the way of packing and curing; and they go as far as Shetland, in Scotland, from Burtonport, and as far as Berwick and Wick, in the north of Scotland, and to all the fishing ports. They take them in preference to the Scotch girls for the purpose of curing.

14825. They go about like the Irish harvest men?—Hundreds of them go off in the fishing season.

14826. And then come back?—And then come back.

14827. What do you suggest with reference to them?—What I say is that the fish curers should be encouraged to employ these girls by giving them cheap rates on the railway. The Lough Swilly Company have refused to give this concession.

14828. Do you know whether the harvest men travel at a cheap rate?—They make a slight concession if about half a dozen or ten harvesters go together. Singly, they give them no concession.

14829. But you don't ask the concession for single persons; you only want it when they go in numbers?—In the case of the girls three is the smallest number, and sometimes they go as many as fifty. There is a large population there, and the only reason why the population holds its own is the fishing traffic.

14830. Have you a tourist traffic?—We have to the highlands of Donegal. A great many people like to come for the wild scenery.

Mr. John Sweeney, representing the Donegal County Council. Complaint as to rates for returned empty fish barrels.

Cheap fares for female fish curers between Burtonport and Scotland recommended.

Mar. 15, 1907.

Mr. John Sweeney, representing the Donegal County Council.

14831. Is there good hotel accommodation?—The hotel accommodation is good.

14832. Do you think the railway companies are doing all they can to foster that traffic?—No; as far as the Lough Swilly Railway has gone it has been a great loss to the country on account of the way it is worked, and the numerous break-downs. I had a particular interest in that line, as a baronial director for two years, on behalf of the ratepayers, to see that the public were served; and I had a lot of letters to write to the Board of Works asking them to put a pressure on the company to give a good service; but the railway company blame the Board of Works and the Board of Works blame the railway company, and between the two of them we can't get a good service.

Complains in his capacity as a Baronial Director of the line, that the development of tourist traffic is retarded by the inefficient working of Burtonport line by the Lough Swilly Company.

14833. Have you been in the room all to-day?—Yes.

14834. Did you hear the evidence of yesterday?—No; I wasn't here yesterday

14835. Do you say that the train service is bad in consequence of the bad road, the bad rolling stock, and the bad engines?—I do not. I don't agree with that opinion at all. I say it is due to the working of the line by the company.

14836. The Lough Swilly Company?—Yes.

14837. You said something about break-downs?—It is due to their putting on incompetent drivers and burning out their engines.

14838. *Colonel Hutcheson Poë.*—Are you one of the directors of the company?—I am a director on behalf of the ratepayers, which is quite a different thing.

14839. You have nothing to say to the working of the line?—Oh, yes, I have.

14840. To the working of it?—In respect of anything that inconveniences the public.

14841. You say that you are one of the baronial directors?—Certainly I am, on behalf of the ratepayers, to see that they are properly treated

English people deterred thereby from travelling on the line

14842. *Chairman.*—You say that the Lough Swilly Company are not properly developing the transit traffic because of the number of break-downs on the railway?—What I said was that their inefficient and bad service deters English people from travelling on the line. They have got such a name all over England that people are deterred from travelling by it. English people come for a holiday but not to be left on the road or in the middle of a bog.

Neglect of Lough Swilly Company to summon the Baronial Director to attend at Board meetings. Baronial Director's appeal to Board of Works on this point.

14843. You are a director of the railway and you say that it is the fault of the company?—I do, and I can show it.

14844. Have you brought the matter before your colleagues on the Board?—Before the Board of Works

14845. But before your own Board?—I never had the pleasure of being summoned to any meeting, for the two years that I was a director, but one. If you will allow me I will read the letter which I wrote to the Secretary of the Board of Works:—"Burtonport, 12th June, 1905. Sir,—I have been appointed a director by the ratepayers to safeguard their interests on the Board of the Londonderry and Lough Swilly Railway Company; and though the Board of Directors have meetings I am never notified of the date and hours of such meetings; and therefore anything coming forward for the benefit of the ratepayers I am powerless to assist in, and anything against their interests I am powerless to oppose. I would feel obliged by your informing me what position I hold. The Act of Parliament which gives the ratepayers the right to appoint a director contemplates that he shall be summoned to the meetings of the directors of the company who are working the line; but as it is the company seem to treat me and my predecessor, Sir John Olphert, with contempt. They even went so far as to refuse him admittance to their meetings. I shall therefore feel obliged by your giving me the information—What are my rights."

The Burtonport line a paying concern notwithstanding bad working by the Company.

14846. Your opinion, then, is that if the line were properly worked by the Lough Swilly company these ratepayers would be relieved of the burden which now falls on them?—There is no burden. Even with the bad conditions with which it is worked it is still able to pay a dividend—that is, from Letterkenny to Burtonport, which is the line I refer to. A certain sum of money was borrowed and the part I represent—from Letterkenny to Burtonport—is only responsible for a share.

14847. *Colonel Hutcheson Poë.*—You are only responsible for £5,000?—That is all.

14848. *Chairman.*—Have you gone into the question of rates on general goods?—No, I haven't gone into that. At least I have gone into the question of rates on weighty goods, such as meal, and flour, and bread stuffs. I have found that wherever there is a sea competition they give a fair rate. Wherever we get away from the sea they charge nearly twice as much. There is a place called Crolly, which is nine miles nearer to Derry than Burtonport, and the rate from Burtonport to Derry for cured fish is 7*s.* 6*d.* a ton for five ton lots, whilst the rate to Crawley is 13*s.* 9*d.*

Chairman.—That is for a one-ton lot.

Witness.—But even for that one-ton lot it should only be 10*s.* proportionately.

14849. What about drapery?—Drapery is charged 15*s.*

14850. Take the rate for drapery from Belfast to Burtonport?—I find that double booking is cheaper than the through rate from Belfast to Burtonport.

14851. You mean that if it is brought from Belfast to Derry, and from Derry to Burtonport the two rates are less than the through rate?—Yes.

14852. Have you represented that to your colleagues on the Board?—I hadn't had the opportunity. It did not come before me at that time. The double booking is cheaper than booking through from Belfast to Burtonport.

Colonel Plews.—There is a steamer.

14853. *Chairman.*—The through rate from Belfast to Burtonport for goods in boxes is 42*s.* 9*d.*, at the owners' risk; whereas the local rate from Belfast to Derry for goods collected and delivered, still at the owners' risk, is 20*s.*, and that from Derry to Burtonport is 15*s.* 2*d.*; so that the two local rates are less than the 42*s.* 9*d.* Well, now, what are the remedies that you would suggest?—I would like to bring under your notice another rate. We can send cured herrings cheaper to New York than to Portadown or Enniskillen. I will give you the fares.

14854. You are talking of salt herrings?—I am talking about cured herrings in barrels. The rate from Burtonport to Derry for five-ton lots is 7*s.* 6*d.*, and the rate from Derry to Portadown is 18*s.*, that is 25*s.* 6*d.* The through rate from Burtonport by rail to Derry, from which there is a steamer to Glasgow, is 12*s.* per ton, and 1*s.* 6*d.* cartage; and the ocean rate from Derry to Glasgow and from Glasgow to New York is 11*s.* 8*d.*, making a through rate altogether of 25*s.* 2*d.* The through rate from Burtonport to Portadown is 25*s.* 6*d.*, that to New York is 25*s.* 2*d.*, Derry to Clones is 19*s.* We are anxious to develop the home trade. In sending to New York we are dealing with a lot of Jewish gentlemen, who are not very reliable; and the people in all the inland towns, if the rates were anyway fair, would be very glad to take our fish, and we are anxious to get them to do so; but under the rates that are made we cannot do it.

14855. Could you tell us what amount of fish traffic was sent away from Burtonport during the last year?—The last season was not a big season; it was partly a failure; but in the season before there was a very heavy traffic. We sent away, I suppose, about 15,000 barrels of herrings. That doesn't include the fresh fish.

14856. Is it done by trawling?—No, by net fishing. That does not include the fresh fish that we sent to London, Manchester, and elsewhere. I would say that there went as many more that way by rail.

14857. Have you made any effort in your County Council to get lower rates for this particular traffic?—Well, the Council did not take up the matter.

14858. They haven't taken it up; I suppose the senders of fish are not a class of men to take up a matter of that sort?—A great many people are not interested in it at all. I am the only party along that coast who does take an interest in it—that is, who is on the County Council. Therefore, the matter remained with one or two. The others are not interested and know nothing about it.

14859. Is there fish all the year round?—All the year round. We have the winter fishing and the summer fishing of herring and the salmon fishing, and at intervals the shellfish.

14860. So that it is an industry?—Oh, it is a vast industry.

14861. Going on all the year round, more or less, but according to the seasons, of course?—Certainly.

14862. And worthy of encouragement in the interest of Ireland and of the district?—In fact I might say that

but for it the district wouldn't exist at all. The land is poor, the district is populous, and the people could not support themselves on the land, and would have to go away to America, and their families would be scattered; but this industry keeps them in the country, and makes them comfortable at home, and enables them to improve their houses; and if the railway company could see their way to giving them facilities, it would be an advantage to everybody.

14863. Now, what do you say about coasting steamers round the coast of Ireland?—Coasting steamers do exist, and only for the coasting steamers our rates at Burtonport would be very high. They keep the railway often in check, and they are in a position to do trade from Killybegs to Londonderry and exist at present. There are three of them; there are Pinkerton and Co. and——

14864. Oh, that does not matter; private enterprise, I suppose?—Yes. There is a line of steamers from Derry, calling at Portrush, Coleraine, Newry, Dundalk, Belfast, and ends here in Dublin, going once a week. What I say about these steamers is if they could be created all round the coast of Ireland, taking traffic from short distances inland, and there is no place in Ireland more than 50 miles from the sea—if such a service could be established it would be an important factor to keep the railway rates in order. The only thing that would be required to carry out that scheme would be something to encourage the steamers to give a regular service.

14865. Of course you inquired, and I should like to know if you have any information with reference to rates for similar traffic, say, from Grimsby or Hull, or Yarmouth or Lowestoft, to inland places, so as to furnish a comparison between the rates in England and Ireland?—No, not further than Wick.

14866. But Wick is an extreme case?—I made London the centre for all.

14867. But your comparisons in this country are to show that the rates are very high from Burtonport to inland places?—Yes, from Burtonport to Clones and Enniskillen.

14868. Have you similar rates in your mind from any fishing port in England to similar inland places?—No, I did not get that. I would have got it if I thought it was necessary.

14868A. It would be interesting, because it is only by comparisons that we can draw conclusions?—I have not got that.

14869. Well, now, have you considered the question of amalgamation of the railways?—Yes, sir. I have considered it for the last while since it was mooted.

14870. Have you formed any opinion on the subject?—I think the nationalisation of the railways would be a very good scheme. It is a very big question.

14871. I wanted your opinion. You don't know, do you, is that the general opinion of the majority of your Council?—As far as our Council is concerned I think I speak for the whole of them, or nearly the whole of them, as far as that goes.

14872. And they are in favour of nationalisation?—Yes.

14873. Purchase by the State, and control by some body in Ireland for the Irish people?—Oh, in Ireland, certainly.

14874. That is your view?—Yes.

Examined by Lord Pirrie.

14875. You said you considered, in connection with the fishing industry that it was very important to find work for the girls?—Yes.

14876. For the female population?—Yes.

14877. Do you look on that as a great benefit?—I do.

14878. You don't agree with Mr. Sweetman who, when he was giving evidence, said that any employment for women was of practically no use to Ireland; in fact, he did not, he said, want women to support their husbands or brothers?—The women form the biggest part of the population, and in a poor district, like ours, I think it is a necessity that the girls should work.

14879. I quite agree with you, and I think it is a very important thing?—Another thing I wanted to mention was about another industry we have in our district, the granite industry. We have the best granite in the world, red granite and grey, and all colours, and it is an industry which requires to be fostered. We have made an application to get the railway to take stone from the quarries, which are about a stone's throw from the Dungloe railway station to the sea at Burtonport, a distance of two miles, and the charge is sixpence a ton, and to make our own siding, and supply our own wagons. That was not very encouraging.

Mar., 15 1907.

Mr. John Sweeney, representing the Donegal County Council.

Rate for granite from Dungloe station to Burtonport complained of.

14880. Now, Mr. Sweeney, I don't think you can expect much else than that?—Sixpence a ton.

14881. Yes?—For large quantities.

14882. What do they do for that?—Bring up an engine and draw to the quay, a distance of two miles.

14883. Don't they find the wagons?—No.

14884. They don't find the wagons?—No, that is not my recollection, but Mr. Spence can tell that definitely.

14885. That is your recollection, sixpence a ton without wagons?—Yes.

14886. And making your own siding?—Yes, and supplying our own rolling stock.

Examined by Colonel Hutcheson Poë.

Unsatisfactory working of Burtonport line attributed to bad management on the part of the Lough Swilly Railway Company and not to defective construction as alleged by Company.

14887. You attribute a good deal of the unsatisfactory working of the Burtonport Extension to the bad management of the Lough Swilly Company?—To their putting on incompetent hands.

14888. Well, bad management?—Yes.

14889. Well, there has been a great deal of discussion about it, and the evidence given before us up to this point has been that the inefficient working of the Letterkenny line has been due to the permanent way being very bad?—It has.

14890. You don't join in the condemnation against the Board of Works for having constructed the Burtonport Extension in an inefficient manner, and you don't allege that the complaints are in consequence of this badly-constructed line?—I don't. I am certain it is not due to the construction of the line.

14891. Can you give us any information as to your experience of the branch between Letterkenny and Tooban junction?—Yes.

14892. That connection is badly constructed; a light railway might suit?—It is a light railway. It is badly looked after.

14893. Now as to the directors of the Lough Swilly Company, they seem to be rather high-handed?—They seem to pay very little attention to the public welfare.

Constitution of the Lough Swilly Board of Directors and attendance of Baronial Directors at meetings discussed.

14894. How many does the Board consist of?—I think about half a dozen.

14895. Is it generally well attended to by these gentlemen?—Yes, it is a good paying line.

14896. Oh, it does well, but has anybody much voice in the management of the line except the Chairman?—I think the Chairman is the Company.

14897. I understood that he was the head and front and tail of the whole Company?—Yes.

14898. Have you made any representation to the Board of Works or Board of Trade about not being summoned to these meetings of the Board?—I did, sir.

14899. What reply did you get?—I received a reply saying they were bound to summon me to the meetings, and they wrote to the Company on the matter.

14900. You did not go on with the matter; you did not pursue it any further?—I got one summons, and that was the only summons I got to attend their meetings.

14901. You mentioned 15,000 barrels of herrings; that is the principal export?—Yes, there are a lot of Scotch curers who come over and cure fish. The local curers cure also. There is a London house, John L. Sayers, that attends to the smoking and curing of fish.

Extent of Burtonport fish curing business.

14902. But is there a local trade for 15,000 barrels?—Part of them are the smaller fish and they are sold in Londonderry and the surrounding districts, and we can't send them further owing to the rates.

14903. You could do a much bigger business with better rates?—Yes.

Composition of Donegal County Council.

14904. What is the composition of your County Council as regards political views—are there many Unionists on it, or are they principally Nationalists?—Mr. Hanna who gave evidence here to-day is a Unionist, and there are two more. Captain Stoney was elected by the people since the time of the Grand Jury.

14905. How many of them have you?—I think four.

14906. And the matter was discussed at your County Council, the matter of railway nationalisa-

Mar. 15, 1907.

Mr. John Sweeney, representing the Donegal County Council.

tion?—I cannot say that it was discussed, but I know what their feelings on the matter are.

14907. Has the question of State purchase ever been before them?—No, but I know what their minds are on it.

14908. But it has not been before them?—No.

Cross-examined by Mr. Gerald Fitzgibbon, K.C.

14909. You applied for a rate for your herrings to Dublin, and were given a rate, a through rate, of 21*s.*, I think—you got a rate for your herrings?—I can get a rate from Derry to Dublin of 17*s.* 6*d.*, but I get that because the steamer is running from Derry to Dublin.

Rates for cured herrings to Irish towns.

14910. You gave evidence as to Clones and Portadown and other places to which the rates, as you said, were prohibitive. Have you ever applied for a reduction of those rates, or brought the matter under the notice of the Railway Company?—No, I am only giving them as comparisons.

14911. So far as you know no application of the kind was made?—No.

14912. As to fish curers, do you know that fish curers get specially cheap rates to Burtonport on the Londonderry and Lough Swilly Railway?—They have been refused.

14913. When?—I have had it from Mr. O'Donnell who applied for them.

14914. When?—About—I think it was last winter. I can get the date.

14915. You also gave evidence as to the carriage of barrels from Londonderry to Burtonport at 13*s.* 4*d.* a ton?—Yes.

14916. Are not these new barrels going to Burtonport?—Certainly.

14917. And they go away from Burtonport by sea?—Sometimes by sea and sometimes by the railway.

14918. It is a very bulky traffic, empty barrels?—Yes.

Rates for empty barrels.

14919. Do you know what is the carriage of empties coming back by rail?—We don't get them back.

14920. Barrels that are going to come back full, where the Railway Company get carriage both ways—returned empties?—We send them away full, and that is the last sight we see of them.

14921. I am speaking of returned empties; do you know that they are carried at 6*s.* 8*d.* a ton?—Do you mean fish.

Lord Pirrie.—Do you mean if the barrels go away and come back the charge is only 6*s.* 8*d.*?

Mr. Fitzgibbon, K.C.—My instruction is that a barrel goes back to Burtonport to be loaded again the charge for carriage is 6*s.* 8*d.* a ton, but if the railway only get the carriage of empties the charge is 13*s.* 4*d.* a ton.

Witness.—I was comparing the rate from Wick to Glasgow and Derry to Burtonport, and the comparison stands still.

Lord Pirrie.—They evidently admit it.

Rates for fish, Burtonport to London and Wick to London.

14922. *Mr. Fitzgibbon, K.C.*—You gave the rate for fish from Burtonport to London, compared with the rate for fish from Wick to London—what class of fish?—Fresh fish.

14923. Ordinary coarse fish?—Yes.

14924. You stated that the rate from Wick to London was less than the Burtonport to London rate?—Yes.

14925. Where did you get that?—From a Wick gentleman, Mr. Moore.

14926. What is the rate that you have got from Wick to London, and what is the amount?—3*s.* 9*d.* per cwt.

14926A. It is £3 15*s.* 0*d.* per ton to London from Wick. Do you know what the Burtonport rate to London for coarse fish is?—£3 10*s.* 0*d.*

14927. And that includes carriage in London?—It all means the same.

14928. No, the Wick to London rate is a station to station rate?—No.

Yes it is. The Wick to London rate is £3 15*s.* 0*d.*, and the Burtonport to London rate is £3 10*s.* 0*d.*, and that is carriage in London?

Chairman.—What about the comparative distances?

Witness.—You are not taking the distances into account.

Mr. Fitzgibbon, K.C.—The statement is that the rate for fish from Wick to London was 3*d.* a cwt. less than the rate from Burtonport to London.

Chairman.—3*d.* per cwt.

Mr. Fitzgibbon, K.C.—3*d.* per cwt. for lots under a ton, and the actual Burtonport rate is 5*s.* less instead of being more.

Witness.—You are taking that as the same distance and under the same conditions.

Mr. Fitzgibbon, K.C.—I am taking the actual rate.

Witness.—It bears no comparison at all with Wick, and it is all rail from Wick.

14929. *Mr. Fitzgibbon, K.C.*—Was I right in believing that your evidence was that the rate from Wick to London was 3*d.* per cwt. less for cwt. lots than the rate from Burtonport to London?—The rate from Wick to London is 3*s.*; that is the quotation; 3*s.* per cwt. for three ton lots.

14930. You said that you are a director, and that you got no summonses to the meetings. Is not it a fact that you are only entitled to attend such meetings of directors as deal with the separate undertaking of the Burtonport Extension?—Yet, but if they deal with it at all they should deal with it more than once in two years.

14931. How many summonses did you receive in the last year of your office?—Two altogether. I attended one, but was unable to attend the second owing to an urgent call to London.

Chairman.—The figure here is £6 12*s.* 0*d.*; it is the North-Western. They have not quoted you a three-ton lot rate, and the witness has quoted it.

Colonel Plews.—We will have that cleared up. The English Companies said they would put Burtonport on the same footing as the Scotch fisheries, and if they have not done it they have not carried out their promise.

Chairman.—Can you tell us the distance from Wick to London?

Mr. Fitzgibbon, K.C.—757, and Burtonport to London 571.

14932. *Chairman.*—The Burtonport rate is out of proportion to the Wick rate; that is your point?

Witness.—Yes, that is my point, and it should be cheaper, because part of it is done by sea.

Mr. Fitzgibbon, K.C.—As to the question of incompetent drivers on the line the Company will welcome any inquiries that may be held.

Witness.—No person as a driver should take charge of an engine that had not a certificate.

Chairman.—You are going into something that we need not go into.

Witness.—I am going into what interests the public very much.

Chairman.—It is not done anywhere.

Witness.—On board ship it must be.

Chairman.—Oh, yes, officers of a ship, but that is a big question.

Witness.—But the public are in danger on a train as much as on board a vessel.

Chairman.—We are much obliged to you, Mr. Sweeney.

The Commission then adjourned till the 22nd of April

TWENTY-SIXTH PUBLIC SITTING—MONDAY, APRIL 22ND, 1907.

At the Reception Room, Royal Dublin Society, Leinster House, Dublin.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Col. WILLIAM HUTCHESON POË, C.B.; Mr. THOMAS SEXTON;

Mr. GEORGE E. SHANAHAN (Secretary).

THOMAS M. BATCHEN, M.Inst. C.E., Engineer, Board of Works, Ireland, examined by THE CHAIRMAN.

Apr. 22, 1907.

Thomas M. Batchen, M.Inst C.E., Engineer, Board of Public Works Ireland.

14933. You are a member of the Institute of Civil Engineers?—I am.

14934. I think you have given evidence before?—I have; in London.

14935. That was more of a general character—the evidence you gave on that occasion?—It was.

14936. On this occasion you wish to bring under our notice facts in connection with the Burtonport railway?—I do.

14937. Now, how was the Burtonport line constructed—who found the money for it?—The money for the construction of the Burtonport line was found by the Government out of funds provided under the Railways (Ireland) Act of 1896.

14938. Was there any agreement entered into with the Railway Company in connection with it?—There was an agreement between the Treasury—the Board of Works—and the Railway Company.

14939. Which railway company?—The Lough Swilly Railway Company.

14940. What was the date of that?—The 6th of January, 1896.

14941. Are you conversant with the terms of that agreement?—I am.

14942. What were the obligations of the Lough Swilly Company in connection with that agreement?—Under the agreement the Company took upon themselves the obligation of acting in the capacity of promoters, and the Order in Council of 1898 was promoted by the Company in accordance with that arrangement. The agreement provided that the Company should complete and finish the line to the satisfaction of the Board of Works and the Board of Trade, and open the same for public traffic within the time limited by the Order in Council; it also provided that if the free grant should from any action or omission of the Company not approved by the Board of Works, prove insufficient for the construction of the railway the Company should raise and expend all such further sums of money as might be necessary for that purpose, and complete and open the railway for traffic.

14943. Before that agreement was made had the Board of Works power to construct the line?—No. Originally it was not intended that the Burtonport railway should be constructed by the Board of Works. It was intended and so provided for in the Treasury agreement that the Lough Swilly Company should prepare the working plans and documents and carry out the works, but the agreement also contained a provision reserving to the Board of Works the power to intervene and build the line in case the Company neglected or failed to carry out their obligations.

14944. How did the Treasury or the Board of Works ascertain the amount of money that they would have to subscribe to this railway?—It was arranged in the agreement, just as in the case of the Carndonagh railway, that in order to ascertain the amount of the free grant, tenders should be obtained by public competition for an entire or inclusive contract for the works, purchase of land, and all other expenses incurred or to be incurred by the Board of Works and the Company in connection with the promotion and construction of the railway; and from the amount of the lowest tender of a competent, solvent contractor, of whose competency and solvency the Treasury were to be the sole judges, there should be deducted the sum of money produced by the issue of the guaranteed capital, and the remainder including the amount required for engines and rolling stock should be the amount of the free grant.

Acquisition of the lands, and the construction and equipment of the Burtonport line undertaken by the Board of Works

14945. Was that agreement carried out?—It was found impossible to carry out the arrangement owing to the unwillingness of the contractors to undertake the acquisition of the lands, and the Board of Works accordingly proceeded to acquire the lands themselves. They also took inclusive contracts for the supply of permanent way materials and the engines and rolling stock.

14946. When you say they, you mean the Board of Works?—Yes. The cost of these, *plus* a sum fixed for promotion, engineering, and law costs, and a further sum of £2,000 to be paid for a running shed, less the amount to be received on foot of the guaranteed capital of £5,000 formed the free grant.

A running shed to be erected.

14947. You mentioned something about £2,000 for a running shed. What was that?—The provision of a running shed did not form part of the Treasury agreement, nor of the contract plans and documents, but it was arranged by the Board of Works at an interview with the Lough Swilly Company in Londonderry that a running shed would be provided. That shed has not yet been erected, because the Lough Swilly Company want to have it placed on their own system at Londonderry, whereas the Board of Works are of opinion that for the purposes of the Burtonport Railway the shed should be erected on lands belonging to that railway, especially in view of the possibility of the line having to be taken out of the hands of the Lough Swilly Company.

Preparation of plans and specifications, &c.

14948. Now, who prepared the plans and specifications and other documents necessary for the construction of this railway?—The Lough Swilly Company as promoters of the line employed an engineer for the purpose of preparing the plans and carrying out the works.

14949. Did they prepare the plans—did the promoters' engineer prepare the plans?—Yes, he prepared the plans, signed them, and forwarded them to the Board of Works for examination and approval. The plans and specifications were examined line by line by the Chairman of the Lough Swilly Company, who is himself a railway contractor, and knows all about plans.

14950. The Board of Works got the plans and specifications from the promoting company—what was the next step the Board of Works took?—They examined the plans and approved of them.

14951. I suppose as a matter of fact they did approve of them?—They did.

Apr. 22, 1907.

Thomas M. Batchen, M.Inst. C.E., Engineer, Board of Public Works, Ireland.

Tenders advertised for.

14952. Who advertised for tenders?—The Board of Works, on behalf of the Company, advertised in the public Press for tenders.

14953. Have you got a copy of that advertisement?—I can get you a copy.

14954. Were the tenders to be sent to the Board of Works or the promoting company?—They were to be addressed to the secretary of the railway company, care of the Board of Works in Dublin, and the tenders were to be opened in presence of representatives of the company and the Board of Works.

Lough Swilly Company's refusal to be present at the opening of tenders.

14955. As a matter of fact who did open them?—When the tenders arrived the company refused to incur the expense of sending any representative to Dublin to be in attendance, and the Board of Works opened the tenders.

14956. How do you know that?—I happened to be there at the time.

14957. How do you know they refused to go to the expense?—I am aware of the correspondence. They used the words, "on account of the expense."

14958. Your evidence is based on the correspondence at the time?—It is, sir.

14959. These tenders were opened by the Board of Works?—Yes.

14960. Were there many tenders?—There were several tenders, about half-a-dozen altogether.

14961. Was the lowest accepted?—The lowest tender was accepted.

14962. Who was the contractor?—Messrs. Pauling and Company, of Victoria-street, London.

Line constructed by the Board of Works owing to refusal of Company to sign the contract.

14963. The promoting company having objected to be at the Board of Works when the tenders were opened, what action did the Board of Works take in connection with it?—The Board of Works informed the company of the lowest tender that had been received, and that the Treasury were satisfied as to the solvency of the contractor and his capability of doing the work, and they asked the railway company to proceed with the construction. The railway company, however, refused to do so, and the Board of Works served them with a notice insisting upon their taking part in the contract and signing the contract deed, otherwise the Board would have to proceed under clause 11 of the agreement. Again they refused. The Board of Works therefore, with the sanction of the Treasury, were obliged to construct the line themselves, with Pauling and Company as contractors. They had all the powers of the company to do so.

14964. That is really how it was done?—That is how it was done.

14964A. What is the total amount of Pauling's contract?—About £220,000. That is exclusive of land, permanent way materials, and other things.

14965. The land you arranged for yourselves?—Yes.

14966. That was an unknown quantity to the contractor?—It was.

14967. Then the Board of Works in consequence of the refusal of the promoting company were bound to carry this out themselves?—They were; if a line was to be made in this district they had no other option.

14968. I suppose there was correspondence on the subject?—Very considerable correspondence.

14969. But it ended in the refusal of the promoting company to accept the tender and construct the railway?—It did.

Engineer and Solicitors employed by Company for the new line taken over by the Board of Works.

14970. Who appointed the engineering staff during the construction?—The Board of Works, having undertaken the construction of the line with the contractors, it was necessary for them to employ an engineer to superintend the works, so they took over the engineer who had been employed by the Lough Swilly Company in preparing the plans and his staff—altogether five engineers—and the works were superintended by that engineer exactly as he would have done if acting directly for the company as originally intended. I represented the Board of Works and the Treasury, and was in constant touch with the line during construction.

14971. And the chief engineer was the engineer who originally prepared the plans and specifications for the promoting company?—That is so.

14972. With his assistants?—With his assistants.

14973. Now, the promoters—of course they had solicitors for their railway?—They had.

14974. Did you take the solicitors over?—In the same way the Board of Works took over the solicitors.

14975. What do you mean?—The solicitors had been already negotiating a good deal in connection with the line.

14976. For the purchase of land and so on?—Yes, for the purchase of the land, and the preparation of the contract documents.

14977. Then the solicitors of the promoters were also taken over?—Yes.

14978. Who were they?—Dr. Todd was one of them.

14979. He gave evidence before us. Did the company—the promoting company—at any time give any reasons for refusing to be represented at the opening of the tenders?—They did. The Board, as required by the Treasury agreement, had fixed the amount of the company's expenses as an item in the free grant. The Company were dissatisfied with the amount so fixed, and demanded more, although they were then unable to furnish vouchers for the amounts already advanced to them, and indeed up to the present moment they have failed to do so, although frequently asked.

14980. Was there any clause in the agreement with reference to vouching expenditure?—There was a clause to the effect that all expenses incurred by the company must be vouched to the satisfaction of the Board of Works.

14981. *Mr. Sexton.*—Was the reason for non-payment that they had failed to furnish vouchers?—That was the reason. The company refused to incur any further expense by sending a representative to Dublin until they got more money. The Board of Works said you have got as much as we consider you are entitled to until you furnish vouchers.

14982. *Chairman.*—And they never furnished vouchers?—They never did. There is a sum of about £1,500 outstanding at this moment that they have not vouched for.

14983. Pauling's having been successful in obtaining the contract—I suppose you made an agreement with Pauling's?—Yes. The agreement prepared by the railway company's solicitors, and which was to be taken part in by the contractors, the Board of Works, and the Lough Swilly Company was utilised.

14984. The contractors got to work. I suppose you gave them the design of the line, and they got to work?—They got to work.

14985. Did the contractors carry out the work as originally specified by the promoting engineer?—There were a few deviations. In July, 1899——

14986. Tell me when was the contract made?—It was made in 1899, about May, 1899.

14987. Early in 1899?—Yes.

14988. Now, on July you say there were certain alterations?—Yes; the contractors suggested certain deviations from the original plans, the adoption of which would in certain instances reduce curvature, and effect improvements in gradients. One of the proposals was to bring the line nearer to Dunfanaghy, enabling a station to be built at a more convenient place for that town.

14989. These suggestions were made by Pauling and Company?—Yes.

14990. Were they made direct to the Board of Works, or were they suggestions to the engineer you had taken over?—They were made to the Board of Works through the engineer we had taken over. Pauling and Company at that time only recognised the Board of Works, as the company never signed the contract with them.

14991. Did the Board of Works approve of the suggested alterations made by Pauling and Company?—The Board of Works approved these deviations.

14992. On the recommendation of the engineer you had taken over?—On the recommendation of the engineer we had taken over and on my recommendation also. I lived in Londonderry at the time.

14993. I suppose the alterations were embodied in the agreement?—They were, in a supplemental agreement.

14994. And were early steps taken to hold an inquiry with reference to this?—The usual steps were taken. A public inquiry was held by an independent engineer, and the statutory report was forwarded to the Donegal County Council, who also agreed to the deviations. The procedure was just exactly as if it had been a new railway.

14995. So that all necessary formal or legal steps were taken to approve of the deviations?—That is quite so, sir.

14996. And the Lough Swilly Company acted as promoters in the case just as they did in the original line?—Yes. They obtained the Order in Council by which the proposals were authorised.

14997. The Lough Swilly Company agreed?—They agreed to the deviations and obtained the Order in Council necessary for their construction.

14998. *Mr. Sexton.*—Although they had refused to carry out the original agreement that they would construct the line?—They did, sir.

14999. *Chairman.*—Now were the railway and the works in connection therewith completed in accordance with the original contract and the subsequent one?—They were, sir, and as varied by these deviations.

15000. The works were completed in accordance with that?—They were.

15001. Who inspected the works—I suppose you inspected the work as it went on?—I did from time to time. That was my duty—I was employed specially to represent the Board of Works and the Treasury in the construction of these lines.

15002. And you saw that the contractor was carrying out his work according to specification?—Yes.

15003. Did the Lough Swilly Company do any inspection?—They did. Several times during the construction of the work their engineer visited the line.

15004. I thought I understood Dr. Todd to say they were not allowed?—That is not so, sir. During the construction of the line the company had free access to the works.

15005. Didn't Dr. Todd tell us that they were not allowed to inspect the line?—He said so.

15006. What do you say in answer to that?—I say that the Lough Swilly Company's engineer came on to the line, made periodical visits, and inspected it, and so also did the chairman of the company, who is a contractor himself; and during the construction they complained to the Board of Works that certain things were not being done properly.

15007. Was that complaint made in writing?—Yes.

15008. And you have got it?—Yes. And a good deal of the correspondence in connection with it, correspondence in which Dr. Todd took part.

15009. Who was their engineer?—The company's engineer was a Mr. Hall.

15010. I mean the Lough Swilly Company?—Yes, the Lough Swilly Company.

15011. And you say he did inspect the works from time to time?—He did, sir.

15012. And that complaints or suggestions were made in writing to the Board of Works in reference to these?—Quite so, and the Board of Works sent down an independent engineer to examine into the complaints of the company. That engineer reported that the works were being carried out quite properly, and in accordance with the specification.

15013. Do you remember his name?—Mr. James Barton, of Dundalk.

15014. Civil Engineer?—Yes, the most experienced in Ireland, I should say.

15015. And his reports vindicated the action of the Board of Works?—Yes, entirely.

15016. And you have got that report?—Yes, we have got his report.

15017. And it can be produced if necessary?—It can be produced if necessary.

15018. Of course that answers in a certain sense the question raised by Dr. Todd when he was here as to the faulty construction of the road and works?—I think it does, sir.

15019. What you say is this, that the railway from first to last was constructed in accordance with the plans and specifications originally drawn up by the engineer of the promoting company, varied by a subsequent agreement and that the whole of the works were carried out in accordance with those specifications?—That is so.

15020. Of course in all contracts we know there are variations, but were the variations in this particular line more than usual, of less than usual?—I should say they were less than usual, and where we did vary them it was always an improvement.

15021. To straighten a curve or avoid a gradient? To improve a curve or gradient, or to improve a station plan, as, for instance, Burtonport Station.

15022. Was there anything special about the form of contract that was used for the construction of this line, or was it the usual form?—It was quite the usual form. It was an inclusive contract.

Deviations carried out on Carndonagh line also.

15023. Was there a similar form for the Carndonagh line?—There was, exactly similar, and with the same contractors.

15024. And that contract was made direct by the Lough Swilly Company?—They were parties to the contracts, just exactly as they might have been with the Burtonport contract.

15025. Do you know from your own knowledge whether any deviations took place in the carrying out of that contract for the Carndonagh line?—There were. I represented the Board of Works on that line, and I approved of deviations which had been suggested by the contractors and submitted to me by the company's engineer.

15026. That is alterations from the original contract?—Yes, alterations in curves and gradients and in stations and approaches.

15027. Were the alterations more on the Carndonagh line than on the other?—I should say they were.

Board of Trade Inspection of Burtonport Railway.

15028. When the line was completed, did the Board of Trade Inspector examine the line—was that done in this case the same as in England?—Yes, exactly the same.

15029. Who was the Inspector?—Major Pringle.

15030. Did he inspect the line?—Yes.

15031. And did he suggest alterations?—He suggested that one or two items should be done. It is the usual thing at an inspection by the Board of Trade.

15032. Two or three little things; you mean something not important. Do you remember what they were?—They were very small, indeed. I cannot tell you off-hand what they were. They were very trifling. I can get the list for you.

15033. Did he object to the road or works?—Not at all, sir.

15034. What then?—There were some trifling matters in connection with the stations. I will read a short paragraph from his report, which will give you an idea of his impression of the line:—"As regards the horizontal and vertical alignment there have been no deviations outside the authorised limits. The fencing is, I think, adequate. The permanent way is in a thoroughly satisfactory condition throughout the line, and, for a newly-laid line, provides an excellent running surface. In the case of all bridges and viaducts, the brick and mason work has a solid appearance and shows no sign of subsidence or failure. The interlocking of all stations is correct."

15034A. That seems to be a very satisfactory report?—Yes, it is; and the company evidently thought so.

15035. Now, was Mr. Hall, the engineer of the promoting company, present when the Board of Trade Inspector was inspecting the line?—I am not quite sure, but I think he was. The general manager of the line was there, I know.

15036. There was a representative there?—Yes.

15037. The manager of the company was present at the inspection?—Yes.

15038. Before the Board of Trade sent their Inspector to inspect the line—when the line was about being completed—do you know, of your own knowledge, did Mr. Hall make an inspection of the line?—I do. When the company consented to work the line they sent down Mr. Hall, and he spent several days walking over the line and inspecting every inch of it.

Intimation from Lough Swilly Company of willingness to take over and work the Railway on certain conditions.

15039. Well, now, had you any communication with the Lough Swilly Company after, or immediately before, the inspection of the line by the Board of Trade officer?—Yes, immediately after the inspection of the line we had a communication from the Lough Swilly Company stating that they were prepared to open the line and work it if the Board of Trade officer's certificate was satisfactory, and provided that the Board of Works would carry out their agreement to supply them with the promised running shed, which, I should say, did not form part of Pauling's original contract.

15040. You have got that letter?—Yes.

15041. And the only reservation there is that the running shed should be erected?—Yes.

15042. I understood you to say that allowance was made for the running shed?—Yes; and we have the £2,000 still, and are quite prepared to spend it at Letterkenny or anywhere convenient on the Burtonport line, but not at Londonderry, where the Lough Swilly Company want it.

Apr. 22, 1907.

Thomas M. Batchen, M.Inst. C.E., Engineer, Board of Public Works, Ireland.

Date of opening of Burtonport line.

15043. That is on their own property?—Yes.

15044. And you say it must be on the property of the Burtonport line?—On the property of the undertaking.

15045. When was the line opened for traffic?—On the 9th March, 1903.

15046. You said just now that you received a letter from the working company that if the Board of Trade officer's certificate was satisfactory they would work the line?—Yes.

15047. Did you communicate to the Company a copy of the Inspecting Officer's report?—I think they got a copy direct from the Board of Trade. I believe a copy was also sent by the Board of Works.

15048. They had it before them?—Yes.

15049. And it was satisfactory?—Yes.

15050. It was a satisfactory report?—The Lough Swilly Company evidently considered it so.

Application from working Company for additional works and equipment.

15051. What was the next step the working company took in connection with the line after they began to work it?—Shortly after the line was opened they referred to the few items that Major Pringle had asked to be done, and stated that over and above those items they considered the equipment of the line deficient in some respects, and that there were discrepancies between the specification and the works executed. They also suggested that the respective engineers—the Board of Works' and the Company's engineers—should meet and discuss the differences, and that the works and equipment that they decided on should be done and supplied within one month, if possible.

15052. So that if the working company considered one month was sufficient to supply any deficiencies they could not have been very serious?—They could not have been very serious—I think that goes without saying.

15053. Did the working company furnish a list of what they considered necessary?—They did. They furnished a list of what they considered discrepancies on the line.

15054. When was that?—That list was received nine days after the opening of the line—that is to say, on the 18th March. I examined the list and found that, as the inspection upon which it was based had been made about three months previous to the opening of the line, fifty per cent. of the items had been already disposed of, and others related to unfinished works which the contractors had undertaken to complete before they handed over the line at the end of their twelve months' maintenance, which is quite the usual practice in railway construction.

15055. That is so; to maintain the line for twelve months in an efficient state to do the work?—Yes.

15056. It is so in England?—Yes. I wish also to say that many of the items were of too trivial a nature to be taken seriously and some were entirely outside the contract documents.

15057. Was there an attempt made to settle these little differences between you and the engineer, or by correspondence?—I met the engineer and we discussed the matter, and the Board of Works wrote a letter to the Lough Swilly Company suggesting that it might be desirable to leave to arbitration any of the contract items upon which I could not agree with the company's engineer.

15058. Was that done in writing?—Yes, a letter was sent to that effect.

15059. Have you got the date of that?—27th of March, 1903.

Arbitration proposed.

15060. Did you get a reply to that letter offering arbitration?—Yes, the company agreed to an interview between the engineers, and that the differences should be submitted to arbitration.

15061. And you say you did meet the company's engineer?—Yes, I met him.

15062. Mr. Hall?—Yes.

15063. And did you dispose of a good many of the items?—Yes, as the result of our conference we agreed to strike out a number of items that had evidently been put forward under a misapprehension.

15064. Put forward months before the line was opened?—Yes; based upon an inspection made months before the line was opened.

15065. And therefore uncompleted at the time the list was made out, but subsequently completed?—Just so, sir.

15066. First of all, you agreed to strike out some of them, then, I suppose, some of them were in course of construction, and some of them you disputed?—Yes.

15067. And those you disputed the Board of Works agreed, by letter, to refer to arbitration?—Yes.

15068. I suppose there was an arbitration clause in the agreement?—I am not distinct about that. There was a clause giving power to deal with it, which I will refer to later on.

15069. Clause or no clause, the Board of Works were willing to refer the whole thing to arbitration?—Yes, quite willing.

15070. Was there any name suggested?—It was suggested merely to refer the matter to arbitration.

15071. You got a reply to that letter offering arbitration?—Yes; they agreed to an interview between the engineers, and that the differences should be submitted to arbitration. As a result of my conference with the Company's engineer it was agreed between us that the company should be asked to furnish an amended and reduced list, which might be arbitrated upon if necessary, and though that list has been repeatedly asked for, it has never yet been furnished.

15072. That particular statement as to the amended list, is it made upon your recollection or on a verbal communication, or a written communication?—It is made upon a verbal communication, but I made a report of it to my Board on that very day.

15073. When the thing was fresh in your memory?—Yes.

15074. Of course, it was important that all these things should be settled before the year expired for the completion of the contract?—It was an important point for the Board of Works, as we had an inclusive contract with the contractors, and we wanted everything settled before the year expired.

15075. After the year the contractor was freed from all liability?—Yes, he was.

15076. Did you get any further communication from the working company?—There was a good deal of correspondence.

15077. You got a revised demand as to uncompleted works?—Yes.

15078. When?—In February, 1904—about a year after the opening of the line.

15079. Eleven months?—Yes; eleven months later.

15080. What sort of a communication did you get from the working company?—We got an increased list of works which they alleged were necessary for the due completion of the line.

15081. And did these include what had already been brought under your notice?—They did, sir.

15082. And something beyond it?—Yes, something beyond it.

15083. Tell us, shortly, what they were?—They were practically the same works that had been mentioned in connection with the inspection made two or three months before the opening of the line; in addition to which there were a number of works entirely outside the contract which we had no power to compel the contractors to do. The Board of Works refused to accept the new lists, and the company were asked to withdraw them in their entirety and to send in the reduced list already arranged for between the engineers.

15084. Have you got the list that you and Mr. Hall agreed to?—I have got it here.

15085. Is there anything on it bearing the signature of Mr. Hall or the manager of the company?—It comes from the company.

15086. As the requirements of the company—you and the Company's engineer had agreed upon a list of certain works to be done?—Yes.

15087. Have you got a record of that list?—I have.

15088. And the subsequent list included several things not in that list?—Yes.

15089. And which you and the Company's engineer had discussed before?—Yes, those are included in the additional list.

15090. What action was taken on the additional list?—The Board of Works refused to accept it. It was now nearly eleven months after the opening of the line, and the contractor's maintenance period nearly at an end. Many of the items were entirely outside the contract. The Board asked the company to send the amended list of works which, in the company's own opinion, could have been carried out within one month after the opening of the line.

15091. That was their original demand?—Yes.

15092. At this particular period—eleven months after the line was opened—and when this amended list was sent in, was there any suggestion made that the engineers should again meet to try and settle matters—by the Board of Works, I mean?—Yes, the Board of Works suggested that I should meet the

Company's chairman and engineer for the purpose of a joint inspection of the line, and no reply was received for three months after the suggestion was made.

15093. And after the contractor had gone?—Yes.

15094. Who supplied the rolling stock?—The Board of Works, as part of the free grant.

15095. Who suggested the number of coaches and engines to work it originally?—That was arrived at upon the advice of several expert railway traffic managers; I would like to deal with the rolling stock question later on.

15096. But the line was opened, at any rate, with a certain amount of rolling stock which had been supplied, by the Board of Works, upon expert advice?—Yes.

15097. And did the working company ask for additional rolling stock?—Yes, and the Treasury agreed to supply it upon certain conditions. About a year after the line was opened the company's application for additional rolling stock was under consideration by the Board of Works and the Treasury, and although it was recognised by the latter that any stock beyond that which had been already supplied ought now to be provided by the company, who so far had contributed nothing to the cost of the line, they agreed to provide a sum of money for additional rolling stock, on condition that all outstanding differences between the Board and the Company in respect of the Carndonagh, Letterkenny, and Burtonport lines should be settled to the satisfaction of the Board of Works, and that any claim in respect of the construction of the Burtonport line should be abandoned. With regard to the latter condition the Board of Works and the Treasury had in their minds at this time the small number of items which the company had suggested could be completed within one month after the opening of the line, not the tremendous claim of £77,900 to which Dr. Todd referred the other day. This offer was made twelve months before the Treasury or the Board of Works knew anything about the big claim.

15098. I suppose the suggestion that the Treasury would provide an additional sum of money was made in writing?—Yes, to the company.

15099. And did the company accept?—No, they did not.

15100. Did they refuse it?—A conference was suggested.

15101. Who suggested the conference?—The Board of Works suggested the conference, and the company assented, but did not act on it in spite of several reminders. Six months were allowed to elapse, when in December, 1904, the company suggested that an umpire should be appointed by the Board of Trade, to sit at the conference and decide all matters in dispute. When the company made that suggestion the Board of Works were not aware that they were busily compiling their enormous claim of £77,900. The Board of Works refused to have an umpire appointed by the Board of Trade. A good deal of correspondence followed; and eventually in May, 1905—two years and two months after the opening of the line—the company sent forward their claim for £77,912 10*s.* 9*d.*

15102. *Mr. Sexton.*—Did the Board of Works refuse to admit an umpire before they knew the claim would be so large?—They did. They knew nothing at all about this big claim. The Board of Works had in mind the few items which the engineers had discussed, and which the company themselves suggested might be done within one month.

15103. Even then they were unwilling to submit the question to an umpire?—But not to arbitration. They were willing to submit it to an arbitrator appointed by the Board of Trade.

15104. *Chairman.*—The company suggested an arbitrator and an umpire?—No.

15105. What do you mean by an umpire; isn't it two arbitrators—one on each side—and a third to act as umpire?—Yes, I suppose that would be it.

15106. *Mr. Sexton.*—You say the Board refused to refer to an umpire?—Yes.

15107. When was the large claim put before the Board of Works?—On the 20th of May, 1905.

15108. They refused the umpire before that?—Yes, in December, 1904; six months before the big claim came in.

15109. *Chairman.*—In December, 1904, the company suggested that the matters in dispute should be referred to an umpire appointed by the Board of Trade, and the Board of Works would not agree to that?—The Board of Works would not agree to that.

15110. You say that the further list of works sent forward by the company would not amount to this huge claim?—Nor anything like it.

15111. Well, I think you have got it pretty clearly on the notes now. Of course we know that the Board of Works declined to entertain that large claim for £77,000?—They did.

15112. And they also declined to submit such a claim to arbitration?—They did, sir, and the Treasury also refused.

15113. How does the question stand to-day?—The question stands thus:—The Board of Works maintain they have no responsibility for this enormous claim, and that the Company will not get anything further from the Treasury. They have got all that was intended to be given to them under the Treasury agreement, and they have now got to work the line as it stands.

15114. Except that you did agree originally to certain alterations with the engineers of the working company?—These were all done during the contractor's maintenance period.

15115. They were all carried out?—Yes.

15116. And they were not included in the £77,000?—Some of them are included in it.

15117. Although they were carried out?—Although they were carried out. I might state for the information of the Commission that the contractors rendered a claim against the Board for about £100,000 for work alleged to be done extra to the contract, which, if added to the Lough Swilly claim, would practically build thirty to forty miles of new line.

15118. How was the question settled about the £100,000?—Well, there was a great deal of correspondence and discussion over it, but it amounted eventually to this, that under the inclusive contract the contractors had to bear their loss.

15119. And the claim was not paid?—It was not.

15120. No part of this £100,000 was paid?—No part of it was paid.

15121. They had what you might describe as a lump-sum contract?—They had a lump sum contract.

15122. Your contention, I mean the contention of the Board of Works when I speak of your contention, is that so far as they are concerned the only liability attaching to you on this particular railway is in respect of £2,000 for a shed?—Quite so, and the Board of Works are quite prepared to give the Company £2,000 to build a shed anywhere on the Burtonport line.

15123. The items that you and Mr. Hall agreed to originally—could those have been shown on a sheet of foolscap?—They could; they were very small, and they were very few.

15124. And not only small in number, but small in cost?—Yes.

15125. Small alterations they were?—Yes.

15126. You say they could have been shown on a sheet of foolscap?—Yes.

15127. How many sheets did the new claim amount to?—I have it here. I should say 300 pages of double foolscap. This (*produced*) is the original.

15128. 300 pages of foolscap?—Yes, double foolscap.

15129. To make up £77,000?—Yes.

15130. Well, we don't want to go into that. I must ask you a few questions as to items, but I will summarise them, if you don't mind. I take the lump sum of £13,000 shown as being necessary for the viaducts, £13,300 odd as being necessary in the judgment of the engineer of the company for the viaducts. Just tell us briefly what you have to say to that?—Here are photographs of the viaducts on this line at Barnes' Gap, Owencarrow, and Faymore. Each is substantially constructed of masonry piers and steel girders. The Company say that these viaducts ought to have been constructed entirely of masonry, or, in the case of the Owencarrow, entirely embanked across the valley; and they practically ask the Board of Works to demolish them and re-construct them at a cost of £13,356, or in the alternative, and this is very important, that the annual estimated cost of maintenance and renewal charges on the steel work should be capitalised and handed over to the Company in a lump sum.

15131. Stop now. You say a lump sum?—Yes, in a lump sum, capitalised, and the lump sum handed over to them for re-construction and maintenance.

Apr. 22, 1907.

Thomas M. Batchen, M.Inst. C.E., Engineer, Board of Public Works, Ireland.

Refusal of Board of Works to submit claim to arbitration.

Large claim for extras made by the Contractors declined by Board.

Present position of the Board of Works regarding the claim for omitted works.

Items of the claim; viaducts.

Apr 22, 1907.

Thomas M. Batchen, M.Inst. C.E., Engineer, Board of Public Works, Ireland. Items of the claim *continued.*

15132. They say that this one should have been an embankment?—It was intended to build the line on an embankment across the Owencarrow Valley, but the foundations were so very bad that an expensive viaduct had to be adopted to obtain foundations, for which we had to sink cylinders eighty feet below the bed of the stream.

15133. There is a water course there?—Yes, a water course about twenty feet wide, and we had to go eighty feet below in order to get the rock foundation.

15134. It seems to have been the best mode of construction?—It was; the ground was not capable of supporting a high embankment.

15135. *Mr. Sexton.*—The real objection appears to be that the steel would be more expensive to maintain?—All these viaducts are on deviations, but the valley had to be crossed in any case, even under the original contract, and the Company designed a steel bridge for that. This was the Company's own proposal.

15136. *Chairman.*—This (*produced*) is the original plan?—Yes, just a steel bridge, practically the same length.

15137. *Mr. Sexton.*—And they asked that it should be all masonry?—Yes.

15138. *Chairman.*—I think you have said enough about these viaducts?—Well, sir, will you take the permanent way?

Permanent way.

15139. I will take the permanent way. According to the figure I have here, £4,750, they say, is necessary to be spent to bring the permanent way to a proper standard. Now, what have you to say as to that?—This amount is claimed, not because the line was not in good running order when the company took possession. We have the Board of Trade officer's opinion that it was in excellent condition, and not because the curves were worse or the gradients steeper than the Parliamentary plans permitted them to be; neither is it for new works, but a sum to be paid down to the Company for what they call loss of life on rails, sleepers, etc., which they contend were delivered prematurely. They contend that the permanent way ought not to have been laid on any portion of the line until the formation had been entirely completed. This is not the way railways are usually constructed.

Ballasting.

15140. I don't think you need say another word on that matter. It is perfectly satisfactory. With regard to the ballast there is an item here for £3,683—what have you to say about that?—That is alleged to be for insufficiency of ballast. There were five resident engineers and two permanent way inspectors on the line during construction, and particular care was taken that the permanent way and ballasting should be up to the specification. I have always considered the permanent way one of the most important matters of construction, and gave it my careful personal attention every time I visited the line.

15141. Did Major Pringle raise any question about the ballast?—Not a single question.

15142. He said the permanent way was in excellent order?—Yes.

15143. And then the ballast must have been in perfect order when he inspected it?—It was.

15144. What was it?—Broken stone in one case and gravel in another, up to the specification.

Fencing.

15145. That is sufficient. Then there is fencing, the total of which is £17,513—what have you to say about that?—The Company say that too much seven-wire fence has been erected, and that the contractors ought to have been forced to build dry stone walls in many places instead of wire fence. They say that thirty miles of wire fencing ought to be taken down and replaced with dry stone walling. This is a matter within the discretion of the engineer, but as a matter of fact there have been thirteen miles less wire fencing erected than was scheduled in the documents prepared by the Company.

15146. By the engineer to the Company?—Yes, by the Company's engineer, which is a distinct gain to the Company.

15147. Certainly?—Another item of £2,500 is asked for as compensation for what they allege to be loss on fencing standards which they consider should have been galvanised.

15148. Iron standards?—Iron standards.

15149. They were not galvanised?—No, and there are other items in which they ask to have three inches, four inches, four and a half inches, five inches, and so on to 60 inches added to the height of the five-feet stone walls; that we should take off the coping and make an addition to the height.

15150-1. That is absurd. I think it is satisfactorily explained. Now, as to the earthworks item of £6,824?—Yes, sir. The Company are dissatisfied with the manner in which some of the railway slopes have been finished, and ask for a large sum of money to have them trimmed and dressed to their satisfaction. They also allege that certain embankments have not been made to the proper heights and slopes, and ask for £3,370 on that account.

15152. Do you know if there have been any slips on the banks?—There have been no slips. The earth works have been most successful all through. There was an enormous amount of earthworks carried out. About a million cubic yards altogether were handled on the Burtonport line, and the work was all successful.

15153. There have been no slips?—No slips, sir. There was a great deal of rock excavation on the line. These photographs (*produced*) will give you some idea of what the line is like.

15154. I think that is quite sufficient about the earthworks. There is an item of £2,205 for the formation of railways over bogs?—Yes, sir.

15155. What have you to say about that?—When the construction of the line was in full swing the Company's engineer on one of his inspections complained that in his opinion we were not forming the line properly over the bogs. The Company wrote to the Board about it, and, while expressing confidence that I would have the work done properly, the Board sent down Mr. James Barton, of Dundalk, an engineer of great experience, to inquire into the complaint, and his report was entirely in favour of the method in which the work was being done. In fact the contractors were putting into operation the experience they obtained when constructing the Carndonagh line. The bogs have not given trouble since the line was opened over four years ago.

15156. I think that is sufficient proof that it was properly constructed then?—I have now dealt with nearly three-quarters of the amount of the claim.

15157. In money?—In money, and there is nothing in what I have enumerated which could in any way cause the serious delays and breakdowns which constantly occur on the line.

15158. I think you had better just recapitulate, without any comment, the figures which go to make up the total claim. Just read the items?—The viaducts——

15159. No, we have had those. Just begin as to this £77,000. You have given us the principal items, but there is a lot of smaller items which in the aggregate make a total of £13,000 or £14,000. Just tell us what they are for?—They are items which are additional to the contract plans and schedule of works, and which could not be supplied or carried out under Messrs. Pauling and Co.'s contract:—signalling at public road gates, additional to those ordered by the Board of Trade, £307.

15160. These are items for small works not included in Pauling's contract?—Quite so. Then we have five cottages and level crossing gates, additional to those detailed in the contract documents, £1,438; additional telegraph instruments beyond those specified, £44; the provision of signal cabins at the various stations instead of the open frames specified by the Company themselves, £457; additional sidings and improvements at Letterkenny station beyond those shown on plan and documents prepared by the Company, £1,100; extension of platforms and increased accommodation at Oldtown, Newmills, and Churchill stations beyond what is provided under the contract documents, £446; two new passing places to be provided, viz., Kilmacrenan and Falcarragh, £1,800.

15161. They were not shown in the contract documents?—No; new engine water supply to be provided at Churchill, £300; new overline footbridge, engine cleaning pits, additional cattle pens, etc., at Creeslough, £637; increased accommodation and entire reconstruction of Dunfanaghy station, £2,658.

15162. Now, was the station constructed in accordance with the plans?—Dunfanaghy station was built on a deviation, and is therefore a new station built to designs similar to those of the original contract.

15163. Approved by the engineer?—Yes.

15164. By the engineer of the working company?—The working company were not called in, but approved by the engineer that was taken over from the working company. The last figure I gave you was £2,658; additional siding, loading bank, cattle pens, crane, cart weigh-bridge, etc., at Cashelnagor station,

£358; entirely new station, overhead footbridge, three-ton weigh-bridge, additional accommodation in yard, etc., at Gweedore station, £1,522; new works at Crollybridge, £300; additional works at Dungloe station, £147; for an entirely new station building additions to goods store, etc., at Burtonport they ask for over £1,000; they ask that the corrugated iron roofing which was specified and erected on the waiting cabins should be taken off and slates substituted, £176; for the further lighting and other works at existing stations they ask for an additional expenditure of about £600; in addition to the foregoing works they ask for hand-bells, lamp barrows, luggage barrows, tail ropes, hand lamps for station-masters, porters, brakesmen, guards, drivers, and cleaners, etc., etc., £1,000.

15165. Just give us the total of these items you have been reading?—£14,290.

15166. That is included in the £77,000?—Yes, it is.

15167. Your contention is that so far as these items are concerned under the agreement these should be supplied by the working company?—They should be supplied by the working company under Clause 11 of the Treasury agreement.

15168. What does Clause 11 say? Have you got it?—I have.

15169. Just read the clause?—"The Company hereby covenant——"

15170. The working company?—Yes. "The Company hereby covenant with the Treasury that they will complete and finish the line to the satisfaction of the Board of Works and of the Board of Trade, and will open the same for public traffic within the time limited by the Order, and in accordance with the provisions of this agreement. And that if the free grant shall, from any action or omission of the Company not approved by the Board of Works, prove insufficient for the purpose aforesaid, the Company will raise and expend all such further sums of money as may be necessary for the same purpose, and will complete and open the railway for traffic as aforesaid."

15171. *Mr. Sexton.*—That was on the assumption that the line would be constructed under their super vision?—But they would have to do that in any case, because the free grant has been fixed by the inclusive tender, the tender submitted by the contractors. When the free grant is fixed any further money must be found by the Railway Company under this clause.

15172. Still that clause contemplates a state of affairs that did not arise, the supervision of the construction of the line by the Company. The Company refused, and the actual eventuality was somewhat different from what is provided for in that clause?—Yes, but it is provided for in another clause, in fact in an addition to the same clause. The words are:—"If from any cause no contract for the execution of the works has been entered into within six months from this Order in Council being recommended to be passed, the Board of Works may, if they think fit, and with the sanction of the Treasury, by themselves or their contractors, construct the railway and equip it, and for these purposes may use all the powers vested in the Company by this Order in Council, and, *mutatis mutandis*, the provisions of this agreement shall apply to the railway so constructed and equipped."

15173. The Board of Works may assume the powers of the Company, but you represent now that, by Section 11, the liabilities of the Company remain the same as if the Company had promoted and constructed the line.

Mr. Healy, K.C.—They must do it within six months.

15174. *Mr. Sexton.*—You are reading it a little widely, are not you?—I think that after notice had been served on the Company to take part in the contract, and they refused to do so, the Board of Works had no option other than to construct the line themselves, otherwise no line might have been constructed in the district.

Chairman.—Where is that working agreement?

15175. *Mr. Sexton.*—At any rate, the circumstances under which you finally came to this decision are not the circumstances stated in clause 11 taken by itself?—But there was provision at the end of clause 11 which I have read to you.

15176. The point you make is that the liability of the company, the company not having promoted and constructed the line was, in the event that actually happened, the same as if they had constructed the line?—I have read it in the last portion.

15177. What are the particular words—your position is that if you take the two clauses together the position is the same as if clause 11 had stood alone, and as if the company had constructed the line?—Exactly.

15178. *Colonel Hutcheson Poë.*—I suppose I am right in assuming it is by virtue of their being the promoters of the line that these liabilities and penalties attach to it?—Yes.

15179. They were the promoters?—Yes.

15180. And the Board of Works entered into an agreement with them that if they did not construct they were still liable for all the penalties as promoters of the line?—Yes.

15181. *Chairman.*—I think we can go on a little further. The working company have objected to the type of locomotive you have supplied?—They have.

15182. What is their objection?—The company have asked that tender engines should be supplied for working the line. They have in their mind that the line should be worked as one system from Londonderry to Burtonport. The Board of Works look upon it that the undertaking is distinct in itself, and should be worked from Letterkenny to Burtonport.

Lough Swilly Company's objection to tank engines supplied by Board for Burtonport Railway in accordance with original specifications.

15183. What is the distance?—From Letterkenny to Burtonport 49½ miles.

15184. That is the length of the line?—Yes, length of the Burtonport line.

15184A. What did you supply for that?—Four tank engines.

15185. Did you supply them after consultation with anybody connected with the working company?—The specifications to which the locomotives were built were submitted to a locomotive engineer on behalf of the Lough Swilly Company. This engineer suggested one or two small improvements or alterations in the specification which were agreed to and the engines built to the altered specification.

15186. He did not suggest that the tank should be converted into tender engines?—Yes, that engineer suggested, acting on behalf of the company, that tender engines would be very suitable for working the line from Londonderry to Burtonport, but he said that the line from Letterkenny to Burtonport could be very well worked by tank engines.

15187. And that was all you were contemplating? That is all that the railway company contemplated. When they promoted the line, they had in their minds tank engines, not tender engines.

15188. Then, so far as the engines were concerned, they were approved for working that particular line?—They were.

15189. And they could carry sufficient coals and water to do the journey easily?—Yes.

15190. Have you any reason to believe that the company themselves contemplated working that line with tank engines?—I have. I find that in submitting evidence before the investigators when they were promoting the line in 1896——

15191. What do you mean by investigators?—If you remember under the Act of 1896, when a railway is proposed by a company in a certain district, an engineer and a traffic manager are sent down to investigate and report upon it.

15192. Oh, I know—that is sufficient. I had forgotten we were in Ireland. I was thinking of the procedure in London?—In sumbitting evidence——

15193. In submitting evidence before these investigators, as you call them, what evidence was given with reference to the engines?—In my opinion there can be no doubt that the company contemplated working the line with tank engines.

Tank engines originally contemplated by Company.

15194. Why do you say that?—Well, the general manager suggests in his evidence the class of engine that he would work the line with; and then their engineer's estimate of cost is based upon the price of a tank engine, which is less, as you know, than a tender engine would be; further, in 1898, when the promoters' engineer was preparing the working plans for the construction of the line, he received instructions from the company that the wheel base of the engine would be 17 feet, and the weight 32 tons—he required the information for designing the girder bridges—and they would measure 28 feet 6 inches from buffer to buffer. These measurements correspond with those of a tank engine; the turntables, and engine sheds were accordingly designed for tank engines.

Apr. 22, 1907.

Thomas M. Batchen, M.Inst. C.E., Engineer, Board of Public Works, Ireland.

15195. Were they made large enough for tender engines?—No, not large enough.

15196. And the turn-tables?—They were not.

15197. And under the designs of the engineer they must have been designed for tank engines?—Yes; in fact we have a copy of the letter from the company's secretary, or general manager for the time being, to the engineer, clearly showing that it was a tank engine that was in their minds.

15198. I think that seems to me, to prove that tank engines were contemplated to be used on this railway?—Oh, there can be no doubt about it.

Desire of Lough Swilly Company to obtain tender engines to run between Derry and Burtonport.

15199. What is the company's objection to a tank engine?—Well, the company want to run their trains right through from Londonderry to Burtonport—certainly a very desirable thing from their point of view.

15200. What is the distance?—Seventy-four to seventy-five miles.

15201. Extra?—No, altogether.

Objections to working tender engines over Burtonport line stated.

15202. As against the line on this railway?—Fifty. But there are serious objections to the running of tender engines in this way, sir. With the tank engine you get a greater weight on the driving wheels, and consequently more tractive force for working your loads up the gradients on the Burtonport line; the 50 lb. rail on the Burtonport line is very suitable for heavy axle weights. On the Letterkenny line there is only a 40 lbs. rail, and you cannot put a heavy load on it; you cannot run heavy engines right through without re-laying that line.

15203. *Mr. Sexton.*—They offered to buy you out and re-lay it?—I understand they offered——

15204. To buy it at a valuation and re-lay the line with 60 lbs. rails?—As far as the Treasury is concerned I should say the valuation of the line is the amount of money they have put into it.

15205. They have accepted less than that in numerous cases. Is it not embarrassing to that company to lay down a rule that they must use such engines upon that Burtonport extension as will prevent them running through from Derry to Burtonport?—It won't prevent them, for they can use any engines they like, provided the axle weight is suitable for the lighter rail. In fact they do it now. They run engines over the Letterkenny line which have a light weight on the axles, and which if the company wish can be right through, but the engines supplied by the Board of Works were supplied for this undertaking solely, and were not designed for, nor are they suitable for, the Letterkenny line.

15206. They say your tank engines are too light for the Burtonport line?—The tank engines are not too light. They are perfectly capable of doing the work if well treated, but they have been very badly used by the Lough Swilly Company.

15207. *Chairman.*—At any rate both the working companies at the time intended to have tank engines?—They did.

Tank engines the usual type used on narrow gauge Railways in Great Britain and Ireland.

15208. And the Board of Works therefore supplied tank engines?—Supplied tank engines. I do not think there are tender engines on any narrow gauge railways in Ireland, nor in Great Britain so far as I am aware.

15209. What is the gauge?—Three feet gauge; and the company and the Board of Works had in view the working of the Glenties line. They were both familiar with that line. The chairman of the Lough Swilly Company built the Glenties line as contractor for the Board of Works, and he knew exactly the construction of that line, and the engines supplied, and that these were in the minds of both parties there can be no doubt. The lines are similar in respect of gradients, curves, weight of rails, and district traversed.

15210. Who is Mr. Malcolm?—Mr. Malcolm is locomotive engineer for the Belfast and Northern Counties line.

15211. A man of experience?—He is.

Specification for the tank engines prepared by Mr. Livesey (Donegal Railway) and approved by Engineer representing the Company.

15212. Who is Mr. Livesey?—He was the general manager and locomotive superintendent of the Donegal line. He had very large experience of working tank engines.

15213. Were they called in to try and settle this dispute?—Oh, no. The specification for the engines was written by Mr. Livesey, of the Donegal line, on behalf of the Board of Works, and that specification was referred to the Lough Swilly Company who sent it on to Mr. Malcolm. There was a conference arranged between the two engineers, and the result was that Mr. Malcolm approved of Mr. Livesey's specification, and the tank engines were built.

15214. Then they were built and supplied then by agreement with the Lough Swilly Company?—Quite so.

15215. Did Mr. Malcolm suggest any alterations?—Mr. Malcolm suggested a few minor alterations, which were readily agreed to.

15216. Not altering it from tank to tender?—No.

15217. Nobody suggested that?—Mr. Malcolm, acting on behalf of the company, suggested that tender engines should be supplied, but he admitted that tank engines were perfectly capable of doing the work, and since the Board of Works were determined to give them the tank engines he approved of the specification and had some minor alterations included in it, and the engines were built.

15218. Who built the engines?—They were built by Andrew Barclay and Son, Kilmarnock.

15219. Were they supplied by tender?—Yes.

15220. Did the working company in the trial runs of these locomotives raise any objection to them?—None, sir. They were worked by the company on their own line from Londonderry to Buncrana, and on to Carndonagh, and each engine ran over 1,000 miles, working on these lines with perfect satisfaction. When the Burtonport line had been opened, things went well for a few months, but in a very short time the engines became very bad, owing to leaking tubes and trouble of that kind.

15221. Well, of course, the details of construction, I don't purpose to ask you of. You are not a locomotive engineer?—I am not a locomotive engineer, sir, but I may tell you that during construction the engines were continually inspected by a competent engineer at the contractors' works.

15222. Who sent the competent engineer?—The Board of Works. One of those inspectors, whose business it is to inspect for big railway companies—he was inspecting engines for the Natal Government Railways at that time.

15223. Did he report to the Board of Works that everything was satisfactory?—Everything was satisfactory.

15224. There is no objection raised to the other portion of rolling stock, I suppose, carriages and wagons?—Not so far as the construction is concerned, but the company rather object to the quantity supplied.

15225. How did you arrive at the quantity to be supplied, how did the Board of Works arrive at the quantity to be supplied?—The Board of Works on the investigators' report thought that a two train service each day would be quite sufficient.

15226. The investigators being?—A traffic manager.

15227. Who?—Mr. Tatlow.

15228. And?—And an engineer, and they reported that the line might be worked with four locomotives and a certain number of carriages. I should say that at this time the Board of Works had as their Chairman the late Mr. Robertson, who was an eminent railway expert, but, not satisfied with that, the Board of Works went still further, and called in another railway traffic manager.

15229. Who?—Mr. Plews, and he also reported that the line could be worked with the four locomotives and a certain amount of rolling stock, and that amount was supplied to the company.

15230. The Board of Works, at any rate, took the best steps they could to get expert information?—They did.

15231. As to the quantity of rolling stock necessary for the proper working of the line?—They did.

15232. And supplied it accordingly?—And supplied it accordingly.

15233. Well, we need not go into the detail, I suppose, the whole of this detail, the locomotives, and rolling stock, and horse boxes and goods wagons, the Investigators reported in favour of that number?—The Investigators reported.

15234. You did not cut down the number, in any way, they suggested?—We did not. I may tell you that in the case of carriages the Lough Swilly Company suggested that instead of five compartments there might be six compartments in each carriage, and they were willing to have the number of these cut down so that the cost should not be increased, that is, they wanted not fourteen carriages with five compartments each, but twelve carriages with six compartments each

15235. On their suggestion?—The suggestion of their general manager.

15236. You provided the same seating accommodation?—Yes, without increasing the cost.

15237. Well, now, the rolling stock having been supplied, and the working company having got to work on the railway, do you know anything about whether the traffic increased at a greater ratio than was expected?—Oh, yes. Shortly after the opening of the line the traffic commenced to increase beyond all expectation.

15238. The quantity of rolling stock having been based upon the running of two or three trains a day?—Two trains.

15239. I thought Colonel Plews suggested three?—He suggested a two-train service.

15240. Passenger service?—Two mixed trains each way. The experience of the working soon showed that a three-train service would be necessary.

15241. Your contention is, I suppose, that whatever was necessary after the first supply, they should be supplied by the working company?—Quite so.

15242. Under the agreement?—Under the agreement; that there could be no liability on the State after the Free Grant had been fixed; that the liability was entirely on the part of the Lough Swilly Company now.

15243. For additional rolling stock?—Yes.

15244. *Mr. Sexton.*—How long after the opening of the line was it found that additional rolling stock was required?—I do not know, five or six months, I think.

15245. Is it not hard for a small line of twelve miles to face such contingencies over a system of 100 miles?—It was their agreement.

15246. It is very hard?—I may tell you that the Board of Works, with the sanction of the Treasury, were quite prepared to give the company additional rolling stock.

15247. If they gave up everything else?—Not everything else, only their claim, which was considered to be very small, and the works of which, if you remember, they said could have been done within a month, and come to an understanding with regard to other outstanding items.

15248. Settle everything to your satisfaction?—To the satisfaction of the Board. Quite so.

15249. *Chairman.*—Did they work at a percentage?—£3 10*s.* per mile per week; and any surplus is divided between the company and the Treasury.

15250. Then the agreement secures them against any loss?—It does up to an expenditure of £3 10*s.* per mile per week.

15251. *Mr. Sexton.*—They may be losing for all you know by working it?—Oh, but——

15252. You know whether they are?—We know they are not. We have power to examine the accounts, and we know they are not able to certify the cost up to £3 10*s.* per mile per week.

15253. Is it not a very cheap rate?—It is cheap working.

15254. We know of other lines where the working expenses are double that amount?—Unfortunately, I know some.

15255. *Chairman.*—Not a narrow gauge railway?—Yes, narrow gauge railways.

Mr. Sexton.—Yes.

15256. *Chairman.*—You don't know anything about that £3 10*s.*; how that was arrived at?—Well, it was arranged between the Lough Swilly Company and the Board of Works, having the advice of Mr. Robertson at the time. I am not sure how it was arrived at.

15257. It strikes me £3 10*s.* would probably insure the probable cost of working. They were indemnified against a loss in the cost of working?—Last year the cost only came to £3 6*s.* per mile per week, and there is a very large profit divided between the Company and the Treasury.

15258. At any rate, there was a disposition on the part of the Board of Works even to meet the demand for increased rolling stock, provided other things were as satisfactorily settled?—There was.

15259. *Mr. Sexton.*—If the Treasury share all the surplus receipts over £3 10*s.* a week, do you not think that they should share in the cost of provision for increased traffic as some reason for it?—So they do; although there is an obligation on the part of the company to maintain the line and make any improvements, such as additional sidings, additional stations, and that sort of thing, the Treasury may allow their portion of the surplus to go to increased works, but the Treasury are not likely to do so while they have this enormous claim against them.

15260. *Chairman.*—This claim stands in the way of an agreement being come to. Evidently the traffic increased at such a ratio that the rolling stock originally supplied was not adequate to the proper working of the traffic that was on the line?—Well, the company allege that that is the case, and the Board of Works were quite prepared to give them more.

15261. You don't dispute this?—No.

15262. Well, I suppose you can't. I think, Mr. Batchen, that is all I want to ask you.

Examined by Mr. Sexton.

15263. Is there any other statement of Dr. Todd except that which you have quoted, to which you wish to direct attention? I ask, because of course you have studied it, and I should wish to know if there is anything more you should think calls for special notice in his evidence?—Well, there are so many of them, sir. There are a great many points I take exception to and which I would like to remark about in connection with Dr. Todd's evidence. Dr. Todd's and Mr Hanna's evidence at the previous sittings.

15264. Perhaps you think it sufficiently dealt with in the general course of your evidence?—I think it is; my general evidence may suffice.

15265. You have read the evidence of Mr. Hanna, County Councillor, Donegal?—I have.

15266. I believe he is, or was, for some time a baronial director of this Burtonport line?—I think not.

15267. What?—I think not; Mr. Sweeney was.

15268. Mr. Sweeney, not Mr. Hanna?—Yes, Mr. Sweeney, not Mr. Hanna.

15269. Mr. Hanna gave evidence of an experience of his on the 3rd of August, 1904, to which you have not referred?—Yes. Well, I will refer to that, sir.

15270. He says, "I left Letterkenny at eight o'clock in the morning to transact business at Falcarragh. The country was dry in the morning when going down, but about noon it commenced to rain, gradually increasing till near four o'clock. I was judging at a cattle show, and I was out in it all the time, so that I know exactly the character of the rain. At a quarter past four I got into the train to go home. At a place near Foxhall, three or four miles from Letterkenny, the country people were shouting and throwing up their hats, and the train stopped at the brink of a one-span bridge. I got out of the train. I had to walk into Letterkenny to catch the train home, and I examined the débris as much as I could. 14174. Was there a collision?—No, no. It was a new bridge built to carry the railway train only the year before. 14175. The bridge gave way?—It was completely swept away. 14176. By the rain?—By three hours of summer rain. I examined the débris as much as I could. Of course with the heavy turbulence of the water I could not see exactly through, but as far as I could see the abutments were mainly built with dry stones and plastered with mortar on the outside."?—Yes, I saw that. With regard to the statement that it was built with dry stones and plastered with mortar on the outside, I say it is quite untrue. We had masonry inspectors as well as engineers in charge of all the masonry work of the line, and I know the mason work is excellent throughout the line. With regard to the rainfall which he describes, I think, as a summer shower, I find here a report which I submitted to my board shortly after the occurrence. I happened to be in the district at the time, and accompanying my report were two extracts from the local press. I will read one of them. "Dear Sir,—In the twenty-four hours——" Collapse of railway bridge near Foxhall. Alleged faulty construction of bridge contradicted.

15271. What is this?—It is with reference to the rainfall of that day.

15272. What is the origin, the authority?—A letter addressed to the editor of the *Londonderry Sentinel.*

15273. By whom?—By a doctor in Letterkenny who keeps a record of the rainfall in the district.

15274. Yes?—"In the twenty-four hours ending at ten o'clock on the morning of Thursday, the 4th inst., 2·18 inches of rain fell here. Over one inch of this quantity fell between 3 and 4.30 p.m. on Wednesday, the 3rd inst. I never saw rain like it for that hour and a half outside the tropics." The result of that very great rainfall was that a small Abnormally heavy fall of rain the cause of the collapse.

Apr. 22, 1907.

Thomas M. Batchen, M.Inst. C.E., Engineer, Board of Public Works, Ireland.

stream which had been embanked—there are a number of streams in that district embanked on both sides—overflowed its banks, and rushing down alongside the railway embankment, seeking for some place to escape, swept away a small accommodation bridge which was not constructed or meant to meet such a flood, and did enormous damage to the crops in the fields adjoining the railway. The farmer took an action against the Lough Swilly Company for £500 damages. The company defended the action successfully on the ground that the rain was unusual, and the circumstance one over which they had no control.

15275. Mr. Hanna says, "I was judging at a cattle show, and I was out in it all the time, so that I know exactly the character of the rain"?—I might say that on the Glenties line, on the Donegal system, that same day there were several washaways.

15276. If that had been an evening train coming there after dark everyone might have been killed?—Quite true.

15277. And whatever may be the explanation of such an incident, the occurrence of it seems to indicate that an authoritative inquiry respecting this line might be a useful measure?—I don't think so. You could not anticipate a rainfall of that kind; it might happen on any railway.

The suggested Inquiry as to the condition of the Burtonport line generally not considered necessary.

15278. Well, there is evidence that people are afraid to travel on the line. We have had it here, and it has been stated in the House of Commons, that people are afraid to travel on the line. Now, if people are afraid to travel on the line, and if you have such an incident as that, alarming though explicable, does it not occur to you that an inquiry might set doubts at rest and might so be useful?—I don't see that it would help this in any way. You can't make an inquiry as to what is the probable amount of rain to fall at a certain time.

Contractors' work done satisfactorily

15279. Well, I think people would like to know that the bridges over which the trains in which they travel have to go would resist any probable rainfall. However, the incident does not convey to you the same impression that it does to me. I shall not press it further. Now, did the contractors construct this line to your satisfaction?—They did.

Cost of construction of line, and Contractors' additional claim for extras discussed.

15280. What did you pay them for it?—About £220,000.

15281. For about fifty miles?—Yes.

15282. And they claimed another £100,000?—About that.

15283. For what—extras?—For extra works.

15284. Not included in the contract documents?—Which they contended were additional to the contract documents.

15285. Additional, yes?—If I might give you an instance.

15286. What did you contend?—We contended that under their inclusive contract they were bound to carry out the line to the satisfaction of the Board of Works and the Board of Trade.

15287. Yes, for the contract sum?—For the contract sum.

15288. Well, you gave them nothing?—We gave them nothing that in any way increased the free grant. We did this. In the promotion of these deviations there was a certain amount of money expected to be saved. This amount of money to be saved by the deviations was to be divided between the Board of Works and the contractors.

15289. Yes?—The contractors tendered this big claim, and as it was within the knowledge of the Board that a great deal more money was spent than what had been contemplated, the Board gave up their portion of the savings, so that the free grant was not altered in any way by the contractor's claim.

15290. Do you mean they lost by the contract?—Yes. They say they lost an immense amount of money. I am not able to say what they lost, but I can give you one instance; the Owencarrow Viaduct was to cost only £6,500 under the Parliamentary estimate. To my own knowledge it cost over £30,000.

15291. If that be so, those calculations of £6,000 a mile, calculations founded on the contract sum, are altogether wrong as to the actual cost of the line?—I don't think so. The calculation at so much per mile is based on the actual cost to the parties finding the money. If the actual total cost of the line to the Treasury is so much, you divide that by the number of miles, and you get so much per mile.

15292. The total cost to the Treasury. But if the building of the line cost the contractors more than the Treasury gave them, then the cost of the line is more than the accounts will show?—On the other hand, if the contractors had made a large profit we would have had to pay the full contract price. We can only reckon that the contract sum was the amount expended.

15293. You have just admitted that the amount expended was immensely more?

Chairman.—For this particular line?

Witness.—For the Owencarrow Viaduct.

15294. *Mr. Sexton.*—That was a typical fact, I think?—It is of my own knowledge I tell you that. As I explained, the contractors had to go about eighty feet down for foundations below the level of the ground.

15295. Well, if people who met with such a mischance and had to spend so much more upon the line than they received had their claim for £100,000 wholly rejected, it cannot be said that the Board of Works errs on the side of concession?—It was a bargain.

15296. I know. Do public departments administering public money for public purposes always hold strictly to the letter of a bargain where equity appears to the contrary?—I am not prepared to offer an opinion.

15297. Well, then, the Company too made claims which appeared rather to grow with time and eventually came to the amount of £77,000: is that right?—That is quite right.

15298. Your case is, I understand, that they knew what they were about all along, that they prepared the plans, examined the estimates, had access to the line, and knew thoroughly when they began to work the line what the position was?—That is our case.

15299. They say, on the other hand, that they understood and believed that their claims would be made good in the twelve months of maintenace by the contractors, and then they contend that it was only after they began to work the line that they became fully aware of the nature and scope of the defects—that is their case?—Yes, that is their case.

15300. Now, does it not seem that in such a case there is room for an inquiry: I mean when a public department like yours gets into an obstinate and prolonged dispute of this sort with a public company, and the public interested suffer, as everybody admits, do you not think that an effort should be made to settle it in some authoritative manner, rather than let it run on indefinitely?—Well, the Company have been able to interest certain members of Parliament and public bodies, and induced them to believe that the line had been badly constructed and that it required £77,000 to put it in proper order. I have shown you by the details of their claim that they ask us to demolish certain viaducts which are acknowledged to be substantial, and that they ask for about £14,000 or £15,000 worth of work which was not included in the contract, and we hold that under the Treasury agreement, anything in excess of what was shown in the contract plans, must be provided by the Company themselves. They undertook to do so.

15301. I am not disputing your contention, I am simply inviting you to consider that there are two sides presented to the case and that they invite inquiry. You may be right or the Company may be right, but is the difference one of a kind that this Commission can determine? Does it not require a combination of legal and engineering skill to deal with it? Can it be dealt with otherwise than on expert evidence and by an expert decision?—I think it can; it is so apparent from my evidence this morning that the claim is not a proper one. I think that if they got £700 out of £77,000 I would say they got too much.

15302. Have you any doubt that another expert would come here to-morrow and tell a different story?—Well, he would not be able to maintain it so well as I can.

15303. And that is equally the question for the expert to determine?—In our agreement with the Company there is no opening for such an expert to come in to determine. The free grant has been fixed, and anything beyond that free grant must be found by the Company.

15304. I know, on the letter of the bond?—Yes.

15305. But there are also the merits. Are you determined to ignore what may be called the substantial merits simply because they are not in the bond?—

What I say is, if they have any action against the Board of Works, let them proceed at common law. It is not for the Treasury, the Board of Works, or the Board of Trade to appoint an arbitrator. They can take action against the Board of Works.

15306. Well, it is an expensive and an unfriendly method?—It is the proper method. If you appoint an arbitrator, the arbitrator gets a big claim before him; he feels there must be something in it if there is a consent to the arbitration; he feels bound to give something; and I say if they get anything at all they get too much.

15307. I consider that if a bridge is swept away under the circumstances stated there is some ground for an inquiry?—I have explained that the circumstances were exceptional.

15308. The circumstances were exceptional, but the destruction of a bridge was exceptional, too. You say the railway company have induced members of Parliament and public bodies to take an interest in the matter, but if it be true, as appears to be admitted, that people are afraid to travel on the line, that the local traffic in fish and cattle is hampered, and the development of the natural resources of that district retarded, is it not natural that the members of Parliament and the local bodies should take an interest in the case without being induced to do so by the company?—Your suggestion was arbitration as to the amount of the claim. If there is any default about the working it is provided that twenty ratepayers may appeal to the Board of Trade, and they can have an inquiry held. The delays and inconveniences, and the suggested danger to the public, are due to the bad management of the Lough Swilly Company in the way that they have abused the engines of the line and run them down into such a state that they are not fit to cope with the traffic.

15309. Has there been an application for an inquiry under Section 24 of the Order in Council?—There has been.

15310. Have twenty ratepayers applied for an inquiry under the Order?—I believe they have, and I believe an inquiry was held under Section 7 of the Act of 1896.

15311. Surely you have had no inquiry under that Section?

Mr. Healy, K.C.—There was no inquiry, sir, I am told.

15312. *Mr. Sexton.*—There are three special modes of inquiry prescribed by law in relation to this matter; there is Section 21 of the Order in Council, Section 24 of the Order in Council, and Section 7 of the Act of 1896, and so far as I understand there has been no inquiry under any one of them. Section 24 contemplates a failure by the promoters and provides a procedure to make good the default, do you consider that section applicable to this case?—I would like you to leave this to be dealt with by the next witness. I know an inquiry was held by Mr. Tatlow.

15313. That was a personal inquiry by Mr. Tatlow as agent of your Board, but was there any such inquiry as contemplated by law in such a case?—No, an application was made to the Board of Trade, but I think that application was not acted upon, the working had improved shortly after the application was made, and it was not considered desirable or necessary to go on with it.

15314. My memory is that there has been a constant stream of applications to the Board of Works for an inquiry and that you have stood out against them. Now take Sec. 21. It is provided that should a difference take place as to the construction of the line it shall be settled by an application to the Treasury—the inhabitants have tried to procure that inquiry, and you have not granted it?—That inquiry is in regard to the plans of the works to be constructed. That was an inquiry which could be held if the two engineers should disagree about the works to be done on the line. That inquiry cannot now arise.

15315. That is your reading of it?—It says if a difference shall arise between the company and the Board of Works as to the construction of the agreement, the Treasury shall be the sole judges of such, and of all matters and things therein referred to, save as regards the designs and plans of the works to be executed under the agreement.

15316. At any rate that inquiry was not held?—No, it was not necessary.

15317. Then there is Section 7 of the Act of 1896, that is not intended to operate before the opening of the line, certainly, but after. Section 7 provides that the Board of Works may in such a case as has arisen here appoint an engineer or other fit person to report upon the condition of the undertaking, and the maintenance and development of the same, and if the report should satisfy them that there is any further cause for action they may appeal to the Lord Lieutenant, and the Lord Lieutenant in Council may make such order as he thinks fit—have you used that power?—That is the power under which, I think, Mr. Tatlow was appointed.

Apr. 22, 1907.

Thomas M. Batchen, M.Inst. C.E., Engineer, Board of Public Works, Ireland.

15318. Yes, but then, having regard to your evidence to-day, the report of Mr. Tatlow must have been such as to entitle you, and, in fact, render it your duty, to proceed to the Lord Lieutenant—did you do so?—That is a matter that is, of course, in the discretion of my Board. I am not altogether sure how they proceeded, but the next witness is quite conversant with all that followed, and he will be able to tell you.

Mr. Tatlow's report under Section 7 of the Railways Act, 1896.

15319. It is very unfortunate where so many modes of inquiry are prescribed that none of them has been found to suit the case, and that the Board of Works, although your evidence shows they have complete faith in their own case, refuse to allow an inquiry?—An inquiry into the construction of the line? I don't think you can appoint an arbitrator under the agreement to decide about the construction of the line or in connection with this scheme.

15320. I gather your view and the view of the Board to be that your sense of the justice of your case is such that you object to any sort of an inquiry?—I think, sir, you are mixing up the two inquiries; the one inquiry is into the working of the line, we have had that inquiry; the other inquiry you suggest is into the construction of the line; the time for an inquiry under Section 21 of the agreement has long since gone, that was applicable before the works were started, and I might say indeed that there was a time when it was quite possible that clause would have been put in force before the works were started.

Proposed Inquiry as to construction under Section 21 of the Treasury agreement.

15321. To settle the dispute between you and the company an inquiry into the construction would be necessary, and to guard the public interest an inquiry into the working of the line is necessary?—An inquiry into the working of the line may be necessary, I might say it is necessary, but an inquiry into the construction of the line is not necessary. The Board of Trade had to be satisfied and the Board of Works had to be satisfied, and the Treasury is satisfied with the satisfaction of those bodies.

15322. You are all satisfied with each other?—Yes, and if anything now is necessary the Lough Swilly Company have to provide it themselves under the agreement.

15323. That is strictly on the clause. The view I submit to you is that a public body ought to recognise that there is no better use of public money than to employ it for the public interest, and if the public interest requires a concession in this case it might be wise to consider it?—I think my evidence shows that it would be absurd to ask an arbitrator to decide whether three certain viaducts should be demolished and others built in their stead, and whether the Lough Swilly Company should receive £5,000 in their hands for the permanent way on the suggestion that the rails were put on the line too soon.

15324. People claim more than they expect?—No doubt they do.

15325. And no doubt a great modification would be made in the event of the inquiry: but you are determined to concede nothing except a running shed?—Which did not belong to the contract at all.

15326. And as to the rolling stock you say, "We will let you have the rolling stock if you give up everything else," does that not seem to be measured rather by their necessities than by the equity of the matter. You say, "We will concede you one thing if you concede everything else"?—When that offer was made neither my Board nor the Treasury had an idea there was to be a £77,000 claim, the idea was that there were a few articles which could be dealt with in one month.

15327. I understand that there were a great many differences, and your condition was that you would give them the rolling stock, taking advantage of their poverty, if they gave up all the other differences to you?—I said there were very few differences as to the construction of the line, but there were very many

Apr. 22, 1907.

Thomas M. Batchen, M.Inst. C.E., Engineer, Board of Public Works, Ireland,

other matters with regard to the Carndonagh and Letterkenny lines.

15328. You wanted them to swop all those other matters for the rolling stock?—No, but to arrange a conference.

15329. But you would not give them the rolling stock unless they accepted your decision on everything else?—Not our decision, but what decision might be arrived at in the conference—they might get everything and the Board of Works nothing.

Conference regarding the matters in dispute with working Company proposed by the Board of Works.

15330. In a conference between you and them. I should think not; if you go into a conference saying, "We will give you the rolling stock if you give us everything else," then I mistake you very much after hearing your evidence, if on going into the conference you would give more than you had offered?—No; I say if we go into a conference we discuss the matters in dispute between us, and if they are settled to the satisfaction of the Board of Works, even supposing the whole of them had to be conceded, the Board of Works will give the additional rolling stock.

15331. If you go into the conference saying, "I will give the rolling stock if you will satisfy me about all the other differences between us," then I say the other side is entitled to regard that conference as one in which you are determined to have all the rest?—I don't think so.

The payment to Company of £3 10*s.* per mile per week for working discussed.

15332. If the £3 10*s.* per mile per week which you pay the company was measured upon the assumption of a two-train service each way daily, and then if it was found almost immediately after they had got to work that they required a three-train service each way daily, and if you, the Treasury, take half the surplus, over £3 10*s.* per mile per week, does it not appear to you now as a just man that a case has arisen in which you might make a concession, apart from the strict letter of the law, with regard to the rolling stock. They have to work more than they expected they would have to work; you get the benefit of the increased traffic by dividing the surplus; and where you receive an unexpected benefit you might make a concession even though not stipulated for in advance?—I can tell you they never anticipated they would ever have such good traffic as they have on this Burtonport line, and so much is this the case, that in making the agreement for the Carndonagh line it was decided between the Board of Works and the Company that the surplus on the Carndonagh line before being divided should go to make up any deficiency on the Burtonport line. There has been no deficit on the Burtonport line.

15333. If in order to get this higher traffic receipt they have to give a more expensive service than they expected to have to give, and if you share the benefit of the higher surplus resulting from that expanded service, I submit to you that in equity you ought to contribute to the expenditure required for carrying on that extended service?—Consider, sir, if they have that extended service, and this great increase of traffic, on the Burtonport line, they get it on the Letterkenny line, which is in the hands of the Lough Swilly Company, and on the Lough Swilly line itself, so they benefit directly on all three lines.

15334. Is this a small company, a twelve-mile line with a small capital?—It is a small company.

15335. Surely you ought to have regard to that circumstance? The official disposition seems to be to take advantage of everything that turns up to increase the surplus, but to do nothing to provide the additional expenses required towards earning that surplus?—I think these people were perfectly capable of making their bargain.

15336. Who is the gentleman who knows everything so well—who is the chairman?—Mr. John M'Farland.

Suggestion that some concession should be made to the working company in the public interest disapproved.

15337. A contractor?—Yes.

15338. What was the capital of the original Lough Swilly line?—I think it was about £80,000; I am not quite sure—something small.

15339. Well, I should think that public opinion would approve of it if in the case of so small a capital suddenly charged with such a large increase of responsibility a liberal view were taken by the public authorities with regard to these financial difficulties?—I don't agree with you there; I think quite enough money has been spent on this line, and if there is £77,000 to spare there are other parts of the country that require it more than Donegal.

15340. Are you entitled to turn your back on the district and shake yourself free of responsibility where people are afraid to travel on the line and the district is hampered by reason of the state of things?—I may tell you that an appeal was made to the Board of Trade regarding that, and they say they have no reason to consider the line is dangerous. The management is bad, no doubt of it; there are delays and inconveniences to the public, but they are due to the management; it is not the line nor the construction.

15341. I confess I look on the question from the public point of view, and care very little whether you or the company are right, but from the public point of view it is scandalous that this dispute should continue from year to year to the disadvantage of the public because a public department, which I think ought to set an example of reasonableness will not admit any third party to settle the dispute?—I don't see why they should. The management is admittedly bad, and the public ought to go to the directors and get them to put it right, and if the company have any claim against the Board they can go to common law and get their claim set right.

15342. Your position is not that of people using private money; you are a public authority responsible to the public, and if the public or a large section of them think this matter ought to be set right even by a larger expenditure, I think a wider and more intelligent view of your duty would be to conform to that attitude?—You would not suggest that we should demolish the viaducts?

15343. No, I say people ask more than they expect, and when temper is hardened and blackened by years of dispute, they do not tend to become more reasonable. I submit it is not reasonable that this state of things should go on to the damage of the district, because a public department will not admit any arbitrator or mediator on a dispute in which they have such confidence in their own case, I think the public are apt to judge in such circumstances that their case is not as good as they represent. Can you give any evidence on the purchase proposals for the Letterkenny line?—I am sorry to say I cannot; I had no direct dealings with it.

15344. This system consist of four lines, the Lough Swilly, Letterkenny, Carndonagh, and Burtonport, the original line, two lines built under the Act of 1896, and the line of which you are mortgagee in possession, the Letterkenny line. You spoke a while ago about the Treasury getting back their own. Did they lend £85,000 about a quarter of a century ago?—Yes.

15345. And they have charged 4 per cent. interest on all that ever since?—Not on all that.

15346. Yes, every penny of it, on the original mortgage of £50,000 4 per cent. interest, and on the second mortgage, £35,000, 4 per cent, for interest, and 1 per cent. for sinking fund?—That is so.

15347. So that in the time that has elapsed since these lines were made you have got back the whole amount of principal by way of interest?—That may be.

15348. And in addition, out of the second mortgage there has been £13,000 of the principal paid off, leaving a balance of £72,000. There is also some arrear of interest on the first mortgage?—Yes.

15349. Was there not an offer made to your Board on the part of the Lough Swilly Company, to buy the Letterkenny line from you, either at a lump sum of £70,000, or at what might be found to be the value of it on an independent expert valuation?—I believe there was, but I am not familiar with it; I was down in Londonderry, and I would not be consulted on a point like that in any case.

15350. But as an official you are aware of it?—I am just aware of it, but I know nothing about the details, and would rather not go into it.

15351. You know the Lough Swilly Company offered, in case this was done, to relay that line with 60 lb. rails?—So I am told.

15352. And to relieve the ratepayers of all liability under the guarantees?—I heard that also, in evidence.

15353. If that line were relaid with 60 lb. rails there would be no reason for objecting to run engines through from Burtonport to Derry?—Not a bit.

15354. At present if they run an engine through which is heavy enough for the Burtonport line it is apt to be too heavy for the line of which you are mortgagees, and you would object?—Quite so.

15365. If that bargain were carried through it would get rid of all the engineering objection; it surely must be embarrassing to that company with their eighty-mile line to be obliged to run with different engines on separate sections?—I don't think so; the carriages run through, and all that is required is that at Letterkenny there should be an engine ready; one is taken off and another is put on; there is no trouble or difficulty.

15356. *Chairman.*—Except the extra expense in working?—It may cost them a little more in working.

15357. *Mr. Serton.*—Can you say the Board have closed their minds against this offer?—I cannot say.

Examined by Colonel HUTCHESON POË.

15358. I suppose that the agreement which was entered into by the Board of Works with the promoting company is the agreement usually entered into for the construction of railways under these various Acts?—I think so.

15359. And clause 11 under which the Board of Works had power, in the event of default on the part of the promoting company to carry out the work, is also similar to clauses inserted in other agreements?—Well, I am not quite sure, but I believe it is a new clause.

15360. There is nothing exceptional?—I think not.

15361. What you said, I think, was that in determining the free grant tenders were invited, and in this particular instance they were invited by the Board of Works? Assuming the Company had carried out their part, and were prepared to construct the line, would they have asked for tenders?—They did, as a matter of fact. Tenders were asked for by an advertisement prepared by the Lough Swilly Company, and were addressed to the Secretary of the Company, care of the Board of Works, Dublin, and were to be opened by the Board of Works and the Company together.

15362. So that the Company had a voice in the decision as to whether they were in their opinion adequate?—Certainly.

15363. And on the face of these tenders the amount of the free grant was determined and fixed upon at £315,000?—Yes.

15364. At that time when the tenders were submitted and, according to you, considered by the Lough Swilly Company and the Board of Works, did the Lough Swilly Company raise any objection as to the amount of the free grant? As to the insufficiency of the grant?—I do not think they did at that time. They wanted more money under the heading of promotion expenses.

15365. Can you tell us or give us any idea what was the amount allocated out of the free grant towards promotion expenses?—The total was about £15,000.

15366. What is the usual procedure with respect to the payment of the promotion money? Is it paid before any work is commenced with regard to construction?—A great deal of it had to be paid before the work was commenced so as to enable the promoters to pay the engineers for the preparation of the Parliamentary plans and the expenses of promotion before the Privy Council.

15367. I quite understand that?—And a certain amount was handed over to the Company and they were expected to provide vouchers for its expenditure.

15368. In this particular case these plans and specifications and expenses attending the bringing of the matter before the Privy Council, and so on, were all incurred by the Lough Swilly Company?—They were.

15369. And certain expenditure was involved on them?—Yes.

15370. On the foot of that expenditure, what was the actual amount paid to the Company by the Board of Works?—About £15,000, I have not got the exact figures. I think I might tell you roughly that £1,500 of the amount allocated has not been vouched for yet.

15371. Of the £15,000 they received £13,000?—They received more than they have been able to produce vouchers for.

15372. That would leave a balance of about £2,000 due to the company?—They would have received that had they produced the vouchers.

15373. In Clause 11, which has been referred to, you seem to have pretty drastic powers, are they more so than in similar undertakings with other companies, particularly these light railways?—I don't think so.

Mr. Healy, K.C.—May I ask a question, Mr. Chairman, with your permission?

Chairman.—I don't think we are finished with the witness yet.

Mr. Healy, K.C.—I beg your pardon. I thought the Commissioners had concluded their questions.

15374. *Colonel Hutcheson Poë.*—I think you said that the Board of Works on taking over the construction of the railway took over the engineer and staff of the Lough Swilly Company for the purpose of assisting in the work?—They did.

15375. These men were not under the orders of the Company but under the orders of the Board of Works?—Yes.

15376. At the same time, I presume the Company benefited indirectly, because they had confidence, as I presume they would have, in the men who had been in their employ?—Oh, yes.

15377. And this engineer whom you took over, was he in the employ of the Company at the time?—No, being a small company they did not employ a permanent engineer on their staff: a permanent way inspector did all the work. They had to employ an engineer for the work of preparing plans and carrying on the construction of the new line. This was the engineer we took over. He prepared the plans and specifications in consultation with the chairman of the Company.

15378. At that time they contemplated doing the work themselves?—Yes.

15379. He was, presumably, a man in their confidence more so than an outsider?—I should certainly say so.

15380. Whilst the deviations were proposed to be made by this engineer, had the Lough Swilly Company an opportunity of submitting them to their own engineer or to their own consulting engineer?—In addition to having referred to the Board of Works on the deviations, they investigated the deviations for themselves, and satisfied themselves as to the desirability of carrying them out.

15381. And I suppose the very fact that they promoted an Order in Council which approved and confirmed these deviations is conclusive evidence that they saw no reason to object to them?—I think so.

15382. I think you said that the Donegal County Council also had the alterations and modifications of the original specifications submitted to them?—Yes; they had to approve of them also under the Act of 1896.

15383. Did they enter any protest against them?—They approved.

15384. Without demur?—Without demur.

15385. On page eight you go on to say that in consequence of the complaints of the Lough Swilly Company it was the opinion of the Board of Works that an independent inquiry was desirable. Does not that rather indicate that there was some justification for some of those complaints?—I do not understand the question.

15386. On page eight you say at various times during the progress of the works objections were made which were disposed of. Then an independent engineer was sent down to examine into the Company's complaints. Of course that independent engineer was called in by the Board of Works?—Yes. I remember distinctly. The Board of Works, while expressing perfect confidence that the work would be carried out properly, wished to satisfy themselves, in view of eventualities such as have occurred now, and thought it would be desirable to send an independent engineer to see the works—Mr. Barton.

15387. *Chairman.*—That was the gentleman from Dundalk?—Yes.

15388. *Colonel Hutcheson Poë.*—It was a course adopted, no doubt, to get the contract through, and to try to satisfy the Company?—Yes.

15389. Did the engineer of the line, the Company's line, at any time during the construction question the way in which the work was being carried out or these different alterations made as to the viaducts or other matters?—Not as regards viaducts. But he did about the construction of the line over bogs, and portions of the fencing, and other matters of that kind. A number of complaints were sent up to the Board of Works in Dublin, and they were specially investigated by myself, and I had the remarks also of the different engineers on the points raised. After receiving my report the Board of

Promoting Company's Engineer and Staff taken over by the Board of Works.

Lough Swilly Company's approval of the deviations from original plans, and their promotion of the Order in Council.

Independent Engineer sent to investigate complaints made by the Company during the construction of the line.

Apr. 22, 1907.

Thomas M. Batchen, M.Inst C.E., Engineer, Board of Public Works, Ireland.

Private agreement between the Lough Swilly Company and the Contractors re'ative to the deviations.

Works sent down Mr. Barton to investigate the matter.

15390. Then, I presume, as regards the allegation that the specification was departed from in several important matters, they did complain at the time that this departure took place; they did in fact raise the point?—They did. I may mention here with regard to these deviations, which extend to about sixteen miles of the entire line, the Board of Works found, after the line was opened, that the Company, although they had no power under the original contract to do so, had entered into an agreement—a private agreement—with the contractors by which they reserved to themselves the right to approve or disapprove of any of the works.

15391. I don't think that has been mentioned yet. I was going to ask a question about it later on, but as you have touched upon it you may take it now. Here it is on page seventeen. Are the Commissioners to understand that a private or, so to speak, secret understanding was arrived at between the Lough Swilly Company and these contractors that before consenting to these deviations which, in the opinion of your engineer, were improvements on the original specification, that, as I say, before consenting to them they had to receive compensation money or something in the nature of compensation money?—Yes, they had. The contractors had to pay a large sum of money to the Lough Swilly Company to get them to promote the deviations.

15392. You are in a position to speak to that of your own knowledge?—Yes. Of my own knowledge.

15393. Perhaps you can tell the Commission what the amount was which was paid over in that way?—The sum of £5,900 was paid over to the Lough Swilly Company as their price for promoting these deviations.

15394. *Chairman.*—For agreeing to them?—For agreeing.

15395. Not for promoting, for agreeing?—To promote also. They had to promote.

(See Appendix No. 8).

15396. *Colonel Hutcheson Poë.*—They said they would not agree if they did not get the money?—I have the agreement here between the contractors and the Lough Swilly Company.

15397. Will you read it?—

Chairman.—It is too long.

15398. *Colonel Hutcheson Poë.*—The relevant point is the consideration?—The first clause is (*Reads*):—"The Londonderry and Lough Swilly Railway Company shall apply to the Lord Lieutenant in Council for an Order in Council authorising the said deviations and abandonments as aforesaid." The second clause (*Reads*):—"The said Pauling and Company shall in consideration of the premises pay to the Londonderry and Lough Swilly Company on a separate credit the sum of £5,900."

15399. *Chairman.*—Do you know that it was carried out?—That money was paid into a separate account. You won't find it in the returns, the half-yearly returns of the Lough Swilly Company. The money was paid.

15400. You know it?—I know it.

15401. What was it to be credited to?

15402. *Colonel Hutcheson Poë.*—I think that point is immaterial, at any rate they got the money?—Clause 6 was:—(*Reads*)—"The works of such deviations shall be executed and carried out by the said Pauling and Company, Limited, in accordance with the provisions and the specifications of the original line as far as same are applicable to the works, and such deviations to the reasonable satisfaction of the said Londonderry and Lough Swilly Railway Company and their engineer." They could thus have approved or disapproved of the manner in which these deviations were being carried out during construction.

15403. If they knew a secret agreement had been made, it would, I think, to a certain extent influence the Board of Works in refusing to entertain the demands put forward by the company?—I am not sure they looked upon it quite in that light, but they would be perfectly justified in doing so.

15404. *Chairman.*—You call it a secret agreement?—I did not call it a secret agreement. I said a private agreement.

15405. How did you get it?—I had heard of it for some months. It was a pretty well known matter. About six months ago the contractors had referred to the matter—they had a very much harder name than I should care to use—to the giving of the £5,900, and I asked them to let me see the agreement, and they sent a copy to me.

15406. *Mr. Sexton.*—Although you refused their claim for £100,000 they sent it to you?—Yes. (*Copy of agreement handed in.*)

15407. *Colonel Hutcheson Poë.*—You have said the Board of Trade Inspector had considered some minor items necessary, and that they should be attended to. What were these, roughly speaking?—They were small matters. The company said they could be done within a month.

15408. What was the total cost involved, roughly?—I am not sure that I put any price upon them they were so small.

15409. That Board of Trade report was submitted to and acquiesced in by the Lough Swilly Company?—Yes, it was. They entered into the usual agreement for working the line in accordance with the Board of Trade regulations.

15410. Were there exceptions, say, with reference to this running shed?—There were.

15411. At the time this £2,000 was set apart for this running shed, I presume it was never contemplated that it would be located upon any other portion of the system except that which you were about to undertake?—That is so.

15412. Afterwards they seemed to wish to have it transferred to an adjoining section, a more distant section of the line?—Yes, to their own line at Londonderry.

15413. Did they give any reason for that departure from the original plan?—Yes. They said it would be more convenient.

15414. *Chairman.*—They said it would be more convenient?—Yes.

15415. It is the natural terminus of the line.

15416. *Colonel Hutcheson Poë.*—You say the time to raise that point was when they entered into the agreement?—Yes.

15417. Did the Board of Trade express any opinion after the inspection as to the equipment of the line or only as to the matter of construction?—Not in the matter of equipment. They saw that the bridges were strong enough and that the line was properly constructed in the interests of public safety.

15418. Did they enter into these various differences between sufficiency or insufficiency of equipment. Did the Board of Trade express any opinion?—No, they had no power to do so. The Treasury are the sole judges upon that point.

15419. At the conference which you held with the company's engineer you agreed to have a certain number of the improvements carried out, and others struck out; have you any idea what was the cost of these improvements? Was it a matter of £1,000 or less?—They were very small. I believe little more than £1,000. I have not gone into the question of price. They were all carried out.

15420. The contractor carried them out?—Yes, during the year of maintenance.

15421. In point of fact, were any of the extra items outside the contract essential to the proper working of the line?—Some of them would not be essential. No doubt they would be desirable, but I would not say they were essential. There were two additional passing places asked for, but if these were required they should be built by the Lough Swilly Company themselves under the Treasury agreement.

15422. The different sums scheduled in the claim of the Lough Swilly Company, for passing places, enlarging certain stations, and better accommodation are all given in your evidence. You said that the traffic of the line had increased enormously, and quite beyond the anticipations of the Board of Works, the Lough Swilly Company, or of anyone in the district; and, therefore, I presume that if you had had reason to anticipate such a development of traffic that probably the Board of Works would have made some larger provision in the way of station accommodation, passing places, and other matters of that kind?—The original proposals, designs, and provisions for all these stations and passing places emanated from the promoters themselves.

15423. Admitting that, they were at the same time based upon certain anticipations of the traffic, and I think you said just now to Mr. Sexton the Board of Works, as a matter of fact, anticipated a loss upon the working of this section, and that the Carndonagh

line was, in certain circumstances, expected to make up the deficit upon the Burtonport line. I put this to you. Under all the circumstances ought you not to consider whether such a large increase of traffic and development having taken place, although strictly speaking on the legal merits the Board of Works are not called upon to contribute one farthing beyond what they have done, yet if satisfied that the accommodation at the present moment is insufficient, that the passing places are inadequate, ought they not, I say, or at any rate might they not stretch a point and improve the accommodation to a certain extent?—Yes; I agree with you. If the company abandon these ridiculous claims, as I may call them, and approach the Board of Works and the Treasury in a proper spirit, this £7,000 or £8,000 of profit that has been made upon the line might certainly be devoted to extension. Although I say that, the Board of Works and the Treasury have got to decide it, but I think it would be quite reasonable.

15424. *Mr. Sexton.*—Would not the intervention of a third party be likely to promote that result?—I don't think so.

15425. *Colonel Hutcheson Poë.*—Under one of the sections of the agreement, the surplus instead of being divided between the company and the Treasury may be applied from time to time on the erection of additional stations. You have actually power to devote £2,000 of the profit of the last two years which is now divided between the Treasury and the company to such a purpose?—Yes, but that is without prejudice to the company's obligation to construct the same at their own expense.

15426. I take it that on the legal merits of the case the company has not a leg to stand on. The legal construction of the bargain, and the reading of Clause 11, shows they are bound to maintain and work the line in an efficient manner without going to the Treasury for a single penny?—That is Clause 12, the maintenance clause.

15427. Can you tell me in the case of other lines constructed under the Act of 1896, where similar clauses obligatory on the railway company exist, whether any assistance, financial assistance, has been given by the Board of Works such as is asked for now by the Lough Swilly Company towards providing better accommodation. In this case I don't wish to do more than discuss accommodation?—No, I am not aware of any, unless I go into the case of the Letterkenny Railway, where the Board of Works are in possession.

15428. That is their own child. They are looking after it. It is not on all fours with a company working independently. I was referring to subsidiary lines worked by agreement with the Treasury, and where there might or might not be a demand or claim such as this company is asking for exceptional assistance?—I cannot tell just now. I don't suppose really there are many lines where there is any surplus to be had which could be devoted to new works.

15429. With regard to the question of rolling stock, the offer of the Treasury was made practically as soon as the line was opened, and evidently at that time the Board of Works must have been of opinion that the stock was rather inadequate. I presume they were, seeing they made that offer?—Yes; when the Board saw very soon after the line was opened that a three-train service would be necessary.

15430. And the only reason they did not carry it out was on account of what you call these preposterous claims?—At the time we did not know the claim would be so large.

15431. *Chairman.*—They made other claims?—We had the earlier claims.

15432. *Colonel Hutcheson Poë.*—Still, if at that time they thought the rolling stock was inadequate, it must be more so at the present time with a largely-increased passenger and traffic development?—The traffic was very great during the first year, or perhaps the first six months after the line was opened. I do not know that it has steadily increased.

15433. The traffic has not steadily increased?—No.

15434. At this time the line was doing well?—We are more aware of it now.

15435. Well, now, we can form an opinion from the very fact that the Board of Works were willing at the commencement, from the opening of the line, to increase the rolling stock that it must have been insufficient; therefore, unless somebody came forward, that insufficiency would still, and it seems does still, exist?—Yes.

15436. *Chairman.*—I understand that the rolling stock was sufficient for two trains a day; then they wanted three trains a day; that would require 50 per cent. more rolling stock?—They found they would require three trains a day soon after the line was opened. The rolling stock was quite sufficient for two trains per day.

15437. *Colonel Hutcheson Poë.*—At the time the line was opened. This was the beginning. I understood you to say that shortly after the line was opened the company said the rolling stock was insufficient?—Yes, if a three-train service was to be continued.

15438. Insufficient for a three-train service?—Yes.

15439. In May, 1905, the Board of Works had notice for the first time that the large claim for the sum of £70,000 was being made against them?—Yes, about two years and two months after the line was opened.

The claim for £70,000 only made more than two years after opening of line.

15440. That was after the contract which was undertaken with the contractors had expired, when it was manifestly impossible, even if the contractors had failed in their obligations, to call upon them to make these deficiencies good?—Quite so.

15441. Now, one or two questions with regard to the larger items in the schedule of claims; you spoke of the company claiming as for viaducts, £13,000, or in the alternative, that they should be given a capital sum calculated upon the annual cost of maintenance required for the upkeep of the steel girders. What does that amount to?—I have not calculated.

The larger items discussed.

15442. Is it actual expenditure on the keeping up of the steel work?—I think they have detailed it in the claim.

15443. *Chairman.*—It is in the claim?—I think they have counted upon renewing the girders every fifty years and have brought that sum down to an annual charge which they have capitalised. Then there is the annual charge for painting.

Colonel Hutcheson Poë.—That cannot be a heavy one.

15444. *Chairman.*—Oh, no. (*Witness*).—It cannot be a very heavy sum.

15445. *Colonel Hutcheson Poë.*—With regard to the tank engine, it is quite evident from Mr. Malcolm's report that he thought the tank engines not adequate for the Burtonport Extension, and that it would be more satisfactory if tender engines were supplied?—Yes; that I saw in the report. The tender engines were for running through the whole way from Burtonport to Londonderry.

Mr. Malcolm's report as to alleged inadequacy of tank engines,

15446. The whole way?—I agree with him that for the working of the whole line it would be the better system.

15447. What is the difference in the relative cost?—The tender engines cost about £400 more than the tank engines.

15448. Was it your regard to economy and to the specifications that made the Board of Works refuse to take the tender engines?—The Board were advised it was better to use the tank engine on the line from Letterkenny to Burtonport.

Suitability of tank engines for the Burtonport Railway explained

15449. On account of the gradients?—They had greater traction force, were more convenient to work, and did not have the additional weight of a tender. The tank saved that greater weight, and the engine could draw an entire carriage instead of a tender.

15450. Do the non-advantages counterbalance the advantages?—On a small line like Letterkenny to Burtonport the tank engine is the best.

15451. They have them, I think, on one of the Kerry lines to Valencia?—Here is a drawing of the engine supplied.

15452. I think it is the same kind of engine. Is this the only line they have them on in Ireland?—Oh, no. There are tank engines on the Donegal line, and on all the narrow gauge lines in Ireland.

Chairman.—They are becoming universal in England for suburban traffic.

15453. *Colonel Hutcheson Poë.*—Had you any plans from the company about the work on the Carndonagh line, any plans for the construction of that line by the company. That line was promoted and constructed by the Lough Swilly Company?—Yes, it was

Promotion and construction of the Carndonagh line.

Apr 22, 1907.

Thomas M. Batchen, M.Inst. C.E., Engineer, Board of Public Works, Ireland.

promoted by the Company, but constructed by Pauling and Company under an agreement exactly similar to that prepared for the Burtonport line. In this case, however, the Company were parties to the agreement, and their engineer had charge of the construction.

15454. They constructed it?—The same contractors constructed the two lines.

Cost of construction of Carndonagh line.

15455. The cost of construction of that line, I presume, was very much less than of the Burtonport—the excavations and cuttings were very much lighter?—The excavations and cuttings were lighter, but the cost of the line was not very much lower. I think it was £6,200 per mile as compared with £6,340 for the Burtonport line.

15456. Was the specification practically on the same lines?—No. The promoting company were able to get a very much better line on the Carndonagh—a better class and much heavier work than they really intended in their Parliamentary plans. To give you an instance, the stations were only to cost £6,200 when they went before the investigators.

15457. How many stations?—About five. But when the stations were advertised for tenders it was found that the lowest tender was over £14,000 for the five stations on the Carndonagh line. Then again, for the main line, they specified that all the masonry should be built in cement mortar, instead of lime mortar. There is not an ounce of lime used in the construction of that line. A great deal of money has been wasted in unnecessary and extravagant work on that line. They acted as contractors for the stations, but the Board of Works, or the Treasury, paid the cost.

Alleged extravagant works.

15458. *Colonel Hutchèson Poë.*—The Board of Works had an opportunity of considering that specification and revising or cutting it down?—They had, but that was settled about a year before the specification of the Burtonport line was made.

15459. And the work that was contemplated and specified for on the Burtonport line was of a very much lighter nature?—Well, it was more in conformity with the requirements of the country, and was indeed what an ordinary railway company would do, if constructing the line at their own cost. As to the Carndonagh line, if the company had had to construct it themselves, at their own cost, they would never have spent the amount of money actually spent on that line.

15460. Does it in your opinion compare unfavourably as regards cost with other lines?—I think it does.

15461. Has it necessitated a larger expenditure of public money than was really justified by the requirements?—I think so.

Accuracy of Dr. Todd's statements *re* Burtonport Railway impugned.

15462. You say in your evidence that you would be prepared to answer any questions with reference to Dr. Todd's evidence, and as I had the pleasure of examining him, I will just ask you a few questions. I asked Dr. Todd—"They took it over, and had no idea of what would equip the line in a satisfactory manner?" and Dr. Todd stated—"No; they protested from the beginning, but I understood that the Board of Works said that if the traffic showed that more rolling stock was necessary they would provide it."

Witness.—Dr. Todd's statement is quite incorrect.

15463. *Colonel Hutcheson Poë.*—I also asked him—this, "I should have thought the Londonderry and Lough Swilly Company would have been asked to see that everything was efficeint before they took it over?" Dr. Todd replied—"No; they were under a contract with the Treasury. The contractors have a year of maintenance, and the usual custom is that several things in lines that are not completed at the time of opening are made good during the year of opening. In this case it was undertaken that they should be made good during the year of maintenance, but the engineer had no chance of checking the works except during the time of inspection by the Board of Trade engineer, and they then called attention to various defects, and the deficiencies they then pointed out and others since observed are said to total up to £70,000." Now, is that a correct description of the situation as regards the opportunities which the engineer of the Lough Swilly Company had?—On the contrary, it is a very incorrect statement. The line was examined and inspected by the Lough Swilly Company's engineer and the Lough Swilly Company's chairman on several occasions, and shortly before the opening of the line it was minutely inspected by the company's engineer, and the company took it over with the reservation that the Board would provide the running shed, and do whatever the Board of Trade required.

15464. *Chairman.*—There was a letter to that effect?—There was a letter to that effect.

Mr. Healy, K.C.—I may say that owing to the sharp controversy that has arisen on this subject that acting on the instructions I have received, I think it better not to cross-examine this witness. We will be in a position to present an independent witness who will give evidence on behalf of my clients. The company do not accept the view presented in the statement of the witness. When the company will have an opportunity of being heard they will call one of their officers. We have some letters to produce on the point. There is a letter in which we were warned off the line by the Board of Works. We have not that letter here to-day, but we can produce it. We actually commenced litigation to endeavour to compel the Board of Works to allow us to construct the line. If the Commission would give the company an opportunity at a later stage to call a witness on the subject, I think it would be the more desirable way of conducting the case.

Chairman.—We will give the opportunity, but I think it would be a benefit to us if it was given not at this, but the next sitting, which will be in about a month—I mean not to defer it longer than that.

Dr. Todd (Solicitor, Londonderry).—You don't mean to-morrow.

Chairman.—Oh, no, the next sitting in May.

Mr. Healy, K.C.—Then there is this question about the tank engines—all these statements we controvert.

Mr. John M'Colgan examined by the CHAIRMAN.

Mr. John M'Colgan, Representative of the Strabane Mercantile Association.

15465. You are from Strabane?—Yes, sir.

15466. And you are in business there?—Yes, sir.

15467. Are you here in any representative capacity?—I am here on behalf of the Strabane Mercantile Association.

15468. The Mercantile Association consists of the principal merchants and dealers of that place, I suppose?—Yes, sir.

15469. Just for my information—is Strabane a large place?—Yes, it is, sir.

15470. What is the population?—Considerably over five thousand—it is a fairly large provincial town.

15471. It is a market town?—Yes, a very important town.

15472. You are a member of the Committee of Management of that Association?—Yes, sir.

15473. And you have been connected with Strabane for many years?—Yes, upwards of twenty years.

15474. In business?—Yes, but not all the time for myself.

15475. Have you considered this question of railway management in Ireland at the Association?—Yes, it has been discussed.

15476. Do you appear before us complaining of the railways in your district?—Yes, sir; we have some complaints to make with regard to rates.

15477. Speaking generally first—we can go into detail afterwards—generally you are satisfied with the railways?—Generally we are satisfied with the railways as a means of transit, but we are not satisfied with the rates.

15478. But at any rate you have no particular grievance against the particular railways that serve your town except as regards rates?—And other facilities, such as cheap market trains.

15479. Then we will say cheap rates and fares?—Yes. With regard to the officials, I may say I have always received the utmost courtesy and attention from the Great Northern and Midland Railways.

15480. Just give me a typical case if you can of what you mean by unfair rates—take the rates for some of the articles in which you deal?—I will give you an instance of the boot trade.

15481. Boots and shoes from England to Strabane?—Yes, from England to Strabane as compared with Derry. The rate from Leeds to Derry is 47*s.* 6*d.*; to

Strabane, 50*s.* 10*d.*; from Leicester to Derry, 55*s.*; to Strabane, 59*s.* 2*d.*

15482. That is quite sufficient. I will put it shortly in this way—that from most of those places in England—Northampton, &c., the rates are lower to Derry than to Strabane, although the distance is greater?—Yes, fourteen miles further on.

15483. Of course you know as a sensible man why the rates are less in Derry?—I understand it is because it is a seaport town.

15484. Is that not a fair and reasonable explanation?—Well, we claim to have a water-way too—we have the Canal.

15485. You have not the steamer coming direct by sea?—No, but of course the small lighters can come up the Canal.

15486. I suppose you know that if they didn't charge a lower rate they would get no traffic, because the whole of the traffic would go by sea?—The sea rate is half-a-crown less even.

15487. It is a reasonable thing for the railway company to charge less to Derry than to any place inland, in consequence of the sea competition—that is a reasonable explanation?—Yes, but we cannot understand why they should carry goods past Strabane cheaper. Allow me to quote another instance. They get oil-cake from Belfast to Derry, and it is cheaper to book it to Derry and re-book on to Strabane than to Strabane direct—they save half-a-crown a ton.

15488. I can well understand that, because they come all the way by water. If there was no low rate they would see no traffic?—It is not by water but by rail.

15489. It is the water-way rules the rates?—Yes, I understand, sir, to a certain extent.

15490. Don't you know it?—I understand it is.

15491. Now, your particular business—boots and shoes—is not an industry that is cultivated in this country?—Well, unfortunately, at present it is not. That is why we complain of the high rates. I am not in favour of cheap inland through rates on any industry—on any article that can be produced in the country, but boots cannot apply except in a very small way.

15492. Would you like cheap rates for imported boots and shoes?—Yes, for everything we cannot produce at home.

15493. Why cannot you produce boots and shoes at home?—Well, the industry never developed properly. In the first place, tanning was abolished—was taken from us by Englishmen principally—with the result that our tanneries are all now closed, and there are only a few struggling boot factories.

15494. Then as a matter of fact nearly all the boots and shoes worn in Ireland are imported?—Yes.

15495. And you are in that business?—Yes.

15496. You have another business attached to these boots and shoes—I see you are an agent for Gilbey's?—Yes, sir.

15497. And of course you do a large trade in wines and spirits?—Yes.

15498. And their traffic is carried in cases?—Yes, in cases and casks.

15499. But where do you get them from?—From the Dublin depot.

15500. Not direct from England?—No.

15501. Give us what you consider your grievance is in connection with that traffic?—Just the rates. All the goods come in cases and casks, and the rates are on the higher scale in consequence of the supposed extra risk, but this is, however, purely a delusion, as Messrs. Gilbey have told me repeatedly that under no circumstances can they get a claim settled for breakages or damage, the custom being to compel carters to sign for the goods as being in good order and condition, while, of course, they know nothing whatever of the contents, and the plea then is, if there is any breakage or damage it must have occurred in the carting from the station to the consignee's place.

15502. I suppose the traffic is carried at owner's risk?—I don't think so, sir, in this case. The rate for whiskey, wine, and spirits, in casks or cases, from Dublin to Derry is 15*s.*; to Strabane, 20*s.*

15503. Well, then again, the traffic could go all the way from Dublin to Derry by water—couldn't it?—Yes.

15504. And wouldn't it if the railway company didn't charge a lower rate?—Yes.

Mr. Healy, K.C.—He is comparing the cartage rate with the station to station rate.

15505. *Chairman.*—Is the Strabane rate a collected and delivered rate?—Yes.

15506. And the Derry rate is station to station?—No, it is the same, I think—I think it is delivered in the same way in Derry.

Mr. Healy, K.C.—I am told it is station to station.

15507. *Chairman.*—Well, there is a difference of 5*s.*?—Yes.

15508. Now then comes the instance of stout?—Yes, that is an important Irish industry. Well, stout——

Comparison of rates for Stout from Dublin to Strabane and Derry.

15509. From Dublin to Strabane?—It is the same as from Glasgow or Burton-on-Trent. The rate has been brought down from 20*s.* to 9*s.* 6*d.* from Dublin to Strabane, but even in this Derry has got a further preference of 2*s.*, for although the rate-book shows 12*s.* 6*d.*, I have been informed that the amount really charged is 7*s.* 6*d.*

Mr. Healy, K.C.—That is a rate station to station—the other is delivered.

15510. *Chairman.*—That is the explanation?—I got these facts from Messrs. Gilbey. They have also got a depot in Derry and the same custom prevails. I think both are alike.

15511. Gilbey's is a big firm, and surely they are able to take care of themselves?—Oh, yes, sir, but I have to pay the rates.

15512. Let us go on now to what you have to say about the train service and passenger fares. What have you got to say about the train service from Strabane to any place—you have not sufficient market day trains?—The complaint is that Derry is getting greater facilities.

15513. What is the population of Derry compared with Strabane?—About 35,000.

Equal passenger train service and facilities to those afforded Derry advocated for Strabane.

15514. You don't expect the same train facilities at a place with 5,000 as you would get in a place of 35,000?—Well, Strabane by its geographical position, and the district in which it is situated, is duly entitled to just as good a train service as Derry. For instance, there are eleven cheap trains running to Derry in the week and to Strabane five.

15515. I should have thought that was a very good number—you don't want eleven, do you?—We would want the same facilities as Derry.

Mr. Healy, K.C.—Strabane has a high opinion of itself.

15516. *Chairman.*—He has a high opinion of the place I don't see really that you have much to complain of. I don't think you have, except that you want to have the same facilities as a town with 35,000 inhabitants. Now, what about cheap trains. What do you want—two cheap trains?—Yes.

Extension of market ticket facilities urged.

15517. Do you mean by that on both systems?—On the Midland system and the Great Northern.

15518. Both of them run through your place?—Yes.

15519. Do they use the same station?—Yes.

15520. You want cheap trains every Tuesday, Wednesday, and Saturday?—Yes.

15521. Why not every day?—It is three days, sir.

15522. You are making a suggestion there which seems to me to be most unreasonable—you would do away altogether with the ordinary fares and charge cheap tickets for every train?—Certainly not.

15523. Are these three days market days?—We have two markets.

15524. What is the general market day?—Tuesday. Wednesday is the flax market day. We give the names of the stations from which we would want them on both systems.

15525. I see you name nearly all the stations in the North of Ireland?—Not quite, sir.

15526. Now, the flax market—surely there are not many people attending the flax market?—Oh, there does. In the winter time it is well attended.

15527. Is there a Corporation in Strabane?—An Urban Council.

The advantage of the introduction of the Midland Railway into Strabane district.

15528. Now what have you got to say with reference to the subject that has been mentioned here several times about the introduction of the Midland Railway Company into your district. Do you think that has been of advantage?—Well, I don't think it has been any improvement, sir, up to the present. For the first five or six years, when the line was extended to Derry—from Strabane to Derry—there was competition in rates, with the result that the trade of the town improved very much—in fact for the past seven years the valuation went up over two thousand pounds—but now they have agreed to charge equal rates and fares and pool the traffic.

Apr. 22, 1907.

Mr. John M'Colgan, Representative of the Strabane Mercantile Association.

15529. The Midland Company have not been there seven years?—No; it was the Donegal Company.

15530. I am asking you about the Midland?—This competition has now ceased, and the accommodation also with regard to porters on some of the stations has ceased. They have been economising to the dissatisfaction of the merchants and farmers. They have not the accommodation at the stations and they are doing away with some of the porters.

The advantage of the introduction of the Midland Railway into the Strabane district.

15531. On the Donegal line?—Yes, on the Midland now.

15532. Do you know this of your own knowledge?—Yes, I do. I got information from a reliable source. There was a gentleman told me the other day they were unloading a cargo of oil cake and he put his horses to it, but had to unloose them again. They had no accommodation and he had to take his horses back.

15533. *Mr. Sexton.*—Are you speaking of that part of the line that belongs to the Midland?—It is Strabane to Derry that belongs to the Midland.

15534. And the rest to the Joint Committee of the Donegal line?—Yes, sir, exactly.

Alleged excessive rates for small parcels.

15535. *Chairman.*—Now, small parcels. I see that you consider that the rates are too high there for small parcels?—Yes. I have a grievance in that.

15536. Of course in your particular business you send principally by parcels post?—We send a good deal by parcels post, but then there is a lot of business done in large parcels between 11 lbs. and 28 lbs.

15537. The minimum on the railway is 28 lbs.?—Yes.

15538. All up to 28 lbs. is charged for as 28 lbs.?—Yes.

15539. You know the same rule is in force in England?—I am told so.

15540. *Mr. Healy, K.C.*—It is the general rule, I am told. *Witness.*—We want the scale to include parcels weighing 7 lbs. 14 lbs, and 21 lbs.—up to 14 lbs. anyway.

Increased lavatory accommodation for third class passengers recommended.

15541. What do you suggest with reference to third-class passengers. I see you want lavatory accommodation?—We want lavatory accommodation on all trains running between Derry and Belfast and Dublin. We consider that as a considerable portion of the revenue is derived from third-class passengers they are entitled to consideration.

Mr. Healy, K.C.—All through there is, except on the night mail.

15542. *Chairman.*—You don't want it on the stopping trains?—No, certainly not.

15543. It is only on the long distance?—Yes.

15544. Many of the trains have got this convenience and it will all come in time?—We hope so, sir.

Extension of Railway from Strabane to Cookstown advocated.

15545. I see your association is interested in a projected new railway from Strabane to Cookstown?—Yes; that is a new line projected.

15546. Who by?—It has not taken practical shape yet, and I think they are endeavouring to get part of it scheduled as a congested district. It would open up a wide district of country.

15547. It is an agricultural country?—Yes, and there are some quarries, and coal has been found in it, I am told.

15548. Are the quarries worked?—Some of the quarries are worked, but in a very crude state.

Industries awaiting development in the district.

15549. Is it good stone?—Yes, freestone and limestone.

15550. It is so far from the railway station that it is impossible to work it at a profit?—Yes and there is a lot of peat there.

15551. And a railway would be the means of developing these unworked industries?—Yes.

15552. Has the coal actually been proved?—It has been used in some cases.

15553. They have got it?—Yes, they have got it at Coalisland.

15554. *Mr. Healy, K.C.*—We would like to know where that coal is?—In Coalisland.

15555. That is a railway station?—It is beyond the end of the line.

15556. How far beyond?—It is only a short distance beyond. In the district the line runs through there are also seams of coal.

15557. *Chairman.*—I see you also refer to an article in the "Nineteenth Century," but we will leave that to speak for itself.

Witness.—I want to show what the position of the township is with regard to the Post Office.

Importance of Strabane as a Post Office centre.

15558. *Chairman.*—You want to indicate the importance of the place by showing that there are several Post Office officials there. How many officials are there under the Postmaster of Strabane?—There are sixty-nine sub-offices under his control and management, and Strabane is also a distributing centre for the entire County of Donegal. At the head office in Strabane there are twenty-one officials and 163 rural postmen of various grades.

15559. Do you know that?—Yes.

15560. Are not there flax mills and other things there?—Yes; there is the largest and most flourishing flax-spinning concern there—the Zion mills, employing 1,400 or 1,500 operatives, we complain that their traffic is within two and a half miles of Strabane and should come to Strabane as a centre of distribution, but which is taken past Strabane owing to the action of the railway company in giving two cheap trains on Saturdays to Derry.

15561. People could walk to Strabane without going on the railway at all. It is only two miles distant?—Two miles and a half.

15562. *Mr. Sexton.*—Does the train stop at Strabane?

15563. *Chairman.*—Of course it does; and they can get to Strabane for 2½*d.* at any rate?—I don't know what the fare is, but it is cheap, at all events.

15564. I don't see why they should go to Derry unless there is some attraction?—The large place, you know, brings the people.

15565. You have told us very frankly about Strabane and its industries and railways, has your association formed any views as to what would remedy the grievances of which you complain?—They are unanimously in favour of State purchase, so far as I can make out, but they are not decided as to the shape it should take—how it should be brought about.

15566. How many members have you got in your association, about?—Thirty or forty members in it; perhaps fifty.

15567. And all the members are engaged in the trade and industry of Strabane and district?—Yes, they are identified with it.

15568. And you are deputed to give us that opinion of these particular traders?—Yes.

15569. That they prefer the whole of the railways of Ireland to be purchased by the State, but as to the mode of purchase they don't express any opinion?—They are undecided about that.

15570. Have you formed any opinion about that?—Yes; my own opinion is that they should be amalgamated and purchased by the State, and worked and controlled by the State, and subject to the control of an Irish Council of some description—the General Council of County Councils, or a Railway Council, and subject to the control of the Irish electors.

15571. Do you think if the railways belonged to the State, controlled by an Irish party of some sort, that it would tend to benefit the trade and industries of the country better than it is done at the present time?—I do.

15572. And do you think it would be the means of developing industries that do not now exist in the country, and that could exist, if what you suggest was carried out?—I do, sir; to adopt a paternal policy, promoting the industries of the country.

Examined by Colonel HUTCHESON POË.

15573. I will only ask you one question with regard to your last answers. You say you would be in favour of the amalgamation and purchase of the railways by the State, and that having been accomplished, you would put the railways under the management of an Irish Council or Board?—Yes, sir.

15574. Presumably of railway experts?—Yes.

15575. And you say that Board should be subject to, and responsible to, Irish public opinion?—Yes; the Irish electorate.

15576. Would you have that Railway Council a Board elected by the people of Ireland simply for railway purposes?—I would have them elected for the control of the railways, but not to manage them in detail.

15577. Who would manage them in detail?—I would entrust them to a small Board of railway experts.

15578. The Council you speak of would not consist of railway experts, it would be a Council in the nature of a central authority, such as we have reason to believe may be soon set up?—Quite so.

15579. And under that central Board would be a small committee of railway experts, who would manage the railways under the control of the central authority?—Exactly.

15580. You would not be in favour of the State—that is, the British Parliament—working the railways?—I would not, for this reason—that the British Parliament is dominated by the influence of the artisans and manufacturers of England, and their policy would be to foster their own manufactures and industries at the expense of ours.

15581. But if you contemplate that the State should purchase the railways, do you think it likely that they would submit to having the working of those railways entrusted to a purely Irish body, without having any voice in the matter?—You mean the British Treasury?

15582. Yes; if they find the money, would you not expect that they would want to have some voice in the allocation and spending of the money?—If they got security for the money they might not be concerned.

15583. What security would you give them?—The railways themselves, and the security of the land and buildings.

15584. Broadly speaking, then you agree with the resolution passed by the General Council of the County Councils, which was to that effect?—Yes.

15585. But that view is one simply held by yourself?—I am not giving that as the view of the association.

15586. The mode of purchase was not decided by them, but it was considered?—Yes; but there were different views as to the carrying it out.

15587. And they did not pass any resolution or express any decided views one way or another?—They did not.

15588. Would it be too much to ask you was the majority of the association more in favour of one view than of the other, might I ask that without trespassing unduly on your confidence?—They are unanimous on the question of State purchase; but with regard to the manner in which it is to take place they have no definite views; at least, they have not expressed any opinion as to the best method of carrying that out.

Examined by Mr. Sexton.

15589. It has been pointed out to you that in the case of Derry, if the railway company did not accept a rate to compete with what the goods would be carried for there by water they would lose the traffic?—Yes.

15590. If they charge much more from Dublin to Derry than the consignor can get it carried for to Derry by sea the railway company would not get the traffic, it might go by sea?—Portion of it might.

15591. It all might, it all could?—That is possible.

15592. What do you say to that: do you say that a railway company is entitled to take note of that competition, and to endeavour to defeat it?—It is in their own interest to do so.

15593. But then you point out that the difference between the rates to Derry and to Strabane, which is fourteen miles nearer the point of despatch, are considerable—several shillings a ton. What remedy would you suggest? You appear to allow that they might fairly charge a low rate to Derry in order to save the traffic from going by sea; what remedy would you suggest for Strabane—would you say stations close to the point of sea competition ought to have a rate more near to that allowed to the competitive point?—Yes, that is my point—that the disparity is too great for a point so near.

15594. If the disparity is so great as to attract trade to Derry, and bring the inhabitants of the surrounding districts into Derry, that puts Strabane at a great disadvantage?—Yes; that has been contended time and again—that Derry is being built up at the expense of Strabane, although Strabane can give as good facilities every way.

15595. Supposing the railways were worked as a unit by public authority, should you think they would take note of such a consideration, and whilst they would fix the rate to Derry, so as to maintain the land traffic against the sea competition, would take care not to make the disparity between the competitive point and stations near it so great as to hamper or destroy the trade of the latter places?—I think so. I think they would endeavour to give every place a fair chance, according to its natural advantages and resources and geographical position.

15596. It does seem hard to justify a system by which a place only fourteen miles from Derry is deprived of what you call its reasonable local trade because the traffic to Derry could be carried on by sea?—Yes.

15597. And you think that from a public point of view a system of railways administered as a unit would do more justice—at least regard the claims of such places more than they are regarded at present?—Yes, I do, sir.

Apr. 22, 1907

Mr. John M'Colgan, Representative of the Strabane Mercantile Association. The disparity in the rates to Strabane and to Derry discussed.

The Commission adjourned till the following morning.

TWENTY-SEVENTH PUBLIC SITTING—TUESDAY, 23RD APRIL, 1907.

At the Reception Room, Royal Dublin Society, Leinster House, Dublin.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Col. WILLIAM HUTCHESON POË, C.B.; Mr. THOMAS SEXTON;

Mr. GEORGE E. SHANAHAN (Secretary.)

Apr. 23, 1907.

J. T. NOBLE ANDERSON, B.E., examined by the CHAIRMAN.

J. T. Noble Anderson, B.E., M.I.C.E., Past President of the Institute of Engineers of Victoria, Australia.

15598. *Chairman*—Mr. Joshua T. Noble Anderson?—Yes, that is my name.

15599. You are a B.A.?—Yes; a B.A. of Melbourne University, and of the R.U.I.; a B.E. of the R.U.I.; a Member of the Institution of Civil Engineers; a Member of the Society of Civil Engineers of America.

15600. Of America?—Yes, and Past-President of the Institute of Engineers of Victoria, in Melbourne.

15601. Australia?—Yes, I held the Presidential Chair twice, two succeeding years.

15602. And you were also member of the firm of Monash and Anderson?—Yes.

15603. Of Melbourne?—Yes.

15604. And you are generally acquainted, I believe, with the railways not only in Australia, but New Zealand?—Yes, directly as railway contractor and agent for railway contractors. Indirectly, of course, as a traveller. I suppose I have travelled over 100,000 miles of railway track, and over about two-thirds of the railway lines of the continent of Australia and the island of New Zealand.

Witness's experience as regards ownership and working of Australasian Railways.

15605. Am I justified in saying that you are well acquainted with the railways in Victoria, Queensland, in Tasmania, Western Australia, and New Zealand?—I am well acquainted with Victoria, New South Wales, and New Zealand. My acquaintance with Queensland, South Australia, West Australia, and Tasmania is not so direct or complete.

15606. Well, now, I think I am justified in saying that the Commission are very glad indeed to have you before us, because we are anxious to get the best information we can with reference to the ownership and working of the railways in Australia, and I believe you are in a position to give us that information?—I am much obliged for your appreciation. I would mention, of course, that in addition to a man's experience his qualifications to take advantage of these experiences are also important, and as far as his giving evidence is concerned, of course the most important thing is what his bias may be, because as you know, everybody sees facts from pre-conceived ideas of his own, so it is for you to find out what my bias is. Personally I think I come here, perhaps, more as an advertisement than anything else, but from a patriotic wish that I may see something in Ireland like what at present exists in the colonies.

Ninety-one per cent. of Australian Railways, and the New Zealand Railways with one exception state owned.

15607. I am going to test your knowledge and experience as far as I can. First of all will you tell us as to the railways in Australia—who are the owners of the railways in Australia?—Ninety-one per cent. of the railways in Australia are owned by the Governments of the various States in which they run. That is also so in New Zealand.

15608. Who are the owners of the railways in New Zealand?—The State are the owners of the railways in New Zealand, except Wellington to Manawatu, a line of ninety-four miles with a capital of £1,000,000.

15609. That is an independent undertaking?—That is an independent undertaking.

15610. With that exception all the railways belong to the State?—In New Zealand.

15611. Does the State work them?—Yes.

15612. In both countries?—In both countries the State works the railways.

15613. Can you tell us anything about the construction of the railways?—This is a very wide subject, indeed.

15614. Yes?—Taking a similar country to Ireland.

15615. Now, I think if you would be kind enough just to follow my questions directly, we will allow you to explain afterwards. The lines, the Government railways in Australia, for instance, do you know whether they were constructed by the Government or by private individuals and then taken over by the Government?—The majority of the lines at present in existence have been constructed by the Government directly.

15616. Yes?—I should qualify the word "directly," often by means of contractors. They have been constructed by the Government with the Government funds.

15617. Yes, that is the point I want?—The great majority, probably 80 per cent.

15618. The Government projected the railways, constructed them, and now they work them?—Yes.

15619. That is correct?—That is correct. There is this qualification, the very first railways in New South Wales and Victoria were projected and constructed by companies.

15620. Now, that is the point I want to make very clear on the notes. But originally some of the lines were constructed and worked by private companies?—Yes.

15621. And then subsequently taken over by the State?—Yes.

15622. But within recent years, am I right in assuming that all the railways in recent years have been constructed by the State?—Ninety-five per cent. of them in recent years. The balance are the private lines that have been constructed since 1885. Of these the Midland Railway of New Zealand has been taken over by the State. The Midland Railway of Western Australia is in negotiation to be taken over by the State, and the Wellington to Manawatu line will be taken over by the State as soon as arrangements can be made.

15623. Negotiations are pending?—Yes, negotiations are pending.

15624. Well, the Tasmanian railways within the last, shall I say ten years have been taken over by the State?—No. Unfortunately I have been a shareholder in some of them. I wish they had. They are not being worked at a profit in Tasmania. There is no incentive to the State to take them over. The Tasmanian railways are exceptional in that they have been run for the development of the mining of the west coast of the country. They are quite exceptional, owing to the mining being practically the only industry of the place. They have been run more or less in connection with mining companies—more or less because the relations are not always on the surface.

15625. But surely the Government purchased a railway there within the last fifty years?—Oh, yes. The Government have purchased, I think, two railways in Tasmania.

15626. That is what I was asking?—Yes. I thought you meant the railways started within the last few years.

15627. No, no. I am speaking of the old railway from Hobart?—Of course; that is one of the first, if not the first, in Tasmania.

15628. That has been taken over?—Yes, certainly.

15629. Yes?—I started by speaking of the railways constructed since 1885.

15630. Well, now, I see you suggest that a statement could be prepared showing the lines owned by the State and privately owned, and their dates of construction, and so on, but I don't think that is necessary for our purpose?—No. There are two or three of the lines that the recent figures for are not obtainable here. One successful line run on very parallel lines to the Victorian railways is the Deniliquin to Moama line, a line of forty-eight miles in extent, 3 ft. 3 in. gauge, which is run on very similar lines to Victoria, and its comparison might be interesting, but unfortunately its figures are not obtainable in this country. It is entirely owned parochially.

Witness.—May I open a letter, sir?

Chairman.—Certainly.

Witness.—It is a letter from Lord Pirrie, stating that owing to an accident he is unable to be present.

Chairman.—I ought to have mentioned that Lord Pirrie has had a slight accident, and is unable to be present either yesterday or to-day. He was rather anxious to be here when you were examined.

Witness.—Yes. He was kind enough to say so.

15631. *Chairman.*—Well, now, the railways in Australia in the beginning, projected as they were by the Government, went into districts where it was impossible for the railways *per se* to pay any interest on their outgoing?—That is so.

15632. Any other private enterprise could not have made these railways because of the want of traffic?—Many of the places—I am not certain whether I could on the spur of the moment give you the exact places.

15633. Generally?—Many places. Attempts were made to induce people to put railways by promises of large blocks of land on the American system and they failed to secure speculators, and they had to get them in spite of that—the railways.

15634. Had it not been for the action of the Government in making these railways miles of undeveloped country would still exist?—That is so. One of the finest examples of this sort of thing in recent years, within the last five or six years, has been the extension of the Victorian railways by a line 200 miles in extent to reach Mildura. Mildura was an irrigation settlement started by speculators some eighteen years ago on the River Murray. They depended for their transport on the navigation of the river. During years of drought, and during dry seasons of the year, the Murray is not navigable, with the result that the settlement containing about 3,000 inhabitants was languishing. They made a strong representation to the Government of the necessity from a national point of view of helping by putting a railway so that they could get their produce away at all times of the year, even though the railway could not run cheaper than the water transport, but the fact that the water was intermittent and the railway was always by made the railway a *sine qua non* of their existence. I was engineer in the settlement, so I know all the details. After three or four years of strenuous work they succeeded in persuading a majority of the House of the necessity of that, and though it was recognised that the grant must be a heavy incubus to the State, the line was put there, more than 200 miles of line, to serve a population of 3,000 of people. That was put there in 1902. The latest estimates of the population to about twelve months ago was 4,400 in the settlement, and some expansion has gone on alongside the line, so that the line has begun to justify itself, and the settlement has been saved. Last year, I understand, over £100,000 worth of fruit was carried away over that line.

15635. From the settlement?—From the settlement.

15636. And of course the line of intermediate land also must have been developed?—Yes.

15637. Alongside the line?—The land is more than desolate prairie—desert. It is a district where without irrigation you can do nothing. The average rainfall is only ten inches in the desert through which the line runs. About a third of that will, ultimately, be taken up and used when the irrigation proposals of the Government are completed.

Apr. 23, 1907.

J. T. Noble Anderson, B.E., M.I.C.E., Past President of the Institute of Engineers, Victoria, Australia.

15638. In that case the State took the responsibility of making a railway so as to afford this particular district the opportunity of development and having their produce brought to the market?—Yes.

15639. Put shortly, that is what happened?—That is what happened.

15640. Now, I suppose that sort of thing has been going on in other directions besides the one you have mentioned in Australia?—Well, I think, at present there about 1,800 miles of railway surveyed, and the people who are interested along that are all clamouring. I can't speak of the details of the other Colonies. In Victoria alone about 1,800 miles of line have been surveyed, and the people interested in these districts are, of course, clamouring that their land is the most important; and what the State do is instructive, they insist on the promoters of the line guaranteeing that there will be no land claims. Before you go to Parliament to get the Select Committee on Railways to deal with your case you have to find guarantors, get the banks to guarantee that the land claims will be all met by the local people.

All land claims on projected new routes must be met locally in the case of extensions into the Bush.

15641. That is to say the land necessary for the construction of the railway and works?—Yes. Obviously, no matter where you go in new countries somebody has taken up some land, some of it has been alienated from the Crown, and, of course, these people will be benefited richly by the land so put to use, so that to that extent the betterment system is adopted in Victoria, that the people who are to benefit must make the guarantees that there would be no charges or that they will meet and bear the charges for land.

15642. In other words, that the State should be relieved?—From the land charges.

15643. From any charges upon the land?—Of course, I am talking of extensions into the prairie, into the bushes. Not town lands or lands in such districts.

15644. That we understand. Do you know, is it within your own knowledge, the number of lines of railway already constructed in Australia?—Including private lines, 17,500 miles.

Mileage of the Australasian Railways (State constructed) compared with the mileage of Railways in Great Britain.

15645. 17,000 miles?—Including private lines, and the lines run by the timber companies, such as the Jarra Timber Company of West Australia.

15646. Roughly, 16,000 lines made by the Government, 16,000?—That is including New Zealand, of course.

15647. Tasmania?—Tasmania, yes. All the Tasmanian lines only brought about 620 miles. Tasmania is almost a negligible factor. Most of the returns which you see and which give the number of people per mile neglect the private lines altogether. I got recently a copy of the Railway Year Book. That gave the return which I spoke of in my abstract as the number of people per mile of railway, population per mile of railway. The numbers are given in this Year Book, but unfortunately they omit to consider anything except the Government lines. They are taken from these annual Government Returns of the Commissioners of Railways, and these only record Government lines.

15648 Now do you know what number of miles of railway we have in England?—I believe it is about 15,000, in or about 15,000, England and Wales.

15649. And Scotland?—No, not Scotland. I should think Scotland would add to that, and bring it up to about 18,500.

15650. Practically the Government worked railways in Australia are almost equal to the mileage of the railways in Great Britain?—About 2,500 miles short.

15651. Roughly?—Yes. Say 88 per cent. or thereabouts, 87 or 88. The total population, of course, is just over 5,000,000 for Australia and New Zealand.

15652. About an eighth of the population of Great Britain?—Rather less than an eighth.

15653. Now it is not in your proof, I think, at least I have not seen it, but it would be very interesting, if you would tell us in your own words how these railways belonging to the State are managed?—Originally they were managed by the Government.

15654. First of all, I must ask you, you don't object to give us this information?—Certainly not.

History of the management of the Australasian State Railways.

15655. We should be very glad of it?—In the first instance in all the States the Government managed the railways directly. That gave rise to a great deal of jobbery. The result was many painful things happened. One example of the sort of thing due to political jobbery of that sort is constantly revulsions of the people—almost revolutions, practically revolutions

Apr. 23, 1907.

J. T. Noble Anderson, B.E., M.I.C.E., Past President of the Institute of Engineers of Victoria, Australia. History of the Management of the Australasian State Railways.

in which numbers of people are discharged and private interests are set on one side in a ruthless way by the people, and the general result was an alternation between what you might call extreme puritanism and extreme political jobbery.

15656. How many years are you going back?—About 1877 was the year of what is known in Melbourne as the Berry Blight, that is the year in which all the public service was discharged.

15657. Can you bring us to the point where the States appointed Railway Commissioners?—About twenty years ago.

15658. That is far enough back to go. Twenty years ago the principal States appointed Railway Commissioners?—Yes.

15659. How many Commissioners were there?—Generally three, but that did not obtain from the start in all Colonies. In New South Wales, Victoria, and New Zealand there were three Commissioners, generally two men with local acquaintance, and one man appointed from elsewhere, who was chairman, and as chairman had a casting vote, consequently had almost supreme power.

Practically controlled for past twenty years by three Commissioners appointed by the Governments.

15660. The control of the railways and the working of the railways was practically in the hands of these three Commissioners appointed by the State?—Yes.

15661. Were they permanent appointments?—No. They were generally appointments for a tenure of five years.

15662. Do you know—take Victoria, do you know what the Chief Commissioner got in that State?—The Chief Commissioner at various times £3,000 and £4,000 a year.

15663. Yes?—And the other two Commissioners £1,500.

Constitution and emoluments of the Commission.

15664. The Chief Commissioner, as a rule, was selected for practical railway knowledge?—The Chief Commissioner was advertised for in Europe and America—England, of course—and was generally an English railway manager, chosen on account of his record.

15665. And the other two Commissioners?—Were chosen on account of their record in the Colony to which they belonged.

15666. And were they mechanics?—Men in touch with the railway working of the Colony, not necessarily mechanics, no; generally members of the Institute of Civil Engineers.

15667. That is what I mean?—Men of standing.

15668. Am I right in assuming that one was supposed to be an engineer?—Yes, and one a man with large commercial experience. In Victoria, to give a specific instance, Richard Spaight. He was, I think, traffic manager of the Midland Railway.

15669. No, he was not. He was with the Midland Railway?—Some appointment. He was chosen about 1888 or 1889, and his two assistants were Greene and Ford. Greene was an engineer. Ford, I forget exactly his record. I think he was a traffic manager. Greene was an engineer of very good standing indeed.

15670. Well, now, what date?—About 1888.

15671. 1888?—Yes.

15672. From 1888 to the present time has that system been continued in Victoria?—With slight and rather disastrous interruptions, it has.

15673. There are still three Commissioners?—Still three Commissioners. There have been interregnums and times of political disquiet when there have been acting Commissioners and when Parliament has interfered a good deal, but practically the position now is what it was when Richard Spaight was appointed. Unfortunately, Richard Spaight lent himself——

15674. We won't go into that?—He listened to politicians.

15675. I don't think we will go into that?—Very well.

Exception to the system of management by Commissioners as regards the Tasmanian and New Zealand Railways.

15676. At present the Victorian Railways and the other State Railways are managed by the Commissioners somewhat on the lines that were adopted twenty years ago?—Yes. With the two or three exceptions. I would like to mention the exceptions. Tasmania is an exception. Tasmanian Railways do not pay, and cannot be made to pay. New Zealand is an exception, and the New Zealand Railways do now pay.

15677. What?—New Zealand is an exception. It is not now managed by Commissioners.

15678. How is it managed?—By a Minister directly. The Minister up to now has been Sir Joseph Ward. Since Seddon, Prime Minister.

15679. He is now in England?—Yes. He is a man of exceptional experience in railways.

15680. He was a railway man?—Exactly, so that the exception in his case, I think, proves the rule. There is a very valuable article, I brought it in, from Sir Joseph Ward's pen in a New Zealand magazine published twelve months ago on the State Ownership of Railways. It is an interesting article, and was written in strong language.

15681. Would you mind letting us see it?—If you care to have it.

15682. I would like to read it?—I brought it in case the Commissioners would like (*handed in*).*

15683. May we have this?—Certainly.

15684. At any rate, Sir Joseph Ward originally was a railway man?—Yes.

15685. And from various occupations he got into their Parliament and was made Minister, and was until recently Minister of Railways, and under his management you say they have been a success?—Yes. In addition to his having been a railway man, he is a man of exceptional strength of character, and he has been associated with the strongest politician which we have had in the colony, Richard Seddon, in a way the strongest and probably the most honest.

15686. So much. This is all outside of your proof, but it is valuable information for us to know about the railways. Which are the most successfully-worked railways in Australia?—The railways of New South Wales and Victoria, I consider, are the most successfully worked.

15687. And in both of these cases?—I should add New Zealand, too.

15688. We will take the groups, then, Victoria, New South Wales, and New Zealand?—Yes.

15689. Sydney?—Eddy was the first Commissioner.

15690. Yes. He was out there. He had three Commissioners?—He had two associates, yes.

15691. Yes. Does the system, in your judgment, work satisfactorily?—Yes.

15692. Is it—do you think it satisfactory that the period of employment should be limited to five years?—No. In case of a good man or good men it ought to be a life appointment, and it certainly ought to be like a judge's appointment, beyond all interference by politicians.

15693. Certainly?—These men ought to be recognised by the public exactly as judges are—judges of the Supreme Court.

15694. In fact it should be an appointment subject only to efficiency and good behaviour?—Yes.

15695. The same as a judge?—Exactly the same as a judge, and he ought not to be interfered with by politicians.

15696. In practice, although the engagements have been for five years, the people have been continued?—Oh, yes, but there has been a great deal of difficulty from political interference.

15697. I am fully aware of all these difficulties in connection with two or three of them?—My friend Mr. Matheson could have told you a great deal about that.

15698. Matheson was at Queensland?—I think in Queensland and Victoria.

15699. He went to Victoria on my recommendation. I remember that?—He did; he was most successful in Victoria.

15700. Yes?—Because he was very firm, and would have no truck with politicians.

15701. Have you considered the question as to whether on the State railways the public are better served both in rates and facilities than they are upon private-owned railways?—In the colonies?

15702. Yes?—The private-owned do not compare favourably with the Government lines.

15703. In other words, these Commissioners on the State railways take into consideration the wants of any particular district, and fix rates and facilities to develop any industry that may be in that district, is that so?—That is so.

15704. Is that your view?—Yes, that is my view. I should like to state that in saying as I do, I don't wish to reflect on the companies. Obviously a concern with a capital of one million, and operating in a small way, cannot give the facilities or work as well as a concern with a capital of forty millions, as some of the State lines have. The facilities that the

* (See Appendix No. 19.)

Government have are much greater than any private company, so that they can give a much greater service.

15705. We understood you are not reflecting. You are giving us your views and opinions, which are valuable, upon the difference between State-owned and private-owned railways?—But I wanted to bring out one of the reasons, because the State can do things in a much larger way than a company.

15706. I want you to be as free as possible with your opinions. It is all information to us, without restriction. Never mind whether it is in your proof or not?—Thank you. With reference to the question of rates, I have brought what I think is the most expensive of the rates, with the exception, perhaps, of West Australia, where lines are exceedingly long. I brought in a time-table. Sir Joseph Ward gives a comparison between rates in Great Britain and rates in the colonies.

15707. In that article?—Yes. There is one thing he does. He compares second-class in the Colonies with second-class in Great Britain.

15708. Passenger fares?—Yes, passenger fares. He compares only passenger fares. I am not giving goods rates, they vary so tremendously, and the regulations are so complicated they would be little use. Comparing passenger fares in this article I have put in, Sir Joseph Ward compares second-class fares with second-class fares at home. That is hardly a fair comparison, because in all the Colonies they have the Midland system of having only two classes, so that the second-class is really the third-class. Generally speaking, you will find that a penny a mile rate practically obtains throughout the Colonies.

15709. Yes, that is to say, for what they call their second and what we call our third?—What the Midland Railway call third. I am alluding to the Midland Railway.

15710. In other words, the passenger fares, as far as they are concerned, are the same as in England?—Yes. In that respect Sir Joseph Ward's article might be a little misleading. He compares their second-class with second——

15711. In other words, there are only two classes, and therefore it is not fair to compare the second-class in England with the second-class in New Zealand?—No. Take any of the fares. The best idea I can give you is this. You can travel any amount in some of the Colonies on what are called coupon tickets, where you buy mile coupons. You buy 500 miles of tickets for £3 first-class and £2 second-class. That would correspond with single fares, of course. We use the coupons by single tickets, of course, always. This is slightly lower than the time-table rates, and consequently people who have much to travel invest largely in those coupon tickets.

16712. But surely we have the same in this country, Ireland and England as well, in the season tickets?—Oh, no, no. The coupon ticket is a different thing altogether. You get 500 miles, and you want to go fifty miles; you tear off fifty coupon tickets and pay for that fifty miles.

15713. What reduction is made in taking 500 above five miles?—You mean——

15714. Is there a reduction in the price?—A coupon ticket! You must invest just as you do in stamps; you must invest in miles, and you pay for your journey in miles like as if you paid for a thing in stamps instead of money.

15715. In other words, the wholesale price of tickets and retail tickets are the same?—The wholesale and retail differ very little.

15716. Little?—Little.

15717. What is the object—what is the use of having these 500 mile tickets if the rates are about the same?—The rates are about the same as the return rates, but by buying coupons you get the return concessions on single tickets—that is the point.

15718. Then you can go anywhere you like?—You need not return by the same route, you can take a circular route, or return by bicycle or coach.

15719. And they are not interchangeable to other States?—Oh, no.

15720. This is Victorian?—Victorian, and I believe New South Wales.

15721. In the railways of both States?—Yes. Another cheap way of travelling is to take a monthly ticket over the lines. A monthly ticket over the lines in New Zealand costs £8 first-class, £5 second-class.

15722. What is the mileage?—The mileage is 24,000. That enables you to travel everywhere on these lines for a month, as often as you like, and as you please, just like the annual ticket on the railway company.

15723. This sounds to me very cheap?—In addition to other concessions, school children are carried free up to twelve years of age.

15724. What is the first-class?—£8.

15725. Second?—£5. School children are allowed to travel free on the lines up to sixty miles.

15726. Up to—age?—Twelve years of age.

15727. Students?—High school children get concessions, roughly, about quarter of the fare. They are allowed to travel on concession; they are allowed to travel at quarter fares. Cadets, soldiers in uniform travel free—volunteers; so that there are a great number of concessions like that.

Special Travelling facilities for children, soldiers in uniform, workingmen, &c.

15728. In New Zealand?—Yes, and practically the same thing in Australia.

15729. Oh, of course, the State own the railways?—Yes. Then, of course, there are great concessions in the way of workingmen's tickets, as you have on the tramway tickets, certain hours of the day. There are certain arrangements for travelling. These are details hardly worth mentioning.

15730. You could not expect private owners to carry school children free?—No. It is part of the State contribution to the Education Department. In some of the States there is an amount charged to the Education Department on that account. I don't think that that is so in New Zealand.

15731. With all these concessions you told us that the railways in New Zealand are no loss to the State, but a profit?—Neither a loss nor a profit. They try to run them to just pay.

New Zealand Railways worked just to pay expenses not for profit.

15732. We will put it there is no loss?—There is no loss. This year they showed a balance after paying interest of £65,000. That was given as a concession to the staff.

15733. *Mr. Sexton.*—What rate of interest is paid?—3·4 per cent. I call attention to Sir Joseph Ward's concluding remarks, page five of his Annual Report, I have underlined his words.

15734. *Chairman.*—Would you mind reading it?—Talking of concessions to workingmen; this raised wages from 7*s.* to 8*s.* a day of the lower grade workingmen. "The cost of these concessions on the basis of the staff existing on the 1st November, 1905, was approximately £65,000 per annum, and it will, of course, increase proportionally with the growth of the staff. In view, however, of the enhanced cost of living, and labour conditions generally, I feel sure that the concessions made to the railway staff are fully justified, and are, further, of a character to commend themselves to everyone." That last remark I do not endorse, because I know myself that employers of labour and contractors especially view these concessions to the railway staff as an injury to themselves, because it raises by influence the rate of wages all over the Colony.

15735. But public opinion in the Colonies, is it favourable to the present system of State ownership?—Yes.

Colonial public opinion entirely favourable to the system of State ownership.

15736. Throughout the Colonies?—Yes.

15737. There is no agitation for a change?—No.

15738. Who is Professor Kernot?—He is the senior professor in the University of Melbourne, but his position is almost above the highest politician in the State. His position is an exceptional one, both in Melbourne and Sydney he is regarded as an authority especially in railway matters. I would mention that he has been Chairman of some of the most important inquiries in connection with the State Railways, for instance, on the removal of the Locomotive Superintendent. The same time as Mr. Spaight was removed. Professor Kernot was chosen to act as Chairman of the Railway Commission that inquired into it, and there was some disappointment that Mr. Spaight did not ask for a similar Commissioner to inquire into his case, because Professor Kernot is a man of such wide views and great moderation, he is respected by the whole community. As an example of how Professor Kernot is respected by the community, I remember in one case before the Supreme Court Professor Kernot was going to be called as a witness and when the judge, Sir Hartley Williams, heard that Professor Kernot was likely to be called as a witness he asked to have Professor Kernot sent for and put into

Apr. 23, 1907.

J. T. Noble Anderson, B.E., M.I.C.E., Past President of the Institute of Engineers, Victoria, Australia.

the witness box before he had gone into the case, and Professor Kernot was asked, "Have you gone into the case for either of the litigants," and he said he had not as yet, and the judge asked both parties if they would abide by Professor Kernot's award, and they agreed to do so, and the matter was settled. I give that as an example of how much respected the man is.

15739. But, now, what is his opinion on the State ownership of railways?—He has expressed his opinion in a paper which he read before the annual conference of the Institute of Civil Engineers in Glasgow in 1901, in which he said, I think I quote his words here, "The system of State ownership and management is universally approved."

The system of State ownership and management approved.

15740. You concur in that opinion?—I endorse that statement.

15741. And you say that public opinion generally will endorse it as well?—Yes.

15742. In the Colonies?—Yes. In connection with the rebates both in passenger and in goods traffic, a thing is always happening in the Colonies which is the automatic continual reduction of rates, that is, new routes to places by less circuitous routes are being opened up. As an example of that sort of thing, one of the chief engineering centres of Victoria is Ballarat; about twelve years ago Ballarat was connected by a route which only took sixty-seven miles instead of the former 101 miles. The rates and freights are now, of course, calculated on the sixty-seven miles, though most of the goods continue to go by the old circuitous route, and whether you take your ticket by the short or by the long route, you can travel either way, you have all the facilities of the long route for the cost of the short route. That sort of thing is always happening.

15743. It is the same system as England?—Yes.

15744. I mean the short distances govern the rates?—Yes. So that the extensions are often in the way of concessions of freights. The railway extensions are not all paying on that account; they often reduced the payments.

15745. I should just like you to look at the notes and tell us in your own language briefly what are the advantages, in your judgment, of the railways being owned by the State?—On the question of lower initial cost would you like me to give my reasons at once.

Low initial cost of construction of Australasian State Railways explained.

15746. Shortly?—The chief reason of that is that they are not hampered by the same restrictions as if they were being carried out by companies. The Government have to take into consideration the type of railways suited to the district they go through and can vary their specifications in a way they could not do for the advantage to a concessionaire. In connection with that question I would mention that in West Australia lines have been laid down at as low a cost as £1,200 a mile with 40 lb. rails.

15747. Including sleepers?—Including sleepers.

15748. *Mr. Healy, K.C.*—They had nothing to pay for land?

Witness.—Practically it was desert country.

Cost of construction per mile compared with Railways in Great Britain and Ireland.

15749. *Chairman.*—And level?—Level in Victoria. I could show you returns as low as £2,000, and lower. This is the annual report of 1906. I will give it as an exhibit.

15750. Light or otherwise?—Light as far as the rails are light, but they carry all the heavy traffic.

15751. Gauge?—5 feet 3 inches, Victoria, West Australia, 3 feet 6 inches. The gauge is not even. There is a great difference in open country.

15752. Cost of sleepers?—In forest countries sleepers are not so very expensive proportionately with the class of sleepers put in; they are hard wood; the sleepers are cheaper; average 1*s.* 6*d.* per cubic foot.

15753. First your suggestion is the State-owned railways can be made at lower initial cost than by private owners?—I hand in the Victorian annual report of the Commissioners of Railways, which will show that some of the recently constructed railways have cost less than £2,000 a mile, 5 feet 3 inch gauge. The average cost of the railways in Australasia in recent years has been less than £8,000 a mile.

15754. *Mr. Healy, K.C.*—Do they pay for land?—No, not as a rule. When land payments come in it is, of course, much higher. But they generally construct lines at from £2,000 to £3,000 a mile, and these lines are strengthened and improved, and the lines, including the rolling stock, will ultimately be perhaps brought up to £8,000 per mile by the time it is in full use.

15755. When there is a traffic developed?—Yes. The high costs of many of the railways—your English records of Australian lines as far as cost of such are concerned are very variable on some lines, and differ in different returns, and there are different costs, but the high costs of many of the Australian lines is due to the fact that they were built at the time when wages were £1 a day for labourers. A line from Melbourne to Bendigo, 100 miles long, cost £5,000,000. They were paying £2 a day for masons and £1 a day for labourers. The inclusion of that increased the average costs of the whole country.

15756. As you say, the average cost of the railways in Australasia is about £8,000 per mile?—Not more.

15757. As against nearly £50,000 a mile in Great Britain?—I think the same sort of railways in Great Britain would probably cost about £12,000.

15758. The average cost in Great Britain is about £40,000 to £50,000?—That includes heavy land charges.

15759. Certainly London?—But take Ireland, which comes nearer to a comparison.

15760. I forgot I was in Ireland?—I don't think you would find the average cost is more than £12,000 or £15,000.

15761. In Great Britain it is £40,000?—Yes. I think you will find the construction costs in Ireland are not more than £12,000, excluding land. I am sure they are not so much.

15762. That is quite sufficient as to the first advantage you have mentioned. What is the second?—Greater facilities for accommodating the style of construction and methods of working to the changing requirements of the district served.

15763. I think you have enlarged upon that?—I would like to mention that at a Railway Commission in Melbourne about twelve years ago, where they were considering the break of gauge so as to serve several mountain districts, I strongly recommended 2 feet 6 inches gauge instead of any other narrow gauge from the point of view that if the country turned out well, as there was every likelihood it would, the narrow gauge could then be changed to the broad gauge and strengthened. Whereas if they made 3 feet or 3 feet 6 inches the chances are that the original gauge would remain for all time. It would be more expensive to put down a bigger and more satisfactory rolling stock; it would tend to a permanency and hamper the district served. A narrow gauge line of 2 feet 6 inches was put in that would never satisfy the district completely and for all time, and when the district did grow the 2 feet 6 inch necessitated strengthening and improving that would mean a 5 feet 3 inch there. My view was adopted by the Railway Commission, with the result that some eighty or eighty-one miles of this 2 feet 6 inches line have been constructed and are being run by the Victorian Railway at a profit.

15764. Am I right in stating that various States have various gauges?—Yes, unfortunately.

15765. There are no two alike?—No; there are no adjoining two alike.

15766. Therefore, they are not continuous?—No, not continuous.

15767. The Sydney and the Melbourne lines vary up to a foot?—Yes, up to 5 feet 3 inches from 4 feet 8½ inches.

15768. It is very unfortunate that should be so?—Very unfortunate.

15769. Now the State-owned system and the advantages?—One is greater promptitude in dealing with provision for national interests.

15770. I think you had better go on and give us them in order. No. 4 is?—Greater facilities for the encouragement of new industries. I will give an instance of that which seems to bear upon a question here. On the Victorian line, in the report you will find that the charge for coal in the coal district of Victoria up to the capital is one half-penny per ton per mile. The charge for coal from the sea ports for imported coal is a penny per ton per mile. That smaller charge is from the colliery district to the town. For the Victorian raised coal the charge is ½*d.* per ton per mile.

15771. For any distance?—Irrespective of distance.

15772. The other rate is double that?—For imported coal the rate is double. There is extra for that, placed on the imported coal.

15773. Are wagons supplied in that case?—Everything is found in each case. The private companies were not allowed to provide wagons.

15774. The conditions of transit are just the same in both cases?—Exactly the same.

15775. But the rate is double for imported traffic as compared with the locally-produced traffic?—There are some things we can do also. Though they were not allowed to have their own rolling stock; they are allowed to have their own colliery staithes and their own sidings. These sidings are paid for by a charge of 7 per cent. on the cost of the siding.

15776. That is the same as in England, only sometimes we get 10 per cent. Very well, now; go on with the others?—More general public interest in the construction of new lines, and the operation of the existing lines.

15777. No. 6?—As an extra to No. 5, I would put in some of the reports which show the progress of the system. Here is the report of the Select Committee on the minute of the railway auditor on appointments and promotions. The report of the Select Committee on the Railway Carriage Loan. These could be increased by a hundred-fold. Every one of these returns is a proof of the keen interest of the public in railway matters. They recognise that the railways are their own property. The amount of enquiry, suspicion and scrutiny, the public give to railway matters is quite surprising.

15778. They may be very interesting, but I would not like to have to read them. No. 6?—The educational value to the public, which looks upon them as a jealously-guarded public estate, and discourages cheating, &c., of which these reports give evidence. In connection with that I would mention the sale of return tickets as an example. That is very rare now. It was known as ticket scalping. That means that a man who has got a return ticket, and does not want to go back, went to an outsider and got him to take the ticket below its value, that is to say, he sells it to another person. The person who buys a return ticket from another man is looked upon as a cheat, and there is very little traffic in return tickets.

15779. *Colonel Hutcheson Poë.*—They are not transferable?—Not transferable, but they used to be transferred freely. Then there is a good deal of vandalism in railway carriages in this country.

15780. *Chairman.*—That is not general—don't mind that?—The public generally are much more jealous in guarding the railways, and regard them as their own property.

15781. May I ask you if in your opinion the prosperity of Australia and of New Zealand is in a measure attributable to the railways being owned by the State?—I think it is one of the largest factors in the prosperity of the country. Obviously the railways are the life blood of the country, the veins and arteries.

15782. Do you know anything about the railways in Ireland?—Not a great deal.

15783. Are you an Irishman?—Yes. The first railway I saw constructed was the Fermoy, Lismore and Dungarvan, "the Duke's Line" it was called. I must have been then a small child.

15784. You are aware of the conditions prevailing in Ireland, private ownership?—I cannot say I know much about it.

15785. Have you formed any opinion. We have to inquire into the question of the working of railways in Ireland? And what would be of benefit to this country in connection with railways?—I think State ownership would be a great boon to Ireland. Take the example of Dublin. If the railways are the veins and arteries of the country, the central railway station is the heart of the country. You have not a proper central railway station in Dublin. There are, I believe, four railways running into Dublin. If you had them State owned, I think the central railway offices would be about Trinity College, and this ground, and the whole of the ground between that and the river would be one large railway yard. The present termini would be only sorting yards. You could then run the railways with advantage. You would have something like what they have in Melbourne at present. I cannot conceive how a country can be run with advantage with a large number of small lines. For just the same reason as I took in the case of the private companies in Australia, they cannot on their small capital account borrow to the same advantage as the larger company can.

15786. Or give the same advantages to the members of the public?—No.

15787. Then you say they want concentrating into one railway system. Have you thought anything of who should own that one railway?—There is no question about it.

15788. Who?—The State, not the Imperial Government.

15789. No, not the Imperial Government, who then?—The State of Ireland.

15790. Would you suggest that in working the railways there should be the same sort of procedure adopted as in the Colonies?—I should strengthen the hands of the Commissioners of Railways in whose hands the railway companies should be vested. They should have a much stronger position than in the Colonies. That is my opinion.

15791. What you said just now was that they should not be of a temporary character, they should be like the judges?—I agree in that.

15792. I think the same thing. That is all the questions I have to ask you.

Examined by Mr. SEXTON.

15793. You have professional experience of railways in nearly all the Australian Colonies?—Of the construction of railways in the majority of the Colonies.

15794. And you have personal experience of the results?—Yes.

15795. Do you attribute the general progress of Australia and New Zealand in a great degree to the public ownership of railways?—Yes.

15796. Do you believe that if the railways of Australia had continued to be privately owned that the progress of these Colonies would be anything comparable to that which is now recorded?—No, it would not.

15797. That progress has been, I believe, very remarkable?—Yes.

15798. Those countries have grown to their present commercial magnitude in the course of about half a century?—Yes. I would call attention to a comparison—take the Victorian railways. On all New South Wales railways the mileage is about the same, and the returns somewhat the same. Take Victoria, 3,400 miles of railway, pretty roughly the same as Ireland. The population is one quarter that of Ireland, and yet the amount of gross revenue per mile of line open is very close to that of Ireland, namely about £1,000 against £1,200 in Ireland, showing by how much greater a proportion of the population is advantage taken of the railways in Victoria.

15799. *Chairman.*—Are you right about the population?—The population of Victoria is 1,200,000, and New South Wales 1½ millions.

15800. What do you take the population of Ireland to be?—About 4½ millions.

15801. What is the area?—The area of Victoria is 87,000 square miles, and Ireland 33,000.

15802. *Mr. Sexton.*—You have had set-backs and reverses in Australia, such as arose from financial crisis and from drought, but, on the whole, the progress has been continuous and very remarkable?—Yes. If you want to regard the railway returns—I should say last year's returns are more favourable than the average; just in the same way if you go back six years they were less favourable, because they had such a drought that three-fourths of all the sheep in New South Wales were lost.

15803. And you say the public ownership of the railways and the use of the railways primarily for the public benefit has been the principal factor in development?—I have said so.

15804. You called it, I think, the life-blood?—Yes.

15805. And you say they are the principal factor?—I say the railways are the veins that carry the blood throughout the body politic, just as the telegraphs and newspapers would be the nerves.

15806. Now, as to the scope of the example afforded by Australia. You pointed out that the mileage on the whole is about equal to that of England and Wales, and that the mileage in the individual Colonies, or the most advanced of them, is about equal to that of Ireland?—Yes.

15807. I have taken from one of the year books the mileage in the different Colonies—on 30th June, 1905. New South Wales, 3,280 miles Government lines, 81 miles private lines?—I have a corrected list given in the Railway Year Book.

15808. I take it from the Statesman's Year Book, 1906?—3,390 is the return I have got in the return of Railway Commissioners in New South Wales for 1906.

Apr. 23, 1907

J. T. Noble Anderson, B.E., M.I.C.E., Past President of the Institute of Engineers, Victoria, Australia.

State ownership of Irish Railways and control under an Irish authority advocated.

The progress of Australia and New Zealand largely attributable to their railways being State-owned.

Comparison of mileage and revenue of Victorian Railways with the Irish Railways in proportion to population.

Railway mileage of the Australian Colonies.

Apr. 23, 1907.

J. T. Noble Anderson, B.E., M.I.C.E., Past President of the Institute of Engineers, Victoria, Australia

That, of course, excludes private lines. They are only eighty-six miles.

15809. If this is approximately correct it will suffice?—I have got this corrected.

15810. Victoria, 3,429 miles, State; none private; Queensland, 3,092 miles of railway, nearly all in the hands of the Government?—3,197 miles, and including private lines, 3,391 miles.

15811. That is about 200 miles of private lines?—About 190 are private.

Mileage of Australasian State-owned and private Railways.

15812. South Australia?—1,925 miles, all Government lines and private. The Government lines are 1,746 miles.

15813. And the private about 200 miles. West Australia?—There you have very difficult returns to make up—including private lines, it is 2,487 miles, but that includes 200 miles of what might be called sidings, because there is no through traffic on them.

15814. Tasmania?—462 miles of Government railways, and about 160 of private.

15815. And New Zealand?—You have 2,391 miles of Government lines and 115 private.

15816. Making in all something over 1,000 miles of privately owned lines, and 16,000 of Government?—Yes, and 16,600 Government owned.

15817. *Sir Herbert Jekyll.*—All these figures are route miles?—All these are single track miles. Few lines are doubled. That is where there are discrepancies in the returns. Double lines are counted double. The figures are the total in miles of single lines.

Colonial Railway rolling stock and facilities for public alleged to be better than in Ireland.

15818. *Mr. Sexton.*—You have made in reply to the Chairman a substantially accurate comparison between about 1,000 miles of private lines and 16,000 miles of Government?—You will find there are very few double lines in the Colonies. Not like here, where double lines are almost the rule, in the Colonies they are very much the exception, but that does not affect the total figures more than two or three hundred miles. There is one point in connection with the running of the lines I would like to mention. They are run certainly better than the Great Northern line here as far as rolling stock is concerned. Generally speaking, the rolling stock and the facilities for the public are better than in Ireland, and not so good as in England.

15819. *Mr. Sexton.*—And the Great Northern is about the best here.

Witness.—I put in this return, and you can see from it the New Zealand returns, and what the heavy rolling stock is.

15820. *Mr. Sexton.*—There are four of the Colonies in which the State mileage nearly corresponds to the mileage of the railways in Ireland?—Yes, that is right.

Beneficial results of the system of allowing the officials a percentage of surplus revenues.

15821. And of course the successful management of the railways in these Colonies affords a very good example for guidance in the case of Ireland?—Yes. For instance, that matter of giving the staffs a percentage of the surpluses has had a very good effect. I have always in my dealings with the railway officials found them most keen and up-to-date to get the best of everything for the Department. As an example, I remember in connection with a railway accident where fingers were crushed with the slamming of a door, calling attention to the fact that a small slip taken out of the side of the door would very largely prevent fingers being jammed. Within a month from the time I gave the hint I saw it adopted—the rolling stock was in hand and it had got chamfered.

Rates and fares on Australian Railways.

15822. Are the rates on the State railways in Australia much lower than on the private railways?—The rates on freights on the private railways are on an average 25 per cent. higher than on the State railways.

15823. And those concessions which you have mentioned—time tickets, free students' travelling, and the very cheap workmen's tickets—are they given on the private lines?—There are concessions on the private lines, but not so liberal as on the others.

15824. Do these great concessions of the Government so far as their lines are concerned greatly reduce the incidence of the rates on the community?—Yes.

15825. I understand you to say that the tendency on the Government lines is as traffic is developed to reduce the rates?—Yes.

15826. Is that going on?—That is going on. I put in this annual return, and you can see the rates, two-thirds of the surplus is to assist in reducing the rates and one-third is for the concession to the employes.

15827. They reduce the rates in order to develop the traffic, and then they avail themselves of developing traffic to further reduce the rates?—Yes.

15828. You might call that the law of development of these railways?—The management of some of the private railways won't compare well with the State railways, but I know most of the managers, and I must say they are men who manage well for their companies. For instance, the Wellington-Manamatchu line has been paying 7 per cent. per annum. The ordinary shares there have been earning 7 per cent. per annum for some time—for at least three years, and the Silverton Tramway 20 per cent.

15829. In one respect the private company might not be so easy to manage as the State railway. The private management is constrained to keep up the rates in order to earn a dividend?—Yes; and there is one important point in the dealing of the State railways as compared with the private railways. It is a very difficult one. It has given rise to charges of dishonesty against the State, some of which, I have no doubt, could be sustained. Like Sidney Smith's corporation, the railways have no body to be kicked or soul to be saved, and the State does many things which would be inexcusable in the individual.

15830. Private companies are in the same situation, so far as body and soul are concerned?—I am talking about a private company dealing with the State. A private company dealing with an individual is in the same position as the State in dealing with a private company. The position of the latter is reversed.

15830A. The inference that might be drawn is that it is better to have one system or the other, as a whole, rather than a mixture of both? I think, from the point of view of the shareholders of Irish railways, it would be better that State ownership should take precedence of Home Rule.

15831. Very well. I suppose we must take them as they come. You told us that the private construction of railways had been dropped, and that the Government took over the privately constructed lines, and that it was the deliberate choice of the people. Is there any reason for supposing that the facilities thus obtained have not been a great benefit?—No reason whatever.

15832. The Government system of ownership is very much more likely than the private lines to give support to industries by means of branch lines to bring them into connection with the trunk lines?—Yes.

15833. I should like a comparison between the successful working of private lines and those publicly owned. The ordinary test of successful working of a private line is the rate of dividend paid?—Yes.

15834. But where railways are administered by the State they are primarily used to develop industry, whereas in the other case the leading idea is not the benefit of the community, but to get interest on the capital?—Yes. In a country where there are State-owned railways the railways dare not make too much profit from the public or other departments of the State. For example, the people regard the railways as the most important servants of the State, and they insist upon getting the best possible facilities. It is very difficult for a particular trade to get advantages. The public don't want to see a big dividend. They want it in railway concessions. They recognise that is the way to develop the country.

15835. You have given your evidence with excellent point and accuracy. Now, when these lower rates are granted they are looked upon as a contribution by the railways to the community?—Yes. In most of the States in Australia the Post Office pays for the services rendered to it. I suppose that is the same in every country. Originally the service of the railways to the Post Office was gratuitous. There are several of these small matters that ought to be borne in mind in making comparisons with twenty years ago, which was only the beginning of it.

15836. The real success of State railways is that they are an effective instrument in increasing the industry and commerce and wealth of the community which they serve?—Yes, and the question of profit is a subsidiary one.

15837. That is a secondary and minor question. At the same time it is a question of some interest.

I have here a book compiled by Mr. Coghlan, statistician to the South Wales Railways, showing the rates of interest earned on the capital, and they range from 2½ per cent. in the more backward Colonies to 4 and nearly 5 per cent. in the more advanced?—Yes; they pay £4 4*s.* per cent. on South Australia, and actually some have paid 5 per cent.

15838. As to the form of management of these State railways. That form is not the same in the different Colonies. You will find in some Colonies a Minister of Railways or Secretary for Railways who is a member of the Government. Does he go in and out with his colleagues?—I think there is always a Minister of Railways, whether there is a Commissioner or not. There is always one Minister of Railways in the Government.

15839. *Chairman.*—I think it is sometimes the Minister of Public Works?—That is for construction, which is classed as public works. There is a line drawn between construction and management.

15840. *Mr. Sexton.*—Some have a Minister or Secretary, and some have a Commissioner or Commissioners.

15841. *Chairman.*—These are in only one or two cases?—New Zealand and Tasmania.

15842. *Mr. Sexton.*—Does the Secretary go in and out with the Government?—I think not; he is a member of the permanent staff.

15843. That is, he is an expert?—Yes. There are cases where there is only one Commissioner; in others there are three.

15844. Do you say there is any substantial difference in the efficiency of the work for the public benefit whether the management of the lines is in one form or the other?—Very little. I have had a great deal of experience, and have been employed by the Government, and I think with regard to politics it is a very unimportant question on the development of the country. It is surprising how little the policy of one party differs from the policy of another.

15845. In a new country the main issue is material improvement. The people are pretty well agreed about that?—I believe the people value it at its true worth. They put no great weight on rhetoric. They see little difference between one Government and another.

15846. It would be interesting to know, and well to have it on your evidence, whether the director, whether Minister or Secretary, retires with the Administration?—The secretary does not retire. He is one of the permanent officers. It is not like America. In the Colonies the permanent officials do not retire.

15847. Not the expert staff; I mean the person responsible for the railways, whether Secretary or Minister, who is a member of the Legislature, does not he retire?—There is only one Secretary in the Colonies, who is like our Chief Secretary here. I misunderstood you.

15848. *Chairman.*—What you call a secretary is not a secretary in that sense?—No.

15849. *Mr. Sexton.*—The secretary for railways is the head of the expert staff?—Yes; he is a permanent official.

15850. I should like to ascertain whether this secretary is not really a member of the Administration?—He is, I think, in New Zealand.

15851. And the other Colonies?—I don't say. I am not aware of it.

15852. Do you think public opinion is capable of keeping the service right whatever the special form of direction may be?—Public opinion very soon rights what is wrong. Things may go wrong for a year or two, but generally things come right in the end.

15853. You have put it very strongly that where the lines are owned by the public, the public regard the lines as in a sense their own property?—In every sense.

15854. And take care that they are not misused. It is rather suggested here that public ownership of the lines in Ireland might result in an undue reduction of the rates?—If the public had to pay for it themselves in another way it would be very soon rectified.

15855. Exactly. If the railway rates were reduced too much some of the traders concerned would have the benefit, and you would have the public at large, in view of such reduction, and the loss of revenue, obliged to make it up out of the taxes?—Any community would regard this as open jobbery; and in Australia it is very difficult for one individual industry to get a concession from the Government on that account.

15856. You think public opinion would keep the management of railways, whatever the special form of direction might be, at a just mean between reduction of the rates and loss on the working?—Yes, if public opinion was kept in touch, as it is in Australia, by fierce political attacks and bright political daily papers.

Effect of public opinion on the management of the Australian State Railways.

15857. Public opinion would insist upon the railways being worked at a small profit: upon commercial principles to that extent?—Yes. So far as public newspapers are concerned, they take a closer interest than the railway officials appreciate, and it is rather instructive to see the notice they have in the railway carriages in Australia: "Passengers are requested to leave the newspapers in the train because they will be used for the benefit of the lunatic asylums."

The Legislature the final authority on Railway policy.

15858. I observe you give some evidence which shows that the Legislatures in Australia apply themselves directly to matters of detail in railway management. That is to say, they legislate upon such matters?—Certainly.

15859. You are of opinion that the persons entrusted with the immediate management of railways should have large powers of administration, and you would, of course, reserve the right of the Legislature as the final authority to take up and settle questions as to rates?—Yes, as in a private suit there is always above judges an appeal from the judge's decision.

15860. Your evidence is not to be taken as implying that the Commissioner should have the final power to judge of rates and fares?—It is a matter of detail; we might discuss these for a week.

15861. You don't mean that?—I speak generally, not particularly.

Question of the State as employers discussed

15862. It has been suggested that if the railways were popularly owned they would not pay an adequate salary to skilful agents?—That is not so.

15863. You think that the public as owners could be depended upon to pay skilful men as much as anyone else would pay them?—Yes; they are fair, not excessive. The engineer and agent in Victoria, when I left, four years ago, was getting £1,600 a year, and other officers in proportion.

15864. And the Chief Commissioner £3,000?—The Chief Commissioner up to £4,000. They are certainly not lavish in their salaries. You must always remember that these salaries, to compare with Great Britain, should be reduced by about 33 per cent., because though the cost of living and food is very much less; but still a man of means has to pay so much more for his servants.

15865. Are the officials pretty well satisfied with their salaries?—That is a very difficult question.

15866. As much as men ordinarily are?—The salaries sometimes are reduced, and occasionally raised. If there is a heavy loss on the railways, they have had occasionally to submit to a reduction of 10 per cent. or 15 per cent., just as in other cases they have an increase.

15867. Are the officials on the State lines paid as well as the officials on the private lines?—About the same, proportionately.

15868. Another objection taken to State ownership is that it would be inelastic, and would not accommodate itself to public needs—I see you believe exactly the contrary?—Yes; the Australian result is exactly contrary. It depends upon how intelligent the community is. In Australia we have an exceptionally intelligent community.

Allegation that State ownership would not accommodate itself to public needs denied.

15869. It seems to be obvious enough that an Administration responsible to public opinion would be more likely than a private body to respond eagerly, and even anxiously to public needs?—With respect to the comparison between Australia and Ireland, I would call attention to one fact in the Victorian Year Book, which is noteworthy since Ireland is spoken of as a most law-abiding country. It is given as an example to Great Britain inasmuch as the criminal record is very much better. In the Victorian Year Book you will find that of foreign-born criminals, those born in other Australian Colonies are proportionately to their population less criminal than the Irish. That is an example of the educative results of communism.

15870. An educated democracy allowed to rule it-

Apr. 23, 1907.

J. T. Noble Anderson, B.E., M.I.C.E., Past President of the Institute of Engineers, Victoria, Australia.

self. You believe the main function of these State railways is to encourage industry?—Yes; in its widest sense.

15871. In all its forms?—Yes.

15872. You are an Irishman. I should like to put a case to you. There is a great colliery here in the County Kilkenny (Castlecomer), covering forty square miles and with a deposit of over 100 million tons?—That is not very large.

15873. It is a good deal for Ireland, at any rate. The output is only 60,000 tons a year. I put this to you—to bring a ton of coal from that place—100 miles from Dublin—and deliver it here costs about 12*s.* 6*d.*?—It would cost 4*s.* 2*d.* in Victoria.

Railways extended and industries encouraged under State ownership in the Colonies.

15874. Owing to the transit facilities in Wales, they can put Welsh coal into the seaport towns of Ireland, and they can occupy the market there to the exclusion of this colliery in Castlecomer, which cannot sell its coal except by cartage in a radius of fifteen miles about the pit. Could such a thing as that happen in Australia or any other country where the railways are owned by the State?—In the case of the Gippsland coalfields the cost is ½*d.* per ton per mile. They were developed about fifteen years ago, and until they got that concession, of course, they could do nothing, but the cost is ½*d.* per ton per mile, which comes to 4*s.* 2*d.* for 100 miles, as against 12*s.*

15875. Take it altogether between cartage and railway rates?—It is loaded on a siding on the railway. The company has to guarantee the cost of putting the siding in, and the company is charged seven per cent. on the cost of the siding.

Want of rail communication to Castlecomer Colliery instanced as a result of private ownership system.

15876. *Chairman.*—What about the railway to the colliery. What mines are you referring to?—Korumbrura Mines.

15877. But did the State make the railway to the colliery?—Yes.

15878. To benefit the colliery?—Not primarily, but to benefit the country. Most of the mining railways in Australia have been made by the miners themselves. Even in some of the coal-mining districts in New South Wales and in Tasmania the great bulk of the lines have been made by the companies and taken over by the States; and in the Colley district of Western Australia that is now being developed by the Government; the Government are making lines to develop the collieries; but where the Government does something of that sort they are most anxious to be the first to benefit by it. They won't do that to put money into the hands of private speculators. They won't help a private person. If you have a colliery or coal mine, and think you can make use of the Government to make a line for your benefit, you make a great mistake—the Australians are far too wide-awake for that. They must have a *quid pro quo* from the person holding the coal-mine.

15879. *Mr. Sexton.*—If the people of a State were using imported coal a local colliery would not be left long unused for want of railway accommodation?—There are some which are unused still in Queensland. A private individual, if he is the owner of a district of that sort, has to yield practically all the benefit before he can get any Government benefit. He takes about ten per cent. of his own outlay.

15880. I understand that the Government takes care that private speculators do not get any undue advantage from measures intended for the public interest?—That is so.

15881. In the case of this Irish colliery the people have been trying since 1805 to get a canal or a tramway or a railway. All their efforts up to the present have proved futile, and there they are just as they were at the time of the Union between Great Britain and Ireland. How long would they be left without such communication in Australia?—It depends on themselves.

15882. I mean that the Government would take a more sympathetic view. You would hardly allow coal to come from another country to be sold in your principal towns whilst there was a great colliery in your own country ready for development?—Near a town called Mirboo there is a big colliery, larger than any in Victoria, and an Irishman happens to hold it, and won't give anything to get a railway line. He is a dog in the manger. People who have been reared, as many Irish people and people in Great Britain have, with the individualistic idea of the British, are not broad-minded enough to take advantage of a State railway. A State railway is not run for private individuals. A man here having a good property will not give up any of his rights—will not concede anything to let the public have the advantage of his property. In a case like Kilkenny I have no doubt that legislation would be passed in Victoria that would forfeit the property from the private individual. He would be paid at the agricultural value of his property, and the State would make arrangements to work it, as the State is doing at present in New Zealand on one of the best coal mines, because they had difficulties with big coal companies. The great drawback to helping a country like Ireland will be that your people are not an educated people as yet, and will only be educated by trials and failures up to the communistic spirit.

15883. If the railways of Ireland were owned by the representatives of the people in Ireland there would be a better prospect of having such railways constructed as are required for the development of natural resources like those of Castlecomer?—I have no doubt that in time the position would work out as it has done in Australia, but what I want to point out is that there must be—and will be eventually—a great deal of suffering and trouble before the people get educated up to the pitch that they are in Australia. People accept a great deal, of what would be considered confiscation in this country, as a necessity of government. They accept the fact that the individual must suffer rather than that the whole community should be at a loss.

15884. The objects which have been put before us by many of the witnesses are two—one to give the local producer access to markets in Ireland, and the exporter of food products a better chance in the English markets against his Continental competitor; and the second object is to provide further railway accommodation in districts that are not now served. Your opinion is clear that both these objects are not only not likely to be attained, but are unattainable at present, but could be attained under State ownership?—I could not do better than refer you to the article by Sir Joseph Ward, who puts his points much more plainly and attractively than I could. He puts the point that a State-owned railway can make concessions so as to give a light freight on goods from the interior to the ports, and, when necessary, a heavy return freight. The point is brought out very well by Sir Joseph Ward.

15885. The question referred to the Commission is, substantially, what system of working the Irish railways would be the most efficient, most economical, most harmonious, and would best tend to develop the trade and industry of the country. What is your answer to that?—There are no two questions about it—State ownership of all the lines.

15886. Under a domestic authority?—Yes, under an Irish authority.

Examined by Colonel HUTCHESON POË.

15887. I think you said that previous to a date which you gave as 1888, the railway system was managed directly by the Government?—Yes.

15888. Could you give us, roughly, any figures to show what results were obtained from the change of management?—I have the figures, but I have not got them at hand. You may take the general fact that the result has been entirely satisfactory. The returns are about fifty per cent. better than they were under the old management. I would instance a case in Tasmania, in which the railway is still under the old management, and in which the return is the lowest—1·7 per cent., as against an average of 3 per cent.

15889. With regard to the tenure of office of the Commissioners, are they subjected to political pressure—I presume in Australia, as in this country, the State is divided into political parties?—Yes, with the exception of New Zealand.

15890. They are a happy family?—Yes. I have heard the late Mr. Seddon, after the last election (1906), where he was returned with only one opponent in a Parliament of ninety-five, make a statement to show that there is no need of two parties in the State.

15891. I presume that occasionally, in the exercise of political influence, unpleasant incidents arise between the legislatures and the Railway Commissioners?—Yes.

15892. Has that resulted in the tenure of those Commissioners being considerably less than the appointed term of five years and to frequent changes of appoint-

ment?—There have been changes, some desirable, and some undesirable, in consequence of political interference. Where a man is taken from the old country to Australia, ignorant of all the details of the country, it is very much a chance whether he will be successful, so that the five years' tenure in Australia for the imported man is probably, in the first instance, a necessity. It is like as if one were to marry a wife without ever having seen her. Obviously where you have had no opportunities of seeing and knowing a man who has been chosen by agents in London you run a great risk. But when that kind of thing is done away with undoubtedly the life tenure ought to be adopted. Take the case of Eddy and Matheison, the tenure of the former would have been renewed if he had not died.

15893. They were such good men?—Exactly; and it is always the case with strong men who have had their own way. Several Commissioners lost public opinion from the fact that they did not stick to their own opinions.

15894. Have changes been made because such men mixed themselves up with politics?—Not necessarily with politics, but because they did not stick to their own opinions—adopted divided counsels.

15895. If they were removed from political influences it would be more satisfactory?—Yes. But I know an instance of where a Commissioner lost his position through his not giving an opinion between a question of two railway lines. He said there wasn't the toss of a penny between them. It meant an expenditure of more than half a million—about £700,000—and he refused to give any opinion on the matter as between two rival railway companies.

15896. *Chairman.*—Who was that?—Mr. Spaight.

15897. There would be some other reasons?—There were other reasons mentioned, but that was the main one.

15898. *Colonel Hutcheson Poë.*—We may take it as your experience, that where the Commissioners exercise their duties efficiently, and in the interests of the community at large, political pressure on the part of the legislative body is very seldom brought to bear?—That is so. But obviously in the case of a censorious community, like the people of Australia, the position is not a sinecure. To hold the position a man has to work exceedingly hard.

15899. With regard to the power of these Railway Commissioners, do they exercise the powers which ordinarily devolve upon the directors of the different companies in a country like Ireland?—Their position would more correspond to that of president and vice-president of the American railways. It does not closely correspond to that of directors here.

15900. Does the extension and improvement of railway systems, and the question of reduction and increase of fares, rest with these Commissioners?—The question of the extension of railways does not rest with them. The Commissioners only make recommendations. I may say that the last word with regard to freights does not rest with the Commissioners either. The extensions are carried out by the Public Works Department.

15901. Proposals for modifications or extensions will come, in the first instance, from provincial Committees?—Yes.

15902. And laid before the Railway Commissioners?—Yes, and before Parliament.

15903. *Chairman.*—Don't the Commissioners report to the Houses of Parliament?—Yes.

15904. I have seen their reports over and over again?—Yes.

15905. *Colonel Hutcheson Poë.*—Are the Commissioners answerable to the Legislature, and is their tenure determinable by the Legislature?—No.

15906. *Chairman.*—They are engaged for five years certain.

15907. *Colonel Hutcheson Poë.*—Subject to good behaviour?—The Commissioners who have been too amenable to Parliament have not held their positions; they have failed. But where you have strong men, who know their business, there would be no question about their tenure.

15908. In New Zealand they are administered by the Government?—Yes.

15909. And so long as you have a strong man like the present Minister for Railways, that works well enough?—Yes; the present man is a very strong man.

15910. Which do you say is preferable—the system as administered by Ministers or by the Commissioners?—Administration through Commissioners is undoubtedly preferable.

Apr. 23, 1907

J. T. Noble Anderson, B.E., M.I.C.E., Past President of the Institute of Engineers, Victoria, Australia.

15911. You spoke about the Government giving a concession of ½*d.* or 1*d.* a ton on Colonially-raised coal, does that concession apply to other products as well?—Similar concessions are made in other matters too, and the matter of distance is taken into account, as the cost for 500 miles would be proportionately less than for 50.

Preferential rates given to Colonially-raised coal and other products.

15912. And does that apply to exported produce generally?—Yes.

15913. The concessions are much the same?—Yes.

15914. There is a modified form of protection in favour of Colonial products?—Yes. Of course, the policy of the country is strongly Protectionist.

15915. With regard to private railways comparing unfavourably with those worked by the State, naturally there must be some dissatisfaction that the rates on the private railways are about 25 per cent. higher than on the State railways?—Yes, and on some of them more.

15916. And they pay very large dividends?—Some of them have to knock under—the Midland Railway in New Zealand.

15917. Where such companies operate side by side—the private and the State-owned railways—how do you account for it, how is it, that public opinion has not been sufficiently strong to induce the Government to take over the private lines?—The Government is trying to take them over; but unfortunately the Government often adopts unfair means to take them over—to starve them out.

15918. *Chairman.*—Hasn't there been litigation over that Midland Railway in New Zealand for years?—Yes.

15919. *Colonel Hutcheson Poë.*—Have the Government no voice over these private railways as to how they are worked?—They have practically the same control over the private railways as the Board of Trade has over railways here; the Acts of Parliament are modelled on our Acts of Parliament here.

Extent of Government control over the Colonial private Railways.

15920. As regards complaints about State management, or mismanagement, of railways before whom would such complaints be made?—Before Parliament.

15921. *Chairman.*—And referred to the Commissioners?—Yes, but often questions are asked in Parliament.

15922. *Colonel Hutcheson Poë.*—Is there any independent tribunal, like the Railway and Canals Commission here, to investigate complaints of the kind?—In Victoria they have a State Railway Committee. In most of the other cases the Minister of Railways investigates them himself.

Tribunal for adjudicating between the public and the management of the State-owned Railways.

15923. Can you give us any idea of what the cost of getting such complaints investigated is to the private trader or other who makes the complaint?—It is practically *nil*; it is only the trouble of getting the evidence in the case.

15924. There is a great deal of cost involved in going before the railway tribunal in this country?—Yes.

15925. That would be one great argument in favour of State purchase in this country?—Yes.

15926. On the State-owned railways in the Colonies there is very little cause for incurring expenditure of this kind?—Yes. In connection with this matter I might say that I think the worst paid people in connection with railways in Australia are the members of Parliament who sit on the Railway Commission. All members of Parliament get £300 a year and a free pass on the railway; but for any time they sit on the Railway Commission they only get their travelling expenses. The only man who gets extra pay is the chairman, or any of them who have to leave Melbourne and travel in the country, and in that case he gets £1 a day. So you see that a man who sits on such a Commission does so at a dead loss to himself.

The Chairman.—So it is to us.

Witness.—They are in a better position than you are, as they get the £300 a year for being members of Parliament.

The Chairman.—We get nothing.

15927. *Colonel Hutcheson Poë.*—I take it, broadly speaking, that the object with which the railways in Australia have been worked is not with the view of earning dividends, but to promote, as far as possible, the interests of the public and the development of the industrial and agricultural resources of the country?—That is their primary test.

The promotion of the public interest the primary object of the State Railways' working.

15928. And, judging by the results which have attended these operations, you have formed the

Apr. 23, 1907.

J. T. Noble Anderson, B.E., M.I.C.E., Past President of the Institute of Engineers, Victoria, Australia.

opinion that it would be to the interests of Ireland that something similar should take place with regard to our system?—Yes.

15929. As a matter of finance, I suppose you are aware that the capital of the Irish railways is forty-three millions?—Yes; it is practically the same as in Victoria.

Capital of Irish and Australasian Railways.

15930. In Victoria it is forty-one millions, in New South Wales forty-three millions, in Queensland twenty-one millions, and New Zealand twenty-three millions?—Yes; but it is very important to remark that for a comparison with Ireland New Zealand ought to be cut out altogether owing to the character of the country. It is something like Norway—900 miles long and 150 miles wide. A high mountain range, higher than in Norway, divides it, and there are eleven separate railway systems with inter-communication; while the population is under a million.

15931. And out of what is earned on the different railways, I suppose, a certain sum is set aside to pay a reasonable rate of interest on the initial cost?—Yes.

15932. And the balance would be dividends?—Yes.

Comparison of Irish and Australasian Railway dividends.

15933. The percentage paid on the Australia railways as a whole is something about the same as in Ireland?—Yes; a little more than 3 per cent. It is 3·44 for Victoria.

15934. And yet that small return enables these great concessions and reductions to be given?—Yes.

15935. And if the Irish railways were placed under State control, it is a reasonable inference to draw that such a result would also follow here?—Yes. I may mention as an interesting fact that a large number of the officials on the railways in the Colonies are Irish.

15936. I hope they are satisfied with their efficiency?—If the country were not satisfied with their efficiency they would not be there. I believe Sir Joseph Ward claims to be an Irishman, or of Irish extraction.

Colonial Railway policy as regards the development of industries.

15937. Now, as regards the coalfields, I suppose we may take it for granted that comparing Castlecomer with the Australian coalfields is comparing small things with great?—No. In Victoria and Tasmania the coalfields are very much like the Irish ones, having only two to four feet seams—like Castlecomer or Ballycastle; but the Irish coalfields are much smaller than those in New South Wales, New Zealand, or West Australia.

15938. But our coalfields here are undeveloped; and although I take it that a State-owned railway must act in the interests of the State rather than of the individual, in the case of a poor country and in the case of industries which could not be benefited under any other system, in such a case Australia would be prepared to grant facilities and to make connections?—Yes, if the people who hold the individual property are reasonable; they have to give concessions on their part. In New South Wales the Government can buy coal at 4*s.* or 5*s.* a ton.

15939. The Government would assist a private owner in developing what would be for the good of a whole district?—The Government would take care in such case that the benefit would be to the whole community, and that the man himself would get the smallest benefit from it.

Examined by Sir H. Jekyll.

Basis upon which the Colonial rates are compiled.

15940. In the rates that you spoke of, are the passenger and goods rates compiled on a strict mileage basis?—Not always.

15941. Does the element of competition come in at all?—Very largely.

15942. Between one railway and another?—Between a railway and a port. Warranambool is situate about 230 miles from Melbourne by rail. The carriage from Melbourne to Warranambool by sea is not more than 10*s.* a ton, and the railway carriage is the same. That is one example; but I could multiply instances.

Cross-examined by Mr. Healy, K.C.

15943. Could you give me any idea of the terms on which the State acquired the privately-owned lines in Australia?—Generally speaking, the terms for resumption have been embodied in the Acts creating the private lines. As a rule, the Government pay 10 per cent. over and above the actual cost of what they take over. Where land concessions have taken place the company retains the benefit of the land concessions. I think, speaking generally, that that is what takes place, and has taken place—that the actual expenditure has been increased by 10 per cent.

15944. That is, 10 per cent. for compulsory purchase?—Yes.

15945. With regard to the making of lines to undeveloped coalfields, would you think it reasonable that the State or the railway company should have the right to send in an expert to test the quality of the product?—Yes.

15946. And the quantity to be mined?—Yes. In Australia they have made very exhaustive tests.

15947. And if the colliery owner refused that right to the railway company an unfavourable conclusion would be drawn?—Yes. That brings out the want of education in the community.

15948. You think an Irish colliery owner who refused the right of a railway company to send in an expert would be an uneducated person?—Yes.

15949. *By the Chairman.*—Do you know anything about the purchase of the Tasmanian Railway some years ago?—No. That was before my connection with them.

15950. Do you know that the price of some of the lines have been fixed by arbitration?—I believe so; but I don't know of my own knowledge.

15951. At any rate, where there is a dispute between the railway company and the Government, arbitrators settle the price?—Yes.

15952. *Mr. Sexton.*—What do you say is the average cost of construction out there?—For construction and equipment, starting in a light way, from £2,000 to £3,000 a mile. They are stronger where there is traffic. Most of the lines in Victoria have got 80 lb. rails, and one has 100 lb. rails; and that brings up the cost.

15952A. *The Chairman.*—That is only in one or two places?—Yes. I should have said express lines.

15953. *Mr. Sexton.*—The cost of purchase is, by the State, a premium of 10 per cent. on the £3,000 a mile, or whatever the cost of construction might be?—Yes. All the cost of construction is audited by the Government, and every penny that legitimately goes into the construction is recorded, and they get 10 per cent. on that. That is the New Zealand method.

15954. *The Chairman.*—I think I am justified in saying that the Commission are very much obliged to you. We have received information of a very valuable character, and we are indebted to you for coming here to give your evidence.

Witness.—I thank you; and I am much indebted to you for the patient way in which you have listened to what I have had to say.

Mr. R. H. Prior-Wandesforde, D.L., examined by the Chairman.

Mr. R. H. Prior-Wandesforde, D.L., representative of the Kilkenny County Council.

15955. I think you are a Deputy Lieutenant and Justice of the Peace for the County Kilkenny?—Yes, sir.

15956. Are you a member of the County Council of Kilkenny?—I am not a member now.

15957. Have you been deputed by that body to give evidence?—I was, on the subject of the need for a connection of the Railway with Castlecomer, not on any subject of policy.

Extent of Castlecomer coalfields and transit facilities.

15958. Are you the proprietor of the Castlecomer collieries?—I am.

15959. What is the extent of the coalfields there?—It covers nearly 40 square miles. It is not all on my property, of course.

15960. What particular part of the County Kilkenny do you represent?—The northern part of the county.

15961. And what railways serve that part?—No railway serves that part at present; it is surrounded by railways, but there are no railways into that northern part nearer than Ballyragget.

15962. What railway runs through the county?—The G. S. & W. R.

15963. Is there any canal communication?—No, not in the county.

15964. Do you work the colliery at Castlecomer?—I do.

15965. To a limited extent, I suppose. What is the output?—The output at present is about 60,000 tons a year.

15966. What is the known or estimated extent of the coalfield?—40 square miles, and it is estimated to contain about 118 million tons; it has been variously estimated—that is about the average.

15967. How long has the colliery been worked?—The colliery has been worked there for nearly 300 years.

15968. Is the present output the largest?—No, at one time the output was over 80,000 tons a year, that, I think, was before the introduction of railways and the bringing in of sea-borne coal, English coal.

15969. Is it a good coal, house coal or steam coal?—Anthracite coal, similar to that of South Wales.

15970. *Mr. Healy*, K.C.—Similar to?—Equal to.

15971. *Chairman.*—What distance are you from a railway station?—The collieries are about from 8 to 10 miles from a station.

15972. What is the nearest railway station?—Ballyragget is the nearest.

15973. How far is that from the colliery?—About 8 miles. One of the collieries is about equi-distant between Abbeyleix and Ballyragget (*shows on map*).

15974. Is that the only part of the field that is worked?—The only part that is worked at present, the only place where it is worked now is on my property.

15975. Five collieries?—Five collieries working at present.

15976. Just tell us first of all what does it cost to get a ton of coal to the nearest railway station?—From 4*s.* 6*d.* to 5*s.* a ton.

15977. For cartage?—For cartage.

15978. And do you send anywhere by rail?—Yes, only to a small extent, I may say, before 12 months ago there was none practically sent by rail, since that there has been a considerable increase in coal sent away by rail from Abbeyleix.

15979. Do you cart to Abbeyleix?—Yes, because that is nearest to the colliery that is being developed on the better seam.

15980. What distance is that?—Eight miles.

15981. In fact there is no colliery situated within about eight miles from a railway station?—About that.

15982. Is it a good road?—No, it is not a good road, it is a road you cannot put traction engines on, for instance.

15983. Why?—Because the bridges won't stand it, at Ballyragget there is a bridge that won't stand above six tons, and there are other bridges that won't stand a traction engine, and there is a boggy bit of road that, when the engines go over it the hedges jump up.

15984. When you get to the railway station, have you any complaint to make about the rates charged by the Railway Companies?—No, not on the whole. Do you know the charge per ton per mile?—Yes, I can give you that, from Abbeyleix to Dublin, six-ton lots, it works out 61 miles, ·985*d.* per ton per mile; from Abbeyleix to Cork, ·758*d.*; Abbeyleix to Wexford, ·93*d.*, and Abbeyleix to Limerick, ·91*d.* Also Abbeyleix to Limerick, eight-ton lots, ·782*d.*

15985. That includes the use of the wagons?—That includes the use of the wagons.

15986. Do you load the wagons?—Yes, my men load the wagons.

15987. And the consignee unloads?—I don't know, I suppose the customer unloads at the other end.

15988. What is your great competitor for your particular coal, is it the Welsh coal?—The Welsh coal for anthracite for such purposes as gas producers, the ordinary bituminous coal competes with our native coal for household purposes.

15989. Have you any figures with reference to the rates on Welsh coals?—I have.

15990. Can you give a figure as to the cost from a Welsh colliery to Swansea?—It would average about 1*s.* 6*d.* per ton, that would be f.o.b. less 2½ per cent. discount.

15991. That includes the cost of tipping at the port?—I have the rates from anthracite collieries from the Garnant and Pantyffynon district to Swansea for shipment in owners' and company's wagons, exclusive of tipping.

15992. First of all, what is the distance?—Taking a general average from 10 collieries, 27·22 miles. In owners' wagons 1/2·85, that is ·539*d.* per ton per mile. In company's wagons 1/5·4, which works out ·651*d.* per ton per mile.

Welsh coal rates.

15993. That is less than ¾*d.*?—Yes, those are reduced for export purpose. Coal for export is lower, of course, than the rates for internal.

15994. Probably in train loads?—I don't know that there are any train loads, they are in wagon loads anyway.

15995. I say probably coal going for shipment would be in train loads?—Those are wagon load rates.

15996. They compare favourably as regards the rates you have to pay in Ireland?—They do.

15997. But the quantity must be different to Swansea to what it is in your district?—The quantity, no doubt, is different.

15998. What do you send away in a week or in a day from any station you use?—From Castlecomer we have never sent a train load yet.

15999. It must go in small quantities?—It goes in small quantities, in wagon loads, 6 to 8 tons; I have the quantities sent away, in January last there were 253 tons sent over the railway.

Area of supply for the Castlecomer coal.

16000. From where?—From Abbeyleix to various stations such as Kingsbridge, Charleville, Clara, Limerick, Thurles, Roscrea, Banagher, Wexford, and so on. That, I may explain, was for coal almost entirely for gas producing purposes in gas engines, not for lighting gas, of course, but for power gas. I have the rates compared from Swansea to some of these competing places.

16001. Where do you reckon your principal markets would be?—All over Ireland.

Necessity for railway communication to render an extension of markets possible.

16002. Assuming a railway to the colliery, where would your principal markets be?—All over Ireland in the first place, and then I consider that an export trade could be established.

16003. In Waterford and Limerick?—Yes, if we got the same rates that are granted for export purposes in South Wales, not otherwise.

16004. Where would you export to?—France and Germany, principally—also to Great Britain, Channel Islands, etc.

16005. In competition with the Welsh coal?—In competition with the Welsh coal.

16006. Is the coal as good?—Yes, I have got a great many opinions on that, no doubt about it.

Market value of the coal compared with Welsh.

16007. That is to say, it is an excellent anthracite coal?—I am speaking of the deeper seam we are developing now, the shallower seam we have worked up to this is not so good, and would not compete, but the deeper seam would compete with the best Welsh.

Absence of shipping facilities at Waterford for dealing with coal traffic.

16008. Are the shipping facilities at Waterford good?—There are no shipping facilities at Waterford.

16009. None?—Nothing as compared with South Wales.

16010. In South Wales it would be impossible to ship the quantities produced there without proper tips?—There are no tips at Waterford.

16011. Do you think there would be if there was a proper coal traffic?—Yes.

Waterford Port dues compared with Swansea.

16012. What are the port dues chargeable at Waterford?—They are more than at Swansea by 5½*d.* on the rateable tonnage for places not in the United Kingdom.

16013. Is that on the ton of coals shipped at Swansea?—Yes.

16014. *Mr. Sexton.*—Rateable tonnage must refer to the ship?—Those (*produced*) are the figures I got from an expert in South Wales.

Chairman.—No, he is right.

Mr. Sexton.—It is per ton, nothing about rateable tonnage.

16015. *Chairman.*—The cost of tipping and filling in the holds, 7*d.* a ton, stevedore, 1*d.*, craneage, including tipping into truck, 5*d.* a ton?—Yes. We have no figures for putting into the ship.

16016. You say the cost of shipping coal in Waterford is considerably more than the Welsh coal pays when shipped at Swansea?—Considerably more.

Price of the Castlecomer coal at pit's mouth.

16017. You have not told us about the price of coal at the pit's mouth?—The price of coal at the pit's mouth averages 9*s.* 11*d.*

16018. That is largely in excess of the price of the Welsh collieries?—The average for the Welsh collieries for 1905 at the pit's mouth was 12*s.* 7*d.*, for 1906, 12*s.* 7¾*d*, anthracite. Anthracite commands a very much larger price than bituminous.

16019. Oh, yes, anthracite, I had forgotten that. just explain to the Commission, when you cart the

Apr. 23, 1907.

Mr. R. H. Prior Wandesforde, D.L., representative of the Kilkenny County Council.

coal to Abbeyleix what is the process there, what facilities are there there for loading it, how is the coal taken from the cart to the railway truck?—It is shovelled out into the railway truck, a man gets on the cart and shovels it out. We pay the carters so much a ton to take the coal to the railway station and load it into the railway trucks.

16020. Are there any weighing machines there?—No weighing machines, nothing to weigh the coals on.

16021. The coal wagon or the coal cart?—No, the consequence is it is very hard to tell if there is any leakage of coal on the way to the station, and we occasionally have complaints of short weight.

Absence of facilities at Abbeyleix Station for dealing with coal traffic.

16022. You weigh at the pits?—Yes.

16023. Do you allow what the Welsh collieries allow a certain percentage for leakage?—We give full weight.

16024. What do you call full weight?—20 cwt. to the ton?—Yes.

16025. Not more; in South Wales they give more than that?—For wastage?

16026. Yes?—This coal is mostly screened and sized, so there would not be much wastage.

16027. Then the railway company supply you with coal wagons?—They do. Oh, I wish to say that, in the draft you have there is a complaint about unsuitable wagons, that has since been put right, there is nothing to complain about that now.

Canal rates higher than railway rates for coal traffic.

16028. Do you send any by canal?—No. We send nothing by canal. The rates on the canal are higher than the rates on the railway.

16029. How far are you from the canal?—We are about ten miles from Carlow, some of the collieries and the others fourteen miles.

16030. Further than to the railway station?—Yes. I ought to mention with regard to the road bridge at Ballyragget that you asked me about, being insufficient to bear the weight of a traction engine, negotiations are going on with the railway company to give us a siding elsewhere.

16031. Nearer to the collieries?—Well, just as convenient as Ballyragget was.

16032. Was there anything else about the district to which you wished to refer?—Yes, it is a large agricultural district.

Fireclay available in district.

16033. I mean in the shape of minerals?—There is fireclay.

16034. Is there much fireclay?—Fireclay underlies the principal seam and of good quality, it is of no value at present for lack of transit facilities, it is not worth taking it up.

Thickness of the coal seams.

16035. You have not told us of what thickness are the seams?—The two principal seams are the Jarrow and the Skehana, the Jarrow is 24 to 36 inches thick, the deeper Skehana seam is 24 to 26. The Skehana seam is an easily worked seam, very little shot has to be used, it is clean coal above, underneath you have a soft culm which has to be raked out and the coal comes down.

16036. Have you to use many pit props?—No, it is very easily worked.

16036A. In a 2 feet seam the men must be always stooping?—Yes, they are. They work, as a rule, lying down on their side.

Increasing demand for anthracite coal.

16037. There is no question if you can produce anthracite coal of the same quality as the Welsh, the demand is almost unlimited?—The demand is almost unlimited at the present moment for anthracite coal and it is increasing. I can give the figures from South Wales.

16038. You might just tell us what was the production of anthracite in South Wales in 1894?—1,550,145 tons, and in 1905 the Welsh anthracite output was 2,789,178.

Output and prices of Welsh anthracite coal.

16039. And out of that total nearly two millions was exported?—Yes, 1,856,000 in 1906, the average price being 12*s.* 7¾*d.*, about 2*s.* 7*d.* higher than the Kilkenny anthracite. I gave you some figures there of the prices of the different qualities of Welsh anthracite, since I wrote that the prices have risen.

16040. You give a price but you don't say whether it is f.o.b. at Swansea or Llanelly. Do you mean to say f.o.b. is 20*s.* 6*d.* a ton?—Yes, 20*s.* 6*d.* to 21*s.* 6*d.*, machine made large cobbles, 19*s.* to 20*s.*, German nuts, 24*s.* to 25*s.* 6*d.*, Paris nuts, 24*s.* to 25*s.* 6*d.*, machine made large peas, 14*s.* 6*d.* to 15*s.*, culm, 7*s.* 3*d.* to 7*s.* 6*d.*, duff, 5*s.* 6*d.* to 5*s.* 9*d.* f.o.b., less 2½ per cent. discount.

16041. In February, 1907, there was an unusual demand all round, coal jumped up; I don't think it is fair to take these as the average price, they seem to be abnormal?—The average price in 1905 is 12*s.* 7*d.* at the pit's mouth.

16042. But when you come to 21*s.* 6*d.* and the railway rate is only about 1*s.* 6*d.* there is an enormous increase, but they were abnormal figures in January, 1907?—They were.

16043. And they have all gone down since?—No, the figures I have just read out are from the 19th of April, they have gone up since January, the anthracite figures, those are the figures for the 19th of April, I have taken them from the "Iron and Coal Trade Review."

16044. *Mr. Sexton.*—What would be the price at the pit's mouth when the price at Swansea f.o.b. was 21*s.* 6*d.*?—It would be about 1*s.* 6*d.* less, the tendency is upwards, the introduction of gas producers and gas engines is one of the principal things that has stimulated a demand for anthracite on the Continent and in England.

16045. *Chairman.*—You have referred to the agricultural resources of your district, I don't know that we need go into details?—I might refer to another point about graphite, the coal of the Skehana seam is eminently suited for making the best class of graphite.

16046 What is graphite?—In America, at the Niagara Falls, a company make lead pencils and carbons for electric light out of it.

16047. You sent over 100 tons to Niagara Falls, in America?—Yes, it came to about £3 per ton by the time it arrived. There was nothing there to compete with it. This (*produced*) is a pencil that was made out of the Skehana coal.

16048. *Chairman.*—This pencil was made from Acheson Graphite manufactured in an electric furnace. Made from your production from this particular district. It was made in America, and you sent 100 tons?—Yes. They could have had more but the price killed it. They have declared it was the best they could obtain for the highest quality of graphite.

16049. This is your own leading?—It is the present means of transit, and typical of the rates unless we had the line.

16050. Do you state seriously that if the railway were constructed to your collieries this graphite, as you call it, would be a considerable source of traffic?—Very probably. I have only touched on the subject of the lack of transit.

16051. What is the quantity available?—About 100 million tons.

16052. Of the graphite?—The graphite is made from the coal. It is manufactured from the coal. It is a pure form of carbon. It has a percentage of 93 per cent of carbon. It is manufactured from that in an electric furnace.

16053. The coal is of such excellent quality that it can be used for this particular purpose, and has been used?—Yes, has been made and proved to be suitable.

16054. What proportion of the coal is suitable for making the graphite?—Practically the whole of one particular seam, viz., the Skehana seam. The coal is also suitable to be used in locomotives and was used formerly by the railway companies for mixing with other coal. I think at the time the Canal Company were working a colliery.

16055. Can you tell us, for our information, how the 100 tons was sent?—It was carted to Abbeyleix, and through Carlow, and went by rail to Dublin. It was put on board the ship there and went to America and then across to Niagara Falls. We had a repeat order for it but the freight finally killed it.

16056. What steps have been taken by the authorities or any of the people to get a railway or connection with these collieries?—A great many attempts have been made from time to time. In 1801 there was a grant made by the Directors of Inland Navigation to make a canal from Castlecomer, a public grant of £40,000 was offered, but probably through the failure of a working agreement with the Canal Company the grant was not availed of. That is the beginning of the history of the thing 100 years ago.

16057. The grant was made. Why the canal was not made you do not know. I think we had better come to more recent times?—1875 was the next thing.

16058. Is this to your own knowledge. I will assume that periodically there have been efforts made to get connection with the collieries. How long have you been engaged with the collieries, directly or indirectly?—Indirectly about fourteen years. Lately I have been directly concerned.

16059. What steps have you taken?—I have only worked the collieries for two years, barely two years. Before that time they were leased. The lease ran out and since that time I have taken them over and have been developing them as owner.

16060. If you will give us your history from the year 1875 it will go far enough back?—That was the scheme of a railway from Shillelagh through Tullow, Carlow, Castlecomer, to Ballybrophy joining the Great Southern. That was probably the best scheme. It would have opened up the country, and would have brought in competition.

16061. Was application made to Parliament?—I only find this in the records. I cannot tell you. In 1884 there was a scheme for a tramway from Castlecomer to Carlow and Castlecomer to Kilkenny. It depended upon a guarantee by the Grand Jury. They refused to guarantee that 1884 scheme. In 1884 there was also a scheme to make a tramway from Castlecomer to Athy.

16062. How far is that?—Fifteen miles.

16063. Is there a station at Athy?—Yes. The guarantee was granted but the Order in Council was rejected by the Privy Council.

16064. Have you traced the reason why that was rejected?—No. In 1888 there was a scheme to connect a railway with Carlow. The Great Southern and Western would not make the line, but they were willing to work it on their own terms. A memorial was sent to the Lord Lieutenant under the Act of 1889, asking him to give a grant, but it was not given, and the scheme accordingly lapsed. In 1893 there was a scheme to make a railway to Kilkenny. The Waterford and Central Ireland Railway offered to work it at a percentage of the receipts, 55 per cent. The Chief Secretary refused to recommend any grant or assistance and said the money was required for the congested districts, which he said needed it more.

16065. That was in 1893?—In 1896 a scheme to connect with the Waterford and Central Ireland Railway at Foulksrath, also a memorial to the Lord Lieutenant, and also in the same year there was a scheme for connecting Portarlington. The Great Southern and Western were unwilling to work this line on any terms, and the capital could not be raised. In 1901 the Great Southern and Western were again approached and a personal guarantee was offered if they would construct the railway.

16066. By whom was it made?—It was a personal guarantee by myself. I offered to guarantee the interest on the capital.

16067. What was the guarantee?—To secure the interest on the capital, the interest on the outlay. They refused to construct the railway, but if made to their satisfaction they would work it at cost price if a guarantee was given for the same.

16068. I understood you to say you offered a guarantee?—They refused to construct, but they would work it when constructed.

16069. *Mr Healy*, K.C.—Read the guarantee that was offered?—It was merely a personal letter written by me.

16070. Read the letter?

16071. *Chairman.*—Have you got a copy of the letter?—I have. I have here the reply from the railway company to the letter. It is dated September 10th, 1901. (*Reads*), "With reference to your letter of the 30th ultimo, asking the company's decision on your suggestion to give a personal money guarantee in the event of the company undertaking the construction of a railway from the town of Castlecomer to Ballyragget Station. The matter has been considered, and my Directors do not see their way to undertake the construction, but if the line is made on the ordinary gauge to the satisfaction of the engineer of the company they will be prepared to work it at cost price, on a guarantee being given for the payment of that sum. I would suggest your making inquiries as to the aerial railway which, of course, could be constructed for a comparatively small amount.—Yours truly, R. G. Colhoun, per E.C."

16072. *Chairman.*—That bears out what you say. That was in 1901?—Yes.

16073. What was the aerial railway?—The aerial railway means a rope railway, with buckets suspended from rope. It is used in a few places in Ireland. There is one at Durrow Brickworks.

16074. Is there any ten miles long?—I cannot say. There is one in Cork, a very much longer one, about four miles, and there are many in Spain.

16075. Was that the last effort you made?—No. In 1903 a grant was asked for under the Irish Development Grant, and a resolution was passed in public meetings and by the County Council and the Rural District Councils, but the Chief Secretary declined to recommend a grant. He gave no reasons.

16076. They do not usually give reasons?—That is so. They don't usually give reasons. In 1906 and 1907 certain negotiations were going on.

16077. With what company?—The Great Southern and Western.

16078. Can you tell us anything about it?—An offer was made that the capital would be found to build and equip a tramway if they on their part would grant certain rates and facilities. The company would not consent to work the tramway on a percentage of receipts or even for all the receipts, or a certain rate per mile per week. They would only consent to work it for what it would cost them. Up to date the concessions offered by the company were not sufficient to enable the capital to be raised.

Schemes for Railway communication and action of the Great Southern and Western Company in connection therewith.

16079. That covers, I think, the whole. You have brought it up to date?—I have.

16080. And there you are as you were 100 years ago?—As we were 300 years ago. I think we are in a worse position than we were before. Railways were not introduced then, and the railways now bring in competing coal. There were no railways to bring anything of the kind then.

Output of colliery less than before the advent of Railways.

16081. In other words the production is less than it was before the railways?—Yes

16082. Well, now, have you formed any opinion on the general subject, the general question of Irish railways?—This opinion, as you will understand, is personal entirely. I am not deputed by the County Council for that. I do not think any general opinion was discussed.

16083. I am asking your personal opinion as a landowner and a man interested in Ireland?—I think my opinion is that what we suffer from in the South of Ireland is lack of competition. I think if we had competition we would have several railway companies struggling to obtain the coal in a colliery district and not throwing discouragement upon the development of it.

The South suffering from lack of Railway competition.

16084. You are against the unification of the railway system?—I think it could be worker better by private companies if there was competition.

16085. You are in favour of more railways?—Yes.

16086. Who is to supply the money for them if private parties won't?—I am of opinion that the State should purchase the railways and canals in Ireland, and then——

16087. Stop a bit, I thought you were for competition?—They should then divide them into various systems, as I think is possible, and lease them to working companies afterwards.

16088. How would that make any difference?—You would have the element of competition introduced then. You would not have one railway controlling the whole of the South of Ireland. I don't think that is a good thing.

16089. How would it be obviated?—They ought to be handed to more companies. If the railways were now bought by the State they ought then to be put into the hands of several companies.

16090. If the State bought the railways; and sold them to somebody else?—Yes; sold them again.

16091. It would be a change of proprietors?—Leased or sold them again to working companies.

16092. I confess I don't exactly follow it, but I asked your private opinion, and you have given it, and I must accept it?—I see a great many objections to State control, but I confess I would rather have that than the present.

16093. You would rather have State control than the present system, as it is in the South of Ireland, in Ireland?—Yes. I am not an expert in railway matters, and these opinions are the result of my own observations and study.

State control of the Railways preferred to present system

Examined by Mr. Sexton.

16094. There are two or three points on which I want your views. I find you give the price of coal at the pit's mouth at Castlecomer as 9*s.* 11*d.*, and price at the pit's mouth in Wales as 12*s.* 7*d.* Were these prices taken at the same time?—Yes, at the same time.

Prices of Castlecomer and Welsh coals compared.

Apr. 23, 1907.

Mr. R. H. Prior-Wandesforde, D.L., representative of the Kilkenny County Council.

16095. The cartage to the railway, Abbeyleix or Ballyragget, was 4*s.* 6*d.* to 5*s.*?—Exactly so. Kilkenny sometimes as high as 6*s.*

16096. The railway rate to Dublin is about 5*s.*?—I think that was the figure Abbeyleix to Dublin.

16097. Does the price at the pit's mouth in both cases include the owner's profit?—Oh, yes, that is the selling price.

16098. You get for 20*s.* to the railway terminus in Dublin. That is, to the railway in Dublin the rate is 5*s.*?—Correct.

16099. Welsh coal 12*s.* 7*d.* at the pit's mouth. It is taken from inland collieries thirty miles to Swansea for 1*s.* 6*d.*, and the rate across the sea to Dublin is 4*s.*?—Yes., 4*s.* in some cases—less in others.

Relative prices of Castlecomer and Welsh coals.

16100. They bring that Welsh coal back to Dublin for 18*s.*, whilst your coal at the same time stands at 20*s.* in Dublin, although the price at the pit's mouth was 2*s.* 6*d.* cheaper than the Welsh coal. Here we have a commodity produced in Ireland, and the cost of it at the pit's mouth to the owners, with their profit, is 2*s.* 6*d.* a ton less than the corresponding figure in Wales; yet the Welsh coal is brought from inland collieries twenty or thirty miles, and carried to Dublin, and the total comes to 2*s.* less than the corresponding figure for the Irish coal?—Yes.

16101. Have you noticed that the Government auditor has surcharged a Board of Guardians in Dublin for having bought Castlecomer coal at a higher price than Welsh coal could be bought for?—Yes, I have noticed that, but in that he is entirely wrong. He is assuming anthracite is of the same value as inferior bituminous coal. He can be very easily proved to be incorrect.

16102. It appears that the conditions of transit enable the Welsh coal-owner to sell an article which had cost him more to produce at the pit's mouth, and to sell in Dublin, to undersell you in the Dublin market by reaching that market more cheaply than you could?—I don't say that the Welsh coal always costs more to produce.

16103. I have given you the figures?—That is the average selling price at the pit's mouth.

16104. The cost of transit added to the price at the pit's mouth?—We can produce quite as cheaply on the average in Kilkenny as in Wales.

16105. If the transit conditions were as favourable, if you had complete railway connections, and corresponding freights to what they have in Wales, you could sell more cheaply than they at the Irish seaports?—That is entirely so. We could enter into competition.

Yearly output of and present market for Castlecomer coal.

16106. What is the output now?—60,000 tons a year on the average. Most of it is sold within a radius of fifteen miles of the collieries.

16107. Wales has increased the output in a few years from 1½ millions to about 3 millions. They are not able to overtake the market?—Yes, that is what has raised the price.

16108. You have a market for your coal; it is of equal quality, and costs less, but your market is within a cartage radius of fifteen miles?—That is our market. It is restricted. We are compelled every year to have restriction. We are the only colliery in the United Kingdom and perhaps in the world where there is that restriction. The colliers work half time in the summer. At the same time the datal and surface men remain on full time, and that increases the cost of production, and consequently the selling price.

16109. What opinion have you as to the quality of this anthracite coal from Castlecomer in comparison with anthracite coal in Wales?—It compares well with the best Welsh. I am not saying that from opinions—I have got proof of it.

Testimonials as to the quality and expert analyses of Castlecomer coal

16110. I want the names of the experts who have testified to that?—This is a letter from Mr. Behenna, of Thomas Williams, Son, and Behenna, who are large buyers and exporters of coal in Wales. We sent him a ton and this is his letter:—

Swansea, 8th February, 1907.

James Probert, Esq., Swansea.

Dear Sir,—Referring to our letter of the 16th November last, we have now made an analysis of the sample of anthracite coal you sent us, and we find the following results:—

			Average.
Ash,	1	1·3%	1·25%
"	2	1·2%	
Volatile,	1	8·3%	8·2%
"	2	8·1%	
Carbon,			90·55%
			100·00%

We have also carefully examined the fracture of the coal, and, from its appearance, we should think it would lend itself admirably to crushing into cobbles and other graduated sizes of nuts, assuming, of course, that this manipulation would be necessary apart from the trade to be done in large and cobbles—in a word, both from the analysis and from the appearance of the coal, we should say that it would compare with anything worked in the South Wales district. One feature is its remarkable cleanliness, which is a most important factor. There can be little hesitation in saying that, with the present demand for anthracite—and the world's requirements for this particular class of coal are daily increasing—its sale should be readily effected, provided, of course, as pointed out in our last letter, that adequate tipping arrangements are provided, and that steamers can be loaded in the same time as is usually occupied by freighters in the South Wales ports. You are yourself fairly conversant with this district, and you are well aware of what is, at present, transpiring. The demand for Welsh anthracite undoubtedly exceeds the supply, and this is due, in a very great measure, to the impetus given to the trade by the use of *gas suction plant*. Giving the usual facilities in loading, there is no reason why a large connection should not eventually be established in English ports for your Irish anthracite: this, of course, in addition to the Continental demand.

If your friends have any other questions to formulate on any point or points, I will endeavour to reply.

Yours faithfully,

E. L. Behanna.

16111. Is that from a firm trading largely in Welsh anthracite coal?—Yes, I have got the analysis, too, from Mr. Probert.

Witness handed in the following:—

10, Quay-parade, Swansea,

February 9th, 1907.

Dear Sir,—Mr. Behenna has been out of business through illness, and knowing him to be as well acquainted as anyone in the trade to give a straightforward opinion of the merits of the samples of coal, I delayed troubling others.

I have seen him to-day, and he has had an analysis of the coal made, and I enclose his further remarks.

I also had the sample inspected by the Managing Director (Mr. Griffith), and the Colliery Manager (Mr. Fisher), of the Gellyceidrim Anthracite Colliery, whose output is about 500 tons a day of the best coal in the district, and they pronounce the coal as excellent, fit, when crushed, for what is know in the trade as Cobbles, German Nuts, French Nuts, Small Beams, and Small Peas, and the demand for such grades is at present more than equal to the supply.

In case you should not know the sizes of the different coals for the Continental market, I give them below:—

Cobbles,	Over 2½ inches,
French Nuts,	1¾ inches to 2½ inches.
German Nuts,	1 inch to 1¾ inches.
Beams,	½ inch to 1 inch.
Small Peas,	⅜ inch to ½ inch.

I am advised to tell you that there would be no difficulty in finding a market for any of these sizes, and you will get to know from the daily papers the ruling value of them.

Yours faithfully,

J. Probert.

R. H. Prior Wandesforde, Esq., J.P.

16112. *Mr. Sexton.*—Will you put in any other testimonies?—Yes; I can put in a report by Pro

fessor Henry Louis, of Newcastle-on-Tyne, who is Professor of Mining in the Durham University. He made a survey of the colliery on my estate.

16113. What is the effect of his testimony as to the comparative quality of the Irish and Welsh coal?—He did not make an analysis of the coal, but his opinion is that it is of a very high class of anthracite. I have also had an analysis made by Messrs. Pattison and Stead, of Middlesbrough, as follows:—

Carbon, ...	93·81
Hydrogen, ...	2·73
Oxygen, ...	0·86
Nitrogen, ...	0·85
Sulphur, ...	0·60
Ash, ...	1·15
	100·00

16114. *Chairman.*—Above 90 per cent. of carbon?—Over 90 per cent.

16115. *Mr. Sexton.*—What might the output of a forty-mile colliery be under favourable conditions, such as would enable the products of the colliery to reach the Irish markets?—The output might easily be quadrupled.

16116. What number do you employ now?—There are about 500 persons employed.

16117. There could be two thousand?—Oh, yes.

16118. Has Kilkenny suffered as much as the South of Ireland generally from emigration of the people?—I think it has. I have not the population figures, but they are obtainable. The population of the colliery district has fallen.

16119. It is very different from what it was at the time the first effort was made to get canal communication; can you throw any light on the circumstance of the canal rates being higher than the railway rates?—I cannot, except that the railways control the canals in some way. The canal rates are higher, and they did not appear to want to take the coal either.

16120. You have given a very interesting recital of the various efforts made to procure either a canal or a tramway or a railway communication extending over many years. Do you think it likely you will get what you want in that district unless there is some public authority dealing with the extension of Irish railways and having resources at its disposal—I mean some home authority?—I have hopes of the Great Southern and Western Railway still.

16121. You say the Great Southern and Western Railway take up the position that they will not construct a line and will not work a line unless they are indemnified against loss; you do not appear to be in a position to indemnify them against loss?—It is a great risk for a private individual to undertake.

16122. How can you hope then to have a line constructed; does not it seem more likely that if you had an authority which would consider Irish needs first and would have resources for the purpose of meeting them; you would be more likely to get the line in that way than in any other?—Possibly.

16123. Just one other matter: I think you have hardly succeeded in making your views quite clear as to the future disposition of the railways: have the Kilkenny County Council expressed any view on the general question?—On the general question of the management of the railways of Ireland?

16124. Yes; of the future management of them?—Not to my knowledge. There is another gentleman coming after me who wishes to give evidence.

16125. They sent delegates to the General Council, where there was a resolution carried?—They did, but nothing was given to me.

16126. You think that the railways and canals of Ireland should become public property; you have said that in your proof?—Yes.

16127. You appear to be of opinion that the State should examine into and arrive at a conclusion as to what further extensions of railways and canals are required. Am I right in drawing the inference that you are of opinion that it would be only the State or a public authority in Ireland that could deal with the question of the further extension of railways and subsidiary lines?—No, I think the experience of the United States shows that private companies, if they wish, can develop a country in an excellent manner, and very quickly.

16128. You cannot have read very much recently about what is taking place as to private ownership of railways there. You think that the State should arrive at conclusions as to what further extensions are necessary, and that the railways should not be leased until that has been done?—Yes.

16129. That would occupy a considerable time?—It would.

16130. Should you have any objection to this:—that during the period after the State had bought the railways, and while it was considering what extensions should be made—that during that period the State should work as well as own the railways, and that the efficiency and fitness of that method for the benefit of Ireland should be judged by the results?—No; I should have no objection to that. There is one point, perhaps, I should mention. A question was asked during the time the last witness was cross-examined by the Counsel for the railways, and the suggestion was conveyed to my mind, and, perhaps, also to those who heard him, that the railway company had offered to send an expert to the collieries to inquire as to whether the statement made by the proprietor as to the value of the collieries was correct or not. The imputation was that this offer was refused and that consequently the proprietor of the colliery was a person without education. I don't say anything as to the good taste with which that was put, but it does not represent the facts by any means. As a matter of fact, I offered some six months ago to allow the railway companies to send an expert, but advantage was not taken of that. Just lately they have acceded to my request, and I imposed certain conditions which I considered right; for instance, I don't know who the expert is, and I think that the report should be considered as a confidential one between myself and the railway company. I would not have mentioned the subject if the question had not been asked, because it conveyed the impression that I had refused a reasonable offer by the railway company.

16131. Have you any objection to a railway company or other promoters or a public authority making such an investigation and inspection of the colliery as would be necessary to determine the quality of the coal and the extent of the deposit?—By no means, but I should know who the expert is. There is a great difference of opinion as to what is an expert and as to who is an expert. A great many people call themselves experts who are not.

16132. The person should be competent to determine the question?—Yes.

Examined by Colonel HUTCHESON POË.

16133. I think you said that there are three classes of coal sold respectively at 9*d.*, 7*d.*, and 3*d.* a cwt.?—Yes, several classes.

16134. In arriving at the average price at the pit mouth, is the cost of the culm included?—Yes, the culm is included.

16135. If the culm were excluded the price would be considerably higher?—It would. In competition perhaps with the Welsh coal it would not enter very largely. Culm is included in the price of the Welsh coal also. Large quantities of culm are sent down from the Welsh collieries and mixed with bituminous coal and made into briquettes. I have had several methods of briquetting the anthracite laid before me, but they are of no use owing to the lack of transit.

16136. The only point I want to get quite clearly is as to whether the comparison between your coal and the Welsh coal is a fair one as to price?—Yes.

16137. It is 9*s.* 11*d.* as against 12*s.* 7*d.*?—I have taken every care to verify that.

16138. You are charged to Dublin, which is a distance of 61 miles, at the rate per truck of ·98 of a penny?—Yes.

16139. You expect that a rate for 27 miles only would be considerably lower?—Yes, but the rate I calculate is from the Welsh colliery down to the port of export, and the railway companies are allowed to charge a lower rate for export coal. You cannot compare that with the rate to Dublin.

16140. With regard to the 200 tons of graphite, did they give you any lower rate than ·98 of a penny from the colliery to Dublin?—I don't think so, but I think I am right in saying that they did not. It was several years ago.

16141. Was it in large consignments?—It went in sacks; it did not go in truckloads.

16142. You never approached them to ask would they give you a lower rate?—The railway company

Apr. 23, 1907.

Mr. R. H. Prior-Wandesforde, D.L., representative of the Kilkenny County Council.

State should work, as well as own, the Railways for a period.

Suggested investigation by a competent expert as to the quality of the Castlecomer coal and extent of the deposit.

Method of arriving at the comparative prices of the Castlecomer and Welsh coals.

Abbeyleix and Dublin coal rate.

Apr. 23, 1907.

Mr. R. H. Prior-Wandesforde, D.L., representative of the Kilkenny County Council.

offered me a lower rate for export coal if we had a tramway, but it was not so low as I considered it should be, not so low as the rate they give in Wales but it was a low rate.

16143. You expected that it would bear the same proportion to the Welsh rate that your distance does to the Welsh distance?—Yes.

16144. Am I right in saying that the Skehana coal is peculiarly well adapted for malting purposes—it is free from sulphur?—We have not experimented much in that direction, but it has a very low percentage of sulphur.

Value of Castlecomer coal for malting purposes.

16145. I think I am right in saying that formerly a considerable quantity of your coal was used by Messrs. Guinness for malting purposes?—Yes.

16146. Something like 800 tons a year?—I believe it was from the Skehana seam.

16147. And the reason they gave up using it was owing to some idea that the carters did not take care to get the best coal, but took some that had a mixture of sulphur?—Yes, it was open to the possibility of the men being dishonest and mixing the coal.

16148. Assuming that your Skehana colliery was developed and that you were in a position to deal directly with a consumer for malting purposes, you have every reason to believe that a large proportion of your coal would be used for that purpose?—I think it would.

Proposed tramway from Athy to Castlecomer and estimated cost of construction.

16149. Then with regard to the different proposals you made from time to time: am I right in assuming that in 1885, when the proposal of a tramway from Castlecomer to Athy was made, am I right in assuming that the colliers themselves were so anxious to get the line that they offered to contribute one day's pay all round towards the promotion expenses?—I have not heard that.

16150. It was given in evidence before the Allport Commission that that was so, and that the colliers actually offered to contribute a day's pay.

16151. *Chairman.*—Do you mean the working men?

16152. *Colonel Hutcheson Poë.*—The working men. (*To the Witness*).—Have you any idea of what the cost would be for making a line from Castlecomer to Athy or to Ballyragget?—It could be made for thirty-five or forty thousand pounds, a broad-gauge tramway line.

16153. To Ballyragget?—Or to a point between Ballyragget or Kilkenny.

16154. Have you considered which would be the preferable route?—I think the preferable route would be to a point between Ballyragget and Kilkenny.

16155. I think in 1887 or 1888 the proposal was to construct a tramway along the road from Castlecomer to Athy?—Yes.

16156. And that it would cost £3,500 a mile, roughly?—I think it could be done for what I say, £35,000 to £40,000.

Excessive cost of upkeep of Queen's County and Kilkenny roads caused by coal traffic, and estimated saving if the traffic were transferred to rail.

16157. Is it not a fact that owing to the heavy traffic along the roads in Queen's County and Kilkenny the expenditure on the roads is very high?—Yes, some roads cost as much as eight shillings a perch.

16158. Principally from their being cut up by heavy coal traffic?—Yes, and the method of keeping them

16159. One effect of making the railway would be that a great deal of that traffic would disappear and a great saving would be effected in the repair of the county roads?—Yes, it would effect a saving undoubtedly. The County Surveyor of Kilkenny estimates that a saving of £400 a year would be effected on one road alone.

16160. And if the line cost £40,000, as you have said, that amount would practically represent the interest in respect of one road alone, which would be a very good return for the capital?—Yes.

16161. In addition, a saving in connection with the roads in the adjoining counties would be effected?—The principal roads are the Carlow, Kilkenny, and Ballyraggett roads, and the Abbeyleix road.

16162. Have you any reason to believe that the County of Kilkenny would raise any objection, such as they did when the Castlecomer and Athy tramway was proposed, to the construction of such a railway now?—They refused the rate then.

16163. They refused to strike a rate because they considered that such a line would be injurious to the prospects of their county. Have you any reason to expect that anything of that kind will occur at present?—I do not think so.

16164. Do you know that an offer was made to the Great Southern and Western Railway Company to work the line at 50 per cent. of the gross receipts?—Oh, yes, the proposal was made to them, but they considered they could not do it. They considered they would not be justified in risking it.

16165. One other question: with regard to amalgamation under the State, I understand you are opposed to the State managing the railways. Would you have the same objection to an amalgamated system of railways being controlled by a central Irish authority provided that authority was satisfactory in other respects?—No, I would not.

16166. Such a body would be more responsible to the opinion of the country?—More responsive to the commercial needs of the district.

Cross-examined by Mr. HEALY, K.C.

16167. The town of Kilkenny is the largest inland town in Ireland, is it not?—It is one of the largest.

16168. What do you charge for coal in Kilkenny?—It depends on the class of coal used.

16169. I want to see how much Welsh coal comes in and why you don't drive it out. What is your charge for coal in Kilkenny?—We charge exactly the same price as is charged at the pit's mouth, plus the cost of carriage.

16170. Kindly give me the figures?—It is sixpence per cwt. on an average, plus 5*s.* or 6*s.* cartage. You should understand that we don't retail the coal at all. It is bought at the pit's mouth by carters.

16171. The charge for Welsh coal is, from Swansea, 4*s.*, freight from Waterford to Kilkenny 3*s.* 7*d.*, and fivepence for unloading. That makes 8*s.*, so that Welsh coal comes handicapped by at least 8*s.* a ton?—Up to 8*s.*

16172. What is Welsh coal sold for in Kilkenny?—I am sure I could not tell you.

16173. Are you aware that the Railway Company carry to Kilkenny every year something like twenty thousand tons of Welsh coal? You are then two or three hours' cartage from the town of Kilkenny; why can't you compete in the town of Kilkenny with the Welsh coal?—We do compete.

16174. Why don't you keep it out? Why are the Welsh people able to sell, although handicapped by eight or nine shillings?—It is a very different class of coal. Our coal is anthracite. The coal you talk about is bituminous.

16175. You say your coal is equal to the best Welsh coal?—It is, to the best Welsh anthracite.

16176. I understand you to have suggested that some Dublin public institutions use your coal as household coal?—Yes.

16177. Therefore you ought to be able to compete in Kilkenny with the Welsh coal for household purposes?—Well, we do.

16178. Why does any of it come in?—The majority of the people prefer a bituminous coal for their fires; you will find the same thing in South Wales in the anthracite districts; you will find the people prefer a bituminous coal, as it is easier for servants to light; but bituminous coal will not give the same heat.

16179. I think you said in reply to Mr. Sexton that even for household purposes the Local Government Board were quite wrong in the surcharge that they made?—It was wrong in surcharging the whole amount of the difference in price.

16180. Do the local institutions in Kilkenny, the workhouse and others, use the local coal?—To a large extent.

16181. Why is it not used exclusively?—I could not answer that question.

16182. What is the depth of the Welsh seams?—They vary very much.

16183. Is there any such thing in Wales as an 18-inch seam?—Oh, undoubtedly.

16184. *Chairman.*—I never heard of an 18-inch seam in South Wales?—I don't know the South Wales district very well, but I think I am right in my statements. Now, the seam I have told you of is underlaid by soft culm and is very easy to work, so that an 18-inch seam in such conditions is equal to a three or four-foot seam in other places perhaps.

16185. *Chairman.*—I never heard of a seam so narrow in Wales?—You should understand that thickness of seam is not the only thing that makes it easy to work. There are parts of the Jarrow seam in which explosives have to be used, which make it more costly to work. In the case of Skehana coal the underlying soft matter reduces the cost of working. Eighteen inches is the lowest. The Skehana seam goes up to 26 inches—average about 22 inches.

16186. *Mr. Healy,* K.C.—When was the new seam discovered?—It has been known for a very long time.

16187. When did you begin to work it?—Two years ago.

16188. The Great Southern and Western only came into the district since the amalgamation in 1901?—Yes, our train service is much better since they came in.

16189. They only ran to Maryborough until the amalgamation?—I believe that is the case.

16190. Have not they offered to put in a siding at Ballyraggett if you would give them 200 tons a week?—Not at Ballyraggett; between Ballyraggett and Kilkenny.

16191. Is that to avoid a bridge?—Yes.

16192. Did you consent?—No, I preferred to make the siding myself.

16193. They offered it to you?—Yes.

16194. If your coal is as good as you suggest, would not it pay the railway company to stack the coal at Ballyraggett and use it for their own engines?—I think it would.

16195. Why don't they use it?—That is known to themselves.

16196. There must be a cause for everything?—Well, they used it when the Queen's County mine was worked.

16197. Why did they give it up?—The mine ceased working. I think they came on a bad fault. They were working near the outcrop in a faulted area.

16198. Do you suggest that there is a prejudice on the part of an Irish company in favour of Welsh coal that prevents them from using yours?—I would not say what the reason is; it is best known to themselves.

16199. Your coal is as good and is within seven or eight miles of Ballyragget?—I cannot say what they might do or might not do.

16200. The only other question I want to ask you is, do you think the railway company, which is a commercial concern, ought to their own loss run a line for your profit?—I think that as a commercial business they ought to construct a line.

16201. For your profit?—Oh, not for my profit.

16202. Why should they do for you what you will not do for yourself?—I did not offer them fifty per cent.; that was a number of years before my time.

16203. If this line would pay anyone to make, it would pay you as a colliery proprietor?—Undoubtedly.

16204. Why do not you run a tramway on the high road?—I have offered to do it.

16205. Why don't you?—I want to have a reasonable rate to enable me to compete.

16206. What rate to Waterford did they offer you?—They offered me a rate from the proposed junction to Waterford.

16207. Did they offer you a cheaper rate for your Irish produce?—But you are comparing two very different things—import coal brought in over the line with export coal. The railways are allowed a cheaper rate for export purposes.

16208. Supposing you were to say to the railway company, "I will build a line of railway if you can give a fair rate from Ballyragget to Waterford," what rate would you have in your mind?—I would have a rate equal to the rate charged from South Wales for export coal, that is ·539*d.* per ton per mile in owner's wagons, or ·657*d.* per ton per mile in company's wagons.

16209. In Wales a thousand tons of coal would be sent in sixty hours. The whole of your consumption would be dealt with in that time?—I have nothing to do with that. I am of opinion that the Great Southern and Western Railway could carry wagon-loads of coal for export at the same rates as in South Wales. They are running trains not fully loaded to Waterford constantly, and their gradients are easy and in favour of load.

16210. Would you compare the South Wales colliery traffic to the port of Swansea with the Skehane traffic to Waterford?—In magnitude?

16211. Yes?—No, undoubtedly not.

16212. You have never shipped?—How could we when we have to pay five shillings a ton as a beginning to get to the railway?

16213. You say you will build a railway if they will give you a fair rate from Ballyragget to Waterford?—Yes, and one or two other things. To deal with these I would have to go into the whole correspondence.

16214. But if you get a fair rate from Ballyragget to Waterford, would you build a railway?—That would be the principal condition.

Apr. 23, 1907.

Mr. R. H. Prior-Wandesforde, D.L., representative of the Kilkenny County Council.

Recent negotiations with the Great Southern and Western Railway Company as to construction of rail connection.

Mr. James G. Dooley examined by the Chairman.

16215. Mr. Dooley, you are a member of the Kilkenny County Council?—Yes.

16216. And have been deputed by that Council to come here to-day—Yes.

16217. Just tell us in your own language what you want to bring under our notice?—I want to bring under your notice the different charges—shall I read what is in my statement?

16218. I want you to read us what you wish personally to bring under our notice at the request of the Kilkenny County Council?—The different charges on the Great Southern.

16219. For goods or passengers?—For goods. Two lines are working in opposition.

16220. Which two lines?—The Great Southern and the South-Eastern.

16221. That is, that the one doesn't work with the other—that is, when you get out of one you have to wait for the connecting train of the other company?—Yes.

16222. And you complain that the delay is unreasonable?—Yes.

16223. Just mention the junctions?—In going to Kilkenny I leave New Ross at nine o'clock.

16224. How far is it from Kilkenny?—Only eighteen miles.

16225. You go from New Ross on what railway?—On the South-Eastern.

16226. You want to get to Kilkenny on the Great Southern and Western?—Yes. It goes to Palace East, which is only seven miles off. I go on the South-Eastern and reach there at fifteen minutes after nine o'clock. There is a connection there with the Great Southern and Western, but I have to wait until thirty minutes after ten in a country station, and I reach Kilkenny at twelve o'clock noon. It takes me from nine o'clock or ten minutes to nine until twelve o'clock to go eighteen miles, which is the distance if I went in a straight direction, but by rail it is close on forty miles.

16227. That is, you are three hours going forty miles?—Three hours going forty miles.

16228. And you are detained at the junction?—I am detained at Palace East, where the junction is between the Great Southern and the South-Eastern.

16229. You think the trains should come together and that the delay should be avoided?—Yes; and the same applies to all the Irish companies in a great measure.

16230. I see you make a grievance of there being no refreshment room at this junction?—Yes, and in winter time very little fire.

Mr. Healy, K.C.—Ask him why he doesn't travel by Waterford.

16230A. *Chairman.*—Answer the question?—If I go *via* Waterford I come back in the evening from Kilkenny and have no connection with the South-Eastern; and then I have to pay a car from Waterford to New Ross. The South-Eastern train leaves Waterford before the down train from Kilkenny reaches it.

16231. What about the goods traffic?—Where there is not competition they charge us prohibitive prices. Where there is competition between the different lines they charge us very fair charges. I can give you a case in point. If I want to get oil-cake from Liverpool *via* the South-Eastern it is 12*s.* 6*d.* to 13*s.* 6*d.* per ton from Liverpool to New Ross coming

Mr. James G. Dooley, Representative of the Kilkenny County Council.

Alleged insufficient provision for comfort of travellers at Palace East Junction.

Anomalies in goods rates between Liverpool and New Ross.

Apr. 23, 1907.

Mr. James G. Dooley, Representative of the Kilkenny County Council.

via Dublin. If I tell them take it some other way they make the rate 11*s.*

16232. Which other way?—That is, if I take it *via* Waterford from Liverpool or *via* Wexford.

16233. From Liverpool to Waterford by steam?—And by rail to New Ross.

16234. Then you get it at 11*s.*?—I get it at 11*s.*; but lately, when the Wexford line began to compete with the Waterford Steamship Company, they took my goods at 9*s.* a ton from Liverpool to New Ross.

16235. You got a substantial advantage?—Yes, a reduction of 3*s.* a ton.

16236. You don't complain of that, do you?—No. That is only to show where there is competition.

16237. But for that competition——?—I would have to pay 12*s.* 6*d.* or 13*s.*

Alleged excessive rates charged in absence of competition.

16238. But since the competition route has been opened you get it for 9*s.*?—For 9*s.* in six-ton lots.

16239. What inference do you wish us to draw from that? You don't want us to do away with competition?—The inference I wish you to draw is that the railway companies, except when there is opposition between them, charge us too much, and the small trader must pay 4*s.* to 5*s.* per ton extra for one to five-ton lots.

16240. You don't suggest that they charge more than their maximum powers?—They don't charge more, but we consider that it is too much.

16241. Have you formed any opinion as to a remedy for these things?—If I want to get goods from Dublin to New Ross, for lots under six tons it is 10*s.*, and for lots over six tons seven shillings. If I want to send goods from New Ross to Dublin, where the water can compete—then they take them from New Ross to Dublin for 4*s.* 6*d.* a ton. They won't give me goods by wagon-loads at less than 7*s.* a ton from Dublin to New Ross, saying that there is so much wear and tear on their line; but here again competition brings them down.

16242. Are you objecting to this competition?—No.

16243. What remedy do you suggest?—My suggestion is that all the railways should be amalgamated.

16244. You have formed that opinion?—I have formed that opinion.

State ownership of the Irish Railways and control by Irish central authority advocated.

16245. And you would do away with competition?—I don't speak of competition in that sense. What I mean is that the railways should be taken out of the hands of the present companies, who are not developing the country. In places where there is no competition they are blocking the trade. I wish to see the railways in the hands of a central body and worked for the good of the country.

16246. Is that the view of your County Council?—It is.

16247. And you are authorised to say that?—I am authorised to say that.

16248. That your Council is in favour of the State-purchase of the railways, and that they should be managed by a central authority in Ireland for the benefit of the people of the country?—For the benefit of the people of the country.

16249. What more have you to say?—The majority of those whom I represent wish to have the railways bought out at their value. Their earnings for the last five or six years——

16250. Now you are going into detail?—Yes.

16251-2. You had better leave that alone. The general principle you advocate is State purchase, and that the railways should be worked by a central authority in this country?—By a central authority which should represent or be elected by the Councils, and with a Government Inspector; the money to be lent by the Government at reasonable interest; and if there should be any profit on the railways it should go for the benefit of the country.

Examined by Colonel Hutcheson Poë.

16253. The only question I have to ask you is with regard to Section 7 in your brief of evidence with reference to the want of facilities given by the railway companies for exhibition purposes?—Yes.

16254. Do I understand from that evidence that you are obliged to send your cattle at this rather prohibitive rate the day before the exhibition?—Yes; the cattle must be sent the day before the exhibition. If not, they would not be in their proper place.

16255. You say then that if you could wait until the next day, it would be only half-fare?—Yes.

16256. But the cattle would not be in time for the show?—They would not be in time for the show.

16257. How would you remedy that?—The same thing should apply to the day before the show as to the day of the show, and also that the men going with the cattle should be taken free.

16258. Is there any considerable number of cattle, or other animals for show purposes, coming from your district in Kilkenny?—There is a very good number—a large number.

16259. Have not the railway companies been giving exceptional rates for cattle?—They do, if the cattle are not sold. They then bring them back free.

16260. Well, that is something?—It is, of course.

16261. Besides that, don't they give you a special rate for show purposes lower than the rate you would have to pay on other occasions?—No, I am quite certain of it. For three cattle they charge 33*s.* 6*d.* from New Ross.

16262. For show purposes?—Yes.

16263. And that is what you would have to pay if you sent them for any other purpose?—Yes.

Mr. Edward Fennessy examined by the Chairman.

Mr. Edward Fennessy, representative of the Kilkenny Corporation.

16264. You reside in Kilkenny?—Yes.

16265. You don't come as representing the County Council, but the Town Council?—The Corporation.

16266. Kilkenny is a corporate town?—Yes.

16267. Mayor, Aldermen, and Councillors—is that so?—Yes.

16268. And are you in the Council?—No. I am not, but I have been chairman of a committee with reference to this matter, and I have been asked to come and give evidence.

16269. Have the Council considered the subject as a Council?—They have.

16270. Have they passed any resolution?—They have. I have got copies of two resolutions which I will read to you.

Two resolutions of Kilkenny Corporation as to Railway extensions.

16271. Read them?—(*Witness.*)—Copy of a resolution passed by a quarterly meeting of the Kilkenny Corporation held on Wednesday, 23rd January, 1907. Proposed by Alderman Cantwell, seconded by Councillor Tynan, and resolved unanimously:—"That we, the members of the Kilkenny Corporation, consider it our duty to strongly recommend to the Viceregal Commission on Irish Railways presently sitting in Dublin to favour the construction of railway communication between Kilkenny and Castlecomer, the seat of the great coal fields of the county, believing firmly that it would be the means of finding a market on a large scale of such a fine article. Again, outside the development of the coal fields, we are strongly convinced that a big general traffic would result from the construction of such a connection, and a great benefit would result for the City of Kilkenny, down to Castlecomer and the adjacent districts. That this resolution be sealed with the seal of the Council, and that it be presented personally to the Viceregal Commission by the Town Clerk on the day that the evidence will be taken on the question. Signed, Otway Cuffe, Mayor; Edward O'Connell, Town Clerk."

16272. Read the second one?—(*Witness reads.*)—"Copy of a second resolution passed at a meeting of the Kilkenny Corporation, held on Tuesday, 5th February, 1907. Proposed by Councillor P. J. Kennedy, B.A., seconded by Councillor John Morris, and resolved:—'That we, the Kilkenny Corporation, entirely approve of the project that a railway connection be made between Castlecomer *via* Kilkenny to Callan, Mullinahone, and to Carrick-on-Suir, and that we shall be very pleased to give the Callan executive all the possible assistance we can in the matter, and that we authorise the Town Clerk to communicate with the secretaries of the Callan Committee on the question, and that a copy of this resolution be sent to all the public Boards of the city and county.' Signed, Otway Cuffe, Mayor; Edward O'Connor, Town Clerk."

16273. You concurred in this resolution?—Certainly, sir.

16274. I see you have some personal grievances, but I don't think they are worth mentioning?—Well, sir, this is not a personal grievance at all. It is the feeling of the people.

16275. Mention them if you wish?—We feel it to be a great grievance that Kilkenny has to pay more rates than other portions of the line, and where it strikes us hardest is that a great portion of Kilkenny County on the Callan side gets its supplies through Clonmel to the great injury of Kilkenny County. Clonmel is the same distance from the port of Waterford, Clonmel being 28 miles and Kilkenny 31 miles, but there is an enormous difference in the railway charges for the two distances. It would not be such a great hardship but for the fact that one half of the county is supplied from Clonmel.

16276-7. It is nearer to the port than Kilkenny?—It is three miles nearer, and there is a difference of 30 to 40 per cent. in the railway rates.

16278. *Mr. Healy*, K.C.—There is a navigable river.

16279. *Chairman (to Witness)*.—Have you brought this under the notice of the railway company?—It was, at the time of the amalgamation.

16280. The question was raised?—Yes.

16281. Did your Council support the amalgamation?—We were against the amalgamation—we opposed it.

16282. What do you mean by opposing—did you appear in Parliament?—Yes; it was opposed in Parliament.

16283. By the Kilkenny Corporation?—No; it was a subscription got up to oppose it.

16284. In the town of Kilkenny?—Yes.

16285. Were prohibitive clauses inserted in the Bill?—I do not know that there were any.

16286. At any rate the question was raised?—It was.

16287. Before the Committee of the House?—It was raised before Mr. Colhoun, the manager of the railway.

16288. He is dead now?—He was alive at this time.

16289. Clonmel has direct water communication all the way up?—It has.

16290. And Kilkenny has not?—It has not. We thought when the amalgamation was carried we should get some advantages, but we don't think we got any advantages, but rather the reverse. We don't think the service is good. There are very general complaints about the goods traffic. I made a complaint myself, not long ago.

16291. *Mr. Healy*, K.C., (*interposing*).—There is a far better service now than there was?

Witness.—There is for passenger traffic, but not for goods.

16292. *Chairman*.—The goods cannot complain?—No, but the owners can.

16293. As long as the goods get away at night, what more do you want?—But there are delays.

16294. Have you brought this under the notice of the railway company?—I complained about it to Mr. Neale, the traffic manager at Kingsbridge. What I complain of is that if it is inconvenient for the railway company to bring the wagons into the store, they should have a portable platform from which the goods could be lifted from the wagons.

16295. Surely this must be exceptional? You don't say it occurs with every ton of cake you get?—It occurs very often.

16296. Is not it exceptional?—I don't agree that it is exceptional, or that it is a proper way to unload any article like cake. It is a proper way to unload anything that can be thrown about, but as to bags of cake it is a ridiculous way. Sometimes we get them all shattered, and the stuff is waste.

16297. Will the railway company hear what you have got to say?—We have complained about goods lying at the station.

16298. That is a neglect of duty on the part of the local staff?—I think the fact is, that before the amalgamation we had two stationmasters and two sets of servants. I believe there is a very insufficient staff at present, and that traders are suffering by it, and the inconvenience is very great.

16299. You are not in favour of the existing railway system in this country—of the present management?—My idea is simply that there should be uniform rates—that there ought to be a wagon-load rate, and I think it a monstrous thing that a shilling has not the same carrying value everywhere. At present a shilling will carry goods further from Dublin than from Kilkenny. The rate for porter from Dublin to Waterford is 7*s.* 6*d.* for 110 miles, and the rate for porter from Kilkenny to Dublin is 11*s.* 11*d.*, which is nearly double for carrying it 30 miles less. I don't think that is fair. We think that there ought to be a wagon-load rate—a mileage rate, on the basis of sixpence per wagon per mile.

Uniform system of mileage rates recommended.

16300. If you put that into operation to-day there would be a growl all over the country to-morrow. It could not possibly work to the satisfaction of the trading public. Such mileage rates are an impossibility?—Why should they give cheaper rates to Clonmel?

16301. Because of the water competition. If the railways did not, they would not carry the traffic at all. (*To Witness.*)—You are not a railway shareholder?—No, I am not.

16302. But you are a merchant?—Precisely. I don't see why they should carry cheaper to the people of one town than to those of another.

Effect of water competition on railway rates discussed.

16303. You gave an instance just now. Suppose they charged the Kilkenny rate from Dublin to Waterford, don't you think that every ton of the porter would go by water?—I know it. I know that the rates are assessed by expediency.

16304. Suppose the railway carried it for nothing, how would you be injured?—If I were in the trade I would be injured.

16305. You would not be benefited by it?—If I were a manufacturer in Kilkenny, I would be benefited if I got it for nothing; but there are manufacturers of porter in Kilkenny, but they cannot send it as cheaply to Dublin as others can send it down.

16306. I want you to see there are two sides to the question. There may be inequalities, and, no doubt, there are, but when you compare the rate applicable to a place wholly served by water, to another place wholly served by rail, the comparison is not a fair one. Take Kilkenny. Take the rate as between Kilkenny and some inland place, and point out any instance of unfairness?—If the trade of half a county is cut off by cheaper rates to an adjoining town, I think it is a manifest hardship.

16307. You say it is a hardship to Kilkenny?—Decidedly. It is the general opinion.

16308. Well, the general opinion is not always right you know. Have you considered the question of the State purchase of railways?—Well, to some extent.

16309. Have you formed any opinion on the question?—Well, I think they should be managed in Ireland, for the expense of going to London is too great. That is about as far as I go upon it.

16310. But they are managed in Ireland now?—I agree with you, but what I think is that there should be uniformity. I think there should be one system.

Unification of the railways recommended.

16311. That is to say, that there should be unification of all the railways into one?—I think so. And the Board of Control should exercise more authority than it does, so that we would get nearer to a union rating. Practically the railway rates seem to me to be regulated so as to get just as much as they can possibly grab. They are not regulated by the mode of expenditure, or of earning power, but by how much they can get from the unfortunate trader, because he has no other means of transit.

16312. Every railway company is limited in its powers with regard to rates?—I am afraid the limit is too loose. Its power of charging rates is too great.

16313. I think it is reasonable, and besides it has been revised within the last two years in this country?—What we ask is considerably above the limit that they carry some things for. We think there should be a wagon load rate.

16314. If such a rate were operative to-morrow there would be an outcry against it, and it would have to be cancelled the next day. You think there are too many railway companies?—I do.

16315. And that there should be unification?—We have certainly lost by the amalgamation. Our wants were better attended to, and our goods more punctually delivered before the amalgamation, and the service was infinitely better. On Thursday evening last, I returned to Kilkenny by the 6.25 train. There was a gentleman in the carriage with me, and when he stopped to get out at Kilkenny he had some Gladstone bags with him. He looked for a porter, but there was none there. I said I would carry his bags to the car-stand, and he said he would be obliged if I did, because he had some more luggage he wanted out of the van.

Apr. 23, 1907.

Mr. Edward Fennessy, representative of the Kilkenny Corporation.

I took his bags up the platform; I met the gentleman coming down, and pointed out the car. He came with me and saw the bags, and I said, "Where is the remainder of your luggage?" and he said, "Up in the van, but I could not get a porter to carry down," and I said I will go back and help you. The remainder happened to be a square hamper which was lying in front of an open goods' van. There was no porter there, and we took the hamper and carried it between us, and put it on the car. That would not have happened before the amalgamation.

Complaint as to insufficient staff at Kilkenny Station.

16316. Did you call the attention of the stationmaster to that?—No.

16317. Was not he there?—I saw no stationmaster, no porter, no anybody. The gentleman was a Doctor of Divinity.

16318. What was the station?—Kilkenny station. It was last Thursday evening. If that gentleman had not had somebody to carry his things, in a few minutes the cars would all have left, and he could not have got away his luggage.

16319. But was not that exceptional?—I call it one of the results of amalgamation. I don't travel very often, but I know that people are dissatisfied with the attendance which, I believe, is not half of what it used to be.

State ownership of the Railways and control by an Irish central authority advocated.

16320. You are in favour of State purchase of the railways?—I am, sir.

16321. Of the whole of the railways?—Yes.

16322. To be managed by some central authority in this country?—Certainly, sir. I think it would be like other public departments, the Telegraph and Post Office.

16323. And you think that if that were brought about, this colliery district would be supplied by the State with a railway to develop it?—I do certainly. Many years ago we passed a resolution at the City Grand Jury in favour of guaranteeing an indemnity for a line to Castlecomer, because the keep of the roads to Castlecomer was 7*s.* 6*d.* a perch, which was an enormous sum, and the guarantee would never come to more on the rates than we would save on the keep of the roads. The City Grand Jury passed that resolution, but the County Grand Jury threw it out.

Examined by Colonel Hutcheson Poë.

16324. You say that you suffered by the amalgamation?—Yes.

16325. Can you give any actual instance in respect of rates?—I cannot as regards rates, but our goods were very much better handled before the amalgamation.

16326. That is from the staff being insufficient?—The staff is insufficient.

16327. Have you any complaints to make as to the rates now charged being higher than they were?—I don't think they are.

16328. Then with regard to the rates to Clonmel being lower than the rates to Kilkenny, you know that that is because the land rate is governed by the sea or river competition?—I quite agree with you, sir, but our argument is that if the two lines to Clonmel and Waterford were in the hands of two separate companies the thing would be different. We think it a monstrous thing that they should be charging these different rates.

16329. If they did not charge the rates that they do, the traffic that is now carried by railway would not go at all?—I do not know that.

16330. You said, I think, that the rates from Waterford to Kilkenny are 30 per cent. higher than the other?—About 30 per cent.

Cross-examined by Mr. Healy, K.C.

16331. What do you pay for Welsh coal in Kilkenny?—I don't buy any.

16332. Do you know the price of it?—I don't know the price.

16333. Can you tell the price of the Irish coal?—I generally pay 1*s.* 2*d.* a cwt. for the best that is sold.

16334. What is the price of the Welsh coal?—I don't know. I don't use any Welsh coal.

16335. Why are 20,000 tons of Welsh coal sold there every year?—I think it is used for lighting the other coal. The Welsh coal is much softer, and more easily lighted. The Kilkenny coal is more difficult to light, but much more lasting.

16336. But the ignition of the other is more lasting?—Yes.

The Commission then adjourned till the following morning.

TWENTY-EIGHTH PUBLIC SITTING—WEDNESDAY, APRIL 24TH, 1907.

At the Reception Room, Royal Dublin Society, Leinster House, Dublin.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Sir HERBERT JEKYLL, K.C.M.G.; Colonel WILLIAM HUTCHESON POË, C.B.; Mr. THOMAS SEXTON;

Mr. GEORGE E. SHANAHAN (Secretary).

Mr. P. J. KENNEDY, B.A., examined by The CHAIRMAN.

Apr. 24, 1907.

Mr. P. J. Kennedy, B.A. representative of the Kilkenny Corporation

16337. Mr. P. J. Kennedy?—Yes, that is my name.

16338. You are a Bachelor of Arts?—I am a Bachelor of Arts.

16339. And a Town Councillor?—Yes.

16340. For the Corporation of Kilkenny?—Yes, sir, for the Corporation of Kilkenny.

16341. What Railway Company is it that serves Kilkenny?—The Great Southern and Western Railway Company.

16342. Well, now, I see in your proof you follow very nearly the same lines as were given yesterday by a witness from Kilkenny?—That is quite so, sir. Only I have given a number of instances with figures worked out.

16343. I will look at that just to see?—I should like to be allowed to correct one point on the matter, Mr. Chairman. The distance from Waterford to Clonmel was put at twenty-eight miles. I believe it is thirty-one miles by rail, exactly the same distance as Waterford to Kilkenny. I verified that matter since. It makes the disparity in treatment of Kilkenny still greater than it appeared before.

16344. There is no other railway verging upon Kilkenny?—No, sir. The Dublin and South-Eastern does not come into the County Kilkenny at all, does not come within twelve or fourteen miles of the City of Kilkenny.

16345. What is your general complaint as to the rates charged by the Great Southern and Western?—There is a feeling that the rates from Waterford to Kilkenny are rather higher than they should be. We found that not merely by a comparison of the rates between Waterford and Clonmel the same distance, but there is a kind of feeling that wherever a railway company is forced to reduce its rates, either by sea competition or sea freight or a navigable river, they are inclined to make up for it on those towns where they enjoy an internal monopoly.

16346. In other words, you suggest that if the railway company can carry traffic from Waterford to Clonmel at a certain rate that they should carry from Waterford to Kilkenny, being the same distance, at the same rate?—No, not quite so far as that.

16347. You don't go as far as that?—No, not quite so far.

16348. Well, then, how far?—I should say that the disparity that exists—over thirty per cent.—between the rates is a little too high, somewhat too high.

16349. Then you recognise the fact that if the Great Southern and Western don't charge a low rate between Waterford and Clonmel, that the whole of the traffic would be taken from them and sent by water?—I recognise that.

16350. You do?—I do.

16351. Now, if they put the rates there to Clonmel the same as Kilkenny, would that meet your case?—No, sir. We don't want Clonmel to suffer at all. I don't think the Railway Company could afford to do it against the river competition. What we ask is that if they have to lose by river or sea competition elsewhere that Kilkenny should not be compelled to make up for that.

16352. Well, it all resolves itself into the question as to whether the rates from Waterford to Kilkenny are fair and reasonable—are they fair and reasonable in themselves?—They are somewhat too high.

16353. What is your comparison?—I have compared the rates per ton per mile both from Waterford to Clonmel and Waterford to Kilkenny, and Kingsbridge to Waterford and Kingsbridge to Kilkenny. There are two tables in my evidence. The figures are given.

16354. May I ask are you interested in any particular trade or industry?—I am, sir. I am interested in the furniture trade and also in the woollen business.

16355. Of Kilkenny?—Of Kilkenny.

16356. Well, then, give us two or three instances?—One or two.

Complaint as to excessive porter and wheat rates from Kilkenny to Waterford.

16357. Well, take any you like?—Take the instance of porter. We have two large breweries in Kilkenny giving a large amount of employment; they had or used to have a much larger trade in Waterford. The rate per ton——

Mr. Healy, K.C.—That is the sea again.

Witness.—If you hear me out, there is another point. The rate per ton from Kilkenny to Waterford for porter is 7*s.* 8*d.*, a distance of thirty-one miles. The rate per ton for porter from Dublin to Waterford is 7*s.* 6*d.*

Mr. Healy, K.C.—He is comparing the carted rates with the station to station—the carted and non-carted rate.

Witness.—I am not. They are both station to station, and, as a matter of fact, I believe porter goes to Waterford cheaper than 7*s.* 6*d.* a ton.

Mr. Healy, K.C.—That is true on account of the sea competition.

16358. *Chairman.*—At any rate you say the rates you mention are station-to-station rates and not collected and delivered?—Yes, and the comparison is perfectly fair as far as that is concerned, and I think Mr. Healy admits himself that the carriage is often lower than that. The point I want to bring before the Commission is that it makes it impossible for Kilkenny manufacturers of stout or porter in Kilkenny to compete with the Dublin manufacturers of stout and porter in a town much nearer to Kilkenny than Dublin, to, say, Waterford.

16359. On account of the rate?—On account of the rate. Any advantage we might have from a geographical point of view is taken away by a rate of that sort.

16360. Give us another instance. You can select any you like. I don't think it is necessary to go through the whole of them—give us typical instances dealing with the grain, flour, wheat, and so on?—Take wheat; I think that covers most of the corn trade.

16361. Is wheat produced in the district?—It is not to a very large extent; barley is produced to a large extent.

16362. Take barley?—Wheat is the same. Waterford to Clonmel the rate is 3*s.* 3*d.* a ton. Kilkenny to Waterford, 4*s.* 10*d.* a ton.

16363. The distance being the same?—Yes, the distance being the same.

16364. That doesn't seem at all proportionate?—Well, we hold that it makes Clonmel the centre for the barley markets in that portion of the county as compared with Kilkenny.

Apr. 24, 1907.

Mr. P. J. Kennedy, B.A., representative of Kilkenny Corporation.

16365. The barley being imported into Waterford and carried to Clonmel and distributed at Clonmel?—The barley is produced in the county, and there is a big district there between Clonmel and Kilkenny. The big barley producing districts are nearer to Kilkenny than Clonmel and a better road to get it; and the fact that the rates are cheaper on barley from Waterford to Clonmel enables the Clonmel buyer to give a higher price than the Kilkenny buyer, and diverts the market from Kilkenny to Clonmel.

16366. I think that is perfectly clear. Just give us one instance with reference to the general traffic—groceries and draperies?—I am afraid I can't give these.

16367. Yes, you have got tea and drapery goods in your proof?—Tea, Waterford to Clonmel, 10*s.* 6*d.* a ton.

16368. Do you know whether that is collected and delivered?—I am not quite sure. I know that the two figures are the same.

16369. If it is collected and delivered at Clonmel, it is also collected at Kilkenny?—Tea, Waterford to Kilkenny, 13*s.* 2*d.* I have been asked also to point out——

Alleged disparity in the rates between Waterford and Kilkenny and Waterford and Clonmel.

16370. Well, these rates, if they include collection and delivery, don't appear to me to be excessive?—There is a considerable disparity between the two towns at the same distance.

16371. I know your point, between the two towns, but you appear to admit there should be a difference?—It may be admitted that there should be a difference, but I think the difference is too great.

16372. It is only thirteen per cent.?—It runs to a good deal more than that. I should have handed in my corrected form. It runs to about, I think, twenty-five per cent.

16373. I see you have corrected this?—The distance makes the difference. Thirty-one miles is the distance from Waterford to Clonmel; not twenty-eight, as I wrote—isn't it?

16374. We had it yesterday twenty-eight. We may clear it up at once. Is it?

Mr. Neale.—Twenty-eight and thirty-one. Clonmel is twenty-eight; Kilkenny is thirty-one.

Witness.—I found in Thom's Directory thirty-one from Waterford to Clonmel.

Chairman.—That is a matter that may be cleared up at once.

Mr. Healy, K.C.—Kilkenny is three miles further from Waterford than Clonmel by rail.

Witness.—I was right in the original figure.

Chairman.—Then the percentage difference.

Witness.—Thirteen is what was originally supplied.

16375. Then you have nothing to say against that, now?—On that point I don't think I have much to say. I may mention that of course railway companies, like every other company, have a right to live, and money invested in a railway company has the right to earn a dividend. At the same time railways have been given compulsory rights, and constituted by special Acts of Parliament, and whether that exactly gives them the power to trade as private companies with regard to penalising one portion of the country as against another is another question. I don't think that, admittedly, their public powers are given like that by Parliament—to a public carrying company—it was ever intended that they should ever penalise one portion of the country as against another.

16376. It depends on whether the particular place is penalised. Looking at these rates they appear to me to be fair and reasonable?—They may from the point of view of the railway, but not from the point of view of merchants and others who have invested money in Kilkenny to see the trade diverted to Clonmel.

16377. Supposing the rates to Clonmel were all advanced to the same as Kilkenny, and the railway company never carried a ton of traffic between Waterford and Clonmel, it was all sent by water by the boat lower than the rate of the railway company; now, what is your position then?—That won't improve us one bit.

16378. Of course it won't?—Not one bit. It might just to a limited extent only: if the river navigation was able to meet the wants of Clonmel in that way it would not improve us one bit. But then the question arises, have the railway companies the right to divert the trade from one place to another.

16379. They don't?—If it does not pay them to carry the goods from Waterford to Kilkenny at the same rate, why do they carry the goods at all? Is it as a public benefactor quite apart from dividend-earning powers they do it?

Mr. Healy, K.C.—It is a quarrel with geography.

16380. *Chairman.*—I think you had better give us one more instance out of your list of, say, something that is produced in your district. I suppose potatoes are produced there, are they?—Yes.

16381. In the district?—Yes.

16382. And exported?—Yes.

16383. I mean sent to Waterford?—Yes.

16384. Give us the rate?—Waterford to Clonmel, 3*s.* 3*d.*, to Kilkenny 3*s.* 9*d.* There is no quarrel with that.

16385. That you consider reasonable to both places?—Taking the general average of the different classes of these goods the difference is too great. I may tell you——

16386. You state the difference is about thirty per cent?—Something about that.

16387. According to these figures in your proof the difference comes down to four or five per cent.?—That would be a single instance. Taking the general average, the difference would be twenty-five to thirty per cent. It is very unreliable.

16388. The general average—why?—Because the tonnage may be different in the various classes of goods.

16389. Coal?—Coal is very fair. There is no quarrel about coal.

16390. That is coal from Waterford to Clonmel?—And Kilkenny. There is no quarrel with that.

16391. Was there any difference recently with regard to the rates between Waterford and Clonmel and Waterford and Kilkenny?—I think the differences are of some standing. There has been no disparity made quite recently in the matter.

16392. You have got something to say with reference to secret rebates?—Of course I can't give personal evidence of that, but evidence was given before the Railway and Canal Commissioners in the Four Courts showing a system of secret rebates, a regular war of secret rebates between the Dublin and South-Eastern Company and the Great Southern and Western Company with regard to Waterford.

16393. Did they affect Kilkenny?

Mr. Healy, K.C.—It was said on both sides; counsel on both sides said these rebates would be abandoned after that inquiry. A vicious system undoubtedly had existed. It has been abandoned by both sides.

Chairman.—It has been abandoned.

Witness.—It affected Clonmel. It reduced the rates considerably; interfered with particular traders.

16394. You are of the same opinion as your colleague from Kilkenny yesterday. You suggest that there should be a fixed wagon rate, equal mileage rate?—That is a question that Mr. Fennessy made his own. I am not qualified to speak on the matter at all.

16395. Very well, we will leave it?—There is another point. Some statements were made yesterday by Mr. Fennessy with regard to complaints against the local officials. I must say generally that the committee of which I am a member, and the Corporation, do not share these views. We always find the officials in Kilkenny very courteous.

15396. I am very glad to hear that, because the evidence was very strong.

Witness.—I am quite sure if the matters were brought before the officials in Kilkenny itself that all their grievances would be removed.

16397. Then you agree with what I ventured to suggest yesterday that if there were no porters, nobody in attendance, that it was quite exceptional?—That probably is the case, sir.

16398. Probably is the case?—That, probably, is the case. The only grievance I heard suggested was that in the corn buying time sometimes they don't get sufficient wagon accommodation there, and have to wait for days before they can get their corn off.

16399. That is when there is, no doubt, pressure?—I daresay there is pressure all over the country at the time, but those who buy on commission complain, the prices varying from day to day, that it interferes very much with their market if they can't get the corn off immediately.

16400. That is the experience of railway companies throughout the world at certain seasons of the year. There is a pressure of traffic which causes a shortage of wagons?—That is quite true. This particular season

occurs regularly, and is one that can be foreseen. It doesn't come suddenly upon them. A sudden emergency one can understand. But where pressure can be foreseen a great system like the Great Southern and Western should be in a position to meet it.

16401. What have you got to say with regard to the goods from Kingsbridge to Kilkenny. First of all what is the distance?—Eighty-one miles—eighty or eighty-one miles, sir.

16402. What is the difference to Waterford—the distance?—One hundred and ten miles.

16403. Well, now, give us just a typical case of the rates?—I have given you the worst case—the porter case.

16404. Give us the best case?—In favour of the railway?

16405. Yes?—The best case is coal.

16406. From Waterford to Kingsbridge?—Seven shillings and fivepence per ton. It is the same from Kilkenny to Kingsbridge, 7*s.* 5*d.* per ton.

16407. The distance, of course, being different?—The distance is considerably larger—a difference of thirty miles.

16408. There again, I suppose, the Waterford to Kingsbridge rate is governed by sea competition?—I expect it is, sir. Yes, and maybe the competition of the Dublin and South Eastern Company.. We should like, however, if the railway company could make an exception in favour of coal in order to give Castlecomer a chance of developing their coal mines. They are already heavily handicapped by being such a long distance from any railway station.

16409. That is the coal district we heard about yesterday?—Yes.

16410. Castlecomer?—Yes. Castlecomer, as to which Mr. Wandesforde gave evidence yesterday. Dealing with that point, I would like to suggest that I think it was put to Mr. Wandesforde yesterday by the counsel for the railways that he alone would make a big profit if a railway were constructed connecting the collieries with the railway system. I think it was put somewhat in that contention. May I suggest, also, that the whole district round about would be served materially by it, and also that the railway company would be served by it.

16411. That goes without saying, it would be of general benefit?—General benefit.

16412. To the district?—Yes.

16413. Did you hear Mr. Wandesforde suggest that he was prepared to make a tramway?—Yes.

16414. If he had favourable rates. granted?—Yes, I heard him state that.

16415. Where is the town of Callan?—Ten miles south-west of Kilkenny City.

16416. Does the railway serve it?—No; the nearest railway station is Kilkenny railway station.

16417. Would a tramway or a line to Castlecomer to a point on the Great Southern and Western Railway serve that point?—I don't know that it would serve it very materially, but the suggestion, I think, was made, and there was a movement being made at the time by the Callan people if they could get a branch either to Ballyhale or Kilkenny City.

16418. Have your Corporation made any representation to the Board of Works in Ireland with reference to additional railways in that district?—No, sir.

16419. Is the particular part of the county there, is it sparsely populated?—Callan district is fairly populous. It is entirely an agricultural district—it is not manufacturing or mining.

16420. They cart their produce, I suppose, to the nearest railway station?—Yes, as a rule to Carrick-on-Suir.

16421. Is it a District Council?—No, sir, Town Commissioners.

16422. Have you considered, or your Corporation had before them, the question of the purchase of the Irish railways by the State?—They have.

16423. They have not?—Yes, they have.

16424. And discussed it?—Yes, and discussed it.

16425. Did they pass any resolution on the subject?—I am not quite sure whether they have done so. Any resolutions that were passed were brought by Mr. Fennessy on the point. The matter has been discussed by them several times.

16426. Tell me first of all what is your opinion about the purchase of the railways by the State—your own opinion?—I think personally that is about the only solution of the difficulties which I am sure the railway companies themselves must meet, and certainly the commercial public in Ireland have to complain of. The railway companies have a big property in which they have invested a large amount of capital and the population of the country is diminishing and the trade in the country is diminishing. The number of people in the country to whom they bring in goods, from whom they carry out goods, and between whom they carry goods is constantly diminishing. Consequently the volume of trade conveyed by the railway companies must be steadily decreasing too, and with that their earning powers, and still the original capital put into these railways remains the same, and the working expenses largely the same, so that they too must feel the pinch as well as everybody else. In order to try to keep up their dividends they have to have resort to means they would not otherwise adopt in order to in every instance keep up high rates, where perhaps they might be able to give lower ones. A railway business is like everything else, a commercial commodity. Supposing, therefore, we think in justice both to the people of Ireland themselves and the railway shareholders that the only solution for it would be some means by which the railways could be brought under one control, for the unification of the system of railways, it would bring about a good deal of economy in the working and a good deal of efficiency, and we think that no single railway company or companies would be able to bring about this. They have not got the powers to do it, and there would be considerable difficulty in acting without unification; and we consider that the only power that could possibly do this is the State itself, and in doing this it would be doing a good thing for the railway companies and a good thing for the country, and, furthermore, I fancy it would be in a position to develop the more backward portions of the country. The State working the railway system doesn't work it for immediate dividend, year by year; it has not got to meet shareholders, and can afford in good years to put away something for use in bad years, and in that way we think the only effective solution of it would be by the State purchase of the railways.

Unification of the Railways under State control advocated.

16427. That is your own opinion?—Yes.

16428. Are they the opinions of your Corporation?—It has been argued both by the Railway Committee appointed by the Corporation and all the members of the Corporation as well.

16429. They are pretty unanimous?—Absolutely unanimous.

16430. Kilkenny?—Kilkenny City.

16431. Is that the general feeling in the town?—Yes, and largely shared in the county. I should like to refer to one or two points. There is another—a point Colonel Poë raised with Mr. Ennis, of Wexford County Council, with regard to the representation of the minority on public Boards in Ireland, I would like to make a remark on that.

Kilkenny Corporation unanimously in favour of this solution of the Railway difficulty.

Chairman.—Colonel Poë will probably ask you a question on that.

Examined by Mr. Sexton.

16432. I am sorry to have missed the opening of your examination. Have you any means of ascertaining the disposition of railway shareholders on this question?—Well, I have not very much myself. My acquaintance with railway shareholders is very limited.

Probable attitude of Railway shareholders towards the question of State purchase discussed.

16433. Have you any reason to think that railway shareholders would be indisposed to purchase, indisposed to the policy of purchase upon any other ground but the question of price—I mean if fair terms were arranged?—No; I don't think so, if fair terms were arranged.

16434. Do you think the railway shareholders would be willing to fall in with what might be regarded as the public interest?—I think so, so far as I know. I know some shareholders of the different railway companies who are very strongly in favour of State purchase on any kind of fair terms, but my acquaintance I can't say is very much extended.

16435. You have spoken of a declining population and a diminishing trade. In view of these conditions might not railway shareholders in general be very willing to accept, and consider themselves fortunate in being able to accept, purchase on fair terms on the present basis without facing the chances of the future?—If I was a railway shareholder myself I would.

Apr. 24, 1907.

Mr P. J. Kennedy, B.A., representative of the Kilkenny Corporation.

Possibilities of reductions in rates and economies in working under State ownership.

16436. The main object in view is reduction of rates?—Certainly, and the extensions of line in portions of the country where the natural resources have not a fair chance to develop.

16437. And where private capital would not be employed?—Where it is impossible to get private capital on such a scale as would enable them to be developed.

16438. If we can assume that the railways may be purchased on such terms by the use of public credit as to leave a substantial residue of the present net revenue, we supply a considerable fund out of which to make reductions?—Certainly you would.

16439. That is a means of making reductions beyond the reach of the existing companies no matter how good may be their disposition?—Entirely beyond them. I am not finding fault with the present management of Irish railways. I am quite sure the officials and directors do the best they can. With such a number of different systems and such a number of officials and directors there must be a considerable amount of expenditure that would be done away with by a system of unification, and that in itself would be a fund which would enable some reductions to be carried out.

16440. Does it occur to you that this is very far from being merely a case of complaint and reply?—It is a big national question. Furthermore, I think that the commercial and industrial future of the country depends very largely on any action that the Government will take in this very important matter.

Commercial system of railways unsuitable for Ireland apart from any question of whether the Companies were doing best for the public interest.

16441. Suppose there was not one word to be said against any railway company. Suppose it was admitted that they were doing the best for the public interest as well as their own, regard being had to the conditions that are constraining them, would there not be still a public question of the first magnitude, whether, looking to the examples of the world, and looking to the experience gained all over the world, this purely commercial system suits Ireland at all?—I certainly think so even if you admit, and I largely do admit, that the railway companies are doing the very best with the powers they have and the means at their disposal. The present system in Ireland is hurtful to the general interests of Ireland, and there remains still a very big national question with regard to the experience of other countries. I know nothing except at second hand. We are told the State system succeeds in other places. I am glad to hear from expert evidence yesterday it succeeds in developing industry.

16442. If you look to any country in the world except two or three you will find in every country the Government is buying or making railways, and in no country is the Government transferring them to private companies. Isn't that a very significant fact?—And a very hopeful one.

16443. You have spoken of one great economy which might be effected; is there not a second and greater, namely, the economy exercised through the concentration of so many varying administrations, varying in size and circumstances, into one great administration?—Yes. That would be the greatest and biggest economy.

The economy of concentrated administration.

16444. I think too much weight is thrown upon the direct saving by concentration of official staffs. I would submit to you that the chief economies are not to be effected in that matter which, in my opinion, is comparatively small, but under the main heads of expenditure—permanent way, locomotive charges, carriages and wagons, traffic charges, and general charges—that each one of these removed from the hands of small administrations and placed in the hands of one board of experts, which would be a more able administration than any single railway has at its command at present, should necessarily result in economies ranging from a quarter to half a million?—I quite agree with that opinion.

16445. Would it not be a lamentable thing if because of any difference between the railways and the public, where there is no real difference of interest, such vast economies as that which might be rendered available for the public service should be left out of reach?—I think it would be a disaster for Ireland and disastrous for the railway shareholders themselves.

16446. When I say that there is no real difference of interest, what I submit to you is this, that provided people who had invested in the railways, and who are entitled to every consideration, receive a fairly liberal return for their investment, or are allowed the option of transferring their investment from those private lines, many of which are more or less in an insecure condition, into either a State Stock or the Stock of a unified system of railways, would they have cause to complain, would they not have a better security?—They would have a much better security. There might be one or two systems, perhaps, on which the shareholders might think it was better as a private company, but if they had a fair price, even if they are not satisfied with the State system, I don't see the cause of complaint.

16447. The directors and officers are nearly all Irishmen, like ourselves, and many of them able Irishmen, of whom we are proud; they are not all Irishmen, but the bulk of them are, and the gentlemen who are not Irishmen, we know, have vindicated their position by their ability, and if we show there is no intention to deal inequitably with any of them, surely that ought to go far to bring about a state of feeling in which this question could be settled by agreement?—I hope it will—I think it is most devoutly to be wished, for a friendly agreement would be the best way to settle the matter.

16448. No matter what may be the feeling of individuals, is it not tolerably certain that when this question comes to an issue the dominant bulk of opinion amongst the shareholders will be governed by the question of price?—Certainly.

16449. Well, now, has any reason been given to-day for the differences between the rates from Waterford to Clonmel and to Kilkenny?—The reason suggested to me is that the competition with the navigable river, the Suir, regulates the rates to Clonmel. I admit myself that competition does exist. The railway company is in a different position there than where it enjoys a practical monopoly. I am rather inclined to suggest that the difference between the rates is entirely unfair to Kilkenny, much too great. I admit there may be a difference. The competition might make a difference. It is all one, for if the railway company don't carry these goods to Clonmel, the river navigation will, and it makes no difference to us in Kilkenny. I suggest if it pays the railway company to carry from Waterford to Clonmel at that rate it would certainly pay from Waterford to Kilkenny on that rate, or a merely raised rate. I also suggest that if they are carrying without a profit or at a loss I am afraid they are making up for the want of profit or for loss by charging Kilkenny.

16450. You admit that the railway may be constrained by sea or by river carriage to reduce its rates to a certain point?—I do.

16451. But then you say the effect of that is the imposition of what you consider excessive rates on towns which have no resources in the way of competition?—Precisely.

16452. Well, some of the differences here are very great. I see that in feeding stuffs, an important article, the difference is 24 per cent.?—24·6.

16453. 24·5?—Yes, in bran and pollard, the difference runs as high as 6*s.* 9*d.*

16454. Wheat, oats, hay, manure, 34?—Each is a staple article in this district.

16455. Would you say a private undertaking constrained by competition to give these low rates in certain cases finds a difficulty in maintaining itself without imposing what appear to be high rates in other cases, but a public authority would be in a better position to take note of the claims and circumstances of different districts?—I hold that a public carrying body like a railway company given certain definite powers by Parliament, and having acquired certain definite statutory rights, never acquired these powers, and it was never contemplated by Parliament when granting them that they should penalise one portion of the country for the benefit of another, and that appears the main objection.

16456. I am rather on the relative freedom of action as between a private company and a public authority. You have shown that you clearly understand the limits within which railway companies work in regard to their dividends and their obligations to the shareholders, but a public authority working

the railways as a unit, and acting under the influence of public opinion would be more likely in measuring its rates to consider what you have stated —namely, that no district should be unduly penalised for the benefit of another?—I certainly think that it is only a public or State authority that could afford to do that very well.

16457. These are questions of arrangement and degree?—Precisely.

16458. And therefore would be properly the subject of judicious administration?—Certainly.

16459. Did you give any evidence upon a suggestion in your proof as to a fixed rate per wagon per mile?—Nothing. I have made no suggestion.

16460. I shall not ask you anything about it. As to the second list of rates—comparison between Kingsbridge and Waterford and Kilkenny, there again you recognise that competition exists in a still more effective form?—Yes.

16461-2. Of course you will admit that a seaport has a natural advantage, of which even the railways cannot deprive it?—I am aware of that. My only regret is that Kilkenny is not a seaport town.

16463. And perhaps you would say that the Railway Company in dealing with a seaport are entitled upon a fair view of their own interests to charge such rates as will not allow the traffic, or the bulk of it, between two points the subject of competition to go by sea and not by land?—Yes, I would be inclined to agree they should be entitled to go a certain distance, the exact point I don't define.

16464. I say again it is a question of degree?—Yes.

16465. You show here that although Kilkenny is thirty miles nearer to Dublin——?—Eighty.

16466. Thirty miles nearer to Dublin than Waterford, although Kilkenny is thirty miles nearer, all the articles included in your statement pay a higher rate?—Almost every one. Every one I believe. All pay a higher rate except coal alone.

16467. For instance, porter is sold both at Kilkenny and Waterford?—It is.

16468. And there are middlemen in the trade, no doubt, who sell the porter to people in the district between?—There are.

16469. Well, if the trader in Waterford can get his porter at 7*s.* 6*d.*, and the trader in Kilkenny has to pay 11*s.* 11*d.*—it is pretty obvious, whatever may be obscure in the matter, that the middleman in Kilkenny, in disposing of that article, stands at a great disadvantage compared with the trader in Waterford, especially in regard to districts between the two?—Yes, and not even the tariff on the old Waterford bridge affected it—the middleman in Waterford having to pay 4*s.* 5*d.* less in the ton on stout was always able to undersell all those middlemen in Kilkenny who dealt with customers that lived in the district between Waterford and Kilkenny, and not even the tariff payable in crossing the old bridge in Waterford was able to give any preference to Kilkenny.

16470. The question, Mr. Kennedy, is one of great difficulty?—Of great difficulty, and one that one would hesitate to give an absolute opinion upon unless one had very full information. In the general line of the thing one can see where certain districts are hit, and hit very hard, by the policy pursued by the railways.

16471. I could anticipate that the railways would say that if they were obliged, or if they agreed to lower the rate to Kilkenny in proportion to the mileage, that the next town behind Kilkenny—between Kilkenny and Dublin—would say that it was prejudiced by the treatment of Kilkenny?—Yes.

16472. And so all the way back to Dublin?—Yes.

16473. And then the railway company would be expected to measure their rates pretty much all the way from Dublin to Kilkenny by the circumstance that there was water competition to Waterford?—I daresay they would. I think that that claim would be made against them whether they would admit it or not.

16474. It would become a question whether they could maintain their solvency under such conditions: but one may go this far, that the circumstance that there is water competition to a certain point, whilst it entitles the railway to protect itself by rates not much higher than the sea rates, yet there should not be created between the competitive point and trading districts near it, such a disparity as amounts to a derangement of trade by the act of a public carrier?—I perfectly agree.

16475. Do you think that consideration would be likely to receive more attention from a public authority dealing with the railways as a whole than it will or can receive from private companies?—From the public authority dealing with the railways as a whole that consideration would be treated with much greater justice.

State ownership and control of Railways the apparent remedy for existing anomalies in rates.

16476. A public authority would be bound to recognise that different districts and different communities have claims to live and thrive, and no doubt they would endeavour, at any rate, in a spirit of sincerity to measure the rates so as to have regard to the circumstances?—I think it is only a public authority that would be able to do that —would be able to take in the claims of the country as a whole and that would be in a position to show it would treat every district fairly. A public authority would not necessarily look for dividends—nothing like for a very high dividend. A public authority, acting as a great company—carrying company—if it is able to pay its working expenses, could make something over and above that to enable them to keep up the railway communication, or, at any rate, to make new lines. I don't think a public authority would act in the same way at all as a private company. A private company is bound by the dividend: a public authority is not.

16477. A railway manager is confronted with the fact that he has had in his last year or half-year a certain net revenue?—Yes.

16478. Capable of providing a certain dividend, and if that railway manager—say, a man of great ability—did attempt to reduce his scale of rates in the hope that after a period more or less indefinite there might be traffic to recoup the loss, do you consider he would be allowed to do it by his board of directors?—I don't think that railway manager would survive very long.

Examined by Colonel Hutcheson Poë.

Comparison of rate for porter Waterford and Clonmel and Waterford and Kilkenny.

16479. I should just like to mention a matter in order to get it right on the notes. In regard to the figures on the first page of your evidence you made a slight mistake. However, it may be a clerical error. With regard to the rates for porter carried between Waterford and Clonmel and Waterford and Kilkenny you will find by your figures that instead of there being an increase of 4·72 per cent. on the carriage to Kilkenny, it is really a decrease in the mileage percentage. 3·10 pence per mile from Waterford to Clonmel, and according to your figure it is 2·96 pence to Kilkenny?—I am afraid it is a clerical error.

16480. It should be really 4·51?—4·51.

16481. It is a decrease in favour of Kilkenny, and similarly with regard to coal, that is a clerical error. It should be ·78 instead of 7·81?—Yes.

Effect of sea competition in determining rates.

16482. It is a small error; but it is better get it right on the notes. With regard to the disparity of the rate between Kilkenny and Kingsbridge and Waterford and Kingsbridge, while you admit, as I take it you do, that there must be a difference where sea competition enters into the case you consider that an increase of 120 per cent. in the case of porter and in the case of other goods an increase of 70 and 40 per cent. is unduly high?—Well, I daresay the actual increase is determined by the competition prices of the sea freights and the rates charged by the South-Eastern Railway. Everybody must see that as between merchants in the City of Kilkenny and merchants in the City of Waterford who are dealing with a certain portion of the population existing between these two cities—the merchant in the City of Kilkenny is hit very hard by these rates.

16483. You have a brewing industry of considerable extent?—Two large breweries, which are being extended.

16484. Do they make porter as well as beer?—Yes.

16485. An increase of 120 per cent. must hit them very hard?—It hits them very hard.

16486. You spoke of the declining trade and population of your county; and it is natural that a declining trade and population must affect the earning powers of the railways?—Certainly.

16487. In order that that trade should be developed

Apr. 24, 1907.

Mr, P. J. Kennedy, B.A., representative of the Kilkenny Corporation.

and that the decrease in the population should be arrested, I understood you to say that you considered that it was absolutely essential that there should be some appreciable reduction in the rates and charges at present in force on the Irish railways?—I should say generally, sir, that the local rates in Ireland as compared with the through rates look very high, and as a matter of fact they act as a preference in favour of the producers in outside countries. While the producers and manufacturers in the country inside are hit by these incoming rates, at the same time it is difficult for, say, a manufacturer in Kilkenny or the Queen's County to get a through rate on a complete system of Irish railways up to the North of Ireland. While I recognise that until trade is established the railways themselves may not see their way to give a through rate at the same time if there was a little more pliability, a little more elasticity, a little more consideration for the efforts that have been made in the inland cities to develop manufactures, it would have a very large effect in increasing manufactures.

Necessity for reduced rates to foster industries and arrest decrease in the population.

16488. But the great effect would be obtained by a reduction of the charges?—The great effect would be obtained by a general system that would reduce the charges.

16489. Seeing that the return yielded on all classes of capital in Ireland is under 4 per cent., is it in your opinion reasonable to expect, much less to try and insist, that the railway companies should make such an appreciable reduction as would, on the one hand, benefit the traders, but would probably for some time, for a greater or less period of time, entail considerable loss on the earning powers of the lines, and consequently on the dividends returned to the shareholders?—We have never claimed that, sir.

The obligation of earning reasonable dividends prevents reduction in rates.

16490. You could hardly expect it?—We think, on the contrary, that it would be rather unfair to those who have their money invested in Irish railways that they should be hit so hard for the general benefit without some form of compensation.

16491. Assuming that it is impossible for the railways under their existing system to make these reductions, is not the time approaching when the trade, which has already declined, with the population decreasing as we all know, will still further decline, and when the earning power of the railways, which at present is small, will be still further reduced?—I think we are very close to that time.

16492. Under such circumstances, is not that the strongest argument for the advocacy of some system of State ownership?—It is.

State ownership and control of railways the apparent remedy for existing defects.

16493. A system which could afford to make these reductions, even though for some time it might entail considerable loss?—It is the only solution of the difficulty that I see. I do not see how any private companies or even any leasing out of the railways to private companies—I do not see at all any possibility of their being able to meet that point.

16494. And in addition to the advantages and economies which Mr. Sexton pointed out to you would probably result from a system of State purchase or control, would not the great disparity which you pointed out exists in this very case between Clonmel and Waterford, and Kilkenny and Waterford, owing to the sea competition—would not that disparity practically cease, because in such a case the railway companies being in one hand, while the goods to Clonmel might still go by water, it would not matter so much whether the railway between Clonmel and Waterford carried anything, as it would be practically within the same management as that between Kilkenny and Waterford, and being under one management it would not affect the issue?—Under a system of State management a state of things could never arise by which one portion of the country would be injured for the benefit of another, or by which one portion of the country would be injured in order to make up for the losses that arise from competition in another portion of the country. Take, for instance, the railway between Waterford and Clonmel, they have to meet river competition, and they lower the prices in order to keep the traffic on their own trains. Whether it pays them or not on those figures I cannot say. The railway company are better judges than I can be. I assume at all events that it cannot pay them as well as the rates they charge from Waterford to Kilkenny. Therefore they are making a bigger profit out of the Kilkenny people than they are out of the Clonmel people, and that too although it diverts trade considerably from Kilkenny to Clonmel. Such a system as that in the case of State-owned railways could not arise because it would be the same for them whether they got the traffic by rail or river. I would not affect the question at all.

16495. I think you said you wished to say something with regard to the representation of the minorities on any public authority which might be set up for managing these railways?—Not exactly that, but generally as regards the representation of the minority on the public boards in Ireland. I think the question was raised before by you, sir, in the examination of Mr. Ennis, who represented the Wexford County Council, and if the Chairman has no objection I would like to say one or two words.

16496. *Chairman.*—Say one or two words, but do not be long?—If the matter was correctly reported in the Press, I gathered, at all events, from the Press that Colonel Hutcheson Poë was under the impression that no members of the minority—or at least members of the minority generally in the South of Ireland—have any chance of being elected on the public boards by the other side.

16497. *Colonel Hutcheson Poë.*—That was not quite my point. I only said that it was the experience of the country gentlemen of Ireland that since the Local Government Act was passed they had practically been excluded from participation in the public work of their respective counties. I think no one disputes that point. It was in consequence of the evidence given by Mr. Ennis, his direct evidence, where he said that it was perfectly certain that in the event of a Central Authority being set up every class of Irishmen would receive fair representation—it was in consequence of that statement that I ventured to suggest whether the experience of the past few years justified the minority in anticipating that they would receive better treatment for the future; and I was glad to hear that so far as his own opinion was concerned, and he had spoken to other County Councillors, he was quite sure that whatever might have occurred in the past a better state of things would prevail in the future. That was my point?—I can only say that my own experience, whatever it is worth, in the county neighbouring to your own, is that all the county gentlemen of the minority, who have shown an active or warm interest in local matters, and have done a fair share of work for it—that all these men if they care for it, have always found representation on the public boards; and I do not think there is any kind of feeling nowadays on the local boards between class and class as that would seem to suggest. But may I point out that behind all that there is a portion of the minority in Ireland—not the country gentlemen who are all well-educated men and men of the world; there is another class of the minority in Ireland who look upon everything in Ireland and everything done by the majority of the people more or less in a hostile way; they never give credit for anything good that is done; they always take care to point out anything defective or faulty. As long as that attitude remains it will prevent the two classes from coming together and understanding one another. And where they do come together, they learn to understand one another and each discovers that the other is not as bad as he is painted, and they discover that they have a lot of common interests to bring them together. If they can be brought together—and it is going on very much more rapidly than, perhaps, the Press would lead us to suppose—it would be a very good thing for Ireland. There is another question. I understand that there are only two companies in Ireland that manufacture their own rolling stock and locomotives—the Great Southern and Western, and the Great Northern. I am not sure, am I quite correct?

16498. *Mr. Sexton.*—Does not the Midland do something?—They may do something. I am not quite sure. The point I want to get at is that they are prevented by Act of Parliament from manufacturing for other railways, they are confined to manufacturing for themselves.

16499. *Chairman.*—That is not confined to Ireland. Every railway company in England is the same. One railway cannot manufacture for another company. Each can only manufacture for itself?—Yes. This is by Act of Parliament. The circumstances that prevail in England are not always on all fours with those that prevail in Ireland. Here in Ireland we are suffering from a constant and increasing drain of emigration. We have set up a system of technical

schools, trade preparatory schools in which a lot of young Irishmen are being trained as mechanics, and when we have them trained we find a great deal of difficulty in providing employment for them in Ireland, and the consequence is that we are going to a lot of trouble and expense to provide trained workers for other countries. That is a great national loss in many ways. And I believe that large companies like the Great Northern and the Great Southern and Western, in which there is a big capital invested, should get more extended powers in the way of manufacturing for other railway companies in Ireland. It would lead to considerably more employment and help to provide for the products of those technical schools. I cannot believe that the railway companies would object to see an increase of Irish industry of that kind. I am sure they would not.

Apr. 24, 1907.

Mr. P. J. Kennedy B.A., representative of the Kilkenny Corporation.

16500. *Mr. Sexton.*—That would be one of the questions that would be settled by a public administration of a unified system?—Quite so, sir.

Cross-examined by Mr. HEALY, K.C.

16501. Do you think it would be fair to treat Kilkenny as a seaport?—I think it would be very generous, Mr. Healy.

Well, then, that is all I ask you.

Chairman.—We are much obliged to you, Mr. Kennedy.

Mr. MICHAEL M'NELIS, J.P., examined by THE CHAIRMAN.

16502. You are a Justice of the Peace?—Yes.

16503. And Clerk to the Rural District Council of Glenties, Co. Donegal?—Yes.

16504. Are you a solicitor?—No.

16505. Are you in business in Glenties?—No, in Ardra.

16506. What business?—General business—grocery and hosiery, and general business.

16507. Do you appear before us in your individual capacity or as Clerk of the Rural District Council?—In my individual capacity.

16508. Have you been authorised by the District Council?—Well, I was authorised since I sent in my evidence. I was not authorised before I sent in my evidence.

16509. Do you speak for the District Council, or speak for yourself?—I speak for myself.

16510. What railway serves your district?—It used to be the Donegal Railway, but it is now the Joint Committee of the Great Northern of Ireland, and the Midland of England.
